On the reception given to his name, by the House of Commons, on a recent occasion.

Patriarch of England's health-inspiring song!  
Pour'd in these latter days along the waste  
Of mind, with many a noxious growth defaced,  
That genius hath uprear'd with magic strong,  
'Tho' baleful!—whether, couch'd amid the throng  
Of wrecks that Tiber laves, thy harp be traced  
To strains of might, whereof renown shall haste  
To claim the burden; or more wrung among  
The desolate cities disenthro'd thout roam:  
Where'er thy haunt, may rumour reach thee now,  
Charged with no vague or dissonant acclaim  
Of thy land's sons in song, while thy name  
Passed from the eloquent lip, a shout from home,  
Hailing the deathless wreath late lifted to thy brow.

Song.  
Oh! who can Fortune's motions tell?  
Who her varying ways relate?  
Who can her many changes count?  
Or who foretell his morrow's fate?  
Thus, while stern sorrows o'er us frown,  
And dire misfortunes bid us mourn,—  
While armies of contending foes,  
Combined, expose to scoffs and scorn:  
As fickle Fortune ofttimes shews,  
Joys turn to sorrows, friends to foes.  
Those sorrows following joys dispel;  
Misfortune but precedes success:  
Foes, scoffs, and scorn, are only given,  
To pave the path for happiness.  
Then those who labour most 'neath pains,—  
Misfortunes baffling all they sought,—  
Should not despair: there still remains,  
When all else fails, this cheering thought,—  
Uncertain Fortune ofttimes bends  
Scorn into love, foes into friends.

Yorkshire.

Rain fallen .525 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

### TO CORRESPONDENTS.

A Correspondent informs us that our quotation respecting early rising, from an American Journal (see last *Lit. Gaz.*), is only altered a little from a passage which originally appeared in *Blackwood's Magazine*.

ERRATA.—In our last No. page 355, col. 1, line 60, for "ghost's" read "ghosts."—Same page and column, line 67, for "head," read "hand."

• Written by a lad of sixteen, and in a five-act play. We insert it, agreeably to request, as an encouragement to early talent.—Ed. L. G.

## ADVERTISEMENTS,

Connected with Literature and the Arts.

**APPROPRIATE SUMMER PRESENTS.**  
In one handsome fcap 8vo. volume, price 10s. 6d.  
**WOODLAND GLEANINGS.**  
By the Editor of the "Sentiment of Flowers."  
With Sixty-four Illustrations.  
"This is a sweet, pretty volume, full of agreeable miscellaneous literature and pleasing anecdotes. It describes all our forest-trees, and has an engraving of each, mingling together history, fancy, poetry, and botany, in a manner at once highly picturesque and instructive. The prints are almost as numerous as the leaves on trees, and very tastefully executed."—*Lit. Gaz.*

2d edition, cloth, gilt edges, price 6s.; 11s. 7s. 6d.; or morocco elegant, 8s. 6d.

**The Sentiment of Flowers.**  
"This is a charming little book. Engravings of groups of the most beloved, the most popular, and the most poetical flowers, are very neatly and accurately colored, and interspersed with elegant descriptions and analogies. Illustrated by quotations from the wide range of English poetry, and from whatever has been most gracefully and fondly said of those darlings of nature."—*Tait's Mag.*

3d edition, in a neat pocket volume, price 2s. in cloth; 2s. 6d.

**Gems from American Poets;**  
Consisting of Selections from Bryant, Willis, Brainerd, Mrs. Sigourney, Pierpont, Percival, Wilcox, Longfellow, Hillhouse, Halleck, Dana, Mrs. Hale, &c. &c. By the Editor of the "Sentiment of Flowers."  
"Especially neat in form and arrangement. We are extremely obliged to the taste of the selector of these transatlantic gems, some of them eminently sweet and beautiful."—*Lit. Gaz.*  
\*This elegant little volume is a fair specimen of "Tilt's Miniature Classical Library."  
London: Charles Tilt, Fleet Street; J. Menzies, Edinburgh.

In 8vo. 18th edition, with Maps and an Abstract of the last Population Returns, 18s. 4ds.; or 12s. 6d. half-bd. in parchment.  
**PATERSON'S ROADS of SCOTLAND**  
and WALES, and of the SOUTH of SCOTLAND,  
By EDWARD MUIR.

Arranged upon a plan entirely novel; and remodelled and augmented by the addition of new Roads and Admeasurements.  
London: Longman and Co.; J. M. Richardson; Hatchard and Son; Baldwin and Co.; W. Joy, J. G., and F. Rivington; J. Boker; Whitaker and Co.; T. and T.egg; J. Duncan; Simpkin and Co.; J. Dowling; J. Hearn; Smith, Elder, and Co.; T. Geaves; and E. Mogg. Liverpool: G. and J. Robinson.

**RAPID RANGES OVER BYGONE TIME: WASTE AND ECONOMY OF HISTORICAL READING.**

**TWO PUBLIC HISTORICAL LECTURES,** on the Vivid Deeds and Flirting Destinies of Man, will be extemporaneously delivered, and variously illustrated, especially by Means of coloured Maps of Time,  
By MAJOR BELLI.

At the Crown and Anchor Tavern, Strand, on Wednesday, the 14th, and Friday, the 16th of June.  
Commencing each day at One o'clock, and each Lecture occupying about One Hour.

Transferable Tickets, 3s. 6d. each, for the Two Lectures, and Family Tickets, admitting Five Persons, 10s. to be procured at the Crown and Anchor; and from Major Bell, 14 Norfolk Street, Strand.

8vo. 9s. 6d.  
**THE NINTH BRIDGEWATER TREASURE.**  
A Fragment.  
By CHARLES BABBAGE, Esq.  
"The volume here presented to the Public, does not form a part of the series of works composed under the will of the late Earl of Bridgewater. I have, however, thought, that in furthering the intentions of the testator, by publishing some reflections on that subject, I might be permitted to connect with them, a title which has now become familiarly associated in the public mind with the subject of Natural Religion."—*Extract from the Preface.*  
John Murray, Albemarle Street.

**FOR SCHOOLS.**  
In 12mo. price 3s. in cloth boards,  
**A LATIN SYNTAX, and FIRST READING BOOK for BEGINNERS;** being an Adaptation of Broderick's "Little Latin Grammar" to the Eton Syntax.  
"This is the work of an excellent and thorough scholar, and one of the very best books yet published for its purpose."—*British Mag.*  
Rivingtons, St. Paul's Church Yard, and Waterloo Place, Pall Mall; and J. W. Parker, West Strand.

**CHRISTIAN INSTITUTES. A Series of Discourses and Tracts, selected, arranged systematically, and illustrated with Notes.**

By CHRISTOPHER WORDSWORTH, D.D. Master of Trinity College, Cambridge; and Rector of Buxted with Uckfield, Sussex.

This Work is designed to be subservient to the Religious Portion of a Liberal Education for the Upper Classes and the Learned Professions. The Selections are chiefly from the following Writers:—Dr. Isaac Barrow—Bishop Jeremy Taylor—Dr. South—Richard Hooker—Bishop Butler—Richard Baxter—Burke—Bishop Jewell—Lord Clarendon—and F. Mason.

Printed for J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 14s. boards, the 3d and concluding volume of

**A CONNECTION of SACRED and PROFANE HISTORY, from the Death of Joshua to the Decline of the Kingdoms of Israel and Judah.** Intended to complete the Series of *Blackford and Pridaure*.

By the Rev. MICHAEL RUSSELL, LL.D. Author of "The History of the Church in Scotland."

By the appearance of this volume, the public are at length supplied with a "Connection of sacred and Profane History," from the creation of the world down to the era of the Christian Redemption; in which are set forth, not only the most remarkable events which befall the ancient people of God, but also an account of the origin, constitution, learning, commerce, and polity, of all the distinguished nations of antiquity.

Printed for J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

3s. 6d. This work may be had now complete, in 3 vols. 8vo. price 12s. 2s. boards.

**THE OLD TESTAMENT, with a Commentary, consisting of Short Lectures for the daily Use of Families.**

By the Rev. CHARLES GIRDLESTONE, M.A. Vicar of Sedgley, Staffordshire.

In this edition of the Bible, it has been one chief object to supply families with an exposition for daily reading. The Scripture is divided into paragraphs of convenient length, and the explanatory and practical matter is digested, under each portion, into one continuous lecture, so as to require no previous examination on the part of those who read it to their families. At the same time, it is hoped that the pains which have been taken to explain all obvious difficulties, and to derive from each passage its appropriate lesson, whether of doctrine or of duty, will render the work no less useful to those who study the Word of God in private.

Printed for J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had,

**The First Part, containing Genesis and Exodus, price 9s.; or the Two Parts in One Vol. 10s.**

Also,

**The New Testament, with a Commentary.**

In 2 vols. 8vo. price 11. 10s.; or in Four Parts, at 2s. each.

In 8vo. price 10s. 6d. in boards,

**A VIEW of the EVIDENCE afforded by the LIFE and MINISTRY of St. PETER to the TRUTH of the CHRISTIAN REVELATION.**

By PHILIP TAPSCOTT DODD, M.A. Rector of Penhurst, Kent, and Chaplain in Ordinary to the King.

Printed for J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In a pocket volume, price 3s. 6d. in boards,

**ANCIENT HYMNS from the ROMAN BRUARIUS, or Domestic Use, arranged for every Morning and Evening of the Week, and especially for the Holy days of the Church. With some Original Hymns on the Church's Ordinances.**

In 8vo. price only 9d. weekly; also, in Monthly Parts, with Engravings.

**THE IDLER, and BREAKFAST-TABLE COMPANION; a Fashionable Journal of Literature, Fine Arts, Exhibitions, Satire, and the Stage.**

"The best, and considering its quality, the cheapest, by far, of our numerous weekly periodicals. It is elegantly printed, of a particularly convenient size for binding, and it contains the News (Literary and Theatrical), Chat-Chat, Varieties, &c. &c. of the past and forthcoming week. \* \* \* It is, in fact, a suitable appendage to the drawing-room table, and alike interesting to the scholar and general reader. Its beautiful engravings are not its least recommendations."—*Standard*.

W. Kidd, 7 Tavistock Street; and sold by all Newsvendors.

In Weekly Numbers, Three Halfpence, and Monthly Parts, 6d.

**WILSON'S TALES of the BORDERS, and of SCOTLAND.**

"They afford a lasting monument of the talents and enterprise of their original projector, and of the kindred spirits that have laboured in the same field; and even now they are silently communicating to thousands, those valuable lessons which produce the most wholesome effect on the character and conduct, when they inculcate themselves into the mind under the seductive form of fiction narrative."—*Bernick's Advertiser*.

Published for behoof of the Widow of John Mackay Wilson, Berwick, by John Sutherland, 19 Calton Street, Edinburgh; and sold by R. Groombridge, Paternoster Row, London, and all Booksellers.

Of whom may be had,

**Volumes I. and II. price 8s. each.**

**TO SCHOOLS AND FAMILIES.** In small 8vo. handsomely bound,

**MORAL AXIOMS for the YOUNG, in Easy Compleets. Selected chiefly from Scripture, for the use of the Young in Schools and Families.**

By Sir RIGBERT BRIDGES, Bart.

"Every child can remember a couplet, especially when it is in rhyme; but the language should be simple, even to nakedness."—*Author's Preface*.

John Macrone, St. James's Square.

## NEW WORKS PUBLISHED THIS DAY.

I.  
England;

### REVIEW OF NEW BOOKS.

#### EDUCATION.

1. *Practical Remarks on Infant Education, for the use of Schools and Private Families.* By the Rev. Dr. Mayo and Miss Mayo. Pp. 106. London, 1837. Seeley and Co.
2. *Instructions for the Formation and Management of Infant Schools in the Bahamas.* Pp. 16. Nassau, 1835.
3. *Self-Formation; or, the History of an Individual Mind: intended as a Guide for the Intellect through difficulties to success.* By a Fellow of a College. 2 vols. 12mo. London, 1837. Knight and Co.
4. *Des Instituts Agricoles et Scientifiques D'Hofwyl, Fondés et Dirigés par M. Emmanuel de Fellenberg. Rapport fait à l'Académie de l'Industrie Agricole, Manufacturière et Commerciale.* Par M. Raymond de Véricour. 1837. Paris; chez l'Auteur, 55 Rue Neuve-Saint-Augustin.

THE principle for disseminating education among all classes of the community has been considered for some time as carried against the prejudices of the illiberal, and the motley opposition of the fearful and the interested. To the humane, the appeal of the untaught comes as the command of a duty: it is but to do for others what we wish should be done for ourselves. The connexion which is inseparable between the claim to education on the part of the people, and the right of inflicting punishment on the part of the government, speaks plainly to the legislature. Little moral authority can exist for exacting the severe penalties of the criminal code, unless it is based upon a sound system of general education. The teaching to do right should precede, if it cannot prevent, the punishments for doing wrong. The knowledge which the parent often purchases for his children at the price of so much self-sacrifice, and which he leaves them as their prized and protecting legacy, tells the state the value at which every head of a family holds this boon. It would be well to confer it upon the children of all. The discussions on education are now for the most part transferred from the principle to its details. With these we now have to do. We commence by offering a few preliminary observations respecting infant schools. We fear that the essential character of these Lilliputian barracks is very much misunderstood. The danger of serious injury to the cause of infant instruction is to be apprehended from the over-anxiety of its friends to teach too much, and to convince the public too hastily of how great avail is their system. The infant mind cannot endure forced marches. It may be a very delightful exhibition to witness infant discipline; but we earnestly deprecate hearing so often the word "attention," and so seldom the command to "stand at ease." For our own parts, we prefer contemplating these institutions, less as schools than as infant asylums, where the cleanliness, the amusement, and the health of the little inmates, are not the subsidiary, but the primary objects of attention. In a word, while through these means the mother is freed from the care of nursing, and is thus enabled to go out to work, the child is rescued from the risks of neglect,—from either

falling into the fire or out of the window, or being run over by the wheels of omnibuses. Maturity seldom rewards the efforts made to display precocity of mind. It is by the gentle indulgence of early childhood's weakness, by letting it grow as nature directs, that it has any chance of becoming strong in after-life. The disposition of the person to whose care the infants are intrusted is very important. His knowledge is something; his manner much; his temper is every thing. Dr. Mayo well observes, "He must feel, as he enters his school-room, that he has to do, not with men, not with children, but with INFANTS." And again, "The age of infancy should be an age of cheerfulness, and the infants' school a happy place." We rejoice to find that under the fostering auspices of Colonel Colebrooke, the same instructions obtain in the Bahamas.

"Amusement is here mentioned separately, because some parts of the school-time must be spent in play. It should, however, be remembered, that amusement is to be blended with the whole course of instruction. There is something wrong in an infant school where every countenance is not cheerful. That amusement may be promoted, there must be attached to the school-room a play-ground, which should be from fifty to a hundred feet square. The front door of the school-room should open into it. It should be fenced round, and have a large open shed in the middle; and if the soil will allow it, tamarind, almond, and other fruit-trees—but not cocoa-nut trees—should be planted round the sides."

The falling cocoa-nut would, indeed, be a very rough play-fellow. We like the fresh air and fragrance of such a scene; it breathes of health and happiness. We regret that we cannot coincide generally with the practical remarks of Miss Mayo, which accompany the lectures of her father. The desire of too much being taught prevails throughout. There is much useful information to be gathered from the pages, and much praiseworthy zeal to be acknowledged; but we are compelled to say, that Miss Mayo is zealous overmuch. The tone and manner of teaching which is inculcated, is certainly unsuitable to the powers of the infant mind.

"In religious instruction, there should be a continual appeal to the children's own experience, as well as a personal application of scripture; they must be taught to see how its precepts and demands bear upon their daily conduct and dispositions, in order that conscience may be trained to do its appointed work. Without much attention to this point, you will find that, though quick-sighted enough in discovering the faults of others, and forward to condemn, as *most shocking*, the sins detailed in the Bible, they will not perceive how they themselves are guilty of the same faults. Even David, when the prophet set before him his sin in a parable, saw all its heinousness, but saw not himself the sinner, till the bold reprover declared, 'Thou art the man.' Education must work against this natural deceitfulness of the heart; and, under God's blessing, there is no more effectual way of counteracting it, than by endeavouring to convict children of sin

in their daily conduct, by reference to the word of God. There should also be a constant desire to awaken religious feelings and sentiments. Children are so easily impressible through sympathy, that much may be effected by manner; indeed, a teacher may in a great measure set the tone of feeling in his school."

Alas, poor little convicts! we would fain see you free from all such useless spiritual despotism. The sounder judgment of Miss Edgeworth is far more to our taste; and we refer our readers, with much satisfaction, to this lady's popular tales, where kindly feeling, and judicious observation, go hand-in-hand on this interesting subject. They will there find neither the negligence of doing too little, nor the ridiculous pretence of doing too much. We pass to *Self-Formation*. This book is written by a very ill-tempered man. The model which he holds up for the formation of character is one which we request our readers on no account to imitate. The spirit of sullen discontent manifests itself throughout these volumes. The modern literary world, the law, the gentry, the church, are each in their turn semi-libelled and lashed. The author has been more fortunate in his father than in his knowledge of literary men.

"My father, though by vocation a professional man, was really, by taste and habit, neither more or less than a devoted man of letters; not one of your literary men of the present day, made up of pliancy, versatility, and general but superficial cleverness; adventurers ready for any thing but fit for nothing; men who think it the very perfection of authorship to be *au courant du jour* in all its frivolities and fashions; who compose, not from the fullness of their minds, but from that of their flippancy and self-conceit; writing, because they have not the patience to read, and making it the point of their ambition to be esteemed fine gentlemen rather than fine thinkers; who give themselves as many airs as though they expected their books to be handled only in perfumed gloves; and, from their silly affectation of becoming all things to all men, have done as much as in them lies to degrade the man of letters into the mere ape of fashion,—in short, literary Greeks; the representatives of the old class of adventurers so spiritedly portrayed by Juvenal. My father, truly, was another manner of man than these,—a being of a far higher and nobler order. He belonged rather to a class, now almost extinct, whose world was in their library; a race 'unteachable in worldly skill,' mere children in the art of pushing their fortunes; and yet, as guardians of public morality and trainers of the public mind, at least as trustworthy as their successors, with whom 'motley's the only wear.' Such an one was my father."

The extract which we subjoin leads us to think that this writer has suffered something very severe from the law.

"His nature was too noble for his circumstances; he could not exist in such elements as make up the moral atmosphere of our law-courts. Simulation and dissimulation, trickery and intrigue, with all the other habitual and indispensable arts of the advocate, were a very

stench in his nostrils. He was not of those lawyers prefigured by the he-goat in the Bible, 'who cast down the truth to the ground, and practised, and prospered.' During his engagements in the low and noisome, but rich fields of legal practice, he was continually panting for the higher and purer regions of literature."

The habits of the gentry are handled with still greater roughness in every chapter. The clergy fare the same.

"If the cries of the monks and friars had carried it, we should have known nothing of the Reformation. Nor shall we know any thing of Christianity, if we suffer its voice to be overpowered by the bellowing of these fat bulls of Bashan [the parsons], these furnaces of the flame of priestcraft."

This "fallow of a college" (which, by the way, he tells us he has renounced) seems not to know that the Reformation originated, and was mainly carried out, by individuals who arose as the champions of civil and religious liberty, from among those very orders of men whom it is one obvious purpose of this book to malign. We are happy, however, to add, that there is nothing of useful information to be gathered, nor any traces of talent to repay the reader for his labour, or to counterpoise much that is tedious and offensive.

The regulations of the system of the agricultural and scientific institution at D'Hofwyl, still flourishing under the direction of its founder, M. Emmanuel de Fellenberg, contain much gratifying intelligence. There is a very handsome acknowledgment made to Mr. E. L. Bulwer, for his assiduous advocacy of popular education; and his "England and the English," is quoted, as supplying some of the strongest and best put arguments for carrying this principle into universal operation.

*Snarleyyow; or, the Dog Fiend.* By the Author of "Peter Simple," &c. 3 vols. 12mo. London, 1837. Colburn.

THIS is a work in a completely new style; a naval historical novel, laid in the time of William III.; and full of character and spirit it is. There is a real earnestness about all Captain Marryat writes, which is its great charm. The adventures may be improbable, but they do not appear so at the time; the characters may be such as were never yet seen in this world before, but they are our familiar friends at once. There is also a kind feeling and a heartiness about the book; it always enlists our sympathies on the right side. Capt. Marryat's comic powers are also great; they are founded on nice touches of human nature, not the less human nature because in what is called low life. There is a capital hit in one of his books, where the hero discovers that "the gal" prefers him to a rival, "because she'd always drink out of my pewter pot and wouldn't out of his'n." The unconscious betrayal of attachment was never more delicately hinted before. The conduct of the story before is excellent, whether the dog or the boy shall turn out to be the devil—we beg Sir Andrew Agnew's pardon, but Captain Marryat is the one to blame—and is well kept up to the last. The time is laid during the Jacobite conspiracies, and we can imagine a scene like the following occurring during that period of wild and picturesque adventure.

"At the gray of the morning, after the attempt to seize the smugglers had been defeated by the instrumentality of Snarleyyow, upon the top of the immense fragment of the rock which we have described as lying upon the sea-edge of the platform, was perched a fair,

slight-made little girl, of about twelve years of age. She was simply clad in a short worsted petticoat, and bodice of a dark colour; her head was bare, and her hair fluttered with the breeze; her small feet, notwithstanding the severity of the weather, were also naked; and her short petticoat discovered her legs half-way up to the knee. She stood there, within a few inches of the precipice below, carelessly surveying the waves as they dashed over the rocks, for she was waiting until the light would enable her to see further on the horizon. By those who might have leaned over the ridge above, as well as by those who sailed below, she might have been taken, had she been seen to move, for some sea-bird reposing after a flight, so small was her frame in juxtaposition with the wildness and majesty of nature which surrounded her on every side. Accustomed from infancy to her mode of life, and this unusual domicile, her eye quailed not, nor did her heart beat quicker, as she looked down into the abyss below, or turned her eyes up to the beetling mass of rock which appeared, each moment, ready to fall down and overwhelm her. She passed her hand across her temples, to throw back the hair which the wind had blown over her eyes, and again scanned the distance as the sun's light increased, and the fog gradually cleared away. 'A sharp look out, Lilly, dear; you've the best eyes among us, and we must have a clue from whence last night's surprise proceeded.' 'I can see nothing yet, mother; but the fog is driving back fast.' 'It's but a cheerless night your poor father had, to pull twice across the channel, and find himself just where he was. God speed them, and may they be safe in port again by this time!' 'I say so too, mother, and amen.' 'D'ye see nothing, child?' 'Nothing, dear mother; but it clears up fast to the eastward, and the sun is bursting out of the bank, and I think I see something under the sun.' 'Watch well, Lilly,' replied the woman, who was throwing more wood on the fire. 'I see a vessel, mother: it is a sloop beating to the eastward.' 'A coaster, child?' 'No, mother, I think not. No, it is no coaster—it is that king's vessel, I think: but the glare of the sun is too great; when he rises higher I shall make it out better.' 'Which do you mean, the king's cutter on the station—the Yungfrau?' 'Yes, mother,' replied Lilly, 'it is. I'm sure it is the Yungfrau.' 'Then it is from her that the boats came last night. She must have received some information. There must be treachery somewhere: but we'll soon find that out.' It may appear singular that Lilly could speak so positively as to a vessel at a great distance; but it must be remembered that she had been brought up to it nearly all her life. It was her profession, and she had lived wholly with seamen and seamen's wives, which will account for her technical language being so correct. What Lilly said was true; it was the Yungfrau, which was beating up to regain her port, and, having to stem a strong ebb-tide during the night, had not made very great progress. 'There are three other vessels in the offing,' said Lilly, looking round; 'a ship and two brigs, both going down channel: and as she said this, the little thing dropped lightly from rock to rock till she stood by her mother, and commenced rubbing her hands before the now blazing fire.'

We must add the harangue of Smallbones, touching his enemy, the dog.

"Let's hear Smallbones,—let's hear Smallbones!" exclaimed some of the men. Whereupon they all collected round the lad, who ad-

ressed the crew as follows. His audience, at first, crowded up close to him, but Smallbones, who could not talk without his arms, which were about as long and thin as a Pongo's are in proportion to his body, flapped and flapped as he discoursed, until he had cleared a little ring, and when in the height of his energy he threw them about like the arms of a windmill, every one kept at a respectable distance. 'Well, now, I considers this, if so be as how the dog be a devil, and not a dog, I sees no reason for to come for to go for to be afraid; for ar'n't we all true Christians, and don't we all fear God and honour the king? I sartainly myself does consider that that ere dog could not a have curamed into this here vessel by any manner of means natural not by no means, 'cause it's very clear, that a dog, if he be as he be a dog, can't do no more than other dogs can; and if he can do more than neither dog or man can, than he must be the devil, and not a dog—and so he is—that's sartin. But if so be as he is the devil, I say again, I don't care, 'cause I sees exactly how it is,—he be a devil, but he be only a sea-devil and not a shore-devil, and I'll tell you for why. Didn't he come on board some how no how in a gale of wind when he was called for? Didn't I see him up in a bread-bag, and didn't he come back just as nothing had happened; and didn't the corporal launch him into a surge over the taffrail, and he comes back just as if nothing had happened? Well, then, one thing is clear; that his power be on the water, and no water will drown that ere imp, so it's no use trying no more in that way, for he be a sea-devil. But I thinks this: he goes on shore and he comes back with one of his impish eyes knocked out clean by somebody or another some how or another, and, therefore, I argues that he have no power on shore not by no means; for if you can knock his eye out, you can knock his soul out of his body, by only knocking a little more to the purpose. Who ever heard of any one knocking out the devil's eye, or injuring him in any way? No; because he have power by sea and by land: but this here be only a water-devil, and he may be killed on dry land. Now, that's just my opinion, and as soon as I get's him on shore, I means to try what I can do. I don't fear him, nor his master, nor any thing else, 'cause I'm a Christian, and was baptized Peter.'

A most efficient reason wherewith to conclude. We have only to congratulate Captain Marryat on his going back a little in the world; but the dash of historic character gives great effect to his wild and animated narrative.

*The Cabinet Cyclopædia: Eminent British Statesmen, Vol. III.* By John Forster, Esq. London, 1837. Longman and Co.; and Taylor.

LIKE all other countries, England has had certain periods in her history—the political landmarks of all time—the stately arches that carry on the bridge of human improvement over the dark and tumultuous waters of ignorance. From the first lauding of the Roman eagles, a strong spirit of resistance has been cultivated on our soil. For years it only spoke with the sword; and our early annals tell of little more than perpetual struggle. The Roman, the Saxon, the Dane, and the Norman conquered, and mingled with those they conquered, till the island gained strength for defiance to all future and foreign invaders. The martial habits long remained among us; and the wars with France, followed by those of the Roses, long kept England like a vast camp. We may

ascribe to our military education that stern endurance, and that steadfast purpose, which has since been turned to much higher purpose. The character had been strengthened; and the strength was soon turned to nobler endeavour than that of destruction.

Of all the epochs that mark the development of the English mind, the one of which these lives treat is the most important. Civil and religious liberty then made their first stand in the name and on the strength of certain fixed principles—principles to which every year has added force—principles to which every year shews the necessity of adherence. They were founded on the truth, mighty, immutable, and enduring; and are at this hour at once our stimulus and our rule of action. It is a period, moreover, which can only be traced by biographies; for never had individual character more influence; and few periods have been so fertile in remarkable men. Yet scarcely any time so much needs investigation; it has been equally misrepresented and misunderstood. The royal cause was the picturesque side of the question; and its very misfortunes gave it the interest that is sorrow's touching privilege. Our chief historians have taken the cavalier side. Clarendon, with his singular felicity in portrait painting, with a stateliness of diction, which gives a solemnness something like truth; Hume, the most dramatic of novel writers, with a style as lucid as it was epigrammatic; and D'Israeli, who turns every thing that he touches into amusement and interest, and whose ingenuity can only be equalled by his industry. These influences have been strong against the opposite party. The patriarchs of English liberty, however, no matter what their faults or errors, made the first stand against the feudal power merging in the royal. They demanded liberty of conscience unlimited, and liberty of action only limited by the law. What they prevented, by saying to the fast encroaching tide of power, "Thus far shalt thou go, and no further," may be shewn by a brief parallel of the consequences of resistance and nonresistance in France, and in England. In France the royal authority was allowed to become unlimited, and all history—not even the worst portion of the Roman empire—can present annals more cruel, frivolous, and disgusting, than those which preceded the French Revolution. The reign of Charles I. more nearly approximates to that of Louis XIII. than any other historical resemblance between the countries. There was the weak and bigoted monarch; the same gradual encroachments of authority shewn in taxation and severity of punishment; and Strafford, with his decision and his talents, so superior to his master, filled the same place as Richelieu. What prevented the results being similar, but the courageous efforts of a few men, who embodied in themselves the energy and the sincerity of the English character? One great and encouraging lesson may, above all else, be drawn from thus going back upon their labours: it is the certainty of working out its ultimate fulfilment that belongs to high and judicious endeavour. The seed of a tree or of a great principle is never sown in vain; sooner or later it is sure to come to fruit. The man who enters political life as a discoverer and a regenerator, must be prepared for delay and for disappointment; his must be "a further looking hope;" but it is also one "that sees, as from a tower, the end of all." Could Eliot, Pym, and Hampden, have arisen from their graves during the reign of Charles II., how bitter would have been the disappointment, and

how hopeless would have seemed the cause for which they laboured! but let them have risen again, and they would have seen another revolution, bloodless and triumphant, the true principles of which are all that we require even in the present day.

As it is impossible for our limits to trace the chain of reasoning which connects the beginning with the end of each career, we shall only give those slight extracts which will indicate what they cannot fully shew, and which will, at least, serve to stimulate curiosity to what so well merits deep attention. It was scarcely in the speech of a Puritan that we expected to find one of the most exquisite and noble definitions of love.

"I know love to be the root and spring of all other passions and affections. A man therefore hates, because he sees somewhat, in that which he hates, contrary to that which he loves; a man therefore is angry, because he sees somewhat in that wherewith he is angry, that gives impediment and interruption to the accomplishment of that which he loves."

*Monopolies.*—"The first notice of coal as an article of export is made thus:—'My lords of Dorset and Holland have obtained a beneficial suit of the king, worth better than 1000*l.* a-year apiece to them, for sea-coal exported.' Then we are startled by the following:—'We have very plausible things done of late. The book called the declaration of the king's for rectifying of taverns, ordinaries, bakers, ostleries, is newly come forth. I'll say no more of it; your agent here will send it to your lordship. All back-doors to taverns on the Thames are commanded to be shut up; only the Bear, at the bridge-foot, is exempted, by reason of the passage to Greenwich. To encourage gentlemen to live more willingly in the country, all game fowl, as pheasants, partridges, ducks, as also hares, are by proclamation forbidden to be dressed or eaten in any inns, and butchers are forbidden to be graziers.'"

*First introduction of Hackney-coaches.*—"The first introduction of hackney-coaches is next commemorated by Mr. Garrard:—'Here is one Captain Bailey; he hath been a sea-captain, but now lives on the land about this city, where he tries experiments. He hath erected, according to his ability, some four hackney-coaches, put his men in a livery, and appointed them to stand at the maypole in the Strand, giving them instructions at what rates to carry men into several parts of the town, where all day long they may be had. Other hackney-men seeing this way, they flocked to the same place, and perform their journeys at the same rate: so that sometimes there is twenty of them together, which disperse up and down, so that they and others are to be had anywhere.'—But now, within two short months of this date, during which time the plan, serving as a comfort and luxury to the great mass of the people, had succeeded to an extra-

ordinary extent, we find Garrard mentioning 'a proclamation coming forth about the reformation of hackney-coaches, and ordering of other coaches about London; nineteen hundred was the number of hackney-coaches of London, base, lean jades, unworthy to be seen in so brave a city, or to stand about a king's court.'"

*Absurd Specimen of Speech-making.*—"The lord keeper's speech was in the absurd strain of high prerogative. He observed; that 'his majesty's kingly resolutions were seated in the ark of his sacred breast, and it were a presumption of too high a nature for any Uzzah uncalled to touch it; yet,' he continued, 'the king is now pleased to lay by the shining beams of majesty; as Phœbus did to Phœton, that the distance between sovereignty and subjection should not bar you from that filial freedom of access to his person and council; only let us beware how, like the son of Clymene, we aim not at the guiding of the chariot.'"

*Noble Image of Pym's.*—"Activitie, life, and vigour, are conveyed into the sublimity creatures by the influence of heaven; but the malignitie and distemper, the cause of so many epidemical diseases, doe proceed from the noysome vapours of the earth, or some ill affected qualities of the aire, without any infection or alteration of those pure celestiall and incorruptible bodies."

*Liberty of Conscience.*—"No impositions are so grievous as those that are laid upon the soule."

*Fine Passage in one of Pym's Speeches.*—"This (hee said) we might undertake with comforte and hope of successe: for though there be a darknesse upon the land, a thick and palpable darkness, like that of Egypt; yet, as in that the sunne had not lost his light, nor the Egyptians their sight (the interruption was only in the medium), so with us there is still (God be thanked) light in the sun—wisdom and justice in his majestie—to dispell this darknesse; and in us there remains a visual faculty, whereby we are enabled to apprehend, and moved to desire, light. And when we shall be blessed in the enjoying of it, we shall thereby be incited to return his majestie such thanks as may make it shine more cleerely in the world, to his owne glory, and in the hearts of his people, to their joy and contentment."

*The Law.*—"The law is that which puts a difference betwixt good and evil, betwixt just and unjust. If you take away the law, all things will fall into a confusion. Every man will become a law to himself, which in the depraved condition of human nature, must needs produce many great enormities. Lust will become a law, and envy will become a law, covetousness and ambition will become laws; and what dictates, what decisions such laws will produce, may easily be discerned in the late government of Ireland!"

*Noble Image.*—"Shall it be treason to embrace the king's coin, though but a piece of twelve-pence or sixpence? and must it not needs be the effect of a greater treason to embrace the spirit of his subjects, and to set up a stamp and character of servitude upon them, whereby they shall be disabled to do anything for the service of the king and commonwealth?"

We spoke very highly of the predecessor to this volume: we have now only to echo that opinion. Mr. Forster has shewn as much industry in collecting material, as judgment in arranging it, and we heartily congratulate him on the present publication.

\* Mr. Browning has worked upon the same noble thought in his poem:—

"All love renders wise  
In its degree; from love which blends with love—  
Heart answering heart—to that which spends itself  
In silent mad idolatry of some  
Pre-eminent mortal—some great soul of souls—  
Which ne'er will know how well it is adored!  
Love is never blind, but rather  
Alive to every the minutest spot  
That mars its object, and which hate (supposed  
So vigilant and searching) dreams not of.  
Trust me,  
If there be friends who seek to work our hurt,  
To ruin and drag down earth's mightiest spirits,  
Even at God's foot, 'twill be from such as love—  
Their zeal will gather most to serve their cause,  
—And least from those who hate."

*Paradise Lost, part 3.*

*A Short Visit to the Ionian Islands, Athens, and the Morea.* By Edward Giffard, Esq. 8vo. pp. 400. London, 1837. Murray.

"THE more haste the worse speed," says the adage; not so with our young and intelligent travellers. They had, indeed, short time, but they employed it well; and this volume is an honourable testimony to the talent and enterprise of its author, and his companion, Mr. Newton, and an interesting proof how much may be seen and done within three little months. Between the 3d of January and the 24th of March, our voyagers steamed from and returned to Falmouth, visiting, in the meanwhile, Cadiz, Gibraltar, Malta, the Ionian Isles, Corfu, the Morea, Corinth, Athens, Napoli, Tirgns, Argos, Tripolitza, Vourlia, Messene, and many adjacent and intermediate places; of which they have given a very unassuming and clever account. The style is easy enough; and, without venturing into the deep researches of a Stuart, a Clarke, or a Leake, we were really surprised to find so much of novelty gathered from so rapid a glance as our countrymen must have had of the memorable objects through which they passed. The mind of Mr. Giffard seems to have been as active and potential as the steam to which he owed so much of his facilities; and the pencil of Mr. Newton has adorned the volume with several very charming illustrations.

We shall not follow their flight, but simply detach a fragment or two by the way, to shew how well the task is executed. At Delphi we are told—

"The Castalian Spring itself appears in the unpoetical shape of a parallelogram, which has been obviously formed for the purpose of a bath (a very shallow one), in which, as we read, the Pythia performed her ablutions before she ascended the sacred tripod. We, according to custom, drank of the Castalian stream, but we understand that the benefit of its inspiration depends on the posture in which the specific is taken: if the votary stoop his lips to the fountain, the effect is one thing; if he scoop up the sacred water in his hand, it is quite another. I do not recollect which mode is supposed to confer the inspiration, but, as I stooped to drink, I fear my readers will have discovered that this was not the favourable attitude. I think one of the tragedians, though I have not been able to discover the passage, mentions that Œdipus, when he came to consult the oracle, sat by the fountain, under the shade of a plane-tree; and if my recollection of this incident be correct, it is singular that there is, close to the fountain, the stump of a plane-tree, now in the very last stage of decay, and, no doubt, of great antiquity; not, of course, that which the poets described, but a tree may have been propagated here successively on the spot, and cherished for the sake of old traditions."

At Corinth a different tale is told.

"Climbing over masses of masonry and by ruined walls, we at length arrived in the main streets of Corinth: here there was some little appearance of life and trade, of which the suburbs gave no promise; houses were building, and shops were opened, in some of which we recognised the handiworks of Birmingham. We asked for the khan (for that Turkish appellation prevails in Greece), and, on entering it, our host informed us that he had porter, —ay, genuine London porter!—this was a luxury we dreamed not of, and which our walk made doubly agreeable. Mr. Burgess, a former traveller (whose Itinerary I much regret not having known before we began ours), describes this man as a 'villanous Cephaloniot.' He

does not state why he bestows this epithet upon him; but the following melancholy and mysterious occurrence is not calculated to improve the reputation of his hotel. The purser of his majesty's ship Portland, while the ship was at anchor at Calamachi, started with some brother officers for a walk to Corinth over the isthmus, in the month of August last, 1836. When ascending the Acro-Corinthus, he left his own party, joining another to get on faster. In about an hour he descended, passing his former party, to whom he said, 'he had seen enough,' and returned to the town, where a Greek gentleman, of whom he inquired for the hotel, conducted him to within fifty yards of it, and there left him. This occurred at nine o'clock in the morning, and since that time nothing has been discovered which can give a clue to the fate of this unfortunate gentleman, though every exertion has been made, both by his brother officers, and the authorities, and inhabitants of the town."

A sketch of the Peiræus is very lively.

"At daybreak we were up, and ready to land, long before the permission to do so was granted us. In the Peiræus, the descendants of the victors of Salamis could now boast but of two small Athenian vessels of war, while the flag of England, a country whose very existence was unknown to Themistocles, floated on two splendid specimens of her navy, the Portland and Medea, one in attendance on each of the Gothic kings who are now the rulers of the destinies of Greece, the King of Bavaria, and his son, Otho, whose name, as King of Greece, sounds in our ears somewhat unclassical—a kind of political false quantity. Russia also and France were represented by ships of war; and of merchant vessels of various nations there was a fair sprinkling."

We shall conclude with an interesting notice of recently discovered Athenian antiquities; and more is expected when the workmen employed in excavating reach the original levels. At present Mr. G. says,

"These excavations may, it is to be hoped, lay bare the foundations or bases of some of those numerous temples and monuments, and perhaps discover even some of the innumerable statues, which we are told existed in former times on a spot—peopled, if I may use the expression, with the gods and heroes of Athenian mythology and history. We read, that after an extensive spoliation by Nero, three thousand statues still remained in the Acropolis. Perhaps the most valuable of all, that of Pericles himself, which we know stood here, may have escaped Nero, and be even yet recovered; or what, if the Graces, by the hand of Socrates himself (who was in early life a sculptor), which stood in the Acropolis, should be found? This is not much more improbable than some corroborations of ancient narratives and traditions which have already been discovered. For instance, Alexander the Great was said to have erected in the Propylæa a statue to Aristotle. This, considering Aristotle's unpopularity at Athens, seemed not probable; but Mr. Pittakys (p. 247) has found in the rubbish of the Propylæa a marble fragment of a pedestal, with this inscription:

..... ΣΟΦΙΗΣ ΗΓΗΤΗΡΑ ..... ΚΑΕΟΣ.....  
ΑΡΙΣΤΟΤΕΑΗ ..... ΡΟΣ.....  
That is

..... OF WISDOM LEADER ..... GLORY...  
TO ARISTOTLE .....

The three last letters of the original inscription,—ΡΟΣ, are probably the termination of the name of Alexander. At all events, mutilated as the inscription is, it affords incontro-

vertible evidence of the accuracy of Pausanias. Another similar discovery, not quite so interesting, but important as corroborative of Pausanias, is this: he states (Att. xxii. 8) that 'at the entrance of the Acropolis is a statue of Mercury, which they call ΕΡΜΗΣ ΠΡΟΠΥΛΑΙΟΣ—*Hermes Propylæus*, or Mercury before the gate.' Mr. Pittakys (p. 258) found on the very spot designated by Pausanias a fragment inscribed

ΕΡΜΗΠΡΟΠΥΛΑΙΩΝΗΠΟΛΙΣ;

clearly denoting, that it was a dedication by

THE CITY, TO HERMES PROPYLÆUS.

Another is still more interesting. Pausanias says, that near the Temple of Diana in the Acropolis, was a statue of Enobius, who had moved the decree recalling from exile the historian Thucydides, the son of Olorus. The text of Pausanias is here very obscure; Mr. Pittakys (272) collects from it, that there was also a statue of Thucydides himself near that of his friend. I see no warrant for this interpretation; but the main fact is clear, that here stood a statue in some way commemorative of the decree for the recall of Thucydides. Now, on this same spot has been lately found the fragment of a pedestal inscribed

ΘΟΥΚΥΔΙΔΗΣ ΟΛΟΡΟΥ

THUCYDIDES, THE SON OF OLORUS.

This was probably a fragment of the inscription of the statue either of Enobius, who obtained the recall of Thucydides, or of the historian himself. These instances, which I hope my readers will agree with me in thinking equally interesting and surprising, must create a very keen anxiety for the continuance of the researches of the Greek government. Nothing before discovered can equal these specimens as to individual identity."

Need we repeat the well-earned compliment to a young author on his first attempt; after we have adduced such examples as these of his taste and ability?

*Hours at Naples: and other Poems.* By the Lady Emmeline S. Wortley. 8vo. pp. 224. London, 1837. Saunders and Otley.

THERE is a charming German allegory, which represents the angel of the flowers as sleeping one summer noon in the "sweet shadow of the rose." On awakening from his fragrant slumber, he says,—

"For the soft shelter yielded me,  
Ask what thou wilt, 'tis granted thee."

The rose's entreaty was for another grace; and

"O'er the rose  
A veil of moss the angel throws."

Even so does the spirit of poetry rest beneath the shadow of life's loveliest things; and even so does it only awaken to add beauty to the beautiful. A woman's higher nature is full of poetry, generous, affectionate, and spiritual; it is this nature which gives its charm to the writings of Lady Emmeline Wortley. The mechanism of the verse is sometimes careless; and more art would often heighten the effect; but there is the true feeling,—enthusiastic; elevated, yet touching. How true, and how sweet, are the following lines to her child, when "wandering in a foreign land!"

"My child! my child!—I am not near thee now,

To part the hair that clusters o'er thy brow,

And plant ten thousand kisses there—to view

Thy fairy joys, and, ah! to share them too:

To watch thy golden slumbers when thou'rt laid

In innocence's vesture pure arrayed—

Like a tired bird within its warm sweet nest—

And all thy raptures are composed to rest!

And, oh! to soothe thy little sorrows still,

For infancy is not exempt from ill!

Though soon effaced from its transparent thought

The shadows there, by some slight grievance brought,

While its expanding and upspringing mind  
Still forward flies, and leaves all pain behind.  
My child! the music of thy laughter now  
I dream of—not a heart thy brow  
Wander ten thousand meanings new and sweet.  
I may not see them—may not guide thy feet  
To spots of pleasantness, now that the Spring,  
That calls to life each bright and blooming thing,  
Is bursting over England's golden fields,  
Till every bank a wealth of blossoms yields  
For childhood's dimpled hands! 'Tis glorious here  
In this warm sunlit Italy—most clear,  
Most exquisite the pure and perfumed air,  
The sky unshadowed, and the sunshine fair;  
And fair the almond-blossoms clustered close  
Upon the loaded bough—while many a rose  
Trails its resplendent wonder, richly bowed  
Beneath its beauty as beneath a cloud,  
Along the trellised walk or fountain side,  
A dazling trophy—Nature's loveliest pride.  
But, oh! my child, my child! I fain would be  
Now wandering 'midst our English haunts with thee,  
Amongst those cowslip-scattered fields so bright,  
They flash one glistening lake of living light."

Again, how the heart gushes forth in the  
address to her "own fair home in England!"

"How well I know, distinctly to recall  
Thy various scenes—thy different features all!  
No little knoll is there—no tiny nook,  
On which even now I cannot clearly look!  
And nothing that belongs to thee but brings  
To me a joy that round my heart's core clings.  
And, oh! no trivial circumstance and slight,  
But yields me some warm transport of delight:  
How well I know each dim and dewy bed  
Where the rather snowdrop hangs its fragile head;  
Or where the frail anemone's meek flower  
Looks meet to grace a fairy's favourite bower;  
Or where the primrose constellations shine,  
On the mossed bank, or by the path's mazed line,  
In paly brilliancy soft, calm, serene,  
And throw a new enchantment o'er the scene;  
Or where the daffodils, in proud array,  
Blaze back the sunshine and bespangle the day;  
And where the rarer lily of the vale,  
Transparently, ethereally pale,  
Clad—a sweet Amazon in silvery mail—  
And armed with shield of emeralds dark and deep,  
Doth all the air in softest fragrance steep;  
Or, dearer, yet, than these—than all beside,  
Where the surpassing violet doth abide!  
As the branched veins of Cytherea, blue,  
And with her musk'd sighs, pure perfume too.  
Even precious to the ambrosial-streaming hair,  
Whose cloud of beauty veiled her shoulders fair.  
The violet! why the very name exhales  
An odour, and breathes forth delicious tales:  
The violet! why the very thought appears  
To sun away the shadows of dark years,  
To give me back a world of love and hope."

We conclude with some charming stanzas—

"I listen for thy steps alone,  
I listen for thee, dearest one!  
With throbbing heart and straining ear,  
Lo! I await that step so dear.  
I listen for thee tremblingly,  
I start, I shrink, I shrink and sigh;  
Yet hope lives fluttering in my heart,  
Through every pulse, through every part.  
Yes, hope's delicious, rapturous thrill,  
Wakes in mine anxious bosom still!  
But when that step indeed draws near,  
My hope is changed into a fear!  
Even so it is with fervent love,  
Such strife the impassioned heart must prove;  
It longs, it hopes, it doubts, it dreads,  
And fast each fresh emotion spreads.  
Each fresh emotion in the heart,  
Through every pulse, through every part,  
Full quickly wins its certain way,  
And makes that trembling heart its prey.  
Those we most love, we most must dread—  
Those o'er whom each fond thought is shed—  
For well their fearful power we know,  
To steep our souls in joy or woe.  
I weep, I watch—I start, and shrink,  
And soon my throbbing pulses sink;  
To meet thee, love, I may not dare,  
Yet how thine absence can I bear?  
It is a wild and wayward war:  
I pine for thee still when afar—  
And yet, when thou indeed art near,  
My hope is changed into a fear!"

The feminine intellect now takes a high position in the literature of our country—it never takes a more fitting or more graceful one than when accompanied, as it is in Lady Emmeline, by a nobility of sentiment, and a truth and purity which give their own grace, and their own dignity.

*Sketches in the Pyrenees; with some Remarks on Languedoc, Provence, and Corsica.* By the Author of "Slight Reminiscences of the Rhine," and "The Gossip's Week." 2 vols. 12mo. London, 1837. Longman and Co.

WE have so lately scaled the Pyrenees in the interesting company of Mr. Murray (and have, indeed, the concluding portion of our review of his work still standing in type, waiting for room), that we need not go into the present production at such length as we might otherwise have done.

Like the preceding volumes from the same pen, these pages are such as reflect honour on the feelings, taste, and intelligence of an accomplished lady. What she sees with an eye open to the natural, picturesque, or beautiful, she describes in a very agreeable style, and the narrative is well checkered with lively anecdotes, legends, remarks, and reminiscences. To this brief preface we shall simply add a few brief selections, and leave the work to that share of public favour to which its variety, playfulness, good sense, and pleasant information, so justly entitle it.

"Nothing," observes our friend, "so comfortable as a belief in compensations. I have just now been talking to a woman, who told me wonders of Toulouse, where she had lived formerly; Caunteretz was, of course, a dull spot compared with it, but then you were not tempted to put into the lottery: this was the equivalent. The compensation sometimes lies, like truth, at the bottom of the well, and it is not every one who can draw it up; sometimes *cela saute aux yeux*, as the French say. I will not name names, but once upon a time there was a certain man whose father died at the age of eighty; the son, a philosopher and scholar, received with dignity the consolations of his friends, and thanking them graciously, added, 'C'est un grand malheur, une grande perte; mais, enfin, mon père était octogone.' This may be called an eight-sided compensation. The mountaineers of the Pyrenees are, like all other dwellers in remote places, addicted to superstition, and believers (they say) in all those old credences at which the more instructed laugh. Wise men, I know, consider superstition as a stupid thing, at once the root and flower of ignorance; but I, who am not wise, cannot help thinking that it is sometimes a garment to the poor, a sort of Providence, that hangs berries on the dry bushes that tangle in their path, covering their briery scantiness with a little show of colouring. Besides, it is a belief, and that is in itself addressing; those who acknowledge supernatural agency, will also acknowledge a directing power."

Another—a mountain sketch.

"Stay another week," has been more than once said to us, "and you will see the shepherds returning from the high pastures with their flocks and their dogs, sole companions of their lonely sojourn in the mountains; you will hear the music of their pipes, and witness their meetings—after five or six months of utter solitude—with their families and friends." What images of pastoral and patriarchal life did this simple picture present! what Bible recollections did it draw out from their hiding-places! we talked of nothing but the coming of the flocks, and looked out for them as children do for the Hallowe'en, or the Twelfth-night gambol. Yesterday evening, the sound of sheep-bells, approaching from a distance, came suddenly upon us. What could it be? It was yet some days to the expected one; but, looking from my window, I saw the sheep descending the hilly street, just as they do in the

journeys of the patriarchs in the old tapestries, each flock accompanied by a guard of fierce dogs, of that superb race peculiar to the Pyrenees, and every shepherd armed with a short club: good against wolves, we thought, but of course a mere club of parade on the present occasion. The sheep were fat, the tones of their bells deep and sonorous; the dogs magnificent, and the shepherds like the shepherds of Sechem. There was no pipe, it was true; no household or heartfelt greeting; no long look-out, with love and joy in it, for those who had tarried behind: but at the moment we scarcely missed these auxiliaries; the bells made their own sweet music, and there was something simple and antique in the scene which became its grave complexion. Suddenly a shepherd sprang from behind the ranks, and, brandishing his club, levelled a blow at another who was a step or two before him: it was returned with fury, and in a moment the aggressor was laid prostrate. He rose instantly, covered with blood: I closed my window, but the cries and sounds of blows came through it. At length, the *gens-d'armes* appeared, separated the combatants, and conveyed them both to prison; and thus ended part the first of the pastoral drama, and the only scene of violence which has been enacted this season in the mountains."

One example more; a sketch of the *Cagots*.

"Asté is an agreeable village in a sweet position, but with an under-population of goitrous throats and idiotic faces painfully demonstrative. There was a poor soul, a boy, with the genuine fool's coat, all of a size from top to bottom, buttoned behind, and a bit of red rag in his cap, who amused himself by dipping first one foot and then the other in a pool of dirty water. A jeering girl laughed at him, and poor Motley responded to her mirth with a galvanic grin; the jaw opening as on a hinge, and snapping back again into its position like a spring-lock. The barrenness of utter idiotism is less painful to the heart than this faint, sad show of answering intelligence; but a woman near me said he was happy—happier much than she was. This boy was not a cagot, but simply a crétin (the names are often applied indiscriminately), a being deprived of the faculty of reason, and but faintly endowed with that of instinct. The real cagot is rarely seen in the social haunts of man: the small remains of this mysterious race, unaccounted for in the history of nations or of people, though no longer exposed to the barbarous persecutions of their fellow-beings, are still strangers to their hearths, and aliens from their intimate communion. They can, it is true, enter a church at its great gate,\* and kneel down with others at the altar; if they cannot pay for shoes, they need not wear them, and are no longer obliged to bear the badge of their ignominy (the foot of a goose) upon their garments. But the cagot, like the pariah, has still his home in the desert, where he dwells with others of his long-proscribed race. No other smoke mixes with that which rises from his humble cabin; no other hand presses his in amity. Debased by persecution until the traces of his human nature have been nearly effaced from his pale and stupefied countenance, and almost, if that countenance may be allowed to testify truly, from his mind also; condemned to perpetuate hereditary taints, hereditary deformities, created by persecution and made innate by ages of misery, and by the concen-

\* "Formerly, the cagots were only allowed to enter by a small side-door, through which contaminated aperture no others ever passed; and were forbidden to go barefooted, lest the stones which they had trodden on should be infected by the contact."

tration within its own limited channel of that blood with which no other blood would mingle, it is no wonder that the cagot should have become mentally and physically degraded below the common standard of humanity. Who were the cagots originally? and what was the terrible crime—perhaps misfortune—which put them under the ban? By what right were they cut off from all communication with their species, sold, bequeathed? walled out like lepers, forbidden to pray with other men, denied the rights of Christian sepulture? and yet, as it seems—for no evidence exists to the contrary—untainted by any contagious malady; and, if ever rebels against the Christian faith, no longer so, but Catholics, like their persecutors, when in the earlier periods of the middle ages we find them noticed as a race apart, an undesignated race, existing in a state of reprobation, the cause of which was, like their origin, involved in darkness. Were they, as Ramond supposes, a remnant of the Goths, paled out from all communication with those who had been outraged by their cruelty? Were they Jews, or Arians, or Saracens fallen into the hands of their conquerors? There exists no record of their first coming; they did not appear at different, though not distant, periods, like the tribe now known all over Europe by the various names of Bohemian, Tzingani, Zingari, Zinguer, Gitano, Cygana, or Gipsy: they had not, like that mysterious race, a language, a complexion, a physiognomy, obviously and entirely foreign and peculiar to themselves; they had no traditions, no remnants of ancient customs, nor has any record come down to us of the crime, whether against God or man, for which they have been so horribly punished. According to some old writers, the cagots were a tribe of Goths banished from Spain as an infected race, in which some terrible malady had become hereditary. Bellefleur believes them to be the descendants of the Visigoths, defeated by Clovis in the terrible battle of Vouille, when Alaric was slain and his army annihilated; and those who follow this opinion derive the name of cagots from *Caas Goths*—*Chiens de Goths*. I have read, that in ancient acts they were called *Chrétiens Gezetains*, which name Marca supposes was given them from Giezza, a leper punished by the prophet Elisha for false dealing. The same learned historian considers this miserable race to be a remnant of the Saracens, who, called into Spain by Count Julien to avenge the dishonour of his daughter Florida, subdued the country, and from thence carried their victorious arms into France; but being defeated with tremendous slaughter between Tours and Poitiers by Charles Martel, fled into the mountains of the Pyrenees; where, degraded below the standard of humanity by the cruelty of their conquerors, they were suffered to exist as living expiations of an audacious act, to which ill success had given the character of an atrocious one. In support of this opinion, it is said, that the plain between Tarbes and Lourdes, called the *Lanne Maurinne*, or *Lande des Maures*, takes its name from a desperate battle fought there in the early part of the eighth century, between the fugitive remains of the Saracen army and the people of the country, who, commanded by their chief, Meselin, rose up against and destroyed them. The tradition adds, that the few who escaped, finding all the passes into Spain closed against them, adjured Mahometanism, and, giving themselves up to inevitable degradation, became (as some believe) the root of this unfortunate race. Some remains of the cagots are said still to exist in Guienne, and

also in Brittany and Navarre, as well as in the Pyrenees; but every where they have been the victims of the same frightful persecutions. When Ramond visited the mountains in 1787, something of compassion had begun to mingle with the feeling of horror which they had so long inspired; but this charitable sentiment had come too late to be of much comfort to these unhappy creatures. Goitre, and the peculiar paleness and abasement of countenance which indicates the disposition to *créténisme*, or its existence, had, as I have already observed, become hereditary among them, and served to prolong that feeling of alienation which still existed, though in a less inveterate form, towards this outcast tribe. The small door, through which alone they had been for ages permitted to enter a church, was, it is true, walled up; they might work, and buy, and be taken to their graves like other people; but no one would intermarry with them, and their dwellings were still apart from the habitations of other men. At present their existence seems altogether forgotten, indeed so entirely, that many consider the race as extinct; and all whom I have questioned on the subject, have either been of that opinion, or, at most, answered doubtfully, with a vague idea that there might be still a remnant existing in some remote valley, but without any thing like certainty. Indeed, the subject has long ceased to excite either interest or curiosity, and yet it is well calculated to awaken both,—curiosity, by the story of a people, of whose origin neither contemporary record or preserved tradition makes mention; a people publicly persecuted, as if for some unimaginable crime, yet not a notice extant—written or remembered—of its nature or commission; and interest, by the fate of this same wretched caste—a bruised and trampled-on race of fellow-creatures, in whom even the brute abjectness, the utter abasement to which injustice had reduced them, could not extinguish the sentiment of affection, or weaken the power or permanence of those tender and domestic feelings which Ramond, who visited their huts, so touchingly and beautifully describes in a passage often quoted; where, alluding to the dim retreats in which they were used to hide themselves, he says, '*J'y ai trouvé des frères qui s'aimaient avec cette tendresse, qui est un besoin plus pressant chez les hommes isolés. J'y ai vu des femmes, dont l'amour avait quelque chose de soumis et de dévoué, qu'inspirent la faiblesse et le malheur.*' Poor wretches! how touching it is to see this first, last, sweetest feeling of the heart lingering still within it, when all other human ones have been nearly trampled out of their sanctuary. And what a lesson to those who curse Providence in the impious rage of disappointed vanity, is the cagot's patient maintenance of religious faith, his pious observance of religious duties, his unshaken trust in God's promises! For him the iron chain, which he has worn on earth, becomes a golden one, as, joining itself to the links of hope, it graduates upwards until it ends in heaven!"

*The Doctor, &c. Vol. IV. 8vo. pp. 392. London, 1836. Longman and Co.*

We are always well pleased to see the *Doctor*, though it fortunately happens that nothing ails us. But it is his very agreeable company which we desiderate and enjoy. We like his outpourings, *ex abundantia*, of various and copious reading; his grave moral; his touches of feeling; his happy illustrations; and even his quips, cranks, and quaintnesses. Not that he is always equally

amusing; who is? nor that he does not sometimes, as it were, lug in quotations by head and shoulders; but that his general observations are, as the vein runs, those of an extremely well-informed mind and of a finely cultivated intellect, instructive or entertaining; while his humour tinges the whole with an originality which makes his lessons (we wish Doctors would make their physics so!) go down most agreeably.

Of so very excursive and very desultory a volume, it is out of our power to convey a perfect idea: all we can do is to offer a sample here and there, which will shew something of its character, and, we trust, recommend it to the favour it so richly deserves. The author mentions a *M. le Cour*, "who, having raised a double tuberose from the seed, and propagated it by the roots, till he had as many as he could find room to plant, destroyed the rest as fast as they were produced, that he might boast of being the only person in Europe who possessed it:" and then goes on to relate another floricultural anecdote.

"*M. Bachelier* (he says) kept in like manner some beautiful species of the anemone to himself, which he had procured from the East Indies, and succeeded in withholding them for ten years from all who wished to possess them likewise. A counsellor of the parliament, however, one day paid him a visit when they were in seed; and, in walking with him round the garden, contrived to let his gown fall upon them: by this means he swept off a good number of the seeds; and his servant, who was apprised of the scheme, dexterously wrapt up the gown and secured them."

Literary morsels always attract our regards, and we copy the author's two versions of a whimsical alphabet, applied to periodical and common literature.

Our Doctor [*i. e.* Dove of Doncaster] flourished in the golden age of magazines, when their pages were filled with voluntary contributions from men who never aimed at dazzling the public, but came each with his scrap of information, or his humble question, or his hard problem, or his attempt in verse. In those days, A was an antiquary, and wrote articles upon altars and abbeys and architecture. B made a blunder, which C corrected. D demonstrated that E was in error, and that F was wrong in philology, and neither philosopher nor physician, though he affected to be both. G was a genealogist: H was a herald, who helped him. I was an inquisitive inquirer, who found reason for suspecting J to be a jesuit. M was a mathematician. N noted the weather. O observed the stars. P was a poet, who piddled in pastorals, and prayed Mr. Urban to print them. Q came in the corner of the page with his query. R arrogated to himself the right of reprehending every one who differed from him. S sighed and sued in song. T told an old tale, and when he was wrong U used to set him right. V was a virtuoso. W warred against Warburton. X excelled in algebra. Y yearned for immortality in rhyme; and Z in his zeal was always in a puzzle. Those were happy times when each little star was satisfied with twinkling in his own sphere. No one thought of bouncing about like a cracker, singing and burning in the mere

\* Of this *apropos*. A lady, as the anecdote is told, lately consulting Sir C. C.—ke, after due examination, &c., said to him, as he sat down to write the prescription,—"I hope, sir, you will not be offended, nor think me silly in the request; but I have so dreadful a dislike to nauseous medicine, that it would oblige me greatly if you would make this as little disgusting as possible." "Ma'am, replied Sir Charles, you must take what is ordered for your good; my name is not Gutter." "Mine is," meekly rejoined the patient.

wantonness of mischief, and then going out with a noise and a sink. But now,

—'when all this world is woeen daily wome,'

see what a change has taken place through the whole Christcross Row! As for A, there is Alaric Watts with his 'Souvenir,' and Acker-man with his 'Forget-Me-Not,' and all the rest of the Annual Albumen. B is a blackguard, and blusters in a popular magazine. C is a coxcomb, who concocts fashionable novels for Colburn; and D is a dunce who admires him. E being empty and envious, thinks himself eminently qualified for Editor of a *Literary Gazette*. F figures as a fop in Knight's 'Quarterly.' G is a general reformer, and dealer in Greek scrip. H is Humbug and Hume; and for my I, it may always be found with Mr. Irving and Mrs. Elizabeth Martin. J jeers at the clergy in Mr. Jeffery's journal. K kicks against the pricks with his friend L, who is Leigh Hunt, the Liberal. M manufactures mischief for the *Morning Chronicle*. N is nobody knows who, that manufactures jokes for John Bull, and fathers them upon Rogers. O is an obstreperous orator. P is Peter Pindar, and is now Paul Pry. Q is the *Quarterly Review*, and R S Robert Southey, who writes in it. T tells lies in the *Old Times*. U is a Unitarian, who hopes to be Professor of Theology at the London University. V is 'Vivian Grey.' W is Sir Walter Scott. X the Ex-Sheriff Parkins. Y was the Young Roscius: and Z,—Zounds, who can Z be, but Zachery Maccauley?"

The following, relating to the fair sex, is a pleasant bit of miscellany.

"The reader will please to observe, that though all worthless books are bad, all bad books are not necessarily worthless. A work, however bad, if written as the 'Carcel de Amor' was, early in the sixteenth century, and translated into Italian, French, and English, must be worth reading to any person who thinks the history of literature (and what that history includes) a worthy object of pursuit. If I had not been one of those who, like Ludovicus Bosch (my friend in the caxon), are never weary of hunting in those woods, I could not, gentle reader, have set before you, as I shall incontinently proceed to do, the fifteen above-mentioned, and here following reasons, why you will commit a sin if you ever speak in disparagement of womankind. First, then, Leriano, the unhappy hero of Diego de San Pedro's tragic story, says, that all things which God has made are necessarily good; women, therefore, being his creatures, to calumniate them is to blaspheme one of his works. Secondly, there is no sin more hateful than ingratitude: and it is being ungrateful to the Virgin Mary, if we do not honour all women for her sake. Thirdly, it is an act of cowardice for man who is strong, to offend woman who is weak. Fourthly, the man who speaks ill of woman brings dishonour upon himself, inasmuch as every man is of woman born. Fifthly, such evil speaking is, for the last-mentioned reason, a breach of the fifth commandment. Sixthly, it is an obligation upon every noble man to employ himself virtuously both in word and deed; and he who speaks evil incurs the danger of infamy. Seventhly, because all knights are bound by their order to shew respect and honour to all womankind. Eighthly, such manner of speech brings the honour of others in question. Ninthly, and principally, it endangers the soul of the evil speaker. Tenthly, it occasions enmities and the fatal consequences resulting therefrom. Eleventhly, husbands, by such

speeches, may be led to suspect their wives, to use them ill, to desert them, and, peradventure, to make away with them. Twelfthly, a man thereby obtains the character of being a slanderer. Thirteenthly, he brings himself in jeopardy with those who may think themselves bound to vindicate a lady's reputation, or revenge the wrong which has been done to it. Fourteenthly, to speak ill of women is a sin, because of the beauty which distinguishes their sex, which beauty is so admirable, that there is more to praise in one woman than there can be to condemn in all. Fifteenthly, it is a sin because all the benefactors of mankind have been born of women, and, therefore, we are obliged to women for all the good that has ever been done in the world. Such are the fifteen reasons which Diego de San Pedro excogitated to shew that it is wrong for men to speak ill of women; and the twenty reasons which he has superinduced to prove that they are bound to speak well of them, are equally cogent and not less curious."

An interesting, though jocular disquisition touching Job's wife succeeds; but we have only room to advise its perusal as a piece of curious learning and drollery. The religious tenets of medical men is also a topic which the author treats in his own original manner; and his moralisation on the vanity of fame is of a similar value.

"Is there (he asks) one of my readers in a thousand who knows that Philistea was a Greco-Phœnician, or Phœnico-Grecian Queen of Malta and Gozo, before the Carthaginians obtained the dominion of those islands, in which their language continues living, though corrupted, to this day? Are there ten men in Cornwall who know that Medacritus was the name of the first man who carried tin from that part of the world? What, but his name, is now known of Romanianus, who, in St. Augustin's opinion, was the greatest genius that ever lived? and how little is his very name known now? What is now remembered 'of the men of renown before the Flood?'

"Who now can explain the difference between the Agerorian, the Eratocean, the Epi-gonian, and the Damonian sects of musicians, or knows any thing more than the names of their respective founders, except that one of them was Socrates's music-master? What Roman, of the age of Horace, would have believed that a contemporaneous consul's name should only live to posterity, as a record of the date of some one of the poet's odes? Who now remembers that memorable Mr. Chinch, "whose single voice, as he had learned to manage it, could admirably represent a number of persons at sport, and in hunting, and the very dogs, and other animals,"—himself a whole pack and a whole field in full cry: 'but none better than a quire of choristers chanting an anthem'—himself a whole quire."

"Who was that famous singer, nick-named Bonny Boots, who, because of his excellent voice, or, as Sir John Hawkins says, 'for some other reason, had permission to call Queen Elizabeth his lady:' and of whom it is said in the canonet,

'Our Bonny Boots could toot it,  
Yea and foot it,  
Say lusty lads, who now shall Bonny-Boot it?'

Sir John thinks it might 'possibly be one Mr. Hale.' But what is fame, when it ends in a poor possibility that Bonny Boots, who called the queen his lady, and that queen, not Bergami's popular queen, but Queen Elizabeth, the nation's glorious Queen Elizabeth, the people's good Queen Beas—what, I repeat, is

fame, when it ends in a mere conjecture, that the Bonny Boots, who was permitted to call such a queen his lady, might be 'one Hale, or Hales, in whose voice she took some pleasure.' Well might Southey say,

'Fame's loudest blast upon the ear of time  
Leaves but a dying echo!'

But, alas, even the fame our critique is likely to confer on the author, must be curtailed. We can give only one quotation more; and we select a portion of that amusing essay in which he describes Daniel Dove's theory of progressive existence.

"It will not (he states) surprise the judicious reader to be told that the doctor was a professed physiognomist, though Lavater had not, in those days, made it fashionable to talk of physiognomy as a science. Baptista Porta led him to consider the subject; and the coarse wood-cuts of a bungling Italian, elucidated the system as effectually as has since been done by Mr. Holloway's graver. But Dr. Dove carried it further than the Swiss enthusiast after, or the Neapolitan physician before him. Conceiving in a deeper sense than Le-brun, *que chacun avait sa bête dans la figure*, he insisted that the strong animal likenesses which are often so distinctly to be traced in men, and the correspondent propensities where-with they are frequently accompanied, are evidence of our having pre-existed in an inferior state of being. And he deduced from it a theory, or notion as he modestly called it, which he would have firmly believed to be a part of the patriarchal faith, if he had known how much it resembled the doctrine of the Druids. His notion was that the archæus, or living principle, acquires that perfect wisdom with which it acts, by passing through a long progression in the lower world, before it becomes capable of being united to a rational and immortal soul in the human body. He even persuaded himself that he could discover, in particular individuals, indications of the line by which their archæus had travelled through the vegetable and animal kingdoms. There was a little pragmatical exciseman, with a hungry face, sharp nose, red eyes, and thin, coarse, straggling hair of a yellow cast (what was formerly called Judas-colour), whom he pronounced to have been a ferret in his last stage. 'Depend upon it,' he said, 'no rat will come under the roof where he resides?' And he was particularly careful when they met in the open air always to take the wind of him. One lawyer, a man of ability and fair character, but ready to avail himself of every advantage which his profession afforded, he traced from a bramble into a wasp, thence into a butcher-bird, and lastly into a fox, the vulpine character being manifestly retained in his countenance. There was another who, from sweeping his master's office and blacking his shoes, had risen to be the most noted pettifogger in those parts. This fellow was his peculiar abhorrence; his living principle, he affirmed, could never have existed in any other form than that of a nuisance and accordingly he made out his genealogy thus: a stinker (which is the trivial name of the *phallus impudicus*), a London bug, an earwig, a pole-cat, and, still worsening as he went on, a knavish attorney. He convicted an old major in the West York militia, of having been a turkey-cock; and all who knew the major were satisfied of the likeness, whatever they might be of the theory. One of the neighbouring justices was a large, square-built, heavy person, with a huge head, a wide mouth, little eyes, and a slender proportion of intellect. Him he set down for a

hippopotamus. A brother magistrate of the major's had been a goose, beyond all dispute. There was even proof of the fact; for it was perfectly well remembered that he had been born web-fingered. All those persons who habitually sit up till night is far spent, and as regularly pass the best hours of the morning in bed, he supposed to have been bats, night-birds, night-prowling beasts, and insects whose portion of active life has been assigned to them during the hours of darkness. One indication of this was, that candle-light could not have such attractions for them unless they had been moths. The dog was frequently detected in all its varieties, from the lap-dog, who had passed into the whipper-snapper *petit-maitre*, and the turnspit, who was now the bandy-legged baker's boy,—to the squire's eldest son, who had been a lurcher,—the butcher, who had been a bull-dog, and so continued still in the same line of life;—Lord A.—'s domestic chaplain, harmless, good-natured, sleek, obsequious, and as fond of ease, indulgence, and the fire-side, as when he had been a parlour spaniel; Sir William B.—'s huntsman, who exercised now the whip which he had felt when last upon four legs, and who was still an ugly hound, though staunch; and the doctor's own man, Barnaby, whom, for steadiness, fidelity, and courage, he pronounced to have been a true old English mastiff, and one of the best of his kind. Chloris had been a lily. You saw it in the sickly delicacy of her complexion. Moreover, she toiled not, neither did she spin. A young lady, in whose family he was perfectly familiar, had the singular habit of sitting always upon one or other foot, which, as she sat down, she conveyed so dexterously into the seat of her chair, that no one who was not previously acquainted with her ways, could possibly perceive the movement. Upon her mother's observing one day, that this was a most unaccountable peculiarity, the doctor replied, 'No, madam! I can account for it to my own entire satisfaction. Your daughter was a bird of some gentle and beautiful species, in her last stage of existence; in that state she used always to draw up one leg when at rest. The habits that we acquire in our pre-existent state continue with us through many stages of our progress; your daughter will be an angel in her next promotion, and then, if angels close their eyes in slumber, she will sleep with her head under her wing.' The landlady of the White Lion had been a cabbage, a blue-bottle fly, a tame duck, and a bacon pig. Who could doubt that Vauban had been an earthworm, a mole, and a rabbit? that Euclid acquired the practical knowledge of geometry when he was a spider; and that the first builder of a pyramid imitated unconsciously the proportionately far greater edifices which he had been employed in raising when he was one of a nation of white ants? Mrs. Dove had been a cowslip, a humble-bee, and, lastly, a cushat. He himself had been a dove and a serpent—for 'Dan was a serpent by the way;' and moreover, he flattered himself that he had the wisdom of the one, and the simplicity of the other. Of his other stages he was not so certain,—except that he had probably once been an inhabitant of the waters, in the shape of some queer fish."

All the rest of this is delightful fooling, and relates many remarkable circumstances in the strange annals of human phenomena; but our task is ended, and we have only to repeat, that, though the Doctor proceeds in crablike-wise, as far as his story goes, he is quite as pleasant as ever; and, in truth, we don't care how long he

spins his yarn, seeing that the web is of so many curious and lively patterns.

*The Widow's Offering; a Selection of Tales and Essays.* By the late William Pitt Scargill. 2 vols. 12mo. London, 1837. Smith and Elder.

WE would call public attention particularly to these volumes; they are published for the benefit of the widow and the orphans of one who long contributed to the general amusement and information. Mr. Scargill's is a history only too common; he struggled through life with many difficulties, and he died in the struggle. His wife and children are left to begin a new struggle, embittered by the remembrance of the husband and the father, who went down to the grave sorrowful, and anxious for their sakes. It would be a curious but painful investigation, to inquire into the circumstances under which some of the most entertaining articles in our periodicals are written. They would almost always be found to be the result of want, of feverish hope, and of labour far beyond what would seem to suffice for any individual existence; and yet thousands find in them daily and weekly recreation. Mrs. Scargill has collected together these scattered remains; and how much thought, how much ingenuity and how much information, is contained in these pages! Possessing a singularly clear and pointed style, with great happiness of epithet, Mr. Scargill is a first-rate writer of short papers. We cordially recommend these volumes,—first, for their intrinsic merit,—and, secondly, as bringing forward one of those appeals to general sympathy so rarely made to an English public in vain.

#### MISCELLANEOUS.

*The Curate of Steinholt.* (London, Longman and Co.)—This work has much the appearance of a translation, though it is not stated to be such. If an original, it is curious, and may be an accurate picture of Icelandic manners; but it has little literary or original interest.

*The Wrongs of the Caffre Nation; a Narrative,* by Justus. 12mo. pp. 333. (London, Duncan.)—A zealous vindication of the Caffre nation; and a strong charge against the colonists for systematic encroachment and oppression. The author has drawn his information from many official documents, and other sources, and certainly makes out a striking *prima facie* case.

*A Historical Enquiry into the unchangeable Character of a War in Spain.* 8vo. pp. 76. (London, Murray.)—A very interesting work, and particularly applicable to existing circumstances. The writer contends strenuously against the policy of, and the pamphlet ascribed to, Lord Palmerston. "Spaniards seem to be wise, but are not," (*los Espanoles parecen sabios, y no lo son*), said the Emperor Charles V. who knew them well; and assuredly, their present civil war, with all its miseries and horrors, affords a sad proof that they have not grown wiser since. We cannot help lamenting that England has any thing to do with it.

#### ARTS AND SCIENCES.

##### SOCIETY OF ARTS.

ON Monday, the annual distribution of the rewards given by this Society took place at the Hanover Square Rooms. His Grace the Duke of Sutherland presided, and if, owing to the bad weather, the attendance of ladies was not so numerous as on some former occasions, still, the rooms were crowded. Eighty-five rewards were distributed: of these, twenty-two were in the class Mechanics, and other practical arts; eight in the Fine Arts—amateurs' copies; ten for originals; a like number for artists' copies; and thirty-five for originals. Fifteen of the successful competitors were young ladies. The following is the list in mechanics; and we may here remark, that those distinguished by asterisks are considered the most important.

\* To Mr. James Ryan, 69 Hare Street, Bethnal Green, for his instrument for drying silk in the loom, the silver Isis medal and five pounds.  
\* To Mr. William Webb, 26 Wood Street, Spitalfields, and

to Mr. George East, 5 Turner's Square, Hoxton New Town, for their improved Jacquard machine for weaving figured velvet, two silver Isis medals.

To Mr. Henry Chapman, of the Royal Dockyard, Woolwich, for his improved cross-tree for ships of war, the silver medal.

\* To Mr. J. Bowen, Corkbeg-Cloyne, for his dredging machine, five pounds.

\* To Mr. James Marsh, of the Royal Arsenal, Woolwich, for his percussion tubes for ships' cannon, the silver medal.

To Mr. J. Kingston, of the Royal Dockyard, Woolwich, for his blow-off pipe for marine steam-engines, the silver medal.

To Mr. Isaac Dodds, Mashbro', near Rotherham, for his safe-plug for a steam-boiler, the silver medal.

To the same, for his cast-iron wheel for locomotive carriages, the silver medal.

To Mr. G. A. Patterson, 21 Coppice Row, Clerkenwell, for his repeating motion for a quarter clock, the silver medal and ten pounds.

To the same, for his vertical escapement for pocket watches, five pounds.

To Mr. H. Mapple, 69 Red Lion Street, Clerkenwell, for his escapement for timepieces, five pounds.

To Mr. T. Cole, 23 Upper King Street, Bloomsbury, for his clock escapement and self-adjusting pendulum, the silver medal.

To Messrs. C. and J. Mac Dowall, 21 Church Street, Kensington, for their centripetal dial-plate for clocks, the silver Isis medal.

To W. Talbot Agar, Esq., Elm Lodge, Camden Town, for his instrument for turning over the leaves of a music-book, the silver Isis medal.

To Edward Mammatt, Esq., Ashby-de-la-Zouch, for his writing apparatus for the use of the blind, the silver medal.

To Mr. W. Juggins, 22 James Street, Covent Garden, for his scale-weights of porcelain, the silver Isis medal.

To Mr. James Sperring, Duke Street, Bloomsbury, for his method of locking sliding-doors, the silver Isis medal.

To Mr. Charles Arundel, 8 Great Mitchell Street, St. Luke's, for his improved router, the silver Isis medal.

\* To Mr. Andrew Ross, 15 St. John's Square, for his adjusting object-glass for a compound achromatic microscope, the gold Isis medal.

\* To Mr. T. Slacks, Langholm, for his method of building an obelisk without scaffolding, the gold Isis medal.

\* To Mr. Richard Jones, 75 Leman Street, for his improvement in the apparatus for raising and lowering the diving-bell, the silver medal.

#### ROYAL INSTITUTION: Last Evening.

YESTERDAY week we had the pleasure to hear Mr. Faraday on the early arts. This was the first of a series (if successful, of which there could not be a doubt, though so modestly supposed by this most able and popular lecturer), to be continued next season, upon the early arts, and their principles. Contemplating the deposits of the Red Indians, in Newfoundland, in what a strange condition man was placed, comparatively, with the state to which we have risen. Mr. F. stated, that he was not about to relate the history of the advancement, but to go back to those times when man had made no progress, and consider the mind of man then, and its mode in application. It was a common and constant remark, in what a wonderful way were the different races of creatures protected and preserved. In animals, this knowledge was called instinct; in man, reason. Animals do not possess the faculty to profit by experience: some cases may be found, with reference to a horse and his stable, a bird and its nest; but nothing like to man teaching one another, profiting by the experience of those who had preceded him. Every thing around us is artificial, and we are utterly unconscious what we should be, restored to former ages. Animals were perfect at once: quoting cases to refute which, was a proof that there was no analogy, instances were so rare as to be marked as curiosities. But he would not enter upon moral philosophy; each should make their own application; and he would proceed to inquire how men, in early ages, applied their knowledge, evincing wisdom, contrivance, and ingenuity. The first knowledge devised the means of obtaining food, providing clothing and houses to protect man from the weather. A bird or beast tore its food to pieces and swallowed it—not so man; and the means of dividing his food was the first case of early art.

Mr. Faraday exhibited a splinter of a stone and a cabbage-stalk, which served the Red Indians for a spear, a hatchet, an adze, or a knife. The inhabitants of New South Wales, as well as all nations a little advanced, used stones for cutlery, tools, and weapons; and when first visited, the natives collected the pieces of broken glass bottles, and substituted them for stone, fastening them to wood with hard gum. When men were driven to such expedients as these, a remarkable result presents itself with regard to the choice of the stones. Silica-flints, agate, obsidian, &c. break with a conchoidal fracture. Chalk may be separated in any direction; some stones, with certain facets or divisions; all crystallised matter, rock crystal, volcanic glass, &c. depend upon their lines of cleavage; and the acquaintance with these facts constituted the arts as they existed in early times. Common flint presented a very interesting surface; when struck, it assumed a shape something like a cone. The blow having a tendency to run under the flint, instead of breaking it short off, produces a more or less perfect conchoidal fracture, upon which a sharp cutting edge depends. Complete conical surfaces are developed by blows on rock crystal, agate, &c. A piece of the latter was shewn, which had been delicately struck by Sir F. Chantrey; it presented no break of surface, but the conical fracture might easily be traced internally by a series of air-bubbles, whilst the exterior was apparently solid. These results were the philosophy of stone; and these effects, though, perhaps, not as philosophical results, were known in early times. Glass broke similarly. Mr. Faraday had observed the conchoidal fracture produced on the edges of two plates of glass overlapping each other, by the mere jarring of an omnibus. Cases of the earliest application of this knowledge were, perhaps, to be met with in Mexico. Poor Davidson had given, at the Royal Institution, a few short notices of Mexican pyramids. Humboldt, also, speaks of the ruins of two, upon the steps of which were found pieces of obsidian, supposed to have been used by the priests in sacrificing. Obsidian had been an object of mining operations of early ages; but the specimens of the arts of those times from Mexico, which were on the table, were all spear-heads. Chip after chip had been broken off, by delicate blows, in the shape of a cone, long, thin, and sharp, in consequence of its structure. This was not mere assertion; as proof and illustration, he would describe analogous operations now existing in Brandon, in Suffolk. He alluded to the beautiful manufacture of gun-flints. The workman having discovered a flint that suits him, black and homogeneous, breaks it into flakes, shivered by successive blows, almost undercut—so definite and determinate are they in the hands of a practised man; yet none of the flint is wasted. The thin flakes or plates of silica, replaced, would reproduce the previous form, so that the lines of fracture could scarcely be traced upon the surface. But modern art was neither so fine nor so beautiful as the like of the Mexicans in the early ages. Next to the Mexicans in the application, were the natives of the Eastern Islands; they went further than the mere flakes, and, by the prolongation of the fractures, obtained a handle. The Terra del Fuegians shaped their arrow-heads by strong pressure with a piece of wood, at a small angle with the plane of the flake; they were then stuck into wood, and bound with sinew, and used as an arrow or a knife; they moreover had a skin with the hair on for a quiver. The arrow-

heads or blades were very thin, and beautiful in symmetry of form—sometimes convex, sometimes concave—enlarged at stalk or base, jagged, the edge acting as a saw: in short, of various shapes. The wooden shaft was also beautifully formed, and with the proper smoothness, thick in the middle, reduced from the rough wood with a pitch-stone knife, and a sandstone had been used as a smoothing tool; then feathered, to give it rotation and direction. Without the knowledge of the principles, only aware of the effects produced, flints similarly worked had been found in Ireland, and in the caves at Dalkeith. Agate formed the spear-heads of South America. Mr. Faraday held forth a spear-head which had actually been made from rock crystal; but to take off a fracture to produce sharpness, he stated was beyond his knowledge. The arrows of California exhibited a variety of shape, and further advancement; the heads projected, and became barbed; the shaft, a reed pointed with wood to make it heavier—feathering dispensed with. How singularly men obtained what they wanted, finding their value. The North American tribes had access to iron, with which they charged their arrows; the iron, placed in a slit in the shaft, was left in the animal struck. The people on the river Amazon barbed their palm-wood arrows with bamboo or fish bones. All plants of the grass tribe, to which the bamboo belong, are externally hardened with silica, and the barbs were so cut as to consist of the hardest parts: thus they took every means their wits could devise to accomplish their ends. When a jagged surface was produced in palm-wood with the pectoral fins of the cat-fish, seeds, or something very similar, were placed upon the points to preserve them. One other class of arrows, the innocent looking skewers on the table, and the instrument of their projection, were described. They were from Rio Grande their points were burnt to harden them, and dipped in poison to become destructive. Some poisons kill, taken into the blood, which are harmless in the stomach; therefore, the flesh of the animals may be eaten with safety. The poisonous skewers at one end are bound round with wild cotton, in the form of a double cone, fitting the bore of the projecting tube in which they are placed, and through which they are propelled by the breath with great force and precision. Mr. Faraday, recollecting, as he stated, his pea-shooting days, frequently struck a hand box, placed on the opposite side of the theatre. The tube was 8 feet long, and 1½ inch in diameter. The double cone allowed the air easily to glide off as the arrow passed through it. The island of Borneo produced no wild cotton: the natives used pith for the same purpose. How singularly is the mind of man led by circumstances!—but, as Mr. Faraday stated, the conjunction of arts and philosophy was reserved for next season.

## GEOGRAPHICAL SOCIETY.

JUNE 12. Sir John Barrow, Bart. vice-president, in the chair.—Read, the official report of Major Mitchell's recent expedition into the interior of Australia, from the colony of New South Wales.

“Sir,—Having proceeded into the interior for the purpose of exploring the further course of the River Darling to its supposed junction with the River Murray, and the course of the Murray upwards, according to the instructions received in March last, I have now the honour to report the result of the expedition, for the information of His Excellency the Governor, having this day reached the river

with a portion of my party, after a successful and highly interesting tour. When I arrived at Burree (the point whence the last expedition also left the settled districts), the channels of streams in which we had then found water, in a season of unusual drought, were quite dry; and I was informed that below a certain point there were no ponds, even in the bed of the River Lachlan. My intended route was the same as that which I wished to have followed last year, namely, to pursue the river as far as Mount Granard, and then travel westward, as the nature of the country permitted, towards the River Darling. When I reached Mount Granard, I found less of a mountain range extending westward than I had expected, and, although we procured abundance of water on its summit (where I passed a night), and that numerous hills, as promising as it was in this respect, appeared to the westward, the season was so extremely dry, that I considered it safer, with such a party in charge, to rely on the ponds in the Lachlan, at least some way further; especially as I had observed from the hills a branch of that river, as it seemed, leading in a very favourable direction over the lower country. After we had descended along the bank of the Lachlan about sixty miles further, water became very scarce; the natives having a name for each hole or quarry. I was then induced to quit its banks, on the assurance of an old native that he could find me water in the direction in which I wished to proceed to the Darling. At the end of the first day's journey, on quitting the Lachlan, we reached the Northern Channel, but found it dry; and, although the old man procured a few quarts some miles beyond, we passed the night without finding any for the cattle; and next morning, the chiefs of a tribe then among the hills beyond, came forward to assure me that all there was dried up. My guide, however, persisted, and was desirous we should go on; but, although I was satisfied that in common seasons I might have found water there, I thought it might be in too parched a state then, after two seasons of drought. In so precarious an enterprise as our further progress thus appeared to be, merely on account of water, I adopted what I considered the alternative, by which the course of the Lachlan to the Murrumbidgee, and that of this river to the Murray, and thence to survey the Darling upwards with a light party. I must here mention, that before I determined on this plan, I had ascertained the identity of the river explored last year, with that which joins the Murray from the northward. I was consequently desirous to get through the survey of that barren and unpromising country as soon as possible, in hopes that in proceeding up the Murray we might make discoveries more equal to the expectations raised by such an expedition. On descending the Lachlan, we frequently travelled along its banks all day without seeing any water in its bed, passing the night without any, and near the place where Mr. Oxley buried a bottle. I travelled three days and passed two nights without finding any, during a ride of one hundred and twenty miles, with a party on horseback. There the Lachlan spreads into several branches, but these unite a short way below, where we found the channel as deep and well defined as it was above; and, near the junction of this river with the Murrumbidgee, the ponds in its bed were deep and numerous. Relying on Arrowmith's map (to which I am referred by the instructions), I passed the junction of the Murrumbidgee with the Murray, without being aware of it. But

a branch of the former river presented so favourable a position for a dépôt camp, in which I wished to leave Mr. Stapylton with the heavy part of our equipment, that I immediately took it up, leaving there the *dasy* boats, and most of the cattle and provisions in that officer's charge, with eight men, while I proceeded forward with a lighter party, in order to complete the survey of the Darling. By this arrangement, my party was in better trim to deal with the savage natives whom we were likely to meet; while the cattle left at the dépôt, and which were already exhausted by a long journey, were refreshed for continuing it into the southern country on my return from the Darling. During my first day's journey from the dépôt, I made the banks of the Murray below the junction of the branch of the Murrumbidgee, and we subsequently encamped where the breadth of this river was one hundred and sixty-five yards. On the following day we were compelled to make a detour by another branch of this river, and thus came upon a fine full lake, sixteen miles in circumference. I found the River Darling of considerable width, at and for above six miles above its junction with the Murray, from which the backwater extended fifteen miles up. But, above that point, the channel seemed scarcely so wide as it was where I had explored it above. It contained so little water, that at my last camp I stepped across its bed dry shod; a little water only dropping over the smooth bottom, seemed the effect of the rain fallen just before. This river exactly resembled the Lachlan in its woods, course, and in the character of its banks—the latter being peculiar to those two rivers only. The sole difference is, that the Darling is on a rather larger scale. The country on both banks was of the same barren description as that I had seen above, or, if possible, worse; for the arid sands and thick scrubs approached the banks of the river, leaving little room for grass. As soon, therefore, as I recognised the points of a range previously intersected, and thus ascertained the identity of the upper and lower Darling, I hastened to rejoin Mr. Stapylton at the dépôt. From the natives we learned that other lakes, similar to Lake Benanee, existed in the country northward from the Murray, especially a large one named Coniowra; and that the Darling tribe came across the country from that river to the Benanee Lake, without passing along the bank of the Darling. As I make the junction of the rivers Darling and Murray, in longitude  $142^{\circ} 3' 26''$  E., or upwards of a degree more to the eastward, than it appears to be in Arrowsmith's map, published in 1832; my movement from the dépôt point will appear less of a detour on my map, than by that map might be supposed. And the longitude of the junction of the Murrumbidgee near my dépôt being also more to the eastward than it is in that map (being  $143^{\circ} 20' 36''$  E.), I had less reason to regret the season of drought which had compelled me to pursue a route which a previous knowledge of the localities was alone wanting, to have proved the most eligible for the accomplishment of both objects of the expedition. I found that Mr. Stapylton and party had remained during the whole period of my absence unmolested. The waters of the Murrumbidgee had risen, and the branch on which I had fixed the dépôt was full and flowing—so that it was necessary, in order to rejoin that party, to swim our horses across."

[To be concluded in our next.]

#### GEOLOGICAL SOCIETY.

May 31. Mr. Whewell, president, in the chair.—A paper was first read, on certain areas of elevation and of subsidence in the Pacific and Indian Oceans, as deduced from the study of coral formations, by C. Darwin, Esq. The author first notices the most remarkable points in the structure of lagoon islands, and shews that the lamelliform corals do not grow at any great depths; indeed, beyond ten fathoms, the bottom generally consisting of calcareous sand, or of masses of dead coral rock. He then noticed the "encircling reefs," which form a ring round mountainous islands, at the distance of two or three miles; and which also encircle the submarine prolongation of islands, as the double line of reef extending 140 miles beyond the island of Caledonia. Again, the barrier reef—as that parallel to the north-east coast of Australia—forms a third class of coral formations. These three classes of reefs, encircling, barrier, and lagoon, are very similar in formation. A distinct class of reefs was also pointed out by the author, called by him "fringing reefs," which extend only so far from the shore, that there is no difficulty in understanding their growth. The theory which Mr. Darwin then offered, so as to include every kind of structure, is simply, that as the land, with the attached reefs, subsides very gradually, from the action of subterranean causes, the coral-building polypi soon again raise their solid masses to the level of the water. But not so with the land; each inch lost is irreclaimably gone: as the whole gradually sinks, the water gains foot by foot on the shore, till the last and highest peak is finally submerged. The author then proceeded to offer some considerations on the probability of general subsidences in the Pacific, where many causes tend to its production; and the difficulty of explaining the existence of a vast number of reefs on one level, unless we suppose that one mountain top after another becomes submerged, the zoophytes always bringing up their stony masses to the surface of the water. Subsidence being granted, it was shewn that a fringing reef would be converted by the upward growth of the coral into one of the encircling order; and this, by the disappearance of the central land, into a lagoon island. After adducing some proofs of subsidences in Keeling and Vanikoro islands, and of elevation in Sumatra, the author proceeds to shew, that as continental elevations act over wide areas, so might we suppose continental subsidences would do; and in conformity to these views, that the Pacific and Indian seas could be divided into symmetrical areas of the two kinds: the one sinking, as deduced from the presence of encircling and barrier reefs and lagoon islands; and the other rising, as known from uplifted shells, and corals, and skirting reefs. The absence of lagoon islands in certain tracts, such as in both the West and East Indies, Red Sea, &c., was thus easily explained, for proofs of recent elevation are there described. Mr. Darwin then pointed out the above areas in the Pacific and Indian Oceans, and deduced, as important consequences: 1. That linear spaces of great extent are undergoing movements of an astonishing uniformity, and that the lands of elevation and subsidence alternate. 2. That the points of volcanic eruption all fall on the areas of elevation. 3. That the geographical distribution of plants is elucidated by the discovery of former centres, whence the germs could be disseminated. 4. That some degree of light might thus be thrown on the question, whether certain groups of living

beings, peculiar to small spots, are the remnants of a former large population, or a new one springing into existence? And, lastly, when beholding more than an hemisphere divided into symmetrical areas, which within a limited period of time have undergone certain known movements, we obtain some insight into the system by which the crust of the globe is modified during the endless cycle of changes.

#### METEOROLOGICAL SOCIETY.

TUESDAY. Dr. Birkbeck, president, in the chair.—This being the last meeting of the present session, it was highly gratifying to find that the Society was in an exceedingly prosperous state, having added upwards of thirty new members, and read nearly fifty original papers on meteorology, since its revival in November last. At the present meeting, Sir Robert William Horton, Professor Cerquero, astronomer-royal, Cadix, and Lieutenants Grey and Lushington, who are just gone out in the expedition to explore the north-west parts of New Holland, were admitted associates. The meetings of the Society were adjourned till November, and the following subjects for investigation were submitted to the meeting, to be carried into effect by observers, whether members of the Society or otherwise, viz:

1. To determine the mean temperature of the several seasons of the year, and also of the whole year, at various stations on the surface of the globe.
2. To mark the daily progression of temperature, and ascertain the form of the daily thermometric curves (also at various stations), and from them determine the two periods in each day at which the mean temperature occurs at each station.
3. To determine the mean barometric pressure for any given period, as a month, year.
4. To mark the various atmospheric phenomena, and the weather immediately preceding and succeeding each occurrence.
5. To register the direction and strength of the wind at numerous stations, and to ascertain the forms of the anomalous curves peculiar to certain latitudes, seasons, &c.
6. To ascertain the nature of the connexion that exists between the anomalous, barometric, thermometric, and hygrometric curves.
7. To register the quantities of rain in various stations, and ascertain the distribution of vapour at various heights.
8. To determine the moon's influence on atmospheric phenomena.
9. To investigate the laws of rain, fog, dew, the crystallisation of snow, &c.
10. To investigate the phenomena of storms, hurricanes, whirlwinds, &c., and trace them to their originating causes.
11. To determine how far atmospheric phenomena are influenced by volcanic action.
12. To form local histories of climate; to state the prevalent diseases at each station for every month; and to determine how far they are influenced by atmospheric action.

#### ENTOMOLOGICAL SOCIETY.

JUNE 5th. The Rev. W. Kirby in the chair.—The minutes of the last meeting were read and confirmed. Numerous donations of entomological works were announced from the Royal Society of Lille, the Entomological Society of France, &c. The Earl of Malmesbury, and C. D. O. Jephson, Esq., were elected members of the society, and certificates in favour of several other candidates were read. The memoirs read were as follow:—1. Notice of a case in which the larvæ of a dipterous insect, supposed to be the *Anthomyia canicularis* of Meigen, were expelled in large quantities from the human intestines, accompanied by a description of the same, by the Rev. L. Jenyns, M.A. F.L.S. &c. 2. Descriptions of several new species of exotic coleopterous insects, including a new species of pausaus, from the collections of Sir Patrick Walker, and Messrs. Norris and Hooker, by J. O. Westwood. 3. Observations on the natural history of two lepidopterous insects of Van Diemen's Land, in a letter addressed to the secretary, by Thos. J. Ewing, of Hobart Town. 4. Some account of the injury sustained by the orchards in Kent, from the attacks of the caterpillars of one of the slender-bodied moths, *Geometridæ*, in a letter addressed to the treasurer, W. Yarrell, Esq., by Dr. John Richardson.

## ELECTRICAL SOCIETY.

A NEW SOCIETY (says the *Morning Post*) has been formed, under the above title, for the purpose of the experimental investigation of electrical science in all its various branches, in order not only to advance that important science, by entering upon, and pursuing, original paths of investigation, but also by testing the experiments of other inquirers. Its first business meeting was held on Saturday, when a paper on the principle of matter, the same cause under different circumstances producing the various phenomena of the different sciences, by Mr. Pollock, was read by the secretary. The author, after describing the "principle," a fluid pervading all space, pursued his investigation under two great heads: the first comprising inquiries intimately connected with all the separate sciences,—vibration of matter, sound, &c., currents of the principle, light, heat, forces, attractive and repulsive. The second containing electricity, magnetism, and equilibrium. By his theory, Mr. Pollock accounts for lightning, the aurora borealis, comet's tail, magnetic variation, diurnal variation. He also explains the phenomena dependent upon the motion of matter or its parts, gravitation, precession of the equinoxes, daily variation in the height of the barometer, density of the plants inversely as their distance from the sun, and the difference of the arc of the meridian in the two hemispheres. In short, the "principle" is an universal cause. A paper was also read by Mr. Sturgeon on primary and subsidiary, or secondary currents of electricity, illustrated by diagrams, and with a horseshoe magnet, curiously constructed by Dr. Callan, of Maynooth collection, small in size, but immense in power. After which the meeting adjourned.

## SOIRÉE: KENSINGTON PALACE.

THE last *soirée*, on Saturday, given by H. R. H. the President of the Royal Society, was quite as brilliant and distinguished as that which preceded. Among the visitors were the Duke of Wellington, Lord Aberdeen, and Sir Robert Peel; and it was a source of delight to every well-poised mind to observe that, wherever literature and science prevail, there the vexations of politics and party cease to exist. Interesting as this meeting was, perhaps its greatest charm consisted in the gratifying feeling of this truth, which it so finely illustrated. H. R. H. was looking well, seeing well, and in excellent spirits.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, June 8th.—The following degrees were conferred:—

*Bachelor in Divinity*.—Rev. P. Maurice, Chaplain of New and All Souls' Colleges.

*Masters of Arts*.—Rev. W. Holden, Rev. T. N. Stephenson, Rev. C. Wetherill, Worcester College; S. C. Walker, Rev. S. Pope, Queen's College; Rev. T. E. Abraham, Balliol College; H. J. Buller, Trinity College; H. H. Vaughan, Fellow of Oriel College; T. Floud, Rev. P. C. Marshall, Wadham College; Rev. G. Marland, Brasenose College; Rev. J. Birch, Pembroke College.

*Bachelors of Arts*.—Rev. G. N. Wood, Wadham College; J. D. Piggott, Merton College.

*Commemoration of Founders, &c.*—There were two honorary degrees conferred, that of Doctor in Civil Law on the Earl of Devon, and that of Master of Arts on A. Brown, Esq. Gentleman Commoner of Brasenose College.

The following subjects are proposed for the chancellor's prizes for the ensuing year, viz:—

For Latin verse—"Hannibal, patriæ defensionem susceperunt, ab Italia acceitit."

For an English Essay—"The tests of national prosperity considered."

For a Latin Essay—"An recte dicatur caruisse veteres ea forma concili publici qua selecti quidam pro universis statuuntur."

*Sir Roger Newdigate's Prize*.—For the best composition in English Verse, not limited to fifty lines—"The Exile of St. Helena."

*Theological Prize*.—"On the Conduct and Character of St. Peter."—The subject above stated, as appointed by the judges, for an English Essay.

*Mrs. Denyer's Theological Prizes*.—The subjects for the year 1838 are:—"On the Divinity of the Holy Ghost."—"On the Influence of Practical Piety in promoting the Temporal and Eternal Happiness of Mankind."

CAMBRIDGE.—*Porson Prize*.—On Wednesday last the Porson prize (for the best translation of a passage from Shakespeare into Greek verse) was adjudged to C. J. Vaughan, of Trinity College.

Subject—*King Lear*, Act iii. scene 2.—The speech of King Lear, omitting the intervening passages, by which its continuity is broken, beginning—

"Blow, winds, and crack your cheeks! rage! blow!" and ending—

"More sinned against than sinning."

## ROYAL SOCIETY.

MR. BAILY in the chair.—The sequel of Mr. Farr's paper On the minute structure of some of the higher forms of polypi, noticed in the last *Literary Gazette*, was read. In prosecuting his researches, the author observes that he discovered no trace of nerves or ganglia, although the attributes of the nervous system were perfectly obvious. He then notices reproduction, and some other types, towards a new subdivision of the three classes; the last of which is the *Entozoa* of Ehrenberg, whose classification Mr. Farr does not disturb. A paper on an improved mode of constructing magnets was likewise read. The author of this paper, finding a larger quantity of carbon in cast iron than in the usual materials of which magnets are constructed, applied himself to the production of magnets from the above metal, and found that it surpassed, in magnetic influence, all others. The great advantages of the discovery are cheapness, ease, and speed, in production. This being the last night of the session, the titles of the unread papers in the possession of the council were mentioned; from which, if we may judge, as well as from the names of their distinguished authors, they must be considered of great value.

## SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY in the chair.—Sir John Trevelyan exhibited a small ancient vessel of bronze, which had formerly been handsomely enamelled, found at Harwood, in Yorkshire; and, also, what appeared to have been a bracelet of bronze or bell-metal, found, with some others, in Sussex. Mr. Cole presented a set of drawings, by his son, of the interior and ornaments of the Star Chamber at Westminster, now removed. Mr. Planché communicated a description of a portrait, painted in oil and on wood, in the possession of the Duchess Countess of Sutherland, and which had been supposed to be that of Charles the Bold; but Mr. P. has discovered, from a badge and "word" (or motto) painted on the back of the picture, that it was the portrait of Anthony, bastard of Burgundy, of whom he gave several curious historical notices. With this the session of the Society closed, and the meetings were adjourned to November next.

## ASIATIC SOCIETY.

SATURDAY, 10th. Sir Alex. Johnston, vice-president, in the chair.—Several valuable presents to the library and museum were laid before the meeting. The secretary read a letter from Major-General Sir Henry Worsley, Hon. East India Company's service, dated the 25th ultimo, in which the general expressed his conviction that he could not more suitably appropriate some of the bounty which he had derived from the best and most interesting military service in the world, than by contributing a portion of it to promote the utility and stability of the Royal Asiatic Society; and there-

fore, with this view, he had the honour to place at the disposal of the council, the sum of one thousand pounds, to be applied, at the discretion of the council, in furthering the objects of the Society. The special thanks of the Society were voted to Sir Henry for his munificent donation; and it was unanimously resolved, that the members should mark their sense of his liberality by entering upon a subscription for a bust of the donor, to be placed in the general meeting-room of the Society, each subscription to be limited to a guinea. An interesting journal of a passage from Calcutta to Alexandria, made in the years 1835-36, by Capt. James Mackenzie, of the E. I. C. service, was read by that gentleman to the meeting. In the course of his journal, Capt. Mackenzie noticed an occurrence illustrative of the lawless habits of the Bedouins. A ship, with 350 Persian pilgrims on board, on their way to the shrine of Mecca, was wrecked one night on the peninsula of Aden, on the Arabian coast. At the dawn of day, the unfortunate pilgrims saw the neighbouring shore covered with Bedouins, ready to seize and strip them of every thing as they landed. There was no remedy: the long-boat was put in requisition; and each successive party, as it reached the beach, was stripped naked, and cast adrift. A vain appeal was made to the sheikh, who sanctioned the robbery, and participated in its plunder. The unfortunate men, however, contrived to send a letter to one of their countrymen, residing at Mocha, by whom a vessel was despatched to Aden, which brought them all off. Captain Mackenzie contemplates the cessation of similar outrages, from the expected extension of the power of the Pasha of Egypt in that quarter. The appearance of the shores of both continents, on approaching the celebrated Straits of Babelmandel, were passed in review. The lofty, sterile, and rugged mountains about Ras Bir, on the African side; and the more dismal shores of Arabia on the other; the bold, bluff rocks of the "High Brothers;" the Peak of Babelmandel; and the low, flat island of Perim, which divides the straits at their entrance, were successively and graphically described. At length, on the 28th of January, the vessel passed the strait, and sailed securely on the beautiful light-green waves, which, in this sea, so strongly contrast with the funereal blackness of its shores. At this period the reading of the paper was discontinued; the remainder being reserved for another meeting.

## LITERARY AND SCIENTIFIC MEETINGS

## FOR THE ENSUING WEEK.

Monday.—Statistical, 8 P.M.; Marylebone Literary, 8½ P.M. (Dr. Lardner on Astronomy, also on the 26th, and July 3.)

Tuesday.—Linnean, 8 P.M.; Horticultural, 3 P.M.

Thursday.—Royal Society of Literature, 4 P.M.

Saturday.—Electrical Society, 7 P.M.

## FINE ARTS.

## INSTITUTE OF BRITISH ARCHITECTS.

ON Monday, P. Robinson, Esq. V.P. in the chair, several gentlemen were admitted fellows; and the secretary read a long list of donations, comprising Bardwell's work on "Temples;" Barlow "On the Strength of Materials;" several pamphlets by M. Hittorff (who has recently been in London); a "Statistical Account of all the Works recently erected in Paris," from the *préfet* of that city; No. VI. of "The London Churches," &c. &c. Mr. Fowler, the junior honorary secretary, read a paper On the construction of the roof of King's College Chapel, Cambridge, drawn up from the observations and sketches of Mr. C. Mylne,

fellow. The style of architecture called Gothic, it is generally supposed, originated abroad, and was there earlier carried to perfection than it was in England: the Gothic of this country, however, displays certain features, differing in every respect from those we find on the Continent; and of these there is none more beautiful than the fan-like groining, which is employed with such pre-eminent success in this chapel. The construction of the masonry to resist the thrust of the roof displays, likewise, considerable skill.—Mr. T. L. Donaldson then read some remarks by Mr. Lee, On the form and decoration of the two brazen pillars, described in the Holy Scriptures as standing before the "house of the forest of Lebanon," and called Jachin and Boaz. Mr. Lee, in his paper, stated that these columns were insulated, similar to others which have been found in Persia; but a reference to the description in the original text seems to shew clearly that this was not the case, but that they formed part of the porch. At the close of this paper, Mr. Godwin, jun. put before the meeting a theory in regard to the subject published by Mr. Morier in "Abel Allnut." Mr. Morier there supposes that the Great Hall of Columns, at Persepolis, furnishes examples of the architecture and general character of Solomon's Temple; and Mr. Godwin, by the aid of a diagram for Sir Robert Kerr Porter's work, supported the view.—Mr. Britton, honorary member, afterwards read an Essay on the church of Stratford-upon-Avon, in the chancel of which lies the body of the immortal Shakespeare. It has been recently restored under able direction, and now presents one of the most interesting specimens of the architecture of the period in which it was built that we can boast of. The poet's anathema, "Cursed be he who moves my bones," is not yet likely to apply.—Thanks were voted to the several gentlemen mentioned, and the meeting was then adjourned.

#### SCHOOL OF DESIGN.

At length, we have the pleasure to announce the formation of a National School of Design, and confided to the able direction of Mr. J. B. Papworth, whose labours of many years in the cause have alike made him competent to the superintendence, and entitled him to the distinction.

"It having been considered important that instruction should be afforded to those engaged in the preparation of designs for the various branches of the manufactures of this country, (says the circular before us) a grant was made during the last session of parliament for the furtherance of this object; and, under the sanction of the president of the board of trade, the School of Design has been established in the rooms at Somerset House, lately occupied by the Royal Academy, for the purpose of teaching design, including light and shade, colour, modelling, perspective. A provisional council has been named, and masters, under the general superintendence of Mr. Papworth, are to be employed to afford instruction in the various branches above enumerated; lectures will also occasionally be given on the principal subjects connected with the ornamental art; and a large collection of drawings and casts for the use of the school has been provided."

Other regulations are promulgated at the Academy, and we have only to add our hearty wishes for the success of an establishment so long and so much wanted, in a manufacturing and commercial country.

#### NEW PUBLICATIONS.

*Wellington at Waterloo.* Painted by A. Cooper, R.A.; engraved by F. Bromley. Hodgson and Graves.

THE decisive charge of the Life Guards is the point of time chosen by Mr. Cooper—and it has afforded him a fine opportunity of shewing his skill in the treatment of that noble animal the

horse. The whole composition is a spirited one: but the character and action of "The Duke," are peculiarly commanding and animated.

*Tableaux from Crichton.* Designed and etched by John Franklin, Esq. Macrone.

MR. FRANKLIN has availed himself of the numerous graphic passages in Mr. Ainsworth's interesting and popular romance, to produce a dozen compositions in outline, the energy, grace, and taste of which, do him the highest credit. "The Oratory," "The Column," "Hic Bibitur" (the anacreontic ballad to which is so admirable, that we grieve we cannot quote it); "The Pavilion," and "The Betrothment," are our chief favourites. Mr. Franklin has made a great stride since the appearance of his "Illustrations of Chevy Chase."

#### 'Roberts' Spain.

WHEN this magnificent publication originally appeared, it was noticed in the *Literary Gazette* with the admiration which its beauty must elicit from every one who has seen it. We have lying before us specimens of some of the plates, mounted, and coloured to imitate drawings; and certainly, any thing more exquisite we never beheld.

#### MUSIC.

##### ANCIENT CONCERTS.

THE eighth and last concert, on Wednesday, 31st ult., under the direction of his Grace the Archbishop of York, would have been excellent had it been curtailed by the omission of a few compositions, now worn completely threadbare to this audience. This remark applies not to any of the choruses, as all the stock pieces in that department are made of stuff that will never wear out. The "Cum sancto spiritu" of Mozart's twelfth mass, went with the precision of clock-work; and the "Kyrie" of Haydn, No. 1., deserves nearly equal praise. Why cannot it be sung to the original words? This chorus was much too good to be placed at the fagend of a very long concert, when about half the company had departed. The same thing may be observed of the song which preceded it, Calcott's "Angel of Life," which was revived on this evening after a slumber of many years, and was sung by Mr. Phillips with such perfect taste and delightful expression, as must ensure it a permanent place on the list. Madame Pasta's performance of "Ombra adorato" was fully worthy of her fame; and, on being encoired, she sang it still more finely. In a long duet between her and Braham, from one of Cimarosa's operas, our countryman proved himself equal to the best of the Italian singers in dramatic energy and feeling. How gloriously, too, does he always declaim that bit of recitative from *Israel in Egypt*! In the concluding sentence, especially, "But the children of Israel went on dry land in the midst of the sea," the torrent of his enthusiasm carries away every thing before it. Mr. Stretton, a student of the Royal Academy, under all the disadvantage of nervous apprehension at facing this audience for the first time, sang Pergolesi's "O, Lord, have mercy upon me!" in a good style, and with considerable feeling. Messames Shaw and Bishop, and Messrs. Hawkins and Parry, jun. were severally very successful in the songs assigned them. Messrs. Pyne and Lloyd assisted in the concerted music. Q.

#### ROYAL SOCIETY OF MUSICIANS.

THE annual performance of the *Messiah*, for the benefit of the funds of this Society, took

place last week; the rehearsal, as it is inappropriately designated, being on Monday morning, and the evening performance on Wednesday. The choruses, at first, went rather languidly, but they increased in spirit as the oratorio proceeded. Handel's own favourite one, "He trusted in God," was sung in remarkable perfection; but in some of the others, though performed with the usual accuracy, we felt the want of more light and shade, and we have also a quarrel against the band for playing too loud, nearly throughout. The solo singers were Messames Caradori, Knvyett, Shaw, Clara Novello, and Birch; and Messrs. Braham, Bennett, Phillips, Stretton, and Machin; all of whom acquitted themselves admirably. We exhort Mr. Stretton to be of good cheer, for his voice and talent are of more than ordinary promise. The room was quite full on both occasions.

*Concerts.*—Of Concerts we have to notice, with approval, one for that ingenious artist, M. Minasi, on the 9th; another for Mr. and Mrs. Alban Croft, on the 13th; and a third, yesterday, for Miss Dickens and Miss Foster, both pupils of the Royal Academy. At the latter, a good deal of very sweet vocal and some well-chosen instrumental music was most creditably executed. We would not wish to pass a more pleasant evening. The performers were almost all young, and most of them pupils of the Academy. Miss Dickens and Mr. Burnett sang a duet, "Esultate per la Babara," most sweetly. Miss Rainforth, also, was in delightful voice: but, where all were so good, it is scarcely fair in us to select. We cordially wish these young ladies the success to which they are so well entitled.

The last *Societa Armonica* concert took place yesterday evening week. It was the best of the season, both for selection of compositions and artists. Rubini, Grisi, Albertazzi, and Ivanhoff, were the principal vocalists; and in the instrumental department were Mori, Chatterton, and Forbes. Grisi and Albertazzi were encoired in "Ebben a te ferisce," which was very finely given; and in an English song by Albertazzi, from Balfe's new opera of *Catherine Grey*, our fair countrywoman was equally admired. The spirited exertions of the directors on this occasion were rewarded by an extremely well-filled room.

#### DRAMA.

*King's Theatre.*—Since our last notice of this house, Rossini's *Semiramide* has been added to the list of performances. With the exception of *Malek Adel*, it has been the least successful opera of the season; not because it deserves to be so—for it abounds in delightful music—but because every one remembers Pasta, who made the part of the queen her own; and whom we may scarcely expect to see equalled—certainly never surpassed. There can be no doubt Grisi has a superior voice, both in tone and compass; but her conception of the character is different, and her acting, consequently, falls very short of her predecessor. The whole weight of the opera rests upon *Arsaces*; the whole interest is in his fate. It was a character which was sure either to raise Madame Albertazzi to first-rate, or to leave her in her present position—of second rate. It has, we think, done the latter. She sings the part all through faultlessly, as far as the execution of the music goes; but it is like a beautiful lesson,—soul is wanting; energy, fire, feeling—all are absent. We hope to see Madame Albertazzi acquire these requisites, which, with her truly magni-

ficent voice, would place her in a far higher position than she now occupies. The celebrated duet "Ebene a te ferisci," sung by this lady and Madame Griis, is one of the most exquisite pieces of music we have ever heard.

*Drury Lane.*—On Thursday, Mr. Wilson took his benefit, and gave a lot of the sweetest Scots music ever heard on the stage. The house was full, and of so many northern natives, that their delightful plaudits were the more acceptable.

The *Haymarket Theatre* opened on Monday; and if spirited enterprise will, as it ought, and we believe it will, command success, Mr. Webster has begun in a style which must ensure a prosperous season. *Hamlet* was the play—Shakespeare—and Macready the *Hamlet*. That character he has played at the larger houses; and there has been much criticism, as there always will be, upon *Hamlet* (hardly, if yet, understood by any commentator); but the general voice according to it was an admirable performance, with exactly such deductions as every writer, with talent to form his own estimate of the part, would make from every performer of it. At the smaller theatre, we think that a higher meed will be adjudged to Macready. His conception, his fine study of the *Prince of Denmark* is, at any rate, fully developed to the spectator. Is he too sad? This is the only question we could ask of ourselves. But the beauty, the force, the pathos overpowering philosophy, the exquisitely minute traits—how glorious they were. If not the *Hamlet* of our imagination, it was (is it heresy or impudence to say so?) a *Hamlet* worthy of Shakespeare. The rest of the cast was fair. Miss Huddart, an excellent *Queen*; and Miss Vincent, with minor and minor theatre faults, an *Ophelia* as good as the usual run. We cannot speak by the card or bill; and have, therefore, only to add generally, that the whole went off well.

The *Strand* has a new piece, the *Winterbottoms*,—very funny, and very well acted.

#### VARIETIES.

Mr. T. Dibdin, besides resuming his labours in dramatic instruction, &c. has advertised to furnish songs and addresses on any given subjects, for public occasions and convivial parties, at 24 hours' notice!!!

The *Artists' General Benevolent Institution* holds its anniversary to-day, under the favourable auspices of Lord Francis Egerton; a chairman, whose deserved popularity as a friend of literature and the arts, not to mention his high talents, is enough to ensure a numerous and gratifying meeting.

*Murillo, &c.*—Some of the newspapers have announced the purchase of the Murillo and the Rembrandt, of Mr. Yates (see a recent No. of *Lit. Gaz.*), for the National Gallery, for 7000*l.*; but this is a mistake: it is not a Rembrandt that is included in the purchase, but Rubens' fine picture of the "Elevation of the Brazen Serpent;" and we rejoice in both being secured for the country.

*Map of London* (Porteus's).—The smallest map ever seen of the largest city in the world. A slight fold, of two inches, gives a very clear guide to the vast thoroughfares of this human ant's nest, with all its public buildings, resorts, &c. &c. It is, indeed, justly called a "gem."

*Weather-Wisdom.*—Our readers, interested in the meteorological matters, which we like to observe acquiring more and more public attention, can compare the past week with the predictions in our last No. Lieutenant Morrison has been specially wrong, Mr. Murphy not very right. We annex, nevertheless, their

future views, &c. &c.\* "The weather will change on the afternoon of the 21st. There will be a prevalence of rain, with thunder, on the 22d and 23d; though the sun be in aspect to Jupiter, other aspects still denote rainy weather."

*Surrey Zoological Gardens.*—The proprietors of this establishment have added to its many beauties, a striking view of Mount Vesuvius and the Bay of Naples; which, standing on the very edge of the lake, and throwing all the shadows by mountain, fortress, tower, and steep, into the water, has a beautiful and novel effect. As the scenery is also fixed, the distances are strongly thrown back by means of the machinery underneath, which gives to the ledges and shaggy points of the precipices a truly savage appearance. When the water is calm, and the sun shining, the whole scene has a very beautiful and magnificent effect; while one or two

\* Remarks connected with a Weather Table, for June, 1837, by P. Murphy (and a copy of which appeared in the last Number of the *Literary Gazette*, on the 10th inst.), presented by him, and read at the last meeting of the Meteorological Society, on the evening of the 13th.—In reference to the ordinary changes of the weather, as calculations connected with them, or with the periods of their occurrence, are less to be relied on at this time of the year than earlier in the season, and that it is sufficiently remarkable and interesting to induce an inquiry as to its cause, the following appear to be the circumstances to which it is to be ascribed, viz.: As with the advance of the season to the period of the solstice the meteor in which rain has its source becomes more concentric in the atmosphere, and circumscribed in its range, a consequence of this is, that it becomes relatively more local than before, which causes that a greater length of time usually elapses between the period of its setting in in any part of the same, or of proximate regions of the atmosphere, and that of its termination in an opposite, as we approach the solstice, than what is the case when, as earlier, and that the action of the sun as connected with the sun is less powerful, it embraces in its range a more enlarged extension. In addition to this, it is to be observed, that, as with the advance of the season the solar action becomes more powerful, it usually has the effect of deranging, more or less, considerably, the influence of the moon on the weather; and thence of, at one time, accelerating the development of its effects, and, at another, of retarding it. From this it follows, as calculations, similar to those connected with the present, equally as with the tables for April and May, founded on the lunar action, cannot be expected to do more than point to the mean results on the weather which are to be expected from its assumed meteoric influence; and that, for the reasons stated, this is more liable to be deranged or interrupted about the period of the solstice than earlier in the season: that, as being a consequence, in proportion as we approach the solstice, and for a considerable time after it, a corresponding increase of time should be allowed for the occurrence of the expected effects of the lunar action on the weather, on either side the period or day specified in the table, than previously, i.e., that such period should be understood to include the day which immediately precedes, and that which follows after, the day marked in the table, as that of their occurrence. As by this means the exceptions, as at an earlier period of the season, will not only be found to dwindle into insignificance, but, together with presenting a more correct view of the subject, more justice will necessarily be done to the principles of calculation resorted to. As refers to the violent phenomena of the atmosphere, such as thunder, or other storms, &c., as they have their source in a more powerful and concentric action than that which induces the ordinary changes of the weather; thence it is that, in general, the periods of their occurrence—even during the summer and winter months—can be counted on with much greater certainty than those of the latter class; and, consequently, the preceding observations are not intended so much to apply to them.

London, June 13, 1837.

P. MURPHY.

To the Editor of the *Literary Gazette*.

Cheltenham, June 13, 1837.

Sir,—I hope you will excuse my calling your attention to the fact, that, though there may have been "no thunder showers" on the 4th inst., as predicted by me, they were very general on the next day. On the 5th, there was thunder and rain at Gloucester and Cheltenham; rain at Edmonion (see *Literary Gazette*), and "lightning and distant thunder;" and a violent storm of thunder and lightning at Rochester; also, that Hoo Church was struck, and the steeple thrown down. I have no doubt it will be found that "thunder showers" were frequent in other parts, as the sun was in *scutella* aspect to Jupiter on the 4th, which never passes in the summer without thunder. I confess I was wrong as to "warm weather" on the 3th, for it did not occur till the 9th, which was the hottest day this year, the thermometer at Edmonion having reached 73 degrees. On the 10th and 11th we have (as predicted) had very high winds, and, near this part, much thunder.—I remain, &c.

R. J. MORRISON.

small vessels anchored in the lake, add greatly to the maritime delusion. It is really a splendid accession to the place: whoever the artist may be, he has brought a masterly mind to the task, and executed it in a manner very superior to similar scenes which we have witnessed.

E—resolves on returning from Spain, it is said: He'll not come in a transport, I'll wager my head. H.

#### LITERARY NOVELTIES.

Mr. B. E. Pote announces immediately, a translation of Three Persepolitan Cuneiform Inscriptions in the British Museum, with Remarks.

In the Press.

The Seven Ages of Shakespeare, illustrated by Original Designs, drawn on Wood, by distinguished Artists.

#### LIST OF NEW BOOKS.

Shrewsbury School List and Prize Exercises, June 13, 1837, 8vo. sewed, 2s.—First Grammar of the Latin Language, by the Rev. W. Butler, M.A. 12mo. 2s.—The Bard, by Gray, with Illustrations, from Drawings by the Hon. Mrs. John Talbot, crown 8vo. 7s.—Devotional Poetry, with Music, 2 vols. royal 32mo. 6s.—Sparleyow; or, the Dog Flend, by the Author of "Peter Simple," 3 vols. post 8vo. 11s. 6d.—Ingram's Memorials of Oxford, 3 vols. 8vo. cloth, 2s. 18s.—H. M. Ship, Inconstant, 4s.—Impressions at Home and Abroad, by J. R. O'Flanagan, Esq. 2 vols. post 8vo. 11s. 1s.—The Widow's Offering, by the late W. Pitt Scargill, 2 vols. post 8vo. 11s. 1s.—Sabbatical Verses, by J. T. Gurney, 8vo. 1s. 6d.—Practical Remarks on Infant Education, by Dr. Mayo, fcap. 2s. 6d.—Wellesley's Despatches, Vol. IV. 8vo. 11s. 5s.—Travels in Palestine and Syria, by G. Robinson, Esq. 2 vols. post 8vo. 11s. 1s.—Picturesque and Historical Recollections of Switzerland, by M. O'Connor, Esq. fcap. 7s. 6d.—Angling Reminiscences, by T. D. Stoddart, Esq. fcap. 5s. 6d.—Progress of Creation considered, by Mary Roberts, fcap. 7s.—Narrative of Captain J. Fawcett's Travels in West Africa, 12mo. 4s.—The Bride of Messina, a Tragedy, from Schiller, by G. Irvine, 8vo. 6s.—The Life of John Thelwall, by his Widow, Vol. I. 8vo. 12s.—The Naturalist's Library, Vol. XVIII.: Foreign Butterflies, 6s.—Letters of Charles Lamb, with a Sketch of his Life, by Mr. Sergeant Talfourd, 2 vols. post 8vo. 11s. 1s.—S. E. Pierce's Forms of Prayer, 12mo. 6s.—Politics of another World, by Mordecai, 8vo. 12s.—Whewell on University Education, post 8vo. 5s.—Mrs. Trench on Education, post 8vo. 15s.—The Deaf and Dumb Boy, a Tale, by the Reverend W. Fletcher, 18mo. 2s. 6d.—Rennie's New Supplement to the Pharmacopoeia, 4th edit. 8vo. 12s.—The Christian Church distinguished from Popery, &c., by the Reverend T. Griffiths, A.M. Part I. 12mo. 5s. 6d.—Introduction to Medical Botany, 3d edit. by Dr. Castle, 8s. 6d.—Translation of the Pharmacopoeia Londinensis, with Notes, by Dr. Castle, 5s.

Edmonion.

CHARLES HENRY ADAMS.

#### TO CORRESPONDENTS.

There were some slight inaccuracies in our notice last week of the late Mr. Otley's collection of engravings. Mr. Sotheby did not undertake the superintendence of the disposal of Mr. Otley's various collections of matters of art; though he was employed to sell the engravings, the first portion of which has just been disposed of. Messrs. Christie and Manson sold the small but choice collection of modern Italian pictures, and many of the most interesting and valuable features of this distinguished amateur's gallery yet remain to be brought before the public, including the whole of the very brilliant and unique collection of paintings (from the walls of churches, &c. in Italy) by ancient Italian masters. With regard to the prices which the prints brought, though certainly liberal for the times, we apprehend that, on the whole, they present a considerable depreciation below the actual cost at the period they were purchased. The British Museum, we are sorry to say, bought very sparingly, being pitted, with a very inadequate sum of money at its command, against the caterers from foreign institutions, with unlimited means at their disposal, and instructions to purchase at any prices. Gems have thus been suffered to find their way out of the country, which, we apprehend, will never be brought together again to give us a chance of obtaining them.

F. B. B., we believe, might receive the information he seeks from J. Britton, Esq.

We fear that matters are too serious for R's lines at this moment.

## ADVERTISEMENT,

Connected with Literature and the Arts.

**BRITISH INSTITUTION, PALE MALL.**—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, is now open, and will continue open daily, from Ten in the Morning until Six in the Evening.  
Admission 1s. Catalogue 1s.  
WILLIAM BARNARD, Keeper.

**JUST OPEN.—DIORAMA, REGENT'S PARK.**—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by J. E. Chevalier Rouston.

Open daily, from Ten till Five.

**NEWLY DISCOVERED COREGGIO MAUDALEN.**—This divine Work of Art, perhaps the *chef-d'œuvre* of Coreggio, remains as it was at No. 40 Pall Mall, and will continue only a short time longer.  
Admission, One Shilling.  
N.B. A few doors from the British Institution.  
Open from 10 to 5 o'clock.  
Every known Artist will be admitted on presenting his own card.

**LESSONS IN OIL AND WATER-COLOUR PAINTING, LITHOGRAPHIC DRAWING, ETC.**—Given by an Artist of Established Reputation.  
Terms, One Guinea per Lesson.  
Elementary Lessons given by the Advertiser's Daughter, at Three Lessons for One Guinea.  
The Advertiser, either alone, or accompanied by his Daughter, would be happy to join a Travelling Party for Sketching for the Autumn.  
For Cards of Address, apply at Same's Royal Library, St. James's Street, or to Rowney and Co. 51 Rathbone Place; if by letter, to E. K., as above, post-paid.

**A LADY, who is going to Italy by way of Switzerland, to finish the Education of her Daughter, would be happy to take a Young Lady with her for the same purpose, or to introduce her into Society. As it is in the advertiser's power to afford peculiar advantages with respect to mental cultivation and social comfort, liberal terms will be expected. An invalid Lady, requiring change of climate, might rely upon the kindest attention, the husband of the lady advertising having been in the medical profession.  
The most satisfactory references will be given. Address, post-paid, to A. C. D. care of Mr. R. Valpy, Red Lion Court, Fleet Street, London.**

**BOTANY.**—A Gentleman who has gained some of the highest botanical honours open to public competition, having spare time at his disposal, is willing to give private instruction in Botany to ladies or gentlemen.  
Direct, O. T. University College, Gower Street.

**TO ADVERTISERS.**—The last Day for the insertion of Advertisements in the next Number of the LONDON and WESTMINSTER REVIEW, will be Monday, the 19th of June.  
Published by Henry Hooper, 18 Pall Mall East; to whom all Advertisements and Communications are to be sent in future.

Price 2s.  
**A CATALOGUE of SECOND-HAND BOOKS for 1827; containing Lists in all classes of Literature, in various Languages, &c. &c. &c.**  
Longman, Rees, Orme, and Co. 25 Paternoster Row.  
\*% Libraries purchased.

**FAMILY ENDOWMENT SOCIETY.**  
Empowered by Special Act of Parliament, for Endowing future and existing Children.  
Office, 12 Chatham Place, Blackfriars.  
Capital, £600,000.

**Trustees.**  
Pascoe St. Jeger Greenfell, Esq.  
Henry Forcher, Esq.  
Martin Tucker Smith, Esq.  
**Directors.**  
Henry George Ward, Esq., M. A. Chairman  
George Alfred Muskett, Esq., Deputy Chairman.  
W. Abbott, Esq.  
William Butterworth Bayley, Esq.  
R. H. Bowden, Esq.  
Hassett David Colvin, Esq.  
John Fuller, Esq.  
Pascoe St. Jeger Greenfell, Esq.  
Edward Lee, Esq.  
Major John Luard  
Thomas Willis Muskett, Esq.  
Major George Wilcock.

**Bankers.**—Messrs. Smith, Payne, and Smiths.  
Public attention is called to the important fact that a premium of from seven to nine guineas (varying with the age of the lady) paid annually to the Society for a term of twenty-two years, will entitle each one of the future children of a marriage, on attaining the age of twenty-one, to 1000. In like manner, a premium of

14 to 18 Guineas will entitle each to £200  
21 to 27 Do. . . . . 300  
28 to 35 Do. . . . . 500  
36 to 45 Do. . . . . 500  
46 to 50 Do. . . . . 1000  
and to any intermediate or larger amount in the same proportion. The premium may likewise be made to cease with the death of either parent, instead of being for a term of years certain.  
Similar endowments are granted, payable at any other age or ages, and also to existing children. Annuities are likewise granted to wives, payable after the decease of their husbands, as well as all other descriptions of annuities, immediate and future.  
JOHN CAZENOVE, Secretary.

23 Fleet Street.

St. James's Street.—Original Models, by Michael Angelo, Bellini, John of Bologna, &c.; Rare Old Silver, Dresden, Cracolin, and other China; Enamel, by H. Bone; Choice Paintings; Sideboard of Plate; Select Library of Books; Cellar of very Old Wines; Piccola Piano, by Wozzani.

**DEBENHAM and STORR (late Machin, Debenham, and Storr), respectfully announce that they are instructed by the Assignees of Mr. A. H. Day, a Bankrupt, to SELL, at the Gallery, No. 25 St. James's Street, on Wednesday, June 20, and following Day, at One, an unique COLLECTION of ORIGINAL DUBLIN, by Michael Angelo, purchased in Florence, and brought to this country by the late antiquarian, the late Mr. Locke, of Norbury Park. These Models form some of Michael Angelo's noblest productions, executed by his own hand, and originally decorated the Decal Palace in Florence. The chief subjects are the model of his celebrated Moses; it is perfect, and every one who has seen more a copy or an engraving from that great work, can form an adequate notion of the grandeur and sublimity of the design; the Monument of Ferdinand de Medici, with figures of slaves at each corner, breaking their bonds—the attitude of the warrior is most exquisitely graceful. It is well known that Sir Thomas Lawrence highly estimated these two models, and considered them of infinite value; and it is hoped that, ere long, they will find a place in the British Museum; a magnificent Figure, from the same hand, executed for the tomb of Julius de Medici; four River Gods, by John of Bologna; a charming Triton, by Bellini, and other fine specimens; a few fine old Bronzes and Marble Sculptures, including a Bust of Napoleon, by Trismozzi; Two Verde Antique Vases, Warwick Vase, &c.; a fine Collection of Antique Rings, Sèvres, Dresden, and Cracolin China, amongst which will be found a Pair of noble Vases, mounted in gilt ormolu; eight beautifully executed Enamels, by H. Bone, and other valuable Paintings, including a fine Landscape, DeFries; the Cobbler, Terberg; the original Johnny Gilpin, Stothard, &c.; a well-selected Library of Books, containing 400 Volumes; the Cellar of choice old Wine, in crushed Port, very long in bottle, Sherry, Madeira, Champagne, &c. Toka, &c.; a Sideboard of modern Plate, and other valuable items.  
May be viewed, two days prior to the Sale; Catalogues (price 6d.) may be obtained, seven days prior, of Mr. Clark, the Official Assignee, 25 St. James's Lane; Messrs. Collier, Marchant, and Co. Solicitors, Carey Street; of the Auctioneers, King Street, Covent Garden, and at the Place of Sale.**

MISS MARTINEAU'S NEW WORK.  
 In 3 vols. post 8vo.  
**SOCIETY IN AMERICA.**  
 By HARRIET MARTINEAU,  
 Author of "Illustrations of Political Economy."  
 "In the course of this tour, I visited almost every kind of in-  
 stitution: the prisons of Auburn, Philadelphia, and Nashville;  
 the insane and other hospitals of almost every considerable  
 place; the literary and scientific institutions; the factories of  
 the north; the plantations of the south; the farms of the west.  
 I lived in houses which might be called palaces, in log-houses,  
 and in a farm-house. I travelled much in wagons, as well as  
 stages; also on horseback; and in some of the best and worst  
 steam-boats. I saw weddings and christenings, the gatherings  
 of the richer at watering-places, and the humbler at country  
 festivals. I was present at orations, at land sales, and in the  
 slave-market. I was in frequent attendance on the Supreme  
 Court and the Senate, and witnessed some of the proceedings of  
 state legislatures. Above all, I was received into the bosom of  
 many families, not as a stranger, but as a daughter or a sister."  
 Preface.

Saunders and Otley, Conduit Street, Hanover Square.

Published this day, price Eighteen Shillings.

Vol. XV. Part 1. of the

# ENCYCLOPÆDIA BRITANNICA.

SEVENTH EDITION.

Edited by PROFESSOR NAPIER.

The present half-volume contains the Articles—Micrometer and Microscope, by Sir David Brewster; Milton and Mirabeau, by James Browne, LL.D.; Mineralogy, by Professor Jameson, including Geology, by Professor Phillips; Mollusca, by Professor Fleming; Money, by J. R. MacCulloch, Esq. &c. &c.

At least two-thirds of the matter in the present half-volume is entirely new. Wherever any of the text of the former edition has been substantially retained, it has been amended in style, improved in arrangement, and accom-  
 modated in every respect to the actual state of knowledge, and the general design of the work.

Upon the whole, the Edition of the "Encyclopædia Britannica" now offered to the Public, embracing improve-  
 ments and additions, both numerous and extensive, ought to be considered not only as a Permanent Repository of all  
 that is valuable in Science and Literature, taking these terms in their most comprehensive acceptance, but, from the  
 regularity of its publication, it also deserves to be regarded as a Periodical, furnishing, in alphabetical arrangement,  
 an ample fund of varied and authentic information; or it may be viewed as a Series of New and Cheap Books pub-  
 lished at stated intervals, upon subjects the most interesting in Literature, and important in Science.

Adam and Charles Black, Edinburgh; Simpkin, Marshall, and Co.; Whittaker and Co.; Hamilton, Adams,  
 and Co. London; and John Cumming, Dublin.

 FAITH.

**CONFESSIONS TO SILVIO PELLICO.**  
 The rapid sale of Sorelli's book has called for a new im-  
 pression of it, beautifully bound, with Illustrations, price 10s. 6d.  
 "Guido Sorelli is a man of talent and sincerity."—*The Christian*  
*Advocate*.

"The perfect candour and unsuspecting frankness with which  
 Guido Sorelli lays before the reader the history of his own mind,  
 and the openness with which every imperfection in disposition,  
 as well as every mistake in judgment, is presented for the pur-  
 pose of instruction and warning, render Sorelli's work exceed-  
 ingly interesting."—*New Monthly Magazine*.  
 Printed for the Author, 18 Piccadilly; P. Rolandi, 30 Berners  
 Street; Sherwood and Co. Paternoster Row; and Simpkin and  
 Marshall, Stationers' Hall Court.

**THE SPIRIT OF ETIQUETTE;**  
 or, Politeness Exemplified.  
 By a LADY OF DISTINCTION.

"This is a neat and elegant publication; and should be in the  
 hands of every one whose station or circumstances leads them into  
 good society."  
 London: Moore, 44 Paternoster Row; and all Booksellers.

NEW EDITION, REDUCED IN PRICE.  
 In 1 vol. 12mo. neatly bound, price 2s. 6d.

**A COMPLETE SYSTEM OF COM-**  
**MERCIAL ARITHMETIC;** containing a new and  
 improved Explanation of the Theory of the Science, with an ex-  
 tensive application of its principles to the various branches of  
 Commerce, according to the existing practices of Trade, and  
 numerous Rules for performing Mental Calculations.  
 By WILLIAM TATE, Jun.

Also,  
**An Appendix to the Commercial Arithmetic,**  
 exhibiting the Methods employed by Merchants, Bankers, and  
 Brokers, for the valuation of Merchandise, Mental per Centages,  
 Interest Accounts in Accounts-Current, Public Funds, Marine  
 Insurances, Standarding in Gold and Silver, Arbitrations of Ex-  
 change in Bills, Bullion, and Merchandise, and actual and pro-  
 forma Statements of British and Foreign Invoices and Account  
 Sales. By W. Tate, Jun. Neatly bound, price 2s. 6d.; or both  
 Parts bound together, 4s. 6d.

"The rules are clear, and more precise than usual. The exer-  
 cises are neatly composed, and have a greater relation to the  
 actual business of the world than is customary with elementary  
 books; whilst, to every branch that will admit of it, rules for  
 mental calculations, or short cuts to answer, are added."  
*Spectator*.

 and Son; J. Templeman; J. Van Voorst; and J. and J. J.  
 Deighton, Cambridge.

On the First of July will be published,

PART I. OF

**A HISTORY OF BRITISH BIRDS.**

By WILLIAM YARRELL, F.L.S. Secretary of the Zoological Society.

This work, which is intended as a companion to "The History of British Quadrupeds and British Fishes," will be completed in two volumes 8vo. and will contain a greater number of British Birds than has yet been included in any work on the same subject.

All the species will be illustrated by engravings on wood—two representations of many of them; and in some cases, even three figures will be given, to represent the various changes dependent on age, sex, or season. The whole of the Birds will be engraved by, or under the direction of, Mr. Thompson, whose name is at once a guarantee that the execution will be excellent and uniform throughout.

The drawings will be made from living examples of the Birds as often as opportunities permit; and in other instances, from the most perfect specimens in the different collections to which the

author has access. The vignettes will be numerous, and subservient to the general subject—occasionally illustrating the description of some interesting portion of internal or external structure; and no expense or labour will be spared to render this "History of British Birds" as complete as extensive observation, long practical acquaintance with the subject, and the plan of the work, will admit.

The work will be printed in demy 8vo. price 2s. 6d. each Part; and in royal 8vo. price 5s.; and a very limited number of copies in imperial 8vo. corresponding in size and character with "The History of British Quadrupeds and British Fishes." The last size cannot be delivered until complete, and Subscribers' Names are requested to be sent to the Publisher.

**PROSPECTUS OF****A HISTORY OF BRITISH REPTILES.**

By THOMAS BELL, F.R.S. Professor of Zoology in King's College.

In pursuance of the plan already commenced by the publication of "The History of British Fishes and of British Quadrupeds," it is intended that the latter work, now nearly finished, shall be immediately succeeded by a "History of British Reptiles," by the same author, which, with the former work, and that of Mr. Yarrell, on British Birds, will complete the Natural History of the Vertebrate Animals of the British Isles.

The Reptiles of this country, although few in number, are not devoid of considerable interest. Their habits are popularly much misunderstood, and several important and useful species are abused and destroyed, from a mistaken notion that they are, directly or indirectly, noxious to man. The elucidation of their habits, the distinctive description of the species, their geographical distribution, and the history of the transformation of all the amphibious forms, are amongst the subjects which will be fully discussed.

The author has already to offer his thanks for the promise of much valuable assistance, particu-

larly from a well-known zealous naturalist of Ireland, whose communications on the Reptiles of that portion of the kingdom, cannot but be highly interesting; and he solicits from all who are engaged in the pursuit of British Zoology, the continuance of the kind and liberal attention which he has already so extensively received during the progress of his former work.

The Woodcuts will be numerous, corresponding, in their general style, with those of the preceding works; and, in addition to a figure of each species, and of some of the most important varieties, will comprise many illustrations of structure and development, particularly the transformation of the Batrachian genera.

Part I. will be published on the 3d of October, price 2s. 6d. in demy 8vo. and 5s. in royal 8vo.; and a very limited number of copies will also be printed in imperial 8vo. uniform with "The History of the British Quadrupeds and British Fishes." The last size cannot be delivered until complete, and Subscribers are requested to forward their Names to the Publisher.

On the First of August will be published, in 1 vol. 8vo. price 28s. (Parts I. to IX. being now ready, price 2s. 6d. each),

**A HISTORY OF BRITISH QUADRUPEDS.**

By THOMAS BELL, F.R.S. Professor of Zoology in King's College.

Illustrated by a figure of each Subject, engraved in the first style of the Art, on Wood, of every British Animal, together with numerous Vignette Tail-pieces. The manner in which each department has been executed, may be known by the following extracts from the press.

"Reflects the greatest credit on its author, from the manner in which it is gotten up, the purity and elegance of the style, and the clearness and beauty of the wood engravings. We are glad to see such a work, one which may be considered of national importance, emanating from the

pen of a gentleman so fully capable of doing justice to a subject of such great interest, not only to the medical world, but to the public in general."—*Dublin Journal of Medical Science.*

"This work will be an acquisition to the literature of the country."—*Metropolitan Magazine.*

A few copies are also printed in royal 8vo. and imperial 8vo. to range with the two preceding and following works.

In 2 vols. 8vo. price 2l. 8s. illustrated by nearly 400 beautiful Woodcuts,

**A HISTORY OF BRITISH FISHES.**

By WILLIAM YARRELL, F.L.S. Secretary to the Zoological Society.

This work, which contains a complete History of the Ichthyology of Great Britain, including many species never before noticed, is embellished with 240 Figures of Fishes, mostly taken from the objects themselves, and the illustrations Vignettes, drawn and engraved by the most eminent Artists; and no pains have been spared to render it worthy of public estimation.

This book ought to be largely circulated, not only on account of its scientific merits—though these, as we have in part shown, are great and signal—but because it is popularly written throughout, and therefore likely to excite general attention to a subject which ought to be held as one of

primary importance. Every one is interested about fishes—the political economist, the epicure, the merchant, the man of science, the angler, the poor, the rich. We hail the appearance of this book as the dawn of a new era in the Natural History of England."—*Quarterly Review*, April.

A limited number of Copies have been printed in royal 8vo. price 4l. 16s.; and Fifty only on imperial 8vo. price 7l. 4s. for which last size early application will be necessary.

In post 8vo. price 10s. 6d. cloth,

**AN ANGLER'S RAMBLES.**

By EDWARD JESSE, F.L.S.

Author of "Gleanings in Natural History."

Contents.—Thames Fishing—Trotting in Staffordshire—Perch Fishing—Club—Two Days' Fly-fishing on the Test—Lusford Fishing—Club—Grayling Fishing—A Visit to Oxford—The Country Clergyman.

"We think we have said enough to confirm our opinion of this excellent little volume. The scraps of philosophy, with which it abounds; the good feeling and benevolence which pervades every chapter; the jokes and good humour interspersed throughout; the sketches of character; the hints and practical information it contains; the occasional pictures of English habits—all combine to render this volume a fund of instruction and entertainment. Every atom is interesting."—*Sporting Magazine*.

In post 8vo. with Twenty-six Illustrations, price 12s.

**BEAUTIES OF THE COUNTRY;**

Or, Descriptions of Rural Customs, Objects, Scenery, and the Seasons.

By THOMAS MILLER,

Author of "A Day in the Woods."

"Mr. Miller has lived in the country, and has observed its features; and he paints them faithfully and well. His images are just, his effects true; and his reflections full of interest and character."—*Literary Gazette*.

"A very pleasant volume; the selections have been made with much good taste, and the original matter is always interesting. The work is beautifully illustrated with many admirable woodcuts."—*Athenaeum*.

"To the real lovers of Nature, this work will be most welcome. It is written with graphic truth, and in a healthy tone. Mr. Miller describes his object to be to embody in his volume whatever is most beautiful or poetical in country life and scenery. All this he has done, and has also portrayed with vividness and skill, many of the old country customs and festivals."—*Examiner*.

Elegantly printed in 1 vol. post 8vo. price 9s. in cloth,

**GRAY'S LEY IN A COUNTRY CHURCHYARD.**

Each Stanza illustrated with an Engraving on Wood, from 33 original Drawings expressly made for the volume, by the following eminent Artists:—

A. W. Callcott, R.A.  
W. Collins, R.A.  
J. Constable, R.A.  
A. Cooper, R.A.  
H. Howard, R.A.  
W. Mulready, R.A.  
T. Stothard, R.A.  
R. Westall, R.A.

J. J. Chalon, A.R.A.

J. W. Wright

"This is a curiosity in art. One of the exquisite gems of our language is here augmented in its interest and beauty by illustrations which, in the very fact of their existence, proclaim the power of the author. The drawings are from our highest artists, and the names of the engravers also include many of the most distinguished, especially in this branch of art. It is truly a beautiful volume."—*Morning Post*.

Published this day, price 7s. uniform in size with the "Elegy," and by the same Author,

**THE BARD.**

With Twelve Illustrations, from Drawings by the Hon. Mrs. JOHN TALBOT.

JOHN VAN VOORST, 1 PATERNOSTER ROW.

Printed by JAMES MOYER, of Brook Green, Hammer-smith, in the County of Middlesex, Printer, at his Printing Office, Number 38 Castle Street, Leicester Square, in the said County; and published by WILLIAM ARMIGER SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, June 17th, 1827.

### DEATH OF THE KING.

THE death of our estimable King, on the morning of Tuesday last, has thrown a gloom over the current literature of the country, as it has done over every class, interest, and public pursuit. Our journal of the week must partake of the general sympathy, the stagnation of business, and the universal sorrow of the land.

With regard to the new reign, as connected with its political projects, speculations, and hopes, we leave it to those other sources of intelligence to whose more peculiar province it belongs. For us it is only to observe, that King William IV. among his many other admirable royal qualities, was ever eminently accessible to applications of a literary character; and that, while his countenance was frankly and freely given to all becoming suits for the patronage of the throne, he was also distinguished by the favours and rewards he bestowed upon authors recommended to his notice by the advisers of the Crown. We trust that our youthful Queen, in the midst of all the party questions and contests in which her early years must be involved, will feel and remember that, important as national politics are, it is hardly less important to the happiness of a nation and the permanent glory of a sovereign, to cherish the literature and genius of the age. When most matters of other kinds, which agitate the passing hour with strong and deep impressions (strong and deep, only because they belong to that hour), have shrunk into their real insignificance, or sunk into their innate oblivion; still will the beneficent effects of what the press can instil, bless a kingdom and shed a lustre, beyond all other lustres, on its government. It is, therefore, the paramount public duty, as well as the paramount self-concernment of rulers, wisely and generously to encourage the useful, the instructive, the refining, and the ennobling efforts of contemporary talent and learning. These, royally fostered, the frivolous, the perverting, and the dangerous, will cease to trouble present tranquillity; and the future will reflect a splendour on the monarch to whom the mighty boon was owed, far more brilliant and lasting than the fame of victories, or the triumphs of policy. It is our fervent prayer, that the Queen may be distinguished above all others, even of her illustrious race, for her love of letters, and her high consideration for the good and gifted of those who adorn them. Thus, indeed, will her people have cause to love her, and posterity to remember her name with gratitude and admiration.

We have a pleasure in closing this brief tribute with a lyric from the pen of our justly popular friend, Mr. LOVER. It is the first we have seen to hail the opening of the virgin reign: may it be prophetic as it is poetical, and auspicious as it is heartfelt.

All hail to thee! queen of the fair and the brave!  
Let the bold song of joy reach the skies;  
Bright, bright o'er the foam of her own subject wave  
See the star of Victoria arise!  
Young queen of the ocean, prophetic our fire  
To hail thee the greatest we've seen;  
Hark! the thundering strain of the old sea-god's quire,  
To welcome Victoria the queen!

May years full of glory and loyalty's love,  
Be thine in thy place of renown;  
To say that we honour thee, means not enough,—  
For Britons all honour the crown.  
But the crown that encircles young beauty's fair brow,  
With fonder devotion is seen;  
And chivalry sheds its romance o'er the vow  
We pledge to Victoria the queen.

Long, long, royal maid, may the olive entwine  
With the laurels that circle thy crown;  
But if war should arouse the old lion again,  
'Twill be to increase thy renown.  
To battle, while rushing, each heart would beat high  
To triumph, as wont we have been;  
Propitious to conquest, our bold battle-cry,  
"Victoria! for England's fair queen!"

### REVIEW OF NEW BOOKS.

*Turkey, Greece, and Malta.* By Adolphus Slade, Esq. R.N. F.R.A.S., author of "Records of Travels in the East." 2 vols. 8vo. London, 1837. Saunders and Otley.

A VERY cursory glance at above a thousand pages of a work like this, received too late for a careful analysis, allows us little opportunity for doing justice to the author, or expressing any critical opinion. For the present we must be content with a run over his course, and a few brief stoppages where he has struck out aught of more than common interest or novelty. In his Preface he describes the nature of his task thus:—

"The following pages are the result of observations made by the author in the years 1834–35–36, while attached to the squadron under the command of Sir Josias Rowley, and chiefly relate to the actual state and prospects of Greece and Turkey, considered separately, and in their connexion with the policy of England and of Russia. . . . He may also be allowed to observe, that the Mediterranean has been familiar to him from an early age, in consequence of having served nearly all his time on that station; and although a youth may be said to remark little or nothing, still he imbibes impressions, which serve to aid his judgment in after years. The policy, the condition, and the prospects of Greece and Turkey, are dwelt on at length; first, as exciting an immediate and general attention; and secondly, because the author, having already written about those countries, felt more interested in them than he otherwise might have been. He was naturally anxious to ascertain how far his previous remarks would stand the ordeal of further experience; how far the impressions of his first residence in the East would be confirmed by a second visit to it; how far he should be obliged to avow with La Rochefoucault, 'J'aime mieux être un homme à paradoxes qu'un homme à préjugés.' His attention having been once drawn to the state of Greece and Turkey, it was comparatively easy to him to fix it again on those countries. The services in which he was usually employed, added to the advantage of enjoying an extensive acquaintance among the varied society of the chief places in the Levant, gave him adequate and satisfactory opportunities of observation and inquiry. If he has failed to elucidate his subject, it has not been from a want of materials. Seeming contradictions may, perhaps, be noticed in the course of the work; but, if so, he begs leave to observe that, in treating questions so involved as the relative position of Greek and Turk, or oriental despotism and Mussulman freedom—each a perfect anomaly—it is difficult to avoid the appearance of inconsistency."

The author thinks that Turkey is rapidly sinking in the scale of nations; and, considering Turkey as the future battle-field between that power and England, advises a timely check on the increasing aggressive force of Russia. With these great questions, however, the *Literary Gazette* has little or nothing to do; and so we shall turn to such points as better suit the character of our pages. Re-

specting Malta, we select the following sketch:

"And the island will increase in prosperity. Malta is becoming the centre of the steam-navigation, which promises, in a few years, to intersect the Mediterranean in all directions, connecting France and Italy with the coasts of Egypt, Turkey, and Greece, and extending its ramifications to the Danube and to Trebizonde. Already the increased travelling gives ample occupation to half-a-dozen good hotels. Intent on a tour in the east, a man should decidedly begin at Malta. On the verge of Christendom, he will have a glimpse of oriental usages. The Arabic language will not sound uncouth after the Maltese dialect; the yamash of the Turkish lady will not appear exaggerated after the Maltese faldette; the resigned dependence on Divine Providence will prepare him for the startling doctrine of fate. It is a good starting-post. You find conveyance by packets or merchantmen in all directions, at all prices; gratis, by a king's ship or a yacht, if you chance to have a friend, or possess modest assurance. Any thing forgotten, you can provide yourself with at Valetta: a note-book for the benefit of your friends—a sketch-book for your own admiration. You may replenish your sauce-bottle, and fill up your powder-flask; you may obtain an active servant, and pick up hints for future guidance, the last being often, as I have found to my cost, the article a young traveller thinks least of, and wants most. Bound eastward, you may not value the island according to its merits; but returning, the transition is joyous; from a course of hardship to all delights of civilisation—the comforts of England and the refinements of France—your own language and the sweet Italian tongue to greet your ears."

"Little intercourse exists between English and Maltese families, the one or two exceptions proving the rule. Lord Hastings endeavoured to promote union by having all parties frequently and informally at the palace, thus raising the natives in their own estimation; but since his lordship's death, separation again widened. In part, I should say, we are to blame. As superiors, it is our duty to make first advances; as superiors, we should drop the national feeling, exclusiveness, which broke up more than one public amusement where the English and natives might mingle without etiquette, without feelings of condescension on one side or the other. Our customs, diametrically opposed, offer, it must be confessed, a bar to sociality. We dine at six; they dine at two. We associate through the instrumentality of cookery and wine; they are satisfied with simple conversazioni. The Maltese, also, are greatly to blame in refusing to learn English, for English people seldom speak other languages with pleasure; for, to the *employés*, the Italian language is merely a temporary convenience,—is not, as English to a native, of lasting utility. They should have perceived this. Nor have they an excuse. Thirty-six years under our rule, twenty-one years annexed to our empire, yet not more than twenty of the natives speak English perfectly. We may express our regret at the acquisition of English not having always been a *sine qua non*

of public employ; at English not being the authoritative text of the law. Sir John Stoddart (chief justice) argued in favour of the latter; but his opinion was, I think ill-advisedly, overruled, and in 1836 the king's government declared Italian the authoritative text."

A notice of the famous Prince Pückler Muskau is not amiss:—

"Here," says the author, "we had Prince Pückler Muskau among us: after a tour through the regencies of Tunis and Algiers, in which he crossed mountains the French stopped at, discovered ruins superior to the Athenian remains, and experienced a reception from every hey never before granted to a Christian—all by his own account. Ayme! Though he was known, though he was inspected in quarantine, though his merits were discussed, though his books were in the library, the prince prevailed over the *Pückler Muskau*. This travelling prince; who writes mawkish sentiment to Julie, a lady of a more discreet age, they say, than his own; who blames the cruel winds (he did so at Malta) for not impelling faster the vessel freighted with the precious burden of her epistles, was let loose on the little English set at Malta. Save in two or three instances, it was 'open sesame' wherever he turned. Nearly every one seemed anxious to be considered a fit gathering for the next basket of '*tutti frutti*.' Dressed in a garb of notoriety, a red skull-cap, large eastern trousers, and mottled boots, not even condescending to put on a Christian garb to inspect the garrison turned out for his amusement, he went the length of his tether, even that of a prince. He made his own works in the public library a curiosity by marginal-noting them from end to end, in elucidation of many parts relating to England, which he averred, by way of excusing himself, were badly translated. Not content with his own acquisitions, he had a secretary who might be said to act as a jackal; entering every box at the opera, known or unknown, to learn the flirtation of the day; to elicit ages; in short, to pick up *petits scandales* '*pour le prince*,' who retired from society to his desk; and 'for the prince,' he was tolerated. Also filling the office of trumpeter, he would say Sir Grenville Temple's descriptions (of Barbary) 'are most accurate and true; but they are dry. Now the prince will take up the same subject; he will give them a form—a colouring, and invest them with a charm that will compel every body to read.' Bravo, M. le Secrétaire! What is your pay? My dear friends! if he shew you all up, give a colouring to your dinners, where the enraptured hosts 'royal highnessed,' and 'spened' him up and down stairs; give a form to your colonial disputes, rife in his day, who will you have to blame? He silences his scruples by saying he writes for Germans: not his fault if Sarah Austin chooses to translate his book so beautifully, and, he might add, so partially, for the translation conveys a feeble idea of the liberties he took in German with his English friends. What German knows or cares anything about the English in a colony, unless as national traits? What harm in depicting them any more than the Bey of Constantine, or the Pasha of Tripoli? So he may argue."

From Malta we fly to Constantinople, and some anecdotes of Turkish ministers. Speaking of Tahir Pasha, we are told:

"One day, during the summer of 1835, his abuse of power being the general theme—for he had just bastinadoed a man on the belly till he died—he received a summons to attend the sultan at the palace of Beglar-Bey. Mahmoud

received him good-humouredly; and after awhile invited him to eat some sweet cakes which were brought in by a page. Tahir inclined himself to the honour, in doubt, however, whether his sublimity were complimenting him or joking. 'Eat, eat,' said his royal host, on seeing him suspend his attack on the fly-envied pile; 'eat, they will do you good.' Tahir bowed his head anew, and continued the luscious task. 'Go on,' repeated the sultan, 'I insist on your eating every one.' Tahir now paled; he fancied he saw in the proceeding something beyond a frolic, and he knew the oriental use of the metaphor. He continued, however, the irksome process; at length ceased, well nigh choked. 'The prophet's vicegerent, Allah smile on him, might do what he pleased to his slave, but he could not eat more; he might take his head away, but his throat would not swallow.' Now for the moral. 'How do you then think,' said the sultan, 'people can eat' five hundred strokes of the bastinado, when you are unable to eat fifty cakes?' My reader may fancy that Tahir never ate sweet cakes again of his own accord; but they may be assured, that the royal wit did not prevent his making others 'eat the bastinado' whenever his mustaches chose to curl. \* \* \*

"Khoesrow Pasha may be termed the Talleyrand of Turkey. He has veered with every wind; he has massacred Christians; he has exterminated Mussulmans; he superintended the slaughter of Ipsara; he cast the parts for the tragedy of the *Emeidas*; he was a staunch janissary, he is now a reformer; he vowed hatred to Russia, he is now her friend. As circumstances may cause a man to be cruel and sanguinary, so we should be cautious how we judge of individual character by the acts of a public life; and in this view, Khoesrow Pasha appears better than one might be inclined to expect. It happened that a certain *ridjal* (gentleman) among the janissaries contrived to escape the destruction of the corps in 1826. As he was of consideration, strict search was made for him, but in vain; he was, therefore, supposed to have been reduced to a cinder in the conflagration of the quarters, or to have fled. Neither one nor the other was the case. He remained in the capital, shut up with his wife and two faithful domestics in a retired house, living on the produce of her jewels, which she was enabled to dispose of without fear of discovery, as the out-door garb of a Mussulman woman is a complete disguise. The absence of domestic espionage in Turkey renders concealment in a house easy. After nine years, however, their money failed; but Süleyman had a note of hand for twenty thousand piastres. He gave it to the partner of his seclusion, with directions to seek out the banker, declare herself, and obtain any part of the sum. She accordingly went to the *khan*, where banking affairs are generally transacted, and, having found out the individual in question, she said to him, 'I am the wife of Süleyman Aga (of such an *orta* of Janissaries); we have hitherto lived concealed from every body, but that is no longer possible; we are in want of means to purchase bread. Here is your bill; take it; give me ten thousand piastres for it—give me five thousand piastres—as you will.' The banker was a villain. 'Süleyman,' he observed, 'in virtue of his janissary reproach, was dead in law; therefore he could claim nothing; nevertheless, let the lady leave their address, he would see what could be done for the sake of friendship. Having thus dismissed the fair suppliant, he repaired to the *eski saray*, and denounced her husband to the seraskier;

thinking to do the great man a singular favour, as well as to rid himself for ever thereby of a creditor. Khoesrow was astonished: he commended the banker's zeal, who retired exulting in his treachery, and sent *chavasses* immediately to the proscribed man's abode. Süleyman, who from the moment of his wife's return might have looked on the stork before his windows as the bird of fate, now deemed his final hour arrived; for what could the dreaded seraskier want but blood? He embraced his wife as though for the last time, and accompanied the messengers to the *eski saray*. Unexpected result! On seeing him enter, on seeing the beard descending to his girdle—sure passport to a Turk's favour—Khoesrow's feelings flowed back to their early fountains. He rose up—he advanced to meet him—he took his hands—he led him to the sofa. Bewildered at this conduct, Süleyman would have declined the proffered honour; 'The slave is not worthy to kiss the hem of his master's robe.' '*Otaur, otaur*,' (sit down, sit down,) said the seraskier, '*korkma* (fear not), the evil time is gone by; you are no longer a bad man; you are a good man. We do not shed blood for the sake of blood.' He made him recount the mode of his escape and his sufferings, in which he took a warm interest, for they had known each other in the 'olden time.' In the meanwhile he sent for the false banker, who started, and the pallor of death overspread his countenance when he saw his intended victim sitting in the place of honour. '*Aman* (marcy), he cried, 'what shall I do? I will do any thing to turn aside this evil which has fallen on my head.' 'Go home, wretch,' replied the seraskier, 'and return instantly with the twenty thousand piastres you owe this age, with the interest thereon—not an asper less.' He gave the money to the astonished Süleyman, then desired him to have no apprehension, but to go about, as he was used to do formerly, and see his friends; and, above all, to visit him again soon. How well Khoesrow must have slept that night! I was then at Constantinople, and witnessed the glad effect it produced on the inhabitants, with whom Khoesrow's ready wit and humour made him half a favourite, in spite of his notoriety. 'They need to complain of my doing nothing with the fleet,' said Khoesrow, 'but I always brought it back again.' A sly hit at Tahir Pasha. As he was riding one day into Pera, some Turkish women mobbed him on account of the scanty supply at the fountains: 'We have no water to wash our dead with,' they cried out. 'So as their souls be clean, my darlings, you need not care about their bodies,' replied the seraskier. 'Ah! the *ghiaour*!' shouted the nymphs, between anger and laughter."

The appearance of the Bosphorus on a *fête*, such at the marriage of the sultan's daughter, must resemble fairy tale.

"Each night, at such times, the Bosphorus may realise one's imaginings of Bagdad under Haroun al Raschid and Zubeide. The noble stream flows along for ten miles between palaces of fire. Every house on either bank is illuminated fancifully. There are Gothic temples, and Grecian colonnades with scrolled frontispieces, and gardens—but all of living flame. The Scuttlie Point, one of Europe's extremities, is a blaze of light, and reflects itself on Asia's cliffs. Nothing of the sort in Christendom can give the slightest idea of Constantinople and the Bosphorus when thus lighted up. The effect is most striking on the water. As no object is visible except the creations of fire,

the ships, which are traced out by lamps, appear to float in mid-air at indefinite distances, while the resplendent kiosks on the hill-tops of either continent may give the idea of magicians' abodes, for they also seem unconnected with earth or water. One may readily fancy oneself alone in a dark lake on the Elysian fields, surrounded by mansions of the blest. From time to time, however, fireworks disclose the scene in detail. Huge wooden whales are moored for that purpose, and from their mouths thousands of rockets fly up over the gilded stream, to mingle first their evanescent brightness with the stars, then fall again in Danaos' showers on its bosom. Numerous caïques them, previously hidden by the glare, emerge into form, and where you fancied yourself to be solitary, your rowers have scarcely room to move. You also see large fish, with shining tails and flaming eyes, paddled about by invisible hands; and carriages and horses, ingeniously built on boats, seem to be driving over the water as securely as on dry land. All is liquid radiance for a few minutes, save where a cypress-grove on either bank throws its shadow forth, as if, like the masked skeleton at an ancient Egyptian feast, to be a silent monitor. As the temporary brightness dies away, Husion obtains complete mastery of the coast: you see a splash, and you look for a sea-god to rise; you hear a voice, and you listen for a Nereid's song. In the joy of his heart, Sultan Mahmud declared that the offspring of the union which called forth such festivity and splendour in the summer of 1834, should be permitted to live. A boy gladdened the young mother's heart for a few months, then died. Sultana Salihah was seventeen or eighteen years old; not pretty, but ladylike, according to the reports of some Frank ladies. She was reported to be haughty and passionate. She affronted the lady pashas, it was said, when they paid their duties to her after the marriage: her foot they were bound to kiss; but instead of smiling on her worshippers, she turned away her head. More secluded than Mussulman women in general, no man (except the doctor) ever setting eyes even on her person, a princess of the house of Othman hark her marriage-day as the day of escape from bondage. She is at once free, excepting in the usual checks of Mohammedanism. Her husband is slave by law and custom. Chosen by the sultan, he must obey; discard his wife if he have one; break off old connexions; then, perhaps, surrounded by his royal mistress's spies, live tormented by the fiend jealousy. The present sultan's sister (a widow) used to watch her husband so narrowly, that, on visiting the isles of the Archipelago, as captain pasha, he deemed it prudent not to land without sending previously to make the Greeks veil. The fair ones of Scio, who prided themselves on their superior attractions, were exceedingly offended at Kutchuk Musseyin's apparent want of gallantry. They might rather have been flattered at his apprehension of their charms. Halil was not so hardly used: he fretted after his former loves, and the sultan at length gave him leave to visit them in secret."

Our author's wanderings in Greece, and among the isles of the Archipelago, occupy nearly a moiety of the work; but the whole is so mixed up with political speculations, that we feel we have reached the end of our task, and cannot, without entering on a field from which we desire to abstain, do or say more for this publication.

*Scenes from the Life of Edward Lascelles, Gent.* 2 vols. 12mo. Dublin, 1837. Curry, Jun. and Co.; London, Simpkin, Marshall, and Co.; Edinburgh, Fraser and Co.

THREE weeks of miserable weather induced the *ci-devant* "Edward Lascelles" to sketch some of the prominent scenes of his early life, in order to pass the time which, as he was debarred from out-of-door recreation, hung tediously on hand. These two volumes are the result of those weeks of bad weather, which we sincerely wish had lasted some time longer; for there is a pleasant freshness in the scenes before us, which reminds us of Captain Mervat or Captain Chamier, in whose steps our author follows closely, most of his adventures being passed on board a man-of-war, or at the ports where she touched. There are a number of characters and incidents introduced, which form a pleasant variety to the amusing adventures of *Edward Lascelles*, whose life we shall strive to illustrate from his own pages.

After landing in most of the usual school-pranks of boys, he is appointed to H.M.S. *Hesperus*, which he duly joins, and the time passes pleasantly till his arrival at St. Helena, where he falls desperately in love, and, like all love-sick midshipmen, enters his leucubrations in his private note-book. These we shall extract, as an amusing example of the state of a midshipman's mind when he is, to use a sea phrase, "sponsey."

"On board H.M.S. *Hesperus*,  
"St. Helena.

"Once more tossed about upon the heaving billows of the boundless ocean! [the sea was, all the time, as smooth as a mirror] seeking for fame and fortune [God knows, there was little prospect of either in these 'piping times of peace'] amid the rude struggle of tempestuous elements! Bubbles! more empty and evanescent than the white sea-foam, that is annihilated the moment of its formation! Fame! what is it, after all, but to have one's name interchanged, for a few centuries after death, with the names of Drake and Nelson [alas! alas!]; and a thousand more of the other pretty names of Europe; and then—why then to have it consigned, like the names of common men, to utter oblivion? Yes! let Vanity and Ambition flatter themselves as they will—Oblivion, with her hollow, sightless eyes, will come at last. At the touch of her destroying hand, the monuments of the great will crumble away; their false inscriptions will be obliterated for ever. The presumptuous piles of Westminster and St. Paul's will be trodden to dust beneath her feet; she will ride the gardens, and ruin the towers, of even the most enduring of Fame's gaudy temples! What, then, does it matter, whether we are forgotten the moment we die, or live on for a few hundred years [!]; after the grave has closed on our remains; in the remembrance of a posterity for whom we care not; of whose very existence we are, in some measure, uncertain? And fortune! O Sophia! indigence and solitude with thee, were worth a thousand times all the luxuries wealth can purchase; all the pleasures society can afford! But I hear the shrill note of that accursed Parsons, piping up the starboard watch.

"Midnight.

"At this solemn hour of silence and solitude, while others are dreaming away in their sluggard beds the little span of life allotted them here below [below in reality], let me revel in luxurious reminiscences of Sophia! O thou angel! brighter than the brightest seraph that ever glided through the regions of

the sky; how unworthy am I of a love so pure as thine! But I shall strive to merit it; and the remembrance of those sighs, those tears of thine, will ever awaken in my bosom a desire for the glorious and the good!

"Shed but one tear ere I depart,

A drop to soothe my bosom's pain;  
I'll shrine the treasure in my heart,

And it shall wake my senses again.

Breathe but one sigh of fond regret,

While sorrow's tear shall mutely fall:

Enough! I see those eyes are wet (!)

Those precious drops pay me for all!

The encircling arms which late entwined,

In joy, thy sylph-like beauties form;

Must now engage the furious wind,

And brave the buffets of the storm.

Again! again! that last adieu;

Repeat once more that kind adieu!

When care and dangers round me press,

Fond memory still shall turn to you!"

This love he quickly gets over, and larks as only mids do lark, till he falls in love again and again; active life soon curing him of these follies. Mr. Lascelles' adventures are pleasantly mingled with descriptions of his shipmates and others, in the *Hesperus*. The purser is well described.

"In the person of the jolly little Mr. Sands we possessed the very prince of pursers. He was a short man, of an extremely stout, square make, with a bald, shining head, large black whiskers, round pleasant countenance, and merry, sparkling black eyes. Unlike the generality of men in his station, he was extremely well-bred and gentlemanly in his demeanour; liberal in his sentiments, and refined in his tastes; and, as a consequence of all these good qualities, a particular favourite of every one on board, and a great intimate of the captain. On his face there was, invariably, a pleased, good-humoured smile; and you might hear him, in all weathers, trollying forth some favourite song, as he sat in the cabin making up his books. The fiercer the blast blew, the louder rose the mellow pipe of the jolly Sands."

At the Cape they took in a new seaman, quite a character in his way, violently addicted to drinking; but a man on whose ward perfect reliance could be placed. *Ex. gr.*

"One morning he came to Strangways, who happened to be in command during the absence of the first-lieutenant, and asked for leave to go on shore. 'No, Wolfe,' said Strangways; 'I cannot allow you to go on shore. You know the last time you got leave, you came on board drunk; and such conduct cannot be permitted.' 'I promise you, sir,' said Wolfe, 'I won't get drunk.' 'What do you want to do ashore?' inquired Strangways. 'I want to fight, sir!' 'To fight!' repeated Strangways; 'a pretty errand, truly! And with whom, pray, do you mean to fight?' 'With black Sambo, the prize-fighter, sir. He challenged me to a match before I joined the ship; and he has been taunting me ever since, insinuating that I am afraid to stand to my bargain. This is the morning on which we were to meet, sir; and, if I do not attend, they will call me coward.' 'It was extremely foolish in you to enter into any such engagement, sir,' replied Strangways; 'but what you say is true: if you do not attend, those Cape Town bullies may impute it to cowardice. You promise me you won't get drunk?' 'I promise, sir!' 'Then you may go,' Wolfe, accordingly, went on shore; and, after an absence of about an hour and a half, he returned without having tasted a drop of liquor. As soon as he got on deck, he went to Strangways, and reported himself. 'I am come on board, sir, sober!' 'Well,' replied Strangways, 'I am glad you have kept your word,

Did you fight the match?" "I did, sir." "Was it a long one?" "Fifty minutes, sir, by the watch." "Who conquered?" "I did, sir." "Did you punish your opponent severely?" "Why, sir, I beat him, and that's just saying enough." "Right! You may retire, sir." "I hope, sir, you will have no objections to let me go ashore again," said Wolfe, still lingering in the neighbourhood of the lieutenant. "What! at present?" "Yes, sir." "Why, what do you want to do ashore now?" "Get drunk, sir!" replied Wolfe, with the gravest possible expression of countenance; while Strangways burst out into an immoderate fit of laughter. "May I go, sir?" continued Wolfe; when he thought the lieutenant had had sufficient time to indulge his merriment. "It is contrary to all rule, sir," said Strangways, scarcely able to articulate for laughter; "but, since you have kept your promise so faithfully, I will permit you for this once to go." "Thank you, sir," said Wolfe, with the same immovable gravity of countenance; and, in a few minutes, he was seen pulling off in one of the Malay boats that attended the ship with fruit. He kept his word as faithfully on this as on the former occasion; and, towards evening, he was carried on board in a state of the "most blissful oblivion."

Of the shore characters we shall say nothing, letting a good-hearted country squire speak for himself, in a letter to his sister.

"Sharman-Hall, Sunday.

"Dear Sister,—I got your letter last Friday, when I came in from the hunt, and would have answered it sooner, only I had Squire Stiles and some of the neighbours to dine with me, and they well-nigh drank me blind. The squire's a mighty deal worse now when you was here, and never stops under four bottles. Then, on Saturday, I had to be assir betimes, for the bounds were to meet at Horsley: we broke cover in the thick furze at Underlyn, and had a glorious run all the way across the common to Hordean, and there the fox earthed, so we lost him. Then, at night, I had to dine with Squire Stiles, and had the coach up to fetch me home, for the squire's dinners are always somewhat wet. So I could not write you that night, being very tired; but, this being Sunday, I have more leisure on hand, and am sorry to hear of the captain's being killed. You know I always liked Harry, and thought father rather over hard on him; but you know I always gave the good gentleman his own way, and never contradicted him—as, indeed, where was the use, seeing he never minded a word I said an old whip-cord? But that's just the worst of being a soldier; for then, as the vicar says, there's no respect of persons. However, it can't be helped now, only I'm sorry for it, poor fellow. Bless your silly heart, Emma! what is it you speak about coldness? you know, girl, I always loved you, although father set me up a little both against you and the captain. But there's no use talking. I've given orders to have your rooms all made ready as before, and the sooner you come to the Hall, the better I'll like it. Now I think on't, I'll send up Dick, with the coach, to fetch you down. I can easily spare it, as I never get into it, only when I'm dining with Squire Stiles, or the like; and it will be more convenient for you and the little ones. I would have come up for you myself, only the bounds are to be out every day this week, and we expect some spanking runs; so you see I've a great deal of business on hand. Old Joe, the huntsman, is always asking about you; and when I told him, yesterday, you were coming home, the old chap began to blubber like a

child. Father let your flower-garden run all up with weeds; and as to the bower, there was no poking your nose into it for the creepers; but I've ordered Sims to have it all cleaned, and the woodbine cut, and he's to have some prime new-fashioned flowers in it before you come home. So keep up your heart, my little Emma, and come as soon as you can. I'll send off Dick to-morrow morning; you never saw such a prime team of bays as I've got for the old machine—only don't put yourself in a quandary, or hurry yourself—only I'm longing to see you. Is Rowley any thing like father? he was a main good man, father, though he had his own ways, and was always over hard in your affair. But there's no use talking. If you could come on Thursday, I shall have no one here, and we can chat together about old things; only don't hurry yourself, but keep Dick as long as you like. I was bargaining yesterday about a bay filly for you; I'm sure she's a good one, for she's out of father's old mare that he used to ride when you were here. You recollect old Die—a prime one in the field, wasn't she? I'll send up a handful of notes with Dick, in case be you have any scores to settle where you are; but I must now stop, as we have a prime haunch this afternoon, and I have some of the neighbours to dine with me.

"Your affectionate brother,

HUGH SHARMAN."

With this we shall conclude; cordially recommending these very entertaining volumes to our readers.

*A Visit to the Great Oasis of the Libyan Desert; with an Account, Ancient and Modern, of the Oasis of Amun, and the other Oases now under the Dominion of the Pasha of Egypt.* By G. A. Hoskins, Esq. Author of "Travels in Ethiopia." 8vo. pp. 388. London, 1837. Longman and Co.

WE are rather sorry to see Mr. Hoskins' name to this volume; for, though every thing new relating to Egypt is possessed of great interest, we do not like to have our time occupied with a solid octavo, screwed, as it were, out of a former publication, presuming upon the name of the subject, and yet containing a very small modicum of originality or information. Twenty lithographic plates of ruins and scenery are the best portion of the work; for the letter-press is really spun out in the most disapproved style of bookmaking.

We have first a sketch of the author's residence at Thebes, and last, occupying nearly half the volume, a sort of *précis* of the travels in these parts of Browne, Caillaud, Belzoni, Drovetti, Edmonstone, Wilkinson, &c. &c. and a *résumé* of ancient notices from Herodotus, Diodorus, Quintus Curtius, Arrian, Josephus, Ptolemy, Edrisi, Abulfeda, Leo Africanus, &c. &c. The latter might be a very useful article in a review or magazine; but, in its present position, must come under the observation we are compelled to make upon all such make-weights.

Mr. Hoskins' travelling companions were, Mr. Hay (whose collected treasures are, we believe, of the highest order) and Mr. Catherwood. They crossed the Desert from Thebes to El Khargeh; and on their way the following particulars are stated:—

"We saw to-day a small white bird with black tail-feathers. Last night our men caught a light fawn-coloured rat; I also found a fawn-coloured lizard; and a second, similar to it, but with pink spots. This light fawn-colour is generally that of the animals and insects in the desert: the lion, gazelle, antelope, giraffe, and

many other tenants of the wilderness, have their coats of the same tint as the sand."

About 125 miles from the Nile they reached the Oasis Magna; of which we are told—

"The inhabitants of this town, and, indeed, of all the Oasis, have (with some exceptions) not such strongly marked features as the Arab of the Nile, and their complexion is lighter than that of the peasants of Egypt in the same latitude. But they are chiefly remarkable for the pallid and unhealthy hue of their countenances, just such a tint, or rather expression, allowing for the difference of colour, as distinguishes the inhabitants of the Pontine Marshes; a languid and sickly appearance; a listlessness in their manner; a sluggishness in their movements; a total want of energy and vivacity—all proofs of the insalubrity of the climate, and the wretched effects of a baneful malaria. This pallid hue is most remarkable in their children and women; the men, exposed to the influence of a tropical sun, have an appearance somewhat less unhealthy. The disorder, which spreads such ravages, and which seems to diminish their population as insensibly, but as certainly, as the desert yearly encroaches on the cultivated land, is a remittent fever, with which they are visited at every return of the summer or autumn. This evidently does not arise entirely from the exhalations of the rice-fields, for the parts of the Oasis where they grow no rice are equally infected; nor from their eating so many dates, as some travellers have supposed. I conceive it arises, in a great measure, from the bad quality of the water, of which, during the hot weather of the summer and autumn, they are tempted to drink immoderately, and which accounts for their suffering only at those particular periods. Ophthalmia also seems a very general complaint. We met with numerous instances of it during our journey."

Of a specific for this disorder Mr. H. gives an account, the secret of which would make the fortune of any quack in England.

"The purser of the French frigate, the *Luxor*, which was built for the purpose of removing one of the obelisks from Thebes, was the fabricator of this extraordinary water. He informed me, when in Egypt, that his father had been attached to Napoleon's expedition to that country, and had then discovered this miraculous cure. From fear of its being analysed, he had never allowed any person to possess more than a very small quantity; but he cured, without fee, all who came to him: Christian and Mussulman, French and English, Turk and Arab. When this liquor was applied in time, it was found always to stop the most virulent attacks of the disease, and generally relieved, in a very few days, even those who had been for several months martyrs to the complaint. A Turk, who had suffered for years, was completely cured in a fortnight; and, in gratitude to his benefactor, gave him a horse richly caparisoned. The Frenchman's fame was spread throughout the country, and many came to him as far as from Keneh and Esneh. Even the surgeon of the *Luxor* was so sensible of the value of the remedy, and of its producing no subsequent bad effects, that he sent all the officers and men of the vessel suffering from that complaint, to the purser, or to the hakim (doctor), as the natives called him. The application was easy to the hakim, but most painful to the patient. He let fall a single drop of the water on the ball of each eye, which immediately spread, and from its pungent nature caused, if much irritation existed, the most inexpressible torture. In twenty minutes, or half an hour, this pain subsided,

and a little clammy matter was seen to ooze from the eye. The remedy, although violent, did not weaken the eye in the slightest degree, nor in any manner injure the sight. Knowing that I purposed going into Ethiopia, the hakim had the kindness to sell me, for about its weight in gold, a small bottle of this water; but under the express condition that I would neither directly nor indirectly allow it to be analysed. He said that it was his intention to return again to Egypt, and that he expected to be able to make his fortune; but whether he does or not, I feel most grateful to him for having saved me from much torture, as I have often been obliged to have recourse to the water, and have kept my promise in not allowing it to be analysed. As this person has now left the country, and no further supply is to be obtained, I prize the water most highly, and cannot afford to use it for the relief of mere strangers. The remedy which I generally find to succeed with the natives, when applied to by them, is sulphate of zinc in strong doses, ten grains being dissolved in an ounce of water, and a drop of this being put in each eye two or three times a day. This is by no means so certain a remedy as the hakim's water, but in nine cases out of ten I have found it to succeed."

But to return to the Oasis; the following is the return of its population:—

	Men.	Population.
The metropolis el Khargeh, the most northern town of the Oasis	600	3000
Genah, south of and separated from el Khargeh by a desert 7 miles in extent	50	250
Boulak, south by east of Genah, across a desert of 14 miles in extent	50	250
Byrese, south by east of Boulak, across a desert 33 miles in extent	120	600
Doosh, south by east of Boulak, across a desert of 7 miles in extent	20	100
Maks, south west of Doosh, across a desert 4 miles in extent	20	100
	860	4300

The total population, therefore, of the Oasis, is about 4300; five to each family may seem a low valuation, but it must be considered that in the number of men there are many old persons, whose sons are grown up and reckoned among the number."

The temple is in ruins, but hieroglyphic and Greek inscriptions shew it to be of the time of Darius Nothus, the successor of Cambyzes, with additions by King Amyrtaeus.\* On this and other temples, the names of the Roman Emperors, Galba, Antoninus, Trajan, Domitian, Adrian, Nero, Titus, Tiberius, and, perhaps, one or two others. In the Santuarii of the temple at El Khargeh, Mr. Hoskins copied some curious inscriptions, of which he has favoured us with accurate copies. His method appears to be excellent.—

"My servants (he says) made me casts in paper of the sculpture on the walls of these two rooms, that is, of all the sculpture in the three large plates which I now publish. This method of obtaining facsimiles of sculpture in basso-relievo, is very successful, and so easy, that I had no difficulty in teaching it to my Arabs. I found stiff, unsized, common white paper, to be best adapted for the purpose. It should be well damped; and, when applied to sculpture still retaining its colour, not to injure the latter, care should be taken that the side of the paper placed on the figures be dry—that it be not the side which has been sponged. The paper, when applied to the sculpture,

should be evenly patted with a napkin folded rather stiffly; and, if any part of the figures or hieroglyphics be in intaglio or elaborately worked, it is better to press the paper over that part with the fingers. Five minutes is quite sufficient time to make a cast of this description; when taken off the wall, it should be laid on the ground or sand to dry. I possess many hundred casts, which my Arabs made for me at Thebes and in the Oasis. Indeed, I very rarely made any drawings of sculpture without having a cast of the same; and as the latter are now quite as fresh as on the day they were taken, the engraver having not only my drawing, but also these indubitable facsimiles, is enabled to make my plates exactly like, and quite equal to, the original."

Of the sculptures themselves he says:—

"I do not conceive that even the most learned in reading of hieroglyphics will hesitate to confess, that the mythological mysteries there depicted are beyond their comprehension. This extraordinary assemblage of divinities in the most grotesque attitudes of animals, beasts, and birds, is not, I am persuaded, a fanciful composition of an eccentric artist. We may be certain that there is a meaning in all these representations and figures; and as they could have had no beneficial moral influence on the minds of the multitude, some metaphysical mystery is evidently represented. \* \* \*

"As I have before observed, the columns are almost all unfinished, and the sculpture is not good; but when we consider the epoch when this edifice was constructed, the imperfection of the style is not surprising. Darius, chiefly on account of his respect for the popular superstitions, his piety, and his encouragement of the arts, was beloved by the people, and was the only one of the Persian dynasty whose name was allowed to remain on their edifices. But we may reasonably conceive that, during the previous violent reign of Cambyzes, the arts, long before on the decline, must have received so deep a wound, that centuries of fostering care and protection would be necessary before it could in any degree be healed. It is, therefore, not surprising to find architecture and sculpture, of so early a date as the reign of Darius, and particularly in such a situation as the Oasis, less beautiful than that of some of the Ptolemaic temples; and especially as the latter were constructed at a period justly termed the second era of the arts in Egypt."

An adjoining necropolis is also an interesting object.

"We perceived on a hill, a mile and a quarter due north from the temple, what appeared to us, at a distance, to be a dwelling-place of the living; but recollecting the descriptions of the travellers who visited this region before us, we were aware that it must be the necropolis mentioned in their works. The distant view of this city of the dead is very striking. The tombs, being built on the brow and summit of a hill, and rising gradually one above another, are almost all distinctly seen from every part of the plain; and, as some of them form streets, the place has quite the appearance of a well-built village. Notwithstanding the descriptions which have been given, the stranger cannot visit the place without astonishment. We have at Pompeii a street of tombs, and at Rome we see the columbarj; and these buildings of the Oasis are certainly not to be compared to the splendid monuments of Adrian, Augustus, Caius Cestius, and Cecilia Metella, &c. But we have here what is still more extraordinary, though less beautiful as works of art:—150 sepulchres, forming streets and squares, and

well deserving the title of a necropolis. The hill on which they are situated has rather a volcanic appearance. The sand has drifted into the streets, but the height of the hill prevents the edifices being overwhelmed by the desert. The good state of preservation of them is another proof of the dryness of the climate. If the Oasis was visited with a few such winters as we have in England, the majority of them would soon be washed away."

We will not accompany our author to the temple of Doosh, or go through his reminiscences of preceding writers; suffice it to conclude with noticing the appendix of Greek Inscriptions, as welcome additions to our collection of data for research into the antiquities of Egypt.

*A Narrative of Missionary Enterprises in the South Sea Islands; with Remarks upon the Natural History of the Islands, Origin, Languages, Traditions, and Usages of the Inhabitants.* By John Williams, of the London Missionary Society. 8vo. pp. 589. London, 1837. Snow and Leitchchild.

DURING a travel of above a hundred thousand miles, and extended over eighteen years, our zealous Missionary traversed the South Seas in every direction, and visited not only islands already known to us, but others, previously untrodden by the foot of European. With all the peculiarities inseparable from works of this kind, the accounts of special providences, &c. &c. there is a great deal of interesting matter in Mr. Williams's narrative, of which an example or two may serve to satisfy our readers. Our first extract may shew, that the story of Whittington and his Cat need not be considered fabulous.

"After remaining eight or ten days, with much interest to ourselves, and, we hope, advantage to the people, we returned to Rarotonga with a most singular cargo, principally consisting of pigs, cocoa-nuts, and cats; the king having obtained about seventy of the first, and a number of the last. Notwithstanding the singularity of our importation, it was peculiarly valuable to the inhabitants of Rarotonga; for, prior to this, they had no other than a breed of small native pigs, of which there were but few, as they were particularly tender, and difficult to rear; and the cats were so valuable that one was quite a treasure, as the rats were astonishingly numerous; so much so, indeed, that we never sat down to a meal without two or more persons to keep them off the table. When kneeling down at family prayer they would run over us in all directions; and we found much difficulty in keeping them out of our beds. One morning, on hearing the servant scream, while making the bed, we ran into the room, and found that four of these intruders, in search of a snug place, had crept under my pillow; they paid, however, for their temerity with their lives. Our friends Mr. and Mrs. Pitman experienced equal inconvenience from these troublesome and disgusting little animals. Some of the trunks were covered with skin, on which the rats commenced very effectual operations, as they had done before upon my unfortunate bellows; and Mrs. Pitman having one night neglected to put her shoes in a place of safety, sought for them the following morning in vain; for these nocturnal-ranblers, being in search of a supper, had devoured them; and a pair of shoes in the South Seas is no contemptible loss. This, however, was a serious affair for their fraternity; for our friends complained to the authorities of the station, and a decree of extermination was

\* Amyrtaeus, according to Manetho, was the only king of the 28th dynasty which succeeded the Persians. He is supposed to be the Inaro of Diodorus and Thucydides, Rosellini's Amihort at Karnak, and Mr. Wilkinson's Aomabate; which latter is probably the most correct.

issued against the whole race of rats; and after school, man, women, and child, armed themselves with a suitable weapon, and commenced their direful operations. Baskets were made of the cocoa-nut leaves, about five or six feet in length, in which to deposit the bodies of the slain, and in about an hour no less than thirty of these were filled. Notwithstanding this destruction there did not appear the slightest diminution. From this it will be perceived, that rats were not the least valuable animal that could be taken to the island. They, however, did not destroy so many rats as the pigs, which were exceedingly voracious, and did much towards ridding the island of the intolerable nuisance. Besides hogs and cats, Makea, and those who accompanied him, obtained a considerable quantity of native cloth and mats, which are highly esteemed, and of considerable value at Rarotonga. A large supply of cocoa-nuts was also conveyed from Aitutaki, and this was a valuable portion of our cargo; for a short time before our first visit, a very disastrous war had taken place, in which the king and his party were beaten, and driven for a time to take refuge in a natural fortress in the mountains. The victors cut down and destroyed all the bread-fruit and cocoa-nut trees, so that, on the north, west, and south sides of the island, which were conquered by the inhabitants of the east, not a cocoa-nut tree was to be seen. This supply, under these circumstances, was consequently of great value for seed. The king made a distribution of his spoils among his chiefs and friends: all were, therefore, delighted with the voyage."

At the island of Manoa we have a curious sketch:—

"In the afternoon, I was honoured with the company of his majesty's five wives. Three of these were about forty-five years of age; the others were much younger. By my invitation they seated themselves upon the ground, and, after asking a blessing, they ate heartily and cheerfully what was placed before them. In the course of conversation, I found that a species of serpent abounded in the Samoa Islands; and having expressed a wish to take a specimen with me to the Society Islanders, who had never seen one, the ladies immediately ran out of the house, and returned about half an hour afterwards, each having a live snake twined about her neck. The manners of these females were pleasing: and, while I gazed upon their good-natured countenances, and listened to their cheerful conversation, I could not but rejoice in the hope, that the period had arrived when they would be raised from the state of barbarous vassalage into which sin and superstition had sunk them. During the evening, while conversing with the king, and other persons of distinction, I made some allusion to the dreadful hurricane at Rarotonga, and found that, at the Samoa Islands, it had raged with great fury, accompanied by a violent shock of an earthquake; four of which, the teachers informed me, had been experienced within the seventeen months they had resided there. They also told me, that, during these shocks, the natives rushed from their houses, threw themselves upon the ground, gnawed the grass, tore up the earth, and vociferated, in the most frantic manner, to Mafuie to desist, lest he should shake the earth to pieces. Some said that the *devo* was angry with them for allowing the *lotu* to be received at their islands, and begged the teachers to hide their Bibles until his rage had ceased. On asking their opinion of this phenomenon, they informed me, that *Tiiti ataranga* supported the island of Savaii with his left hand,

and that, had it been his right, long ago he would have shaken it to pieces; but that, in a quarrel with Mafuie, the latter broke his left arm, which rendered it feeble, and which accounts for the universal weakness of that arm in men. Thus ignorant are the heathen of the works as well as the word of God."

Alas! how little more do we know!

We have recently observed, with sorrow, that some cruel massacres have taken place in these islands. The struggle between the ancient idolatries and the missionary faith has not been carried on without blood and havoc.

*Records of Ancient Science exemplified and illustrated in the Primitive Universal Standard of Weights and Measures.* By Captain T. B. Jervis. Pp. 97. Calcutta, 1835.

An article in the *Westminster Review* has fortunately called forth this extremely able, scientific, and philosophical essay. The straightforward mode of stating facts, and of deducing consequences, adopted by the author, is a lesson to theorists who,

"As following commentators' view  
In Homer more than Homer knew."

have strained from the Bible the most extravagant deductions to support their own wild fancies. Arthur Lumley Davids, in a short lecture of considerable ability, some few years since, summed up the real attainments of the Hebrews in science and philosophy; but, young as he was, he did not pretend to establish, for the Jewish nation, the extravagant pretensions of some late writers. On this head Captain Jervis well observes,—"If knowledge came originally by inspiration, the chosen race contrived to carry away very little of the benefit. The inhabitants of Egypt had far outstripped them when their patriarch entered that house of bondage; or Moses would never have been celebrated as learned in all the wisdom of the Egyptians." Many ages afterwards, Solomon, or his historians, knew no nearer proportion of the circumference of a circle to the diameter than that of 3 to 1. Whatever Solomon might have done for botany or zoology, it is clear he had not done much for the geometry of his subjects.

Captain Jervis was first struck with the simplicity and skill of the meteorological system of Western India; and, finding that the natives could give no satisfactory account of their own knowledge, not even the most learned Brahmins (they were as ignorant of this as of every other point of their pretended antiquity), he extended his researches after the similar systems of other parts of the world. The results he here presents to us, in this concise but elaborate and valuable treatise, with a variety of incidental and useful information, which combines to throw the light of science on his inquiry. The pendulum sought, Captain Jervis conceives to be discoverable as one of two distinct linear measures in the buildings of Solomon's Temple; and he shews, also, that "the molten sea," so ridiculed by sceptics as erroneous in its measurements, must, from the two passages often quoted as contradictory, and which he thus reconciles, have been an oblate spheroid; and that, therefore, the Hebrew text has not undergone any material alterations, but, on the plainest rules of argumentative analysis and sound reasoning, that the internal evidences of its accuracy are irresistibly conclusive. We have only to regret, that he who writes so well writes so little.

*Jeannette Isabelle: a Novel.* 3 vols. 12mo. London, 1837. Richardson.

HALF English and half French, this work is

no bad representative of the worst class of our absentees. They mix the two languages together, till, whether there be any meaning or not, admits of a question. They engraft habits the most dissimilar on their own, till a whole is formed, half unnatural, half ludicrous. Our author does not want a certain cleverness, but his taste has been formed in the worst possible school—that of the modern Parisian novel. The familiar and the horrible are alike exaggerated. The characters are too much like caricatures, and deeds and deaths are scattered in merciless prodigality. It has, however, one merit; it is laid in a new scene, and that sketched with much liveliness. Let our author avoid Gallicism in his style, subdue his horrors, and he has, we think, the capabilities of giving an animated and true picture of the English of to-day in Paris.

*Lives of Celebrated Women.* By G. P. R. James, Esq. 2 vols. 12mo. London, 1837. Bentley.

WE do not think this work at all equal to Mr. James's reputation. It is composed in a style of most unmitigated panegyric—just like the eulogiums the new member of the French academy is bound to pronounce on his predecessor. Neither is the selection good. True, that Elizabeth was one of our most celebrated women; but her chronicles are so connected with those of her country, that the brief sketch here given does no more than repeat the routine of facts and dates known to every school-room. Again, the panegyric, we can scarcely call it biography, of Madame de Maintenon, gives no real idea of what France was in her time. But minute criticism is not called for on pages which are an exaggerated and flattering, yet meagre compilation of material already well-known to the most careless readers.

*Letters from the South.* By Thomas Campbell, Esq., author of "The Pleasures of Hope." 2 vols. 8vo. London, 1837. Colburn.

THE popularity of these Letters, in the widely spread pages of the *New Monthly Magazine*, has made them so generally known to the literary world that we will not venture on any extracts. Their pleasant style rendered them peculiarly fit for periodical publication; and yet their matter of permanent value amply recommended them to the more lasting form into which they are now collected. These volumes, embellished with appropriate engravings, possess altogether a character at once agreeable and instructive: we seem to read merely for amusement, and yet find, in the end, that we have thus easily been led along to acquire much useful information. In the Preface, Mr. Campbell briefly discusses the question of the French occupancy of Algiers, and says that, were they to abandon the country, the grand question to decide would be, to whom could they restore it? This may be the question now; but nothing can alter the original want of faith with which they seized it in the teeth of their own solemn declarations; and it is only worthy of remark, that, if ever war should unfortunately arise between France and England, the African possessions of the former would be in a bad plight.

*The Despatches, Minutes, and Correspondence of the Marquess Wellesley, K.G., during his Administration in India.* Edited by Montgomery Martin. Vol. IV. 8vo. pp. 632. London, 1837. Allen and Co.

POSSESSING all the high characteristics we have noticed as belonging to the preceding volumes, the present volume embraces the important epoch of 1804–5, when our contests with Scindia, the Rajah of Berar, Holkar, and

the Rajah of Bhurtpore—all memorable in Indian history—and their results, are fully and clearly expounded. With this interesting publication the work is completed; but we are promised a supplement, containing documents which bear on all the events narrated in the four volumes: when added, we shall only have to add, that the whole will be a valuable, sterling, and lasting contribution to the history of England, and especially as connected with one of the most extraordinary colonies which the world ever saw.

*Spain, and the Seat of War in Spain.* By H. Byng Hall, Esq. Pp. 328. London, 1837. H. Colburn.

CAPT. HALL, late of the 7th Royal Fusiliers, having served for some time in Spain, and made notes, at the moment, on the events in which he shared, contributed a series of very popular papers to the "United Service Journal." These he has now collected together, and formed a volume, which will be read with much interest by all who are unacquainted with the original publication. The anecdotes, notices of frightful war, and sketches of the country, distracted as it is, form a whole which cannot be perused without exciting feelings of strong emotion.

*Doveton; or, the Man of Many Impulses.* By the Author of "Jerningham." 3 vols. 12mo. London, 1837. Smith and Elder.

WE have laid it down as a rule in criticism, always to lean to the sunny side of an opinion when pronounced on a first production. We believe that indulgence tends more to good than severity, for a young writer is soon discouraged; but a second work has no plea to urge in mitigation of the sentence: it shows that the author has confidence in his own powers; and by those powers he must stand or fall. "Jerningham," the first work of the author, indicates habits of study and fine taste, which might have led to better results than the miserable failure now before us. *Doveton* shows the poverty of an uncreative mind, which exhausts its resources in a first attempt. It exhausts them because they were not productive, but acquired. As a story, *Doveton* is impalpable and dull; as an analysis of character, exaggerated, yet feeble; while the whole perpetually betrays the different quarries whence the material is borrowed. The little dancing-girl, *Paan-pied*, is a thousand and oneth copy of Goethe's "Mignon;" while the compound, called the hero, puts us in mind of the friend, who, while listening to the tragedy the author was reading, kept continually taking off his hat at particular passages. "It is but polite," said he, "to recognise old acquaintances." On this principle the readers of *Doveton* would have little to do but how, though, it must be confessed, "the old familiar faces" are not improved in the transmission.

*Trovels in Palestine and Syria.* By George Robinson, Esq. Illustrated with Maps and Plans. 2 vols. 12mo. London, 1837. Colburn.

MR. ROBINSON has traversed the whole of Syria and Palestine, including the countries lying east of the Jordan and the Anti-Libanus, and also many interesting portions of Asia Minor; and of his travels he has given us here a succinct, plain, and unornamented account. His journal is not only the best, but, perhaps, the only guide through these remote regions; and, without the feeling and talent of John Carne, and other distinguished travellers who have preceded him, in every part he has visited, we look upon his work to be one of much sim-

licity and interest. Having stated its useful character, we will not trouble our readers with any extracts, but refer them for further information to Mr. Robinson's pages.

*Preface to the Second Edition, and Reply to the Pamphlet entitled "Policy of England towards Spain."* Pp. 110. London, 1837. Murray.

LORD CARNARVON's work on Spain displayed so complete a knowledge of the subject, and his reflections upon every part of the case were so clear and conclusive, that we have never since reading been able to hold any opinions but those which he inculcated. The present publication strengthens his reasoning; and at its close we are compelled yet more fervently to breathe the prayer, that England had nothing to do with the monstrous and horrible civil war which ravages Spain, and disgraces humanity.

#### MISCELLANEOUS.

*Transition.* (London, Churton, for the author.)—A very well-meaning little book; but one in which good intentions take, as they often do, the place of all other merits.

*The Philosophy of Instinct and Reason,* by J. Stevenson Bushman. Pp. 316. (Edinburgh, A. and C. Black.)—Dr. Bushman, in this treatise, endeavours to demonstrate what that partition is which divides instinct from reason. He investigates the functions of organised bodies, and the nervous systems of men and animals, and of irritability in plants, &c. &c. His conclusions are, that the sources of the organic motion is irritability; of instinct, in sensibility; and of reason in the faculty of thinking; and that all three are perfectly distinct.

*What Asylums were, are, and ought to be,* by W. A. F. Browne, Surgeon. Pp. 240. (Edinburgh, A. and C. Black.)—The substance of five lectures delivered before the managers of the Monrozie Lunatic Asylum, by the medical superintendent of that establishment, and attaching much value to phrenology in regard to this melancholy condition.

*Observations on the Topography, Climate, and prevailing Diseases of the Island of Jersey,* by G. S. Hooper, M.D. 8vo. pp. 190. (London, Whittaker and Co.)—We are not aware of any preceding treatise on this subject, and must, therefore, look upon the labours of Dr. Hooper, after an experience of thirteen years, to be of the greater value to the invalid who may desire to seek health in change of climate. To such, as well as to the general medical practitioner, we cordially recommend this volume; which may guide the consumptive, or others afflicted by various maladies, to seek relief in a place not far distant from our own shores, of easy access, and, according to the author, admirably adapted to alleviate disease and suffering.

*Dr. Tliak's Introductory Grammar of the German Language, with Exercises for writing German,* &c. Pp. circ. 130. (London, Souter.)—The system of tuition at Campbell School, and, apparently, a very simple and efficient one. The second edition of *Exercises for writing German* (pp. 106. London, Wacey), deserves like praise.

*Exposure of the Un-Christian and Unphilosophical Principles set forth in Combe's "Constitution of Man."* 8vo. Pp. 132. (Edinburgh, T. Clarke.)—A third edition of Mr. Gillespie's work is the best proof that need be given of its ability. But Phrenology needs no mortal murders on its crown: it is as lively every time it is killed as if nothing had happened. *The Reasonableness of Phrenology,* by J. T. Smith (8vo. pp. 38. London, Wilson), is a sample of this.

*Journal of a Horticultural Tour through Germany, Belgium, and Part of France, by J. Forbes.* 8vo. Pp. 164. (London, Ridgway.)—Full of useful practical observation, and well worthy the attention, not only of professed or amateur horticulturists, but of the general reader. A catalogue of *Cactae* at Woburn Abbey is curiously copious.

*Practical Instructions on the Teeth,* by H. Browne. Pp. 43. (London, Churchill.)—Mr. Browne has condensed much useful information within a very small compass; and, as a cheap piece of advice, his little book deserves well of the public.

*Verschoepje; a Roman Catholic Tale of the 18th Century.* Pp. 412. (London, Hatchard.)—A religious tale, in which the errors of the Roman Catholic religion are strenuously set forth, from the experience of the writer, during a long residence in countries where that religion prevailed.

*Southey's Cæsar.* Vol. XIII. (London, Baldwin and Cradock.)—Embellished beautifully: this volume has the *Odyssey*: there are very few notes.

*The British Colonial Library,* by R. M. Martin. Vol. VII. (London, Whittaker and Co.)—Gibraltar, Malta, and the Ionian Isles, are the subjects of this useful volume; and, with neat little maps, render it a complete compendium of information on these valuable possessions.

*A Popular Treatise on the Physiology and Diseases of the Ear,* &c. by W. Thornton, M.R.C.S.L. 8vo. pp. 176. (London, J. Churchill; Exeter, Roberts.)—Together with an able treatise on the ear and its maladies, the au-

thor claims a superior mode of treatment of the deaf and dumb. Who shall decide when doctors disagree? not we! We shall, therefore, only say, that Mr. Thornton appears to be a person of much talent and experience.

*The Miracles of the Lord Jesus Christ.* First Series, pp. 148; Second Series, pp. 150, by the Rev. B. H. Draper. (London, Darton.)—Succinct and familiar accounts of the miracles recorded in the New Testament, with woodcuts. The editor's connexion and remarks are written in a pious spirit.

*Maternal Instructions on the Rite of Confirmation.* Pp. 292. (London, Simpkin and Marshall.)—A well-meant and simple compilation, particularly adapted to the capacity of young females.

*Religion without Gloom.* Pp. 220. (London, J. Eames; Simpkin and Marshall; Ilminster, J. Moore.)—Religion without gloom is what all religion ought to be. This truth is variously enforced in these lessons, hymns, prayers, &c. from distinguished writers.

*The Dover Road Sketch-Book.* Pp. 154. By J. Brady.—For the traveller between London and Dover, a complete and useful description of both sides of the road.

#### ARTS AND SCIENCES.

##### GEOGRAPHICAL SOCIETY.

[Major Mitchell's Report continued.]

"FROM the dépôt camp to the junction of the Murrumbidgee and Murray, the distance was eight miles over firm ground; and for two miles below the junction (by the river), I moved the whole party across the Murray, with a view to proceed up that river, according to the second part of my instructions. We had proceeded far up this river before the country, on its banks, appeared much better than any we had seen lower down. Grassy plains extended some way from the river, but were limited by sand-hills covered with cypress trees and scrubs. We crossed various broad lagoons, apparently the beds of ana-branches of the river in seasons of high flood. After several days travelling (nearly southward), reeds appeared in extensive flats along the river; and in longitude 143° 40' E. the course of the river being from the S.E. the reeds extended eastward to the horizon. The mean distance of the bergs of sand-hills covered with pine, which limited the reedy flat, was there about eight miles across. We soon passed the region of weeds, which, gradually disappearing as we advanced, were replaced by grassy plains. We reached the junction of a river, which I took to be that of the Twiden (or Goulburn) of Mr. Hume, in latitude, 35° 19' 43" south, longitude, 143° 41' 15" east. A clear grassy hill, which I named Swan Hill, marks this junction, which takes place close under it. The banks of this river were so soft and steep, and wood was so scarce there, that the cattle could not be watered without danger, nor could fire-wood be procured, on one frosty night in particular, when this river unexpectedly brought us to a stop, and we had nearly reached the larger one beyond, whose whole course was distinguished by lines of lofty trees, as on most other rivers. These, so distinctly different, flowed for many miles very near each other, each river preserving the same character throughout. In this vicinity we came upon a very singular formation, consisting of numerous lakes of salt or brackish water, and which were enclosed by semi-circular ridges on their eastern shores. The largest of these lakes was named Boga, and was six miles in circumference. The river floods having reached this by a small channel, the water in it was sweet, and it was peopled by a very savage tribe, who refused to give us any information, throwing their spears at Piper, who shot one of them. Beyond Boga Lake we crossed some very fine plains; but the main channel of the river we were endeavouring to explore was no longer accessible, nor even visible, from the numerous branches, and still reaches, which intersected the alluvial margin, which appeared to be very broad. Following the general course of the

river, we next entered on a tract remarkable for extensive forests of box, with occasional intervals of open grassy plains. It was watered by chains of ponds in deep channels, whose meandering course, through a perfectly level country, seemed to pursue no particular direction. From what I afterwards observed on higher plains, I conclude that these waters are derived from the floods of the river, and that these, spreading into branches of minor depth, thus water the level country. Turning more towards the river, we passed alternately over grassy plains, and through belts of lofty gum-trees—the beds of broad lagoons. Near the river, deep reaches of still water cut off all access to it, so that we could only trace its general course; the highest point at which we found it accessible before turning south, being in latitude,  $35^{\circ} 55' 35''$  south, longitude,  $144^{\circ} 35' 38''$  east. The extreme western point of a range then appearing in the southern horizon, I proceeded towards it, anxious to know more of the country back from the river. The view I obtained from that summit induced me to direct our course southward, with the intention of returning across the heads of the Murray further to the eastward, where I hoped the hills might afford me the means of extending the survey across the adjacent country. I perceived, from the height, a distant line of lofty trees, which seemed to mark the course of another river; beyond, were the summits of very distant hills, verdant plains variegated with clumps, and lines of trees extending westward to the horizon—the whole seeming good pasture land. At about thirty miles from the hill, and on the  $144^{\text{th}}$  degree of longitude, we reached a deep but narrow stream, flowing between high and grassy banks to the westward, at the rate of one mile and a half per hour. Its mean depth was nine feet; in one night, however, it suddenly rose fourteen feet higher, carrying away a rough bridge we had just completed. The aboriginal name of this river is the 'Yarrayne'; the plains beyond it were five miles in breadth, and of the best description. Forests of black-butt gum, and casuarinas, then extended back to the mountains and forest hills. In these forests, instead of novelty, we found the Blue Mountain parrot, and other birds common near Sydney; many of the plants, also, which grow in Cumberland. 'Barrabungale,' a lofty mountain of granite, was the chief point of that range; but, on ascending it, the weather was unfavourable for my observations: a group of open forest hills were connected with Barrabungale; they enclosed valleys richly covered with grass, and all well watered. We passed over many fine tracts, sheltered by open forest hills, and crossed various fine streams, all flowing westward. At length, on the 11th July, I discovered the summits of a noble mountain range of broken and picturesque outline; and, by subsequent survey, I found that this was the predominant feature of that vast territory lying between the river Murray and the southern coast, giving birth to numerous streams of convenient width and constant current, by which the surrounding country is watered abundantly. These Gramians of the south are situated between  $35^{\circ} 52'$  and  $37^{\circ} 38'$  of south latitude, and between  $141^{\circ} 55'$  and  $142^{\circ} 47'$  of east longitude; the latter being the longitude of Mount William, the highest and most eastern summit, and on which I passed a night, vainly hoping that the clouds would rise above it. Situated thus centrally, this lofty mass, so essential to water the lower country, presents no impediment like the coast ranges of the settled district to the

formation of roads, and the progress of colonisation. The principal river flowing under the north side of these mountains is the 'Wimmera,' which has no steep banks, and appears to be a very constant stream. I explored its course to the  $142^{\circ}$  of longitude, when it turned to the north-west, leaving me in a country covered with circular lakes, in all of which the water was salt or brackish. These had semi-circular ridges on the eastern side, as in those of Boga, on the Murray, and the land about them was in general very good and grassy; its mean elevation above the sea being about 580 feet. From the continued rainy weather the earth was in a very soft state; and this, at length, became a most serious impediment to the progress of the expedition, the party being unable, even with the greatest exertion, to proceed through the mud, above three miles a-day. But for this I might have returned at least two months ago."

[To be concluded in our next.]

#### GEOLOGICAL SOCIETY.

MAY 31. Mr. Whewell, president, in the chair. — A letter was read from Dr. Forchhammer of Copenhagen, foreign member of the Society, addressed to C. Lyell, Esq., on some changes of level which have taken place during the historical period in Denmark, shewing, that not only does elevation go on at a different rate, but that motion takes place in opposite directions. Thus the Island of Saltholm, mentioned as a source of income from the 13th century, and being hardly 5 feet above the level of the sound, must have been elevated at a slower rate than Bornholm, which rises one foot in a century. On the Danish coast, 6 miles to the north of Copenhagen, there is a well defined beach, 6 feet above sea level. The Danish Island of Bornholm has its eastern shore composed of a granitic rock, covered to the height of 250 feet by a stiff loamy soil, containing numerous fragments of the slates of limestones of the transition formation: the specimens of the latter rock may be traced to the island of Gothland. From this and other facts, the author conceives that this clayey loam is due to a violent inundation from the N. E. of the Baltic. The first beach formed on Bornholm is seen at a height of about 40 feet. The small bays formed on the coast having been choked up towards the sea, formed ponds, which by degrees became filled up with peat. This peat-moss is separated from the sea by a narrow beach, 10 feet high, sloping at an angle of  $15^{\circ}$ , and abutting on an horizontal plain, 160 feet in breadth, which is succeeded by a sloping beach 102 feet in breadth, and this, by the present beach. The formation of these beaches must have continued through great numbers of years; and their elevation has been very gradual, except the abrupt elevation of 10 feet, which the author thinks may have been owing to a great earthquake 4000 years ago. The author also mentions, that over all Denmark, Sleswig, and Holstein, shells of the German Ocean of the present day may be found at considerable elevations; and also, that a submarine forest, (said to be of fir), is found 9 feet below high-water mark, between the Island of Römö and the shores of the kingdom of Sleswig.

#### STATISTICAL SOCIETY.

SIR C. LEMON in the chair. — Eight gentlemen were balloted for, and elected foreign honorary members. A paper on the longevity of miners in Cornwall, furnished by Col. Sykes; and a communication on the prisons of Scotland, by Frederick Hill, esq. were read. From

a paper On the statistics of prostitution in the parish of Lambeth, collected and arranged by Professor Dewhurst, under the auspices of Sir Arthur De Capell Broke, likewise read, we can hardly venture to give any notes; as, though the inquiry may have statistical utility, it is of a very dubious nature, and its facts quite unfit for publicity. The children of prostitutes are but few; for, in consequence of the intemperate lives they lead, the infants seldom experience the comforts of a mother's care; and the ardent spirits they themselves partake of are very often given to the children; and infants under the ages of two and three years are often in a state of intoxication. It could not be learned that any attend to the common duties of religion: some of the most serious in form occasionally read the Bible; but they are ridiculed by their sisters in misfortune, consequently they read it but seldom.

#### ROYAL MEDICAL AND CHIRURGICAL SOCIETY.

JUNE 13. The president in the chair.—Dr. Kingston made a few observations on pulmonary excavations, referring to his former paper. He shewed that five of his cases had been noted by Dr. Wilson, Dr. Aldis, and Mr. Malton. Dr. Moore read a report of a case of secondary measles. Mr. Estlin also related a case of abdominal tumor, from a sacculated enlargement of the bladder.

#### AFRICAN NATURAL HISTORY.

OUR readers are aware, from our report of the proceedings of the Royal Geographical Society, of the successful expedition of Dr. Andrew Smith into Central Africa, and of the splendid collection of objects of natural history which was the result of his zealous labours and intelligence. That collection we rejoice to say is now in London, and we have had the pleasure of seeing it preparing for public inspection in the rooms in Piccadilly, formerly filled with Mr. Bullock's interesting exhibitions. One more interesting than this, or of greater interest to science, was never opened; and we trust we may therefore be excused if we advert a little to its history.

Upon some notices touching the state of the interior of Southern Africa having been submitted to the Cape Literary and Scientific Institution, at an ordinary meeting, on the 5th June, 1833, it was proposed by the members there present, that an endeavour should be made to send a party to examine the country referred to in the said notices; it appearing to be pregnant with points of special interest. The Institution not being able to furnish the means necessary to meet the expenses, it was suggested that a sum adequate for the purpose might be secured by subscription; and, as a mark of the interest excited by the proposal, 189*l.* were contributed in the room, and a provisional committee appointed to ascertain the probability of carrying the plan into effect. The provisional committee, upon finding the public much inclined to support the proposal, called a public meeting for the 24th of June, and, at this meeting, it was resolved, that such persons as were interested in the measure proposed, should form themselves into an association, to be called "The Cape of Good Hope Association, for exploring Central Africa," the object of which should be the acquisition of knowledge upon the geography, natural history, and internal resources of South Africa. Soon after that proceeding was made known, the committee were enabled to report 900*l.* as having been sub-

scribed, and, moreover, a noble donation of 300*l.* from Mr. M<sup>c</sup>Queen of Glasgow, a gentleman well known by his writings in relation to Africa. These two amounts were found quite adequate to meet the expenses. The party left Graaf Reinet, one of the most northerly villages in the colony, on the 12th August, 1834, and returned to it early in January, 1836, with the collection as detailed below. The association, on the 19th March, assumed a new character; previous to that, it had been looked upon as an institution of a temporary description,—then it became, by unanimous consent of the members, a permanent establishment. How it was to raise funds, to meet future expenses, then occupied its attention; and its anxiety to obtain a sufficient amount for a purely public object is highly creditable to the limited society of the colony. Such a spirit ought to be encouraged by the British government. The collection has been sent home by order of the society, with instructions how it is to be exhibited and sold; and, until some considerable returns are made, a second expedition cannot start from Cape Town.

List of articles delivered over to the Association on the return of the expedition party.

- 180 Skins of new or rare quadrupeds.
- 379 Skins of new or rare birds.
- 3 Barrels, containing snakes, lizards, &c.
- 1 Box containing insects.
- 1 Box containing skeletons, &c.
- 3 Crocodiles.
- 2 Skeletons of crocodiles.
- 23 Tortoises, new or rare.
- 799 Geological specimens.
- 1 Package of dried plants.
- 457 Drawings, and
- The Diaries of Mr. Burrow and Dr. Smith.\*

The species of quadrupeds and birds brought home by Dr. Smith are but few of them contained in the collections of the Zoological Society and British Museum. Among the quadrupeds, the most important discoveries consist in a new species of rhinoceros, named by Dr. Smith, *rhinoceros kribbia*; a new species of *galago*; two new species of *ichneumon*; two new species of *macroscelides*, a genus of which Dr. Smith was the first discoverer. Among the birds and reptiles very many new species have been obtained in this expedition.

Having only had a hurried glance at a late hour, we must be content with this imperfect notice till another opportunity.

#### INFIRMARY, &c.

WE notice with much gratification the progressive improvement, in funds and extended usefulness, of that excellent charity, the Infirmary for fistular and other similar diseases. At the anniversary on Wednesday, a numerous and most respectable meeting paid the tribute justly due to its zealous and indefatigable founder, Mr. Frederick Salmon; who, in return, expressed his exultation at the realisation of all the hopes he had entertained of benefiting his fellow-creatures, and mitigating the sufferings of the poor, by obtaining the aid of the benevolent for this institution. The report of the committee was most favourable: it states, that upwards of 1000*l.* have been given and subscribed to the end of last year, and

"That, during the period of only fifteen months, no fewer than 167 patients have received the professional assistance, which it is the design of this charity to afford. A large proportion of these have been entirely relieved, others effectually benefited, and nearly all raised from a state of disease and disability to comparative enjoyment of that first of earthly blessings, bodily health; and thus rendered capable of pursuing their several avocations, instead of being a burden to themselves and to society. To the present period, only four fatal cases have occurred: three of the subjects of these had not the advan-

tage of proper advice, until the constitution was impaired beyond hope or recovery, and they may be thus considered as having fallen a sacrifice to the want of timely or efficient aid; while the fourth affords an appalling example, in confirmation of what has been urged in a former address, namely, of the absolute need of an institution like this, were it but for the single purpose of protecting the afflicted poor from selfish and fatal empiricism."

Nothing of the kind could go off better than this truly beneficent and social re-union.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

CAMBRIDGE, June 11th.—The following degrees were conferred:—

*Doctor in Divinity*.—Rev. J. Weller, Senior Fellow, Emmanuel College.

*Bachelors in Divinity*.—Rev. C. Yate, Rev. H. Thompson, Fellows, St. John's College; Rev. J. Tinkler, Fellow, Corpus Christi College; Rev. R. J. Bunch, Rev. W. R. Colbeck, Fellows, Emmanuel College.

*Doctor in Physic*.—G. Pardoe, Caius College.

*Masters of Arts*.—J. S. Croser, Catharine Hall; Rev. H. P. Jones, Corpus Christi College.

*Sir William Browne's Medals*.—June 12th, these medals were adjudged as follow:—

Greek Ode.—C. J. Vaughan, Trinity College. Subject, "Ingenium cui sit, cui mens divior aque os Magna sonaturum, des nominis hujus honorem."

Latin Ode.—P. Freeman, Trinity College. Subject, "Newtonus."

Greek and Latin Epigram.—C. J. Vaughan, Trinity College. Subjects,

"Nil fuit unquam

Sic impar sibi."

"Proximus sum egomet mihi."

Chancellor's English Poem.—No prize adjudged.

#### ROYAL ASIATIC SOCIETY.

JUNE 17th. Professor H. H. Wilson, the director of the Society, in the chair.—Colonel Sykes read a paper On the three-faced busts of Siva in the cave-temples of Elephanta and Ellora. He observed that the colossal bust at Elephanta had been the subject of much discussion; and that it was believed, until the year 1818, to be the only one of the kind in existence. In that year he had paid a visit to the temples at Ellora, near Dowlatabad, and had there discovered numerous busts in alto-relievo, precisely similar in all their details to that of Elephanta. Many of these were quite perfect; and there could be no doubt that the mutilated portions of the Elephanta figure might be completely restored from them. A drawing of one of the most perfect had been made on the spot, and which Col. Sykes begged to submit to the meeting. It was evidently not a representation of the Hindu triad, Brahma, Vishnu, and Siva, but was that of Siva himself, in his threefold character of Generator, Preserver, and Destroyer. Colonel Sykes here gave a slight description of the figure, and referred to the "Transactions of the Literary Society of Bombay," Vol. III. for a further detail. He said that it might seem extraordinary that these figures should so long have remained unknown to Europeans; but observed, that this might be easily explained by the insecurity of the place, the fatigue of examining such a multiplicity of objects, on the side of a hill, under a burning sun; and, by the usual reply made by the *cicerone* to the question, if all had been seen, that every thing had been seen that was worth visiting. Col. Sykes had enjoyed advantages on his visit there which would account for his success: his stay was not limited to a day or two; and he was accompanied by a guard, which enabled him to prosecute his researches without uneasiness. He referred to his opinions, before published, respecting the superior antiquity of the Buddhist worship; and stated that now, after a lapse of eighteen years, he saw no reason to alter his judgment upon this point. He was the more inclined to this from noticing that the inscriptions in all the decidedly Buddh

caves were in an ancient and unknown character; and that, as they approached to more modern times, the unknown letters, similar to those of the cave inscriptions, gradually diminished, and finally disappeared altogether.—At the conclusion of the paper, a few observations were made by the learned chairman on the opinions expressed by Colonel Sykes respecting the priority of Buddhism over Brahmanism in India. He observed that the arguments in favour of the former mode of worship were drawn from coins and inscriptions; now these coins and inscriptions proved nothing that had ever been disputed. It was not doubted that Buddhism had flourished at a very early period,—as early, at the lowest estimate, as the dates of any of the coins or inscriptions that had been found. Their existence at an early period was also ascertained from the Chinese annals, and from the testimony of the most ancient Christian fathers. But the question was not whether Buddhism existed in India at a remote period, but whether it existed and flourished previously to Brahmanism. Now, the Buddhists themselves did not pretend to a greater antiquity than the Brahmins: they carried their origin to Gautama only; while the Brahminical traditions were made to extend to a much greater antiquity.—A discussion ensued upon these points, which was carried on by several members; but the acknowledged obscurity of the subject, and the want of really authentic information to which reference might be made, rendered it impossible to come to a definite conclusion.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.; British Architects, 8 P.M.

Tuesday.—Zoological, 8½ P.M.; Architectural, 8 P.M. (a Conversation).

Wednesday.—Medico-Botanical, 8 P.M.

Saturday.—Royal Asiatic, 2 P.M.

#### FINE ARTS.

##### INSTITUTE OF BRITISH ARCHITECTS.

AT a recent meeting of the Institute of British Architects, the beautiful drawings by Bruce, the Abyssinian traveller, which we mentioned in our report of the last *conversations* of the Graphic Society, were again shewn; and Mr. Cumming Bruce read a short Memoir, which has since been privately circulated. So important, however, is this Memoir to a just appreciation of the energies and devotion to his pursuits of that extraordinary man, that we here reprint, and make it more extensively known. "Having understood from Mr. Papworth and Mr. Donaldson, that several members of the Society had expressed a desire to see the drawings made by Bruce in Northern Africa, still in my possession, and having been honoured with an invitation to attend this meeting, it occurred to me, that it might be agreeable to the Society if I shortly endeavoured to recall to them the circumstances under which his visit to Northern Africa originated—circumstances which gave him peculiar facilities for accurately exploring a country of very difficult access; the qualifications which he possessed for the execution of the task he had undertaken; the amount of assistance which, as far as I have been able to ascertain it, he received in the execution of his labours; and the position, nature, and extent of the ruins which he discovered and delineated. Wishing to save the valuable time of the Society, on which, had I trusted to memory alone, I might have trespassed by unnecessary repetition, I have thought that I should best comply with

\* Besides a vast multitude of native costumes, utensils, instruments of chase and war, ornaments, manufactures, &c. &c.

this supposed desire, by committing the following notes to writing; and, if agreeable to the Society, I shall proceed to read them. About the year 1762, having been appointed to the Consulate at Algiers, Bruce left England for that country. He had been induced to accept this appointment by the representations of Lord Halifax, who stated to him that Shaw, a writer of undoubted credit, had spoken of magnificent remains of architecture existing in the territories of Algiers and Tunis, in which great part of the ancient Roman province of Mauritania, and Numidia, were now included; and that, as that traveller had given no drawings by which their extent or character could be estimated, or the memory of their existence preserved, it was much to be desired that they should now be accurately delineated. Promises of royal favour and ample reward were held out in case the desire thus indicated were ably and successfully complied with—promises which, in the result, were, if not altogether neglected, yet very inadequately fulfilled. In his way to Algiers, Bruce passed through Italy, where he remained the greater part of a year. During that period he improved himself carefully in drawing, and, as is remarked by his biographer, Murray, 'the taste and skill which he acquired in that art in Italy, produced the excellent style and manner in which his drawings are allowed to be executed.' While waiting at Naples for instructions to proceed to his post, he visited Paestum, the ruins of which were then but little known; and, at the suggestion of Sir James Gray, the British ambassador, made accurate drawings of those ruins, and conceived the idea of illustrating the history of that city,—the city of the mystic and the rose,—from its various coins of different periods. This idea, which he was the first to originate, he executed with much learning and ingenuity. On proceeding to Africa, he entrusted these drawings to his friend, Sir Robert Strange, for the purpose of having them engraved; but, from circumstances which have never been explained, copies of them were surreptitiously obtained, and, on his return from Abyssinia, he found that his work had been pirated and published under another and a feigned name. In an autograph memoir of his life, in my possession, never published, he expresses strongly the feelings which this circumstance was calculated to excite; but his chief complaint is, 'that the bunglers had not known how to avail themselves of the materials for the history of Paestum, which, by whatever means, had fallen into their possession.' These drawings of Paestum, and the MS. written in his own hand, to which I have referred, I have been induced to offer to the inspection of the Society, in consequence of a remark made on them the other day by Mr. Brockedon, to whose courtesy I am happy in having this opportunity of expressing my sense of obligation. When the Barbary drawings were exhibited to that gentleman and others, who did me the favour of calling on me to see them, doubts were expressed as to their having been in any considerable degree executed by Bruce himself. I could only reply, that he had repeatedly, as well in his published allusions to them, as in letters to private friends, so spoken of them; that it was a fact notorious, that he never had any assistant except an Italian, Luigi Balugani, sent to join him at Algiers, in 1765 or 6, by Mr. Lumisden, author of the 'Roman Antiquities'; that Mr. Lumisden, speaking of this person, says, that though the best qualified artist he could find willing to undertake the journey, yet he was deficient in the drawing of figures and ornaments, 'in which,' he adds, 'you must assist him yourself';

and while he describes him as possessing excellent talents, he says further, that 'his experience was limited, and his knowledge imperfect; that, as far as regarded the degree of credit to which Bruce's assertions generally were entitled, it had recently received a very strong and satisfactory corroboration, for that Lieut. Wellsted, who had lately returned from a complete and laborious survey of the Red Sea, had expressed to me in the strongest terms his admiration of the astonishing accuracy of Bruce's observations and descriptions; that that accuracy had, indeed, been questioned by Lord Valentia and Salt, subsequent travellers; but that Mr. Wellsted had found that, in every instance, Bruce's account was correct—theirs, where they called his accuracy in question, erroneous; and that he had described that accuracy as extending not only to the description of general features, and the observations of the longitude and latitude of the ports described, but to the depth of water in the harbours, and in a very minute degree to the correctness of drawings of natural history and botany; and that, therefore, I could see no fair reason to doubt the truth of his assertion, that these drawings, in their essential parts, were really, in the far greater part, executed by himself. Now, on seeing the drawings of Paestum, made long before his connexion with Balugani commenced, Mr. Brockedon remarked that they were evidently by the same hand as the African drawings, but executed before that hand had been perfected by subsequent practice. The question, to me at least, is an interesting one; and I trust the Society will not think that I trespass on them unnecessarily with this detail. I pretend not to have shewn cause why all doubts on the point referred to should cease, for those doubts, expressed very freely when Bruce presented a selection of these drawings to the king, George III., have now acquired, from the lapse of time, a sort of inveterate sanction. But I may be permitted to add, that a similar incredulity was allowed to extend itself to many other statements of this distinguished man, all which statements, by further subsequent inquiry, have been confirmed as strictly consistent with truth. Having brought the public business of his consulate to a termination, during which period he acquired a perfect knowledge of the language and manners of the Moors; and having obtained the necessary protection from the Beys of Algiers, Tunis, Constantina, and, subsequently, of Tripoli, whose friendship he had been fortunate in conciliating, Bruce commenced, in September 1768, his journey into the interior, along the River Majerda, famous as the stream on the banks of which a serpent of enormous size had arrested for a time the march of the army of Regulus. He proceeded by Tucca, Keff (the ancient Sica Venera), Hydra, and Tipasa, to Constantina, the ancient Cirta, capital of Syphax and the Numidian kings. He had previously visited Shersell, the ancient Julia Cesarea, the capital of the territories bestowed by Augustus on the younger Juba, and the sepulchre, not far distant, of that prince and his queen, Cleopatra, the daughter of Antony and the Egyptian queen, where he mentions him having first used his camera obscura—an instrument which he found of the utmost service, when practice had given him a facility in using it, and of correcting its errors. This sepulchre is now called the Kubber Romeah, or Sepulchre of the Christian Woman; and tradition assigns it as the spot where are interred the remains of the beautiful and unfortunate Florinda, to whose romantic story the muse of Southey has lent the charm of a most affecting interest.

From Constantina, with an escort of soldiers furnished him by the bey, he visited Madrasem, the tomb of Syphax and the Numidian kings, a monument similar to the Kubber Romeah, and which, like that, would, from its mass and form, indicate an Egyptian origin. Thence, among the wild and romantic valleys of the Anasius Mons, a branch of the great chain of the Atlas, he explored the ruins of Lambesa, Thamugadi, and Thignica, and of the district celebrated as the scene of the triumphs of Belisarius and Solomon; who there realised the predictions of the female prophets of the Moors, that they would be conquered by a heartless antagonist. Thence he returned by Tezzonte, Spaita (the ancient Suffetula), Muchtar, and Thugga, to Tunis. In most of these places he found extensive ruins of temples, theatres, triumphal arches, and aqueducts, some of which were erected by the Romans during the best ages of the empire. His next journey from Tunis was by Zowan to Ferriana or Thala, where were the aqueducts which supplied Carthage, and thence by Caisa, Tozer, Gabo, to El Gemme, where he found an amphitheatre in good preservation, little inferior in size to that of Rome. El Gemme is the ancient Tiedrus: from it he returned by the coast to Tunis. These journeys were made between September 1765 and February 1766. He next proceeded by Gerba, the Menix Islands of the ancients, and across the desert, at great personal risk, to Tripoli; but finding that the state of our relations with that government were not favourable towards his obtaining the protection necessary for exploring its territories, he returned by the shores of the Lesser Syria to Tunis, where he remained till August 1766. He was not, however, of a character to be diverted by temporary obstacles from the execution of the purpose he had formed, of exploring the ruins of the Greek cities of the Pentapolis and Cyrenaicum; and having, at length, obtained from the Pasha of Tripoli assurances of favour and protection, which were very imperfectly fulfilled, he again returned by Sfax and Gerba, to Tripoli. He then crossed the Gulf of Sidra, or the greater Syrtis, and landed at Bengazi, from which place he visited Leptis Magna, Arsinoe, and Ptolometa. At Ptolometa alone he found ruins deserving of much attention,—and here his travels, as connected with the drawings on the table, terminated. Ptolometa afforded him another opportunity of witnessing the utter disregard of the native Arabs for such monuments of antiquity as yet exist. While he was employed in drawing and measuring the ruins of an Ionic temple there, they wantonly threw down the only part of the architrave which remained standing, and this, apparently, for the mere pleasure of mortifying the stranger Christian, who appeared to attach a value to its preservation. Indeed, he had repeatedly found that the passion, transmitted to them from the Vandalic and Mahometan conquerors of Africa, for the destruction of all monuments of the past, was in full force, and that the desire of obtaining the lead used in the construction of the buildings, was of itself sufficient to induce them to mutilate and destroy those ruins which had resisted the lapse of centuries. This circumstance, while it stimulated his anxiety to preserve, by accurate drawing, every thing which still existed worthy of preservation, has doubtless added an unhappy value to his labours, since it is probable, that many of the ruins which he found more or less entire, have since been, if not altogether destroyed, at least very materially injured. In a letter, of date

the 2d of April, 1766, to his friend Mr. Wood, author of the work on "Balbec and Palmyra," (the ruins of which Bruce also visited and delineated), he thus sums up the result of his labours, previous to his visit to the Cyrenaicum. 'It is now time to mention how that space has been employed, and whether my expectations have been answered by the antiquities I have found in my journey. The principal are these: eight triumphal arches of the Corinthian order, mostly of different plans and designs, and little ruined; seven Corinthian temples in great preservation, all highly ornamented, and of the very best ages, whose plans, parts, and decorations I have, by very laborious searches and excavations, made myself entirely master of; add to these one large temple of the Composite order in its best age, one part of which is so perfectly preserved, that it must be looked upon as an unexceptionable example of the manner in which the ancients disposed and proportioned the constituent parts of that order. Two large aqueducts, the smallest of which exceeds, by 42 ft. in perpendicular height, the remains of the highest aqueduct in Rome. In my designs are also included the ruins of the three principal cities of Africa—Iol, or Julia Cesarea, the capital of Juha, Cirta, and Carthage,—the last of which I hope will be found to make a better figure than it does in the accounts of some travellers who would persuade us there are no traces of that city remaining; the drawings are 16 inches by 12, which, taking the length and the breadth, are the largest ever published, and will make three volumes about the size of Mr. Le Roy's 'Antiquities of Greece,' or something larger. I bestowed my utmost care and attention on them, and may safely say, I have not left, in the parts I have visited, one stone undesigned, whence any benefit could result to the arts.' After noticing his corrections of previous geographical observations, he adds:—'I have collected about 300 medals of all kinds, many of which are curious, though I have not had time to consider them; some large medallion vases and statues of bronze, all in good taste; and have copied about 1000 inscriptions; and, lastly, I have not entirely neglected, but have made about 30 drawings of the rarest animals, insects, birds, and plants of this country, particularly of the interior and remote parts of it, all in their natural colours. As soon as Mr. Harrison has obtained leave for me, I return to Tripoli, and thence I intend to visit the ruins of Leptis Magna, go round the Gulf of Sidra or Syrtis Major, to Berenice, Arsinoe, Cyrene, Ptolemais, Barca Apollonia, down to Darné. There I shall finish; for, however my desire might be to continue my researches till I saw the end of Africa at the pyramids, as this is part of Mr. Montague's design, I would not, in any manner, seem to interfere with it, as I willingly confess he is in every respect my superior, both in capacity and preparation. I hope you will do me the justice to believe, from what I have mentioned, that nothing in my power has been omitted to comply with what you recommended to me on leaving England—viz. that I should endeavour to make large excursions into this country. These, though terminated to my satisfaction, have been so continually attended with every kind of danger, hardship, and difficulty, that no consideration possible would make me again repeat the journey I have now finished. Often beset with, and constantly in fear of, the wandering Arabs—the most brutal set of barbarous wretches ever, I believe, existed;—constantly parched with heat, or suffering from extreme

cold; exposed many times to the risk of dying with thirst, though perpetually in view of large quantities of water equal in saltness to the sea; in the northern parts in constant danger from tigers, lions, and panthers—in the south, afraid of every creature, where the smallest insect is endowed with some noxious quality,—scorpions and horned vipers are in such abundance, that of the former 35 were killed in and about my tent as near as it was pitched; and when, in the evening of a sultry day, we had the comfort of a fresh breeze, we were hindered from enjoying it by reflecting that, if it increased, we might, while asleep, be buried in the showers of sand it carries along with it. But the greatest discouragement of all is the little countenance given by government to such undertakings. Asia has been, and I hope will still further be, by your endeavours, freed from that obscurity under which her antiquities were buried. Greece has been worth thread-bare by late publications. Rome is, and will be still farther, in the same situation; while Africa, at our very door, but two short days' journey from France and Italy, has been, till now, looked on as a place into which it was rashness to penetrate." Here Mr. Onslow Bruce read the letter which we were allowed to insert in our report of the last Graphic meeting, and concluded with—"It remains for me only now to thank the Society for the indulgent attention with which they have been pleased to favour me. I have endeavoured, very imperfectly, to put them in possession of circumstances which appear to me not without interest, as connected with the drawings before them; and in conclusion, I may observe, that as no one, previous to Bruce, was able successfully to explore, to the same extent, that interesting portion of the ancient Roman Empire, so it would appear, as far as my information goes, that no subsequent traveller has succeeded in penetrating into some, at least, of the remote and inaccessible regions which it was then his good fortune to visit."

## GRAPHIC SOCIETY.

THE last of these agreeable conversations took place on Wednesday, the 14th, and, in spite of the warm weather, was well attended. Numerous drawings and prints were placed on the tables. To the former, one of the richest contributors was Mr. Uwins, R.A., whose books of sketches in Italy, and some exquisitely finished drawings, were objects of great attraction. Sir Jeffrey Wyattville sent a folio of drawings of the Royal Presence Chamber, at Windsor, and an original design of Sir James Thornhill's for Greenwich Hospital. Etchings and proof impressions of unpublished works were numerous: one of the attractions of these meetings is the first appearance of important and beautiful works of this class. This society has now closed its fifth session. From its commencement it has increased in interest and attraction; and it would be difficult to name a society where zeal for its success is more strongly felt by its members, or where they derive more pleasure from contributing to the gratification of the friends of art.

## ARTISTS' GENERAL BENEVOLENT INSTITUTION.

LORD F. EGERTON, in the chair.—The anniversary, on Saturday, went off, as we anticipated, with much spirit. About a hundred guests partook of the dinner, and a liberal subscription was made. Lord F. Egerton, in proposing the prosperity of the Fund, eloquently enforced the cause of the Fine Arts, and the

consideration due to their professors. He spoke of his own love for them, and said that since he had a shilling he could call his own, it had been spent at Somerset House. Sir M. A. Shee, also, in giving the toast of the Chairman, paid a handsome compliment to his love of art, and his liberality in opening his splendid gallery for the study of artists. The health was drank with enthusiastic applause. Mr. Lover returned thanks for the Royal Irish Academy in a short and pointed address, and, being invited by the chairman and company, sang, at the piano, one of his own charming lyrics—"The four-leaved Shamrock." After this, his name was coupled with the stewards, by the president, who complimented him on his universal genius, in prose composition, in music, in poetry, and in painting. Mr. Holland returned the acknowledgment of the stewards; and Mr. Broadhurst sang sweetly the following appropriate verses, to the tune of "Poor Jack," written for the occasion by the now veteran Tom Dibdin:—

We all know that Fortune's perspective deceives,  
While her foregrounds are brilliant and gay;  
The distance hides error which no eye perceives,  
Till her false thus have faded away.

In the varnish she uses too oft we detect  
A mere cover life's cares to conceal;  
But Poverty's train of want, scorn, and neglect,  
Her sad disproportions reveal.

Then, if to avert such effects you intend,  
Brother artists, let feeling persuade  
Your hearts to throw Charity's light on a friend,  
And to rescue desert from the shade."

## MR. LUNY'S PICTURES.

AN exhibition of a very pleasing collection of 130 pictures, painted by Mr. Luny of Teignmouth, was opened to the public on Monday last, in Old Bond Street. They consist of naval engagements, coast scenery, and marine views in different parts of the world. Mr. Luny is, we understand, seventy-eight years of age, and it has only been within the last two years that he has relinquished the palette. His residence at Teignmouth gave him abundant opportunities of studying the sea in all its ever-changing aspects, from the calm to the hurricane; and of those opportunities it is evident that he has made the most. His skies are also full of variety, and his shipping is nautically correct. The Naval Club ought to purchase Mr. Luny's five large representations of the great victories of the late war.

## NEW PUBLICATIONS.

*The Abbotsford Family.* Painted by Sir David Wilkie, R.A.; engraved by Robert Graves, A.R.A. Hodgson and Graves.

GENRUS is never better employed than in the illustration of genius; and of Scott, for many reasons, there could not be a more fit or worthy commentator than Wilkie. Most of our readers must recollect this interesting group, when it ornamented the walls of the Great Room at Somerset House. It has been thus described by Sir Walter himself:—

"The idea which our inimitable Wilkie adopted was to represent our family group in the garb of south-country peasants, supposed to be concerting a merry-making, for which some of the preparations are seen. The place is the terrace near Kayside, commanding an extensive view towards the Eildon Hills. The sitting figure, in the dress of the miller, I believe, represents Sir Walter Scott, author of a few scores of volumes, and proprietor of Abbotsford. In front, and presenting, we may suppose, a country wag, somewhat addicted to poaching, stands Sir Adam Ferguson, keeper of the regalia of Scotland. In the back-ground

is a very handsome old man, upwards of eighty-four years old at the time, painted in his own character of shepherd. He also belonged to the numerous clan of Scott. Of the three female figures, the eldest is the late regretted mother of the family represented. The young persons most forward in the group, are Miss Sophia Charlotte Scott, now Mrs. Lockhart,\* and her younger sister, Miss Ann Scott. Both are represented as milkers, with their leglins, or milk-pails. On the left of the shepherd, holding a fowling-piece, is the son of Sir Walter, now Captain in the Hussars. The boy is the youngest of the family, Charles Scott. The two dogs were distinguished favourites of the family; the large one, a stag-hound of the old Highland breed, called Maida."

A more beautiful, or a more highly finished line engraving than Mr. Graves has produced from this pleasing composition, we have never seen. Adhering with perfect fidelity to the character and expression of the various individuals who are introduced, he has given to the whole a firmness and solidity, in which, if our memory serves us, the original was somewhat deficient.

*The Sale of the Pet Lamb.* Painted by W. Collins, R.A.; engraved by S. W. Reynolds. Boys.

A COMPANION to the interesting print of "Sunday," the product of the talents of the same artists, which we noticed a few days ago. No man is more happy than Mr. Collins in the representation of the feelings and affections of rural life. The little drama before us is very touching, and has lost nothing of its simplicity and tenderness in the hands of Mr. Reynolds.

*The Infant Wesley.* Painted by F. Newenham; engraved by G. T. Payne. Boys.

A FINE portrait of a fine lad. The title of "The Infant Wesley" is, we hope, attached to it simply because it represents a great-grandson of Charles Wesley. We are no great admirers of "Infant Rosciuses," or "Infant Handels;" but a young religious parrot would be offensive to feelings higher than taste.

*The Bard, by Gray;* with Illustrations from Drawings by the Honourable Mrs. John Talbot. Van Voorst.

IT is extremely pleasing to observe a lady of rank and fortune engaging in pursuits of taste and refinement, instead of yielding herself up to the frivolous occupations which too frequently disgrace fashionable life. The designs (twelve in number) which Mrs. Talbot has made for the purpose of illustrating this elegant edition of Gray's noble poem, do her great credit; and they have been admirably transferred to wood by those eminent engravers, Messrs. Branston, Cleghorn, Jackson, Smith, Thompson, and Williams.

*The History and Antiquities of the Manor House and Church at Great Chalfeld, Wiltshire: forming Part II. of "Examples of Gothic Architecture," Third Series.* By Thomas Larkins Walker. Weale.

By the antiquary this publication must be highly esteemed. Mr. Walker is of opinion, that there cannot be found a more interesting example of Domestic Gothic Architecture, than the Manor House at Great Chalfeld, the erection of which he ascribes to the latter end of the reign of Henry the Sixth. The Church bears evident signs of greater antiquity. The present possessor of the Manor House, and patron of the living, is Sir H. B. Neale, bart.

\* Now, alas! also no more.

*Bellagio, Lake of Como.—Heidelberg.* Drawn from Nature, and on stone, by George Barnard. Ackermann and Co.

A TASTEFULLY executed pair of picturesque prints. The distance in the view of Heidelberg is singularly beautiful.

#### DRAMA.

*King's Theatre.*—On Thursday, the glorious Pasta appeared as *Romeo*, in the opera of *Romeo e Giulietta*; and, if possible, surpassed herself. A more splendid piece of acting was never seen; and her thrilling *Oh Dio!* alone was worth a whole wilderness of stage effects.

*Haymarket.*—Macready's *Hamlet*, on Wednesday, again drew a bumper: proof, if proof were wanting in this hot weather, that really fine acting, however decried by speculating asses in the management of our theatres, has not yet ceased to attract the British public. On Thursday, the *Rivals* was also well cast, and filled the theatre; and the comedy of *Spring and Autumn* was rewarded throughout with the loud laughter of a summer house.

*The Strand* goes on with enterprise and success. Another sprightly novelty, a broad caricature, has just been added to its attractions.

#### VARIETIES.

*Steam Communication with India.*—The arrangement between government and the East India Company for monthly communications by steam-vessels between England and India, *via* the Red Sea, is, that government shall defray all the expense of the voyage out to Alexandria, and half the expense of the voyage from Bombay to Suez, besides half the expense of the steam-boats; receiving the postage on all letters transmitted by this medium. Mr. Waghorn being appointed deputy agent at Egypt, half the charge of his appointment is also to be paid by government.

*Victoria.*—The newspapers have begun to call the Queen, "Victoria the First;" surely unnecessary, as there is no second, to require the distinction.

*Elephant Shooting.*—Extract of a letter from Ceylon, dated 20th January, 1837, in the Wellesse District. "We had excellent sport, having bagged 106 elephants among four of us in three days, but I had a very narrow escape from shooting my friend G—. We had all followed three elephants into a thick bit of jungle, and came up with them at an opening of, perhaps, twenty feet square. G— and I went at the same bird, which, after taking some shots from both of us, and one or two from our companions, got into the cover, but suddenly burst out again abreast upon G—, who was close behind it, and who, being unloaded, halted back, and stumbled over the trunk of a dead elephant, sufficiently within reach of the live one. In the mean time a Cooly had put a fresh gun into my hand, and, as I fired, G—, in rising from his stumble, brought the top of his cap on the line of sight. I saw the cap jerk and open, and the elephant drop at the same instant. The cap was of wicker-work, covered with blue nankeen, and in shape a hunting-cap, fitting close to the head; the ball had opened full four inches of it: his hair was not cut, but still it was a frightfully close shave."

*A Good Breeder.*—In the churchyard adjoining to Conway Castle, N. W., is a stone, with the following remarkable inscription:—"Here lieth the body of Nicholas Hooker, of Conway, Gent., who was the one-and-fortieth child of his father, William Hooker, Esq., by Alice his wife, and the father of seven-and-

twenty children. He died the twentieth day of March, 1637."

*Female Editors.*—The *Peoria Register* and *North Western Gazetteer*, a very clever newspaper, just commenced at Peoria, in Western America, informs us, that the periodical press of the United States boasts of editresses as well as editors. The following case is extracted from that paper of April 29 last. "Mr. Barney Parsons was indicted for an assault upon the famous Mrs. Ann Royal. This lady, it seems, had been very liberal in her castigation of Mr. Barney Parsons, through the columns of the *Paul Pry*, a newspaper which is edited by the lady, and Mr. Barney Parsons was determined to be as liberal in his castigation of the fair editress; but instead of using his pen, he had recourse to the cow-hide, which he smartly applied to the shoulders of Mrs. Ann Royal, and for which he was fined five dollars."

*Recently discovered Fossil Reptile.*—Dr. Mantell has lately obtained from a quarry in Tilgate Forest, a considerable portion of the vertebral column of the *Hydrosaurus*; that extraordinary reptile which was furnished with enormous spines along the back. In this specimen there are upwards of twenty vertebrae, consisting of the lumbar and many of the caudal vertebrae, together with portions of the large spines, and many small dermal bones. The chevron bones present considerable variety in form, according to the position they hold in the series. The first caudal vertebrae have chevron bones resembling those of the crocodile; in the middle of the tail the chevrons are hatchet-shaped; and towards the extremity they become of an elongated form. The transverse processes of the lumbar and first caudal vertebrae are very long, and the spinous processes short; the tail, therefore, must have been wide transversely, and not in a vertical direction, as in the crocodile.—*From a Correspondent.*

*Submarine Forests.*—A submarine forest has lately been discovered near St. Brieune, at a time when the tide was remarkably low. This important discovery will furnish another proof, in addition to those previously existing, of the terrible cataclysms which formerly ravaged and changed the configuration of the northern coast of Brittany. The first of these events occurred in the month of November, in the year 700, after a dreadful tempest; a great part of the coasts of Armorica was swallowed up by the sea. Mount St. Michel was separated from the continent, and became an island; the bay of Cancale took the place of the ancient forest of Seissey, which was celebrated in the time of the Druids. Immense irruptions indented the coast of Brittany, and even that of Normandy. The disaster extended far beyond Morlaix, where the phenomenon of submarine forests is well known, especially since the curious researches of the Count de Fruglaye. There are still found in the road of Morlaix, at low-water, especially when the sea has been much agitated by storms, trunks of trees holding by their roots; others, even in the channel, lie heaped one upon another, more or less carbonised. M. de la Fruglaye has no doubt that this vast indenture, which is now the road, was formerly an immense forest, which some learned men believe to be that of Lexobia. M. de la Fruglaye, favoured by fortunate circumstances, had discovered precious remains of Druidical and Roman antiquities, for which he contends with the sea, though these monuments are many feet below its surface. In the month of September 1172, another terrible eruption of the sea caused further ravages, and submerged

all the eastern part of the bishopric of St. Pol de Leon, and part of that of Tréquier.

**Caverns in Belgium.**—*Liege, June 13.*—Some time ago a large cavern, full of beautiful stalactical formations and incrustations, was discovered near Tili. A second, far more splendid than the first, has just been discovered. It is a prolongation of the former, and every thing in it is grand and magnificent. The various halls, if we may so call them, resemble the naves of cathedrals. On the right and left are stalagmites, rising in stages to a great height, which look like glaciers, and extend further than the eye can reach. From the top of one of them, which is between 60 and 70 feet high, rushes a superb cascade, which falls into an alabaster basin, to which the name of Bath of the Nymphs has been given. Beyond this second grotto there is a third, which will be explored next week. The persons who have discovered these caverns have already penetrated above a league into them.

At a meeting of the Philosophical Society, a paper was read by Mr. Hopkins, the principal object of which was to investigate the motions of precession and nutation, on the hypothesis of the fluidity of the interior of the earth. He stated, that the notion of the original fluidity of the earth, as well as of the other planets, had been entertained by astronomers long before the existence of geology as a science, and depended principally on the spheroidal form common to all the planetary bodies, till it became strongly corroborated by geological phenomena. Assuming the truth of this hypothesis, and that the fluidity was due to excessive heat, he pointed out the conditions under which the solidification would commence at the surface, and those under which it would begin at the centre; and stated it to have been proved that, in either case, the actual state of the surface is perfectly consistent with the supposition of the earth being composed of a solid external shell and a fluid internal mass, with or without a central solid nucleus; the thickness of the shell being very small compared with its radius. Whether the interior of our globe be such as here described, or entirely solid, has not hitherto been proved; but Mr. Hopkins conceives that he has now been able to establish the fact of its non-fluidity, by shewing that, if it were fluid, the precession of the equinoxes, and the nutation of the pole, would necessarily be different from what they are observed to be.—*Cambridge Chronicle.*

**Vienna, April 30.**—Baron von Hugel (who was lately in London, on his return from six years' travels in the Cape of Good Hope, New Holland, part of India, &c.) has announced the first part of the fruit of his labours, under the title of "Cachemere, and the Empire of the Seiks, in 1835 and 1836," 2 vols. 8vo. This, however, will be a small portion of the whole of his travels, and will contain only his researches, observations, and measurements, in the valleys and mountains of the Himalaya, which are more celebrated than known in Cachemere, and the empire of the Seiks and the Punjab. Hugel is not merely a naturalist: he treats of the political situation of the countries through which he passes, the religious and moral condition of the people, their historical importance, and the physiognomy of Nature, in all her sublimity and beauty. His immense collection of plants, seeds, animals, manuscripts, coins, &c. are not yet arranged; and he has hitherto published only one part of his botanical researches in New Holland, and about Swan River, under the title of, "Enumeratio plantarum quas in Nova Hollandia ora austro-

occidentali, ad Fluvium Cygnorum, et in Sinu Regis Georgii, collegit Carolus liber baro de Hugel." It contains, in its first part, more new plants than have been discovered and described during the last year in all the world besides, viz. more than 300 plants, of which 200 are new.

**The Idler**, a new weekly contemporary, No. I., has just been sent to us. It contains a very clever, original paper, "A Sketch of the Actor;" and appears in other respects to be a smart periodical for the chit-chat of the day.

Why is a good judge of horse-flesh not to be trusted?—Because he is *hippo-critical*.

#### LITERARY NOVELTIES.

We rejoice to see announced, in monthly volumes, the first complete edition of the Poetical Works of Southey, revised and amended, with many additional pieces never before collected, or now first published.

Blue Stocking Revels, a new Poem by Leigh Hunt, is, we observe, announced among the forthcoming monthly novelties.

*In the Press.*

#### TO CORRESPONDENTS.

The number and various qualities of poems we have received on the death of our late and lamented King, prevent us from even making a selection.

#### ADVERTISEMENTS,

Connected with Literature and the Arts.

**BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE.**—The next meeting will be held at Liverpool, during the week commencing on Monday, September 11th. The Members of the General Committee will assemble on the preceding Saturday.  
By Order of the Council,  
JAMES YATES, Secretary to the Council.  
JOHN TAYLOR, Treasurer.  
London, March 21, 1837.

**THE THIRTY-THIRD ANNUAL EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS**, at their Gallery, Pall Mall East, will close on Saturday, July 8th. Open each Day from Nine till Dusk.  
Admittance 1s.—Catalogue, 6d.  
R. HILLS, Secretary.

**JUST OPEN.—DIORAMA, REGENT'S PARK.**—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Aigues, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.  
Open daily, from Ten till Five.

**NEWLY DISCOVERED COREGGIO MAGDALEN.**—This divine Work of Art—perhaps the chef-d'œuvre of Coreggio—is now on view at No. 49 Pall Mall, and will positively be withdrawn at Six o'clock on the Evening of Saturday, July 1st.  
Admission, One Shilling.  
Open from Ten to Six o'clock.  
N.B. A few doors from the British Institution.  
Every known Artist will be admitted on presenting his own card.

**HANWELL COLLEGIATE SCHOOL** (formerly Dr. Bond's), Middlesex.  
Principal, the Rev. J. A. EMBERTON, M.A. Oxon. Curate of Hanwell.  
The intellectual advantages of a collegiate course are combined with religious instruction, moral training, and domestic care. The grounds attached to the School are several acres in extent, and the terms are adjusted on the most liberal scale.  
Further particulars may be had on application, if by letter, post paid, to the Rev. T. T. Walsley, D.D. Rector, Hanwell; J. D. Macbride, Esq. D.C.L. Principal of Magdalene Hall, Oxford; B. A. Kent, Esq. M.D. 30 Harley Street, Cavendish square; and of the Principal, at the School.

**A GENTLEMAN**, about to make the Tour of Europe, would take charge of, and introduce into the first Society, the youthful Son of any Nobleman or Gentleman of Fortune. Solid instruction, general information, taste, and accomplishment, may be acquired, under advantages seldom to be met with through the medium of a public education.  
Letters, addressed to Adolphus T. Cooke, Esq. 48 Warwick Street, Regent Street, will be forwarded and duly attended to.

**TO BOOKSELLERS, PRINTERS, and STATIONERS.**—To be disposed of, with immediate possession, an Established Bookselling, Printing, and Stationary business, situate in a large City in one of the Midland Counties. The premises are spacious, and the connexion, which is highly respectable, is capable of much extension.  
For further particulars, apply, if by letter, post-paid, to Messrs. Whittaker and Co. Booksellers, Ave Maria Lane; or Mr. H. Groombridge, Bookseller, Paternoster Row, London.

**ENGLISH, FRENCH, GERMAN, ITALIAN, SPANISH, and PORTUGUESE LITERATURE.** Subscribers to Churton's British and Foreign Library, 36 Holles Street, besides being supplied with every new Publication, the Magazines, Reviews, &c. have the power of selecting from the General Catalogue, containing 35,000 Volumes in the above languages.

Terms of Subscription.  
The Year ..... £5 5 0  
The Half Year ..... 3 3 0  
The Quarter ..... 1 16 0

**ANIMAL MAGNETISM.** Twelve Lectures, delivered in the French Language, and followed by Experiments, performed by Baron Dupotet Desrennoy, of the Faculty of Medicine of Paris, Professor of Animal Magnetism, Member of many Learned and Scientific Societies, and Author of several works on Magnetism, &c. &c. at No. 5 Maddox Street, Hanover Square.  
These Lectures, in which Baron Dupotet will exhibit the wonderful phenomena of Magnetism and Somnambulism, and their application in the cure of the most obstinate Diseases, will begin on Monday next, June 30, at One o'clock precisely, and will continue successively on the following days (Sunday excepted), till the 8th of July. Address for Terms at the above residence.

On the 1st of July will be published, in Imperial 8vo. price 3s. 6d. and super-royal 4to. with Proof Plates on India paper (an unusually splendid edition), large folio, price 7s. 6d., Part I. of **SAUNDERS'S PORTRAITS and MEMOIRS** of the most eminent LIVING POLITICAL REFORMERS. The Portraits engraved on steel, in the first style of art, by Holl, Mote, Robinson, Scriven, &c. &c., in most cases from original Paintings made expressly for the work, by B. R. Dwyer, Esq.; and the Memoirs founded on data obtained from the highest authorities.

Part I. will contain  
The Right Hon. Lord John Russell, M.P.  
Charles Buller, Esq. M.P.  
John Arthur Roebuck, Esq. M.P.  
London: Published by John Saunders, Jun. 7 Dyer's Buildings, Holborn Bars.

Portion of a Liberal Education for the Upper Classes, and the Learned  
Professions. The Selections are chiefly from the following  
Writers:—Dr. Isaac Barrow—Bishop Jeremy Taylor—Dr. South-  
—Richard Hooker—Bishop Butler—Richard Baxter—Burke—  
Bishop Jewell—Lord Clarendon—and F. Mason.Lectures on the Proprietary Office of the  
Church, viewed relatively to Romanism and Popular Protestant-  
ism. By John Henry Newman, B.D. Fellow of Oriel College,  
and Vicar of St. Mary the Virgin, Oxford. 8vo. 10s. 6d.A View of the Evidence afforded by the Life  
and Ministry of St. Peter to the Truth of the Christian Revela-  
tion. By Philip Skene Peck, M.A. Rector of Penshurst,  
Kent, and Chaplain in Ordinary to the King. 8vo. 10s. 6d.Ancient Hymns from the Roman Breviary,  
for Domestic Use, arranged for every Morning and Evening of  
the Week, and especially for the Holidays of the Church. With  
some Original Hymns on the Church's Ordinances. By the Right  
Rev. Richard West, D.D. M.R.I.A. Lord Bishop of Down and  
Connor. In a pocket volume. 3s. 6d.A Compendium of Rudiments in Theology;  
containing a Digest of Bishop Butler's Analogy; an Epitome of  
Dean Graves on the Pentateuch; and an Analysis of Bishop  
Newton on the Prophecy. By the Rev. J. B. Smith, D.D.  
M.R.S.L., of Christ's College, Cambridge; Rector of St. John's,  
Inchmearney of Birmingham; and Head Master of Newcastle Gram-  
mar School. For the Use of Students. In 1 large volume, 18mo.  
10s. 6d.A Manual of the Rudiments of Theology;  
containing an Abridgement of Bishop Tomline's Elements; an  
Analysis of Paley's Evidences; a Summary of Bishop Pearson on  
the Creed; and a brief Exposition of the Thirty-Nine Articles,  
chiefly from Bishop Bardenet; together with other miscellaneous  
Matters connected with Jewish Rites and Ceremonies, &c. &c.  
By the same Editor. 3d edition, enlarged. 18mo. 10s. 6d.Harmonia Paulina; being an Arrangement,  
in the Words of the Apostles, of the complete scheme of Christian  
Faith and Practice contained in the several Epistles of St. Paul.  
By the Rev. Henry Latham, M.A. Vicar of St. Edmund and Alcester,  
Barnet. 8vo. 12s.The Four Gospels, arranged in a Series of  
Tabular Parallels, on a new Principle. 8vo. 7s. 6d.The Voluntary System. In Letters. By  
Rev. S. R. Maitland. New edition, enlarged. 18mo. 6s. 6d.A Connexion of Sacred and Profane History,  
from the Death of Joshua to the Decline of the Kingdoms of  
Israel and Judah. Intended to complete the Series of Shuckford  
and Prideaux. By the Rev. Michael Russell, LL.D. author of  
the "History of the Church in Scotland." Vol. III. and last. 8vo.  
14s.\*By the appearance of this volume, the public are at length  
supplied with a "Connection of Sacred and Profane History,"  
from the creation of the world, down to the era of the Christian  
Remythology, in which not only the most remarkable  
events which befel the ancient people of God, but also an  
account of the origin, constitution, learning, commerce, and  
polity, of all the distinguished nations of antiquity.

\*This work is now complete, in 3 vols. 8vo. price 21. 2s.

## THE PHILOSOPHY OF HUMAN

NATURE, in its Physical, Intellectual, and Moral Rela-  
tions: with an attempt to demonstrate the Order of Providence  
in the Threefold Constitution of our Being.

By HENRY MCGURMAO, M.D.

"The great merit of the book before us, is its extraordinary  
facility of expression. Though connected with subjects gene-  
rally regarded as abstruse, it has the merit—the greatest of all  
merits—of being perfectly intelligible to the least reflecting  
mind."—Atlas.

By the same Author, price 6s.

## An Exposition of the Nature, Treatment,

and Prevention of continued Fever.

"This work is unequalled in our literature, and well deserves  
a place in every medical library."—Lond. Med. and Surg. Journ.  
London: Longman, Rees, Orme, and Co.

Published by J. H. Parker, Oxford; and J. G., and F. Rivington.

The 15th edition, 32mo. 3s. 6d.; the 16th edition, 18mo. 6s.

## THE CHRISTIAN YEAR.

Thoughts in Verse, for the Sundays and Holydays  
throughout the Year.

## The Golden Grove; a Guide to Devotion.

By Jeremy Taylor, D.D., late Lord Bishop of Down and Connor,  
With an Engraving of the Golden Grove in Carmarthen.

Published this day, price Eighteen Shillings.

Vol. XV. Part I. of the

## ENCYCLOPÆDIA BRITANNICA.

SEVENTH EDITION.

Edited by PROFESSOR NAPIER.

The present half-volume contains the Articles—Micrometer and Microscope, by Sir David Brewster; Milton and Mirabeau, by James Browne, LL.D.; Mineralogy, by Professor Jameson, including Geology, by Professor Phillips; Mollusca, by Professor Fleming; Money, by J. R. MacCulloch, Esq. &c. &c.

At least two-thirds of the matter in the present half-volume is entirely new. Wherever any of the text of the former edition has been substantially retained, it has been amended in style, improved in arrangement, and accommodated in every respect to the actual state of knowledge, and the general design of the work.

Upon the whole, the Edition of the "Encyclopædia Britannica" now offered to the Public, embracing improvements and additions, both numerous and extensive, ought to be considered not only as a Permanent Repository of all that is valuable in Science and Literature, taking these terms in their most comprehensive acceptation, but, from the regularity of its publication, it also deserves to be regarded as a Periodical, furnishing, in alphabetical arrangement, an ample fund of varied and authentic information; or it may be viewed as a Series of New and Cheap Books published at stated intervals, upon subjects the most interesting in Literature, and important in Science.

Adam and Charles Black, Edinburgh; Simpkin, Marshall, and Co.; Whittaker and Co.; Hamilton, Adams, and Co. London: and John Cumming, Dublin.

**Perils in the Woods;**

Or, the Emigrant Family's Return: a Tale.  
By the Author of "The Wanderings of Tom Starboard."  
With Engravings, in 1 vol. neatly half-bound, price 6s.  
"To Mr. Wilson pre-eminently belongs the merit of giving a new and higher tone to a branch of literature so important in the development of the infant mind, and to the formation of the child's after character."—*Leeds Times*.  
Elliingham Wilson, 88 Royal Exchange.

## COMPLETE COURSE OF INSTRUCTION IN THE FRENCH LANGUAGE,

NEW EDITIONS, AT REDUCED PRICES,

By P. F. MERLET,

Professor of French at the London University College.

### I. A COMPLETE FRENCH GRAMMAR,

Divided into Three Parts—the Pronunciation, the Accidence, and the Syntax. Each of which are sold separately, or in one volume, 12mo. new edition, neatly bound, price 6s. 6d.; and with a Dictionary of Difficulties of the French Language, neatly bound in one volume, price 10s. 6d.

### II. A DICTIONARY OF DIFFICULTIES OF THE FRENCH LANGUAGE,

New edition, with the following improvements:—1. Considerable Additions to every former Part; 2. Free Exercises, gradually increasing in difficulty; 3. Mercantile Expressions, Phrases, and Letters; 4. Elements of French Composition, exemplified by Notes, Letters, and different Subjects, to be amplified according to the progress of the pupil, price 5s. neatly bound.

"We may take upon ourselves to state, that no French Grammar hitherto published contains so much useful matter. We besides think the plan of this work admirable, as it admits of four different parts, each part being complete in itself, and thereby allowing of its being had separately, according to the progress of the learner. The rules are short and clear, and the examples and exercises calculated to furnish the pupil with colloquial phrases. In a word, we perceive that this work is the produce of a man well versed in the art of teaching."—*Monthly Review*.

### III. SYNOPSIS OF MERLET'S FRENCH GRAMMAR,

In 12mo. 2s. 6d. bound in cloth, presenting, at one view, as it were, all the Rules of the Author's Grammar, to which there are References.

### IV. KEY TO MERLET'S FRENCH GRAMMAR,

Price 3s. 6d. bound; a Key to the Exercises contained in Merlet's French Grammar.

### V. LE TRADUCTEUR;

Or, Historical and Miscellaneous Selections from the best French Writers,

On a plan calculated to render reading and translation peculiarly serviceable in acquiring the speaking and writing of the French Language, designed for junior students; third edition, considerably augmented, neatly bound, 5s. 6d.

"This is decidedly the best French compilation we have seen; throughout there is not an objectionable extract; we recommend this varied and truly entertaining production."—*Atlas*.

### VI. PETIT TABLEAU LITTERAIRE DE LA FRANCE,

Contenant un Essai sur la Littérature Française depuis son Origine, jusqu'en 1832, et de nombreux Extraits des meilleurs Auteurs; suivis de Notes sur quelques difficultés, servant de suite au "Traducteur."

"The selections have been made with good taste and sound judgment; there are explanatory notes at the end, by which the student is materially assisted in comprehending not only difficulties, but the beauties of French phraseology."—*Monthly Review*.

In a large 12mo. volume, neatly bound, 7s. 6d.

Effingham Wilson, No. 88 Royal Exchange; and Taylor and Walton, Booksellers to the London University, No. 30 Upper Gower Street.

### NEW EDITION, REDUCED IN PRICE.

Just published, in 1 vol. 12mo. neatly bound, price 2s. 6d.

### A COMPLETE SYSTEM OF COMMERCIAL ARITHMETIC,

Containing a new and improved Explanation of the Theory of the Science, with an extensive application of its principles to the various branches of Commerce, according to the existing practices of Trade, and numerous Rules for performing Mental Calculations.

By WILLIAM TATE, JUN.

Also,

### AN APPENDIX TO THE COMMERCIAL ARITHMETIC,

Exhibiting the Methods employed by Merchants, Bankers, and Brokers, for the valuations of Merchandise, Mental per Centages, Interest Accounts in Accounts-Current, Public Funds, Marine Insurances, Standarding in Gold and Silver, Arbitrations of Exchange in Bills, Bullion, and Merchandise, and actual and *pro forma* Statements of British and Foreign Invoices and Account Sales.

By W. TATE, JUN.

Neatly bound, price 2s. 6d.; or both Parts bound together, 4s. 6d.

"The rules are clear, and more precise than usual. The exercises are neatly composed, and have a greater relation to the actual business of the world than is customary with elementary books; whilst, to every branch that will admit of it, rules for mental calculations, or short cuts to answer, are added."—*Spectator*.

Effingham Wilson, 88 Royal Exchange.

### PINNOCK'S NEW ENGLISH GRAMMAR.

This day, price 1s. 6d. bound in cloth,

### AN ELEMENTARY ENGLISH GRAMMAR,

Upon an entirely new principle, especially adapted, by its simplicity and its numerous Exercises, for the Junior Classes in Schools, for Private Tuition, or for Self-Instruction.

By W. H. PINNOCK.

London: Effingham Wilson, Royal Exchange.

### Improved editions of MR. INGLIS'S SPAIN, TYROL, &c.

#### I. Spain;

With an Introductory Chapter, giving an Outline of the Proceedings in the Peninsula since the lamented decease of the Author.

3d edition, in 2 vols. post 8vo. price 17. 1s. cloth.  
"One of the most impartial and satisfactory works that has yet been written on the Peninsula."—*Monthly Review*, April 1837.

#### II.

#### The Tyrol;

With a Glance at Bavaria.

3d edition, in 1 vol. post 8vo.  
"This work opens a new route to Italy, and is a delightful guide through these wild and picturesque regions."—*Sunday Times*.

### REVIEW OF NEW BOOKS.

*Notes Abroad and Rhapsodies at Rome.* By a Veteran Traveller. 2 vols. 12mo. London, 1837. Longman and Co.

NOT to disparage the rest of this work, there are an advertisement and a pro-preface, introductory to it, which claim so much of our attention, that it is probable we may have enough to say upon them in our present sheet, to preclude us from entering far into the author's general labours. In this case, his travel through Italy, Switzerland, and part of Germany, with all the notes on arts, theatres, persons, and things, must either be merely referred to, or postponed;—if referred to, with a tribute of praise to his acuteness and ability, and regret for his sharpness and personality; if postponed, perhaps never again to be overtaken in our page. But whether we go into a critical review or not, we may remark, that the writer is one of the Parthian race, who shoots his arrows in every direction, before and behind, on the right and on the left, sparing none of those against whom his resentment may have been provoked, and few of any other order, who, without any obvious cause, have attracted his shafts to be aimed in their direction. Lady Blessington, Tom Hood, John Britton, Tom Moore, Sir J. Soane, *Annals, Magazines, Reviews, &c. &c.*, all, and sundry, come in for a lick of the rough side of his tongue; and it does not seem that there are very many matters in this our round-about world to please him. That he has found no fault with us is so far fortunate, that it affords us an opportunity of expressing our thoughts without bias or prejudice.

The advertisement, to which we have alluded, is pointed, and justly satirical. "In compliance (says the author) with the very admirable practice now generally adopted, I might, by means of preparatory puff-paragraphs, have assured the public that 'people ask each other whether the book is not by far too strong in many parts, and likely to give great offence, as maliciously quizzical upon several individuals?' This, I say, I might have done, it being no more than what is done every day; and a very honest piece of humbug it is, because it is instantly perceived that people are not likely to know much of a book before it is published. In such cases, therefore, 'people' must be understood to refer to the compositors and printers' devils, who are the sole persons behind the curtain; and, as regards the present work, they have meddled with it only officially—that is, *printing-office-ally*. Should any one, after actually perusing them, be of opinion that these volumes contain aught of reprehensible import, in the various *Rhapsodies* and *Notes* with which they abound, I would recommend him to read them over again with greater attention, when he will probably arrive at a more sensible conclusion."

The absurdity of the practice here reprehended, cannot be placed in too ridiculous a light. One would imagine, that such paragraphs could have no effect; could never gull a single purchaser, and that their cost must not only be utterly thrown away, but that their quackery would be hurtful, by deterring people of sense from looking at the publications. The

clumsiness, too, with which most of them are constructed, is another offence; for it shews that their perpetrators are devoid of the judgment, even if they possessed the impartiality, to form a proper estimate. Altogether, the weakness and folly of the system must render it unproductive; and the chief source of regret in respect to it is, that by juxta-position, overshadowing, and confusing, it injures and defeats the fair claims of honest literature.

Turning to the introductory chapter I. "by way of preface," we find the author running a muck at reviews and reviewers. Among other grievances of authorship, he speaks of one by no means "the least; namely, that inflicted by manuscripts being unjustifiably detained for months, nay, years, by the editors of literary journals, who are above their business, and quite indifferent as to the vexation and pain of 'hope deferred' they so wantonly inflict. Applications may be made again and again, without the slightest effect; and a writer may frequently consider himself lucky if he succeeds in recovering his manuscript out of their clutches; for, after waiting till his patience is wholly exhausted, ten to one he is coolly informed that it is lost. 'Multiplicity of papers offered' is the shuffling excuse generally pleaded on such occasions; but were payment for the lost MS. enforced, as it ought to be, editors of periodicals would then discover, that, by adopting a methodical system, and making regular entries of every contribution, with the author's name, the date of its being received, and that of its being either sent to press or returned, no mistakes could ever occur; and they would, perhaps, save themselves a good deal of their important time, now thrown away in hunting over chaotic heaps of papers. A friend of mine once offered a long article to a certain tip-top annual, begging to have it returned as soon as perused, if not approved of. As it did not come back, he took for granted that it would be printed; but no, there he found himself disappointed. In answer to his application for it, he was told that the editor was 'very sorry,' but 'really could not find it.' To which his reply was, that then the editor really must pay for it, and then his sorrow would be all the more sincere. This had its effect; for the next day's post brought the MS. that 'really' could not be found. The article was afterwards printed in another annual, and pleased so well, that it was copied into various other publications. However, there was some excuse for the editor here alluded to, because, judging from the compositions to which he attached his own name in his annual, he was a perfect ass. Little wonder, therefore, if he shewed himself to possess neither the straightforward dealing of a man of business, nor the courtesy of a gentleman."

With some shew of truth, and a piece of tolerably good advice as to method and arrangement, there is little of justice in this statement. The editors do not invite these communications, they are voluntary offerings. Allowing, therefore, for the kindly intention of the writers, and desiring to meet it with a corresponding feeling, it is a little too much to say that the precious time of a person engaged in

the most unintermitting and endless of literary pursuits, shall be taxed at the notion of every individual who fancies himself or herself a wit, a poet, or a philosopher. We could inform the accuser, for instance, that one-third of the whole labour in editing the *Literary Gazette*, is consumed in frivolous and unnecessary correspondence, in answering questions put by strangers, in giving opinions on MSS. with which the journal has no business, and in many other ways, the result whereof never produced a single public line, or a single private advantage. Under such circumstances, is there no excuse for apparent negligences, where respect and esteem are due to able and friendly contributors? We hope there is, and that the good sense of the world will accord it.

Again:—"However, the reviews have lately been playing a tolerably amusing part,—at least amusing for the bystanders; one, withal, that must, I think, go far to open the eyes of the public, by shewing what extreme contrariety of opinions exist among these infallibles; and, as even the important We does not actually multiply a critic, or even give him, like Cerberus, a 'leash of heads,' people may, in time, come to think that a critic is not a whit more than a solitary individual, whose opinions, perhaps, are no better entitled to deference than those of any other individual. In proof of this, we have but to look at the strangely conflicting opinions that have emanated from different *We's* on the same work. After being rudely tomahawked by the 'Quarterly,' Mrs. Butler's book was bemoaned in the 'Edinburgh,' and also in 'Fraser,' the two latter journals being, oddly enough, of the same sentiments in regard to it. Mr. N. P. Willis, who is so belaboured by one of the Albemarle Street critics, is, on the contrary, boasted of by the Great Marlborough Street editor, as one among his best labourers; and Willis again retorts upon his reviewer, styling him 'a reptile of criticism,' and felicitating himself on having escaped 'the slime of his approbation.' It is strange that there should be obstinate people in the world, who refuse to submit patiently to the castigations inflicted upon them by their literary betters; yet, so it is; and the editor of 'The Georgian Era' shewed himself of the number, when, after being well scourged and quizzed by 'The Quarterly,' he took his revenge by liberally distributing a printed statement, in which he ungraciously set forth all the blunders and falsehoods perpetrated by the reviewer. A few exposures of the kind would do no harm, and might possibly teach even the magnates of criticism to be a little more cautious in passing judgment on books and their authors. *Apropos* to which, I here venture a respectably 'antique witticism.' Talking of critics the other day with a friend—'Although they are all literary J's,' said he, 'they may be divided into two pretty distinct classes, one of which consists of the judges, the other of the jack-ketches of literature.'"

Does it not occur to the author, that the degradation of our literature may not so much rest with the reviews, as with the original

Surely, this looks very like impartiality.—*Ed. L. G.*

materials on which they are employed. A fine and high class of national publication would make a fine and high class of reviewers: but what is to be done with the manufactures, the compilations, and the trash, which is our daily fare in the literary productions set before us for observation? Can we make silk purses of the sow's ears (dog's ears they never will be), or extract sweetness from what is so bitterly bad? Till a more wholesome style of publication is encouraged in England, no review, embracing its current and general literature, can be other than a mottled affair; and well it is for the readers of any periodical of the kind, if the taste or the skill, the talent or the judgment, of those who write in it, contrive to mingle amusement with instruction, drawn from such untoward materials.

If we trace effects to their causes, we will discover that the present low ebb of our national literature has no connexion with the criticisms either of judges or jack-ketches. The debasement is founded on the trading nature and character attached to every literary effort and pursuit. Hacks and drudges may starve on hack and drudge employment; and men of rank and fortune may *début* at their own proper cost. But where is unknown genius to look for encouragement? Where is lowly learning to expect protection? Nowhere! They cannot even obtain a hearing; they are, to all intents and purposes, excluded from competition. The huckster's cart-horse, the pampered palfrey, or the ass, may occupy the race-course for which they are so unfit; but the true blood, the noble hunter, and the beautiful racer, are neither admitted, nor allowed to run. Publishers, with very few exceptions, are merely tradesmen. They have a right to make the most they can of their capital; but they are not such competent judges of the article they deal in as fishmongers or butchers are of fish and flesh. The latter know what is fresh and good, what will please the palate, and nourish the frame of the consumer; they will not vend stinking brill for turbot, nor diseased meat for wholesome food. If they did, they would soon lose their customers. But see the books that are sold, and only guess at the MSS. rejected, though hawked to every dealer in London. The shops are filled with the former, the commonest ware that can be got up; while the latter, be they ever so precious, can find neither credit nor market. The merchants in paste and scissor productions have no fancy for original works of sterling value, as persons who deal in paste ornaments and imitations do not traffic in pearls and diamonds.

There is no disparagement to publishers in stating this; nor would it be necessary but for the oft-repeated saying, fathered on Dr. Johnson, that booksellers were the best patrons of authors. A grosser absurdity could not be enunciated; he might as well have said that the slaughter-house-man was the best friend of hullocks. A publisher setting up for such a character would be a madman. He does not pretend that his business is to benefit literature and authors; but to live by and upon them in the most productive and safest way he can. Suppose a publisher has a capital of 10,000*l.* to lay out, and it were possible that another Newton should apply to him to purchase and publish the "Principia," another Milton offer him "Paradise Lost," and another Shakespear beg to have printed the immortal dramas of "Lear," "Hamlet," "Macbeth," "Romeo and Juliet," "As You Like It," "The Midsummer's Dream!" There is not a house in London would embark five hundred pounds

in either speculation. The returns would be too uncertain—too distant; and in the meanwhile it would be easy to employ the capital in a series of monthly compilations, a few trashy novels, or a parcel of school books, the sale of which is assured beyond the chance of much loss, and with almost the certainty of being frequently turned with considerable gain. Is it wonderful, that under such circumstances, the publisher would as soon meddle with a wild elephant as with the "Principia," with a boa constrictor as with "Paradise Lost," and with a Bengal tiger as with Shakespear's plays? His business is to acquire gain—not to encourage genius; and genius can have no hope of encouragement, except inasmuch as a trader thinks he can convert it to account.\*

Dr. Johnson, too, of all men, to be quoted for such an opinion. He, the Colossus, who lived in intimacy with Goldsmith, with all his works a victim of endless distress and difficulties; and himself hardly ever lifted above poverty, the author of "Rasselas," written in a few days to pay the expense of a mother's funeral; and who, but for the Thrales, Garricks, and Reynolds, would have been very little above the condition of his more thoughtless compatriot.

The argument is precisely similar to that so long maintained in favour of slavery. Slave-owners, it was affirmed, would not ill-use their slaves, because they lived upon their produce. But, such is human nature, very many did cruelly and horribly maltreat their slaves; and thousands perished under extorted toil and the lash. And so it is in literary pursuits; and no blame to publishers and booksellers, who are no more bound to provide for those who cannot produce articles profitable to them, than they are to provide for the Spitalfield weavers, now destitute of work. It is the community, the public, the government, on whom the *onus* rests; and with all the efforts at improvements, so ripe in our days, we trust to see it faithfully discharged.

Critics and reviewers can only make the best use in their power of what issues from the press, lamenting the sad deterioration that has taken place, and, for the sake of what merit does exist, or may be generated by kindness, endeavouring to sift the grains from the chaff, and hold them forth for public approbation.

But, to return to our author; let us, for example, hear what he ironically says of Hood:—

"My acquaintance with the writings of this bright ornament of our literature, in the present 'march of intellect' century, extends no further than those choice *morceaux* which his reviews are pleased to cull out as tit-bits, and come-buy-me specimens. In one piece, which his *ex-officio* puffer declares to be 'capital,' occurs a most infamous stanza, in what purports to be a temperance society's drinking song:—

\* "In bookselling matters, an author must either be the conjuror, who commands the devil, or the witch who serves him; and few are they whose situation is sufficiently independent to enable them to assume the higher character: and this is injurious to the indigent author in every respect; for not only is he obliged to turn his pen to every various kind of composition, and so to injure himself with the public by writing hastily, and on subjects unfitted for his genius; but, moreover, those honest gentlemen, the booksellers, from a natural association, consider the books as of least value which they find they can get at least expense of copy-money, and therefore, are proportionally careless in pushing the sale of the work. Whereas, a good round sum out of their purse, like a moderate rise of rent on a farm, raises the work thus acquired in their own eyes, and serves as a spur to make them clear away every channel by which they can discharge their quires upon the public. So much for book-selling—the most ticklish, and unsafe, and hazardous of all professions, scarcely with the exception of horse-jockeyship."—*Life of Scott*, Vol. II.

'The man of the ark, who continued our species,  
He saved us by water; but, as for the wine,  
We all know the figure, more sad than facetious,  
He made after tasting the juice of the vine.'

In another piece of balderdash, the whole of which is given by his puffer as deserving unqualified approbation, Hood, describing a sow, says—

'Whilst from the corner of her jaw  
A sprout of cabbage, green and raw,  
Protruded,—as the dove, so stanch  
For peace, supports an olive branch.'

If the 'march of intellect' can much longer tolerate this profaneness and indecency, it must be as mad as a March hare."

This is, surely, violent and exaggerated. Hood never meant such offence as is imputed to him; nor is he justly chargeable with being the author of, or apologist for, "horribly indecent allusions to holy writ." Hood is a peculiarity; not one among his imitators has done any thing like him. He may be called a mannerist, and his mannerism may be somewhat exhausted; but his originality, his quaint distortions, and his odd and oblique views of subjects, so different from those of the rest of the world, are highly humorous and entertaining. Then, his touches of feeling are as full of nature and simplicity, as the worst of his jokes are laboured and artificial; and for force, look at his "Eugene Aram." Taken as a whole, Hood is one of the cleverest men of his time; and we do not remember a single indecency or profanation throughout his performances in verse or in prose.

*History of England, from the Peace of Utrecht to the Peace of Aix-la-Chapelle.* By Lord Mahon. 3 vols. 8vo. Vol. II. London, 1837. Murray.

HISTORY is the most important branch of literature, or rather, it is the root whence all others must ascend. The poet and the philosopher alike look to it for their material; and the mind's noblest reward for its noblest efforts, that of being remembered "in its land's language," must be given by the page of history. Without such a chronicle, the present would have no monitor, the errors of the past would be no warnings to the future; and its errors are its best lessons—and yet, our great historical works are few in number, and likely to be fewer. It is scarcely possible for the author by profession, whatever be his talents or his energy, to undertake a great work requiring labour, leisure, and distant in its reward. His time is his daily bread, and that is life: hardly earned and penurious, and whose "onward looking hope" is darkly bounded by to-morrow. It is fortunate when leisure, labour, and talent are united, as in Lord Mahon's instance. The present work is a valuable and standard one: every avenue to information has been carefully searched, previous authorities have been sedulously compared, and the whole arranged with the utmost clearness and intelligence. The first great stand of political principle was made in the previous age. In the one here recorded, it was more the struggle of parties; the moral standard was infinitely lower, but the lesson given, if less elevating, is almost as useful. There never was a period shewing how much the lofty purpose, and the generous belief, are needed to make political warfare what it ought to be—carried on in the noble hope of enlightenment and universal amelioration. Lord Mahon has obviously his own bias; but it is liberal, and the result of conviction. No man can be in earnest who takes neither side. In politics as in religion, the worst possible want is that of a creed. The present pages will be

useful towards forming one, for they bring forward a vast mass of information. Lord Mahon has a lucid style, that would do honour to the days of Pope and Addison, and he is very felicitous in summing up a character. His account of Wood's patent is full of important truths; and the way in which Swift flung his rigorous bitterness into the scale, which, as he chose, predominated, is a curious instance of the retribution exacted by neglected talent. Let us hope that Swift's age, an age singularly small in its motives, gave that satire a narrower sweep than was meant for mankind. Lord Mahon's chapter on literature is so admirable, that we shall principally make our extracts from its contents; but we must first give place to a most eloquent picture of the influence of Clarendon's history on Atterbury; and another passage, still more eloquent, when speaking of prison abuses.

"We were inclined to seek some excuse for Atterbury's adherence to that cause, we might, perhaps, find it in his close study of Lord Clarendon's History, which he himself had edited, conjointly with Aldrich and Smalridge. I have always considered the publication of that noble work (it first appeared under Queen Anne) as one of the main causes of the second growth of Jacobitism. How great seems the character of the author! How worthy the principles he supports, and the actions he details! Who could read those volumes and not first be touched, and at last be won, by his unconquerable spirit of loyalty; by his firm attachment to the fallen; by his enduring and well-founded trust in God, when there seemed to be none left in man! Whose heart could fail to relent to that unhappy monarch, more sinned against than sinning; to that 'gray disrowned head,' which lay upon a pillow of thorns at Carisbrook, or rolled upon a block at Whitehall! Or whose mind would not brighten at the thought of his exiled son, in difficulty and distress, with every successive attempt disappointed, every rising hope dashed down, yet suddenly restored against all probable chances, and with one universal shout of joy! How spirit-stirring must that history have been to all, but above all to those (and there were many at that time) whose own ancestors and kinsmen are honourably commemorated in its pages—the soldiers of Rupert, or the friends of Falkland! Can we wonder, then, or severely blame, if their thoughts some times descended one step lower, and turned to the grandson—also exiled for no fault of his own, and pining in a distant land, under circumstances not far unlike to those of Charles Stuart in France!

"Such atrocities in a civilised country must fill every mind with horror; and it is still more painful to reflect, that, for very many years, perhaps, they may have prevailed without redress. Thus, for example, in the session of 1725, I find a petition from poor insolvent debtors in the gaol of Liverpool, declaring themselves 'reduced to a starving condition, having only straw and water at the courtesy of the serjeant.' How often may not the cry of such unhappy men have gone forth and remained unheeded! How still more frequently may not their sufferings have been borne in constrained or despairing silence! The benevolent exertions of Howard (whom that family, fertile though it be in honours, might be proud to claim as their kinsman), and still more the gradual diffusion of compassionate and Christian principles, have, we may hope, utterly rooted out from amongst us any such flagrant stripes at the present time. Yet, let us not

imagine that there is no longer any tyranny to punish, any thralldom to relieve. Let not the legislature be weary in well doing! Let them turn a merciful eye, not merely to the dungeon, but to the factory; not merely to the suffering, and, perhaps, guilty man, but to the helpless and certainly unoffending child! For my part, I firmly rely on the progressive march of humanity. In a barbarous age it was confined to men of our country. In a half barbarous age it was confined to men of our religion. Within our own times it extended only to men of our colour. But as time shall roll on, I am persuaded that it will not be limited, even to our kind; that we shall feel how much the brute creation also is entitled to our sympathy and kindness; and that any needless or wanton suffering, inflicted upon them, will, on every occasion, arouse, and be restrained, by the public indignation and disgust."

We proceed to his lordship's views on "The encouragement, combined with the independence of literature."

"During the reigns of William, of Anne, and of George I. till 1721, when Walpole became prime minister, the Whigs and Tories vied with each other in the encouragement of learned and literary men. Whenever a writer shewed signs of genius, either party to which his principles might incline him, was eager to hail him as a friend. The most distinguished society, and the most favourable opportunities, were thrown open to him. Places and pensions were showered down in lavish profusion; those who wished only to pursue their studies had the means afforded them for learned leisure, while more ambitious spirits were pushed forward in parliament, or in diplomacy. In short, though the sovereign was never an Augustus, almost every minister was a Mæcenas. Newton became master of the mint; Locke was a commissioner of appeals; Steele was a commissioner of stamps; Stepney, Prior, and Gay, were employed in lucrative and important embassies. It was a slight piece of humour at his onset and at his introduction—the 'City and Country Mouse'—that brought forth a mountain of honours to Montagu, afterwards Earl of Halifax, and first lord of the treasury. When Parnell first came to court, Lord Treasurer Oxford passed through the crowd of nobles, leaving them all unnoticed, to greet and welcome the poet. 'I value myself,' says Swift, 'upon making the ministry desire to be acquainted with Parnell, and not Parnell with the ministry.' Swift himself became dean of St. Patrick's, and, but for the queen's dislike, would have been bishop of Hereford. Pope, as a Roman Catholic, was debarred from all places of honour or emolument; yet Secretary Craggs offered him a pension of 300*l.* a-year, not to be known by the public, and to be paid from the secret service money. In 1714, General Stanhope carried a bill, providing a most liberal reward for the discovery of the longitude. Addison became secretary of state. Tickell was secretary in Ireland. Several rich sinecures were bestowed on Congreve and Rowe, on Hughes, and Ambrose Philips. Looking to those times, and comparing them with ours, we shall find that this system of munificent patronage has never been revived. Its place has, however, in some degree, been supplied by the large increase of readers, and the higher price of books, and, consequently, the far superior value of literary labour. A popular writer may now receive a liberal income from the sale of his works; and, according to the common phrase, needs no other patron than the public. It is often boasted, that the latter state of

things far exceeds the former in independence; yet, however plausible this assertion, it is not altogether confirmed by a closer survey. I cannot find that the objects of such splendid patronage were at all humbled by receiving it, or considered themselves, in the slightest degree, as political or private bondsmen. I cannot find that Swift or Prior, for example, mixed with the great on any other footing than that of equal familiarity and friendship, or paid any submissive homage to Lord Treasurer Oxford, or Secretary St. John. In Bolingbroke's "Correspondence" we may still read the private notes of *Mat* to *Harry*, and of *Harry* to *Mat*. The old system of patronage in literature was, I conceive, like the old system of patronage in parliament. Some powerful nobleman, with large burgrave tenures in his hands, was enabled to place in the House of Commons any young man of like principles and of promising abilities. That system, whether for good or for evil, endured till the Reform Bill of 1832. But, whatever difference of opinion may exist concerning it, there is one point which will be admitted by all those who have observed its inward workings—although we often hear the contrary roared forth by those who never saw it nearer than from the strangers' gallery—that a man brought into parliament from his talents, felt no humiliating dependence on him by whose interest he was elected—no such dependence, for example, as would be imposed among gentlemen by what seems a far less favour, a gift of fifty pounds. The two parties met on equal terms of friendship. It was thought as desirable for the one, that his principles should be ably supported, as for the other, that he should sit in the House of Commons. Thus, likewise, in literary patronage, when Oxford made Swift a dean, or Bolingbroke made Prior an ambassador, it was considered no badge of dependence or painful inferiority. It was, of course, desirable for Swift to rise in the church, and for Prior to rise in the state; but it was also desirable for the administration to secure the assistance of an eloquent writer, and of a skilful diplomatist. It may, moreover, be observed, that literary profits do not in all respects supply the place of literary patronage. First, there are several studies, such as many branches of science or antiquities, which are highly deserving of encouragement, but not generally popular, and, therefore, not productive of emolument. In these cases, the liberality of the government might sometimes usefully atone for the indifference of the public. But even with the most popular authors, the necessity of looking to their literary labours for their daily bread, has not unfrequently an unfavourable effect upon the former. It may compel, or at least induce, them to over-write themselves; to pour forth hasty and immature productions; to keep, at all hazards, their names before the public. How seldom can they admit intervals of leisure, or allow their minds to lie fallow for a season, in order to bear hereafter a larger and a better harvest! In like manner, they must minister to the taste of the public, whatever that taste might be, and sometimes have to sacrifice their own ideas of beauty, and aspirations of fame. These are undoubted evils, not merely to them, but to us; and as undoubtedly are they guarded against whenever a fixed and competent provision can be granted to genius. I am, therefore, clearly of opinion, that any minister who might have the noble ambition to become the patron of literary men, would still find a large field open to his munificence; that his intercourse with them on the footing

of equal friendship, would be a deserved distinction to them, and a liberal recreation to himself; that his favours might be employed with great advantage, and received with perfect independence."

It is impossible to question the truth of the view here taken. Existing on opinion, surrounded by a thousand casualties, literature, even with the utmost exertion on the part of its followers, must be dependent; and assuredly, it were better that such dependence should be vested where there is something to be hoped of generous admiration, and warm appreciation, and not among those from whom such feelings are indeed of rare occurrence. But the hardships of a literary career are even yet but little understood. We own we consider it one, that our space admits of no further examination of the many important questions contained in the present work. We must not, however, omit to mention, with warm praise, the chapter on Methodism. Indeed, the whole volume, whether we regard the industry, the integrity, or the ability with which it is written, reflects the highest credit on Lord Mahon.

*Memoirs of the Life of Sir Walter Scott, Bart. Vol. IV. 1837. Edinburgh, Cadell; London, Murray; Whittaker, and Co.*

THIS volume, embracing six of the best and most prosperous years of the life of Sir Walter Scott (1815, 1816, 1817, 1818, 1819, 1820), will probably be read generally, as it has been by us, with more agreeable sensations than any of its precursors. With the exception of several severe attacks of cramp, from which he suffered greatly, this period saw him outriding the pressure of pecuniary circumstances; repaying his obligations; gratifying, perhaps, his strongest passion, by attaching purchase after purchase to Abbotsford, building, embellishing; rising, by every successive publication, to higher eminence and more lucrative remuneration, till he finally reached the apex of his career as a novelist, with "Ivanhoe;"\* and was distinguished by his sovereign, by being created, alone, the first baronet of the new and splendid reign.† Thus was literature rewarded and honoured in his person; and never more justly honoured and rewarded. Even within these few years, the author of the "Minstrelsy of the Scottish Border," of "Marmion," and the "Lady of the Lake," had delighted the world with "Paul's Letters to his Kinsfolk," "The Antiquary," "Tales of my Landlord," "Harold the Dauntless," "Rob Roy," "The Heart of Midlothian," "The Bride of Lammermoor," and the "Legend of Montrose," besides the productions already mentioned, and others of lesser importance. What fund of riches for the pleasure and improvement of mankind! Well did he merit the accumulation of wealth and glory which thence attended his rapidly ascending and dazzling footsteps.

We will not waste our readers' patience by a minute examination of a production so popular as this, and so soon in every body's hands; but rather, for the sake of the foreign and distant, run cursorily through the narrative, with a few connecting and incidental remarks.

"Paul's Letters" were well received; and

\* The "Monastery" was published in 1820; but the "Monastery" was the first of the declension—the beginning of the ending.—Ed. L. G.

† Scott's baronetcy was conferred on him, not in consequence of any ministerial suggestion, but by the king personally, and of his own unsolicited motion; and when the poet kissed his hand, he said to him—"I shall always reflect with pleasure on Sir Walter Scott's having been the first creation of my reign."—[It was with this kingly grace that George IV. so royally enhanced the value of many of his acts of spontaneous munificence.—Ed. L. G.]

"The Antiquary" fully sustained the fame of "Waverley," and "Guy Mannering." It was, in the sequel, the author's own chief favourite. In 1816, "Tales of My Landlord" followed, under different publishing auspices, but with equal success; and the other works we have intimated, flowed out of the same apparently inexhaustible fountain, with the same effect upon public opinion, and of public gratification. During this period, frequent notices occur about Lord Byron, and, as these can hardly fail to be interesting, we select a couple of them, to be classed together. On his separation from his Lady, and voluntary banishment, Scott writes to Mr. Morritt:

"So Lord Byron's romance seems to be concluded for one while; and it is surely time, after he has announced, or rather they themselves have announced, half a dozen blackguard newspaper editors to have been his confidants on the occasion. Surely it is a strange thirst of public fame that seeks such a road to it. But Lord Byron, with high genius, and many points of a noble and generous feeling, has Child Harolded himself, and outlawed himself, into too great a resemblance with the pictures of his imagination. He has one excuse, however, and it is a sad one. I have been reckoned to make a good hit enough at a pirate, or an outlaw, or a smuggling bandit; but I cannot say I was ever so much enchanted with my work as to think of carrying off a drift of my neighbour's sheep, or half-a-dozen of his milk cows. Only I remember, in the rough times, having a scheme with the Duke of Buccleuch, that when the worst came to the worst, we should repair Hermitage Castle, and live, like Robin hood and his merry men, at the expense of all round us. But this presupposed a grand *bouleversement* of society. In the meanwhile, I think my noble friend is something like my old peacock, who chooses to bivouac apart from his lady, and sit below my bed-room window, to keep me awake with his screeching lamentation. Only I own he is not equal in melody to Lord Byron, for 'Fare thee well, and if for ever,' &c. is a very sweet dirge indeed. After all, *c'est genie mal logé*, and that's all that can be said about it."

Again, speaking of the "Black Dwarf," it is almost intimated to be an incarnation of his brother bard, for Mr. Lockhart says—

"The latter tale, however imperfect, and unworthy as a work of art to be placed high in the catalogue of his productions, derives a singular interest from its delineation of the dark feelings so often connected with physical deformity; feelings which appear to have diffused their shadow over the whole genius of Byron, and which, but for this single picture, we should hardly have conceived ever to have passed through Scott's happier mind. All the bitter blasphemy of spirit which, from infancy to the tomb, swelled up in Byron against the unkindness of nature, which sometimes perverted even his filial love into a sentiment of diabolical malignity; all this black and desolate train of reflections must have been encountered, and deliberately subdued, by the manly parent of the "Black Dwarf."

In this volume we find more justice done to the worthy character of James Ballantyne, though poor John, the "Rigid Funnidos" of so many jocund years, is blackened with even darker insinuations and suspicions than before. We never expected to see our merry and, if the editor pleases, thoughtless friend, painted as a deep conspirator; but so it is:—

"I am," he says, "very sorry, in a word, to confess my conviction that John Ballantyne,

however volatile and light-headed, acted at this period with cunning selfishness, both by Scott and by Constable. He well knew that it was to Constable alone that his firm had more than once owed its escape from utter ruin and dishonour; and he must also have known, that had a fair, straightforward effort been made for that purpose, after the triumphant career of the Waverley series had once commenced, nothing could have been more easy than to bring all the affairs of his 'back-stock,' &c. to a complete close, by entering into a distinct and candid treaty on that subject, in connexion with the future works of the great novelist, either with Constable, or with any other first-rate house in the trade. But John, foreseeing that, were that unhappy concern quite out of the field, he must himself subside into a mere subordinate member of his brother's printing company, seems to have parried the blow by the only arts of any consequence in which he ever was an adept. He appears to have systematically disguised from Scott the extent to which the whole Ballantyne concern had been sustained by Constable, especially during his Hebridean tour of 1814, and his Continental one of 1815, and prompted and enforced the idea of trying other booksellers from time to time, instead of adhering to Constable, merely for the selfish purposes,—first, of facilitating the immediate discount of bills; secondly, of further perplexing Scott's affairs, the entire disentanglement of which would have been, as he fancied, prejudicial to his own personal importance."

It appears to us that Mr. Lockhart could hardly be correct in this statement, without seriously implicating Sir Walter Scott, who readily adopted, and warily acted upon these suggestions. His immediate negotiations with Murray and Blackwood were the result; and these were conducted in the true spirit of trade. And they turned out well too; for not only was the present speculation very profitable, but it led to the obtaining of far more advantageous terms from Constable when he was returned to, and future works issued from his press. Indeed, this is demonstrated by Mr. L. himself; for he observes:

"How sharply the unseen parent watched this first negotiation of his 'Jedediah Cleishbotham,' will appear from one of his letters:

"To Mr. John Ballantyne, Hanover Street, Edinburgh.

"Abbotsford, April 29, 1816.

"Dear John,—James has made one or two important mistakes in the bargain with Murray and Blackwood. Briefly as follows:—1stly. Having only authority from me to promise 6000 copies, he proposes they shall have the copyright for ever. I will see their noses cheese first. 2dly. He proposes I shall have twelve months' bills—I have always got six. However, I would not stand on that. 3dly. He talks of volumes being put into the publishers' hands to consider and decide on. No such thing; a bare perusal at St. John's Street\* only. Then for omissions—It is not stipulated that we supply the paper and print of successive editions. This must be nailed, and not left to understanding; secondly, I will have London bills as well as Blackwood's. If they agree to these conditions, good and well. If they demur, Constable must be instantly tried, giving half to the Longmans, and we drawing on them for that moiety, or Constable lodging their bill in our hands. You will understand it is a four-volume touch—a work totally different in style and structure from the

\* James Ballantyne's dwelling-house was in this street, adjoining the Cannongate of Edinburgh.

others—a new cast, in short, of the net which has hitherto made miraculous draughts. I do not limit you to terms, because I think you will make them better than I can do. But he must do more than others, since he will not or cannot print with us. For every point but that, I would rather deal with Constable than any one; he has always shewn himself spirited, judicious, and liberal. Blackwood must be brought to the point instantly; and whenever he demurs, Constable must be treated with, for there is no use in suffering the thing to be blown on. At the same time, you need not conceal from him that there were some proposals elsewhere; but you may add, with truth, I would rather close with him. Yours truly,

W. S.

“P.S. I think Constable should jump at this affair, for I believe the work will be very popular.”

If John Ballantyne, therefore, acted a cunning and worldly part, what can we say of his principal and ally? At this date, a very characteristic letter appears about Blackwood, who, it seems, had offered some suggestions for altering the conclusion of the “Black Dwarf,” on which we are told:

“He did both know and appreciate Blackwood better in after times; but, in 1816, when this plain-spoken communication reached him, the name was little more than a name, and his answer to the most solemn of go-betweens was in these terms, which I sincerely wish I could tell how Signor Aldiborontiphosphornio translated into any dialect submissible to Blackwood’s apprehension.

“Dear James,—I received Blackwood’s impudent letter. G—d—his soul! Tell him and his coadjutor, that I belong to the Black Hussars of Literature, who neither give nor receive criticism. I’ll be cursed but this is the most impudent proposal that ever was made.

“W. S.”

In a letter to Murray, Scott solemnly denies being the author of the Tales. On 18th Dec. 1816, he writes:—

“My dear Sir,—I give you heartily joy of the success of the Tales, although I do not claim

\* A later bookseller sketch may amuse our readers. Anno 1818, Mr. L. says of an entertainment at John Ballantyne’s: “It was at one of those Trinity dinners this summer, that I first saw Constable. Being struck with his appearance, I asked Scott who he was, and he told me, expressing some surprise that any body should have lived a winter or two in Edinburgh without knowing, by sight at least, a citizen whose name was so familiar to the world. I happened to say, that I had not been prepared to find the great bookseller a man of such gentlemanlike and even distinguished bearing. Scott smiled, and answered, ‘Ay, Constable is indeed a grand-looking child. He puts me in mind of Fielding’s apology for Lady Booby; to wit, that Joseph Andrews had an air which, to those who had not seen many noblemen, would give an idea of nobility.’ I had not, in those days, been much initiated in the private jokes of what is called, by way of excellence, *the trade*, and was puzzled when Scott, in the course of the dinner, said to Constable, ‘Will your carish majesty do me the honour to take a glass of champagne?’ I asked the master of the feast for an explanation. ‘Oh!’ said he, ‘are you so green as not to know that Constable long since dubbed himself ‘The Earl of Muscovy,’ John Murray, ‘The Emperor of the West,’ and Longman and his string of partners, ‘The Divan.’ And what title, I asked, ‘has Mr. John Ballantyne himself found in this new almanack imperial?’ ‘Let that flee stick fast to the wa’, quoth Johnny; ‘when I set up for bookseller, the Crafty christened me ‘The Dey of Algiers;’ but he now considers me as next thing to dethroned.’ He added: ‘His majesty the autocrat is too fond of these nicknames. One day, a partner of the house of Longman was dining with him in the country, to settle an important piece of business, about which there occurred a good deal of difficulty. ‘What fine swans you have in your pond there,’ said the Londoner, by way of parenthesis. ‘Swans!’ cried Constable, ‘they are only geese, man. There are just five of them, if you please to observe; and their names are Longman, Hurst, Rees, Orme, and Brown.’ This skit cost the Crafty a good bargain.” [We do not think this is a true version of the story.—*Ed. L. G.*]

that paternal interest in them which my friends do me the credit to assign me. I assure you I have never read a volume of them until they were printed, and can only join with the rest of the world, in applauding the true and striking portraits which they present of old Scottish manners. I do not expect implicit reliance to be placed on my disavowal, because I know very well that he who is disposed not to own a work must necessarily deny it, and that otherwise his secret would be at the mercy of all who choose to ask the question, since silence in such a case must always pass for consent, or rather assent. But I have a mode of convincing you that I am perfectly serious in my denial—pretty similar to that by which Solomon distinguished the fictitious from the real mother—and that is, by reviewing the work, which I take to be an operation equal to that of quartering the child. But this is only on condition I can have Mr. Erskine’s assistance, who admires the work greatly more than I do, though I think the painting of the second tale both true and powerful. I knew Old Mortality very well; his name was Paterson, but few knew him otherwise than by his nickname. The first tale is not very original in its concoction, and lame and impotent in its conclusion.”

Upon which Mr. L. remarks—

“Since I have mentioned this reviewal, I may as well, to avoid recurrence to it, express here my conviction, that Erskine, not Scott, was the author of the critical estimate of the Waverley novels which it embraces—although, for the purpose of mystification, Scott had taken the trouble to transcribe the paragraphs in which that estimate is contained. At the same time I cannot but add, that had Scott really been the sole author of this reviewal, he need not have incurred the severe censure which has been applied to his supposed conduct in the matter. After all, his judgment of his own works must have been allowed to be not above, but very far under the mark; and the whole affair would, I think, have been considered, by every candid person, exactly as the letter about Solomon and the rival mothers was by Murray, Gifford, and ‘the four o’clock visitors’ of Albemarle Street, as a good joke. A better joke, certainly, than the allusion to the report of Thomas Scott being the real author of Waverley, at the close of the article, was never penned; and I think it includes a confession over which a misanthrope might have chuckled.

“We intended here to conclude this long article, when a strong report reached us of certain Transatlantic confessions, which, if genuine (though of this we know nothing), assign a different author to these volumes than the party suspected by our Scottish correspondents. Yet a critic may be excused seizing upon the nearest suspicious person, on the principle happily expressed by Claverhouse, in a letter to the Earl of Linlithgow. He had been, it seems, in search of a gifted weaver, who used to hold forth at conventicles: ‘I sent for the webster (weaver); they brought in his brother for him: though he, may be, cannot preach like his brother, I doubt not but he is as well-principled as he, wherefore I thought it would be no great fault to give him the trouble to go to jail with the rest!’”

Out of his literary career Scott, at this epoch, made an application to be created a Baron of Exchequer, but the matter fell to the ground. In the mean time the large sums he received for his novels, enabled him (as we have stated) to add eke to eke to Abbotsford; but in the autumn of 1817 he was visited by one of those severe and dangerous disorders to which he was

periodically liable. The following touches on both points.

“He was now master of all these haunts of ‘True Thomas,’ and of the whole ground of the battle of Melrose, from Skirmish-Field to Turnagain. His enjoyment of the new territories was, however, interrupted by various returns of his cramp, and the depression of spirit which always attended, in his case, the use of opium,—the only medicine that seemed to have power over the disease. It was while struggling with such languor, on one lovely evening of this autumn, that he composed the following beautiful verses. They mark the very spot of their birth—namely, the then naked height overhanging the northern side of the Cauldshields Loch, from which Melrose Abbey to the eastward, and the hills of Ettrick and Yarrow to the west, are now visible over a wide range of rich woodland,—all the work of the poet’s hand:—

‘The sun upon the Weir-daw Hill  
In Ettrick’s vale is sinking sweet;  
The westland wind is hush and still—  
The lake lies sleeping at my feet.  
Yet not the landscape to mine eye  
Bears those bright hues that once it bore;  
Though evening, with her richest dye,  
Flames o’er the hills of Ettrick’s shore.

With listless look along the plain  
I see Tweed’s silver current glide,  
And coldly mark the holy fane  
Of Melrose rise in ruined pride.  
The quiet lake, the balmy air,  
The hill, the stream, the tower, the tree,—  
Are they still such as once they were,  
Or is the dreary change in me?

Alas, the warp’d and broken board,  
How can it bear the painter’s dye!  
The harp of strained and tuneless chord,  
How to the minstrel’s skill reply!  
To aching eyes each landscape lowers,  
To feverish pulse each gale blows chill;  
And Araby’s or Eden’s bosom  
Were barren as this moorland hill.”

[Conclusion next week.]

Central Society of Education. First Publication. 12mo. pp. 414. London, 1837. Taylor and Walton.

SUPREMACY of mind, in any of our countrymen, is a common source of national boast. This is as it should be. Such pride is healthy; the object of it is lofty; and the spirit in which it is evinced, gives warrant that the appreciation of intellect is alive and stirring. It is the national homage to mind. On the other hand, to be a native of an intelligent country, is a passport to respect. The higher the standard of the national mind, the greater is the honour which is reflected on all who live under its institutions, or hold the reins of government. The monarchy of Prussia has tried the experiment of an organised system of education, and is flourishing in this its enlightened policy. Information there has bred no discontent. The happiness of the people, at least as yet, has gone hand in hand with their knowledge. Whatever protection or instruction is given to a people by its institutions, is invariably regained from increased security, and repaid by the sincerity of the people’s attachment. In ruling the ignorant, and in driving the bullock, the honour is pretty much the same. The goad is the sole executive. We should not feel greatly proud to occupy the throne of the Queen of Otaheite, or to succeed his majesty the King of the Cannibal Islands. From the intelligence of the people, the true dignity of the crown is derived. Far be from us, however, the discussion of political questions; further still, a tone of presumption. We speak only as men to whom the literature of our country is dear; whom a life of literary experience has made somewhat well acquainted

with the delights and the resources which the lettered man alone has for his refuge. Knowing, as we do, that literature can lend a balm, which, like oil on the waters, spreads over the rough harassments of life; how often it quiets the tossing to and fro of the sick-bed, combats sorrow, and animates despondency; aware, too, that literature will often turn aright the perverted, prick up the indolent, or at least keep him out of harm's way; that it tends to exalt many, and to amuse more; surely, with such impressions as these at home in our hearts, we pass not the boundaries of our own peculiar province in venturing to plead for opening these fountains of delight to all, which we ourselves know to be such genuine sources of gratification and enlightenment. We cannot refrain from repeating the expression of our earnest trust, that the present reign will become entwined with the intellectual sympathies of the country, by fostering the spirit which has been hitherto eager to instruct the people, but more directly by concentrating the present detached efforts into a regular national system. Strange, indeed, does it seem that, while there exists an anxious craving for knowledge on the part of the people, and a willingness on the part of the government, responding to this universal appetite, yet, that no public demonstration should be made for realising any thing of the kind. All agree, either by their expressed opinion, or by their silence, that it ought to be done, yet nobody does it. Lord Brougham, the early friend and sedulous advocate of popular education, has the satisfaction to know that, through his unwearied activity, the principle has been carried; but the practice is yet but partial, and still stands in need of public sanction and regular organisation. The latent, or rather the glaring cause why no national system has been adopted by public authority, is owing to the divisions which obtain among the professed friends of education. Its best interests are thus distracted, and the main object of a national system is sacrificed. Without entering into detail, we may broadly state the essential question at issue to be, whether morality is to be taught as wholly, or partially, dependent on religion? The one system is connected with the established church, the other is carried on upon wider principles, and with popular views. Education has, alas! become a party question. So long as men busy themselves in ringing the changes on Bell and Lancaster, that unity of purpose will be wanting which can alone hope to gain the entire confidence of the public mind. The choice of the nation is embarrassed between the two systems. If this contention were only a present evil, or of itself at all likely to terminate, we would be the first to say, let these partisans stimulate each other by their rival efforts; let them fight it out, and then let the country have the benefit of that system which proves itself to be the best. But something more than this is required. It is now high time to ask, to what must the progress of education, as now carried on, necessarily lead. Within the same country two principles of education are at work, in direct hostility to each other. This feeling loses none of its acrimony from the close approximation of the two systems. How far the points of difference are at all essential to general education, we do not take upon ourselves to decide; but, unquestionably, a national blessing is thus being perverted into a national curse. The heritage we are leaving is a heritage of dissension. The time for conciliation is childhood; but it appears that we prefer to arm posterity for the contest, rather than

to do away with the necessity of contending at all. Surely, this has neither the foresight of sound policy, nor the benevolence of philanthropy. The dictates of such would say, "We are brothers, we are brothers; let us not sow the seeds of internal discord from generation to generation. Let us cease to split straws; at least, let us not use them for fuel to light up the fires of perpetual contention for our children's children." Having thrown out these few general remarks, we proceed to observe upon the book before us. It is published under the auspices of the Central Society of Education, and contains much information. The reader is made acquainted with the progress and prospects of education, both in our own and in all other countries, where efforts are making for the general instruction of the human race. The working of the various systems are distinctly set forth, and their peculiar principles are discussed with great acuteness, by those who are, unquestionably, conversant with the bearings of their several subjects. There is, however, one point upon which all these writers draw together, which savours strongly of partiality and a warped judgment, if not of a lurking desire to mislead, as well as to inform. No opportunity is let slip of making a side-hit at the present systems of education at our public schools, or at Oxford, or the schools under the surveillance of the church; for instance—

"Proceeding onwards in intellectual education, it may be worthy of consideration, whether the learned languages are, at this moment, effectually attained; not whether a few persons are distinguished as scholars at the universities, but whether the mass, who are spending fourteen of the best years of their lives upon the classics, do, after that period has elapsed, obtain such a knowledge of them as to appreciate the most valuable of their contents, or even obtain the power of reading them with tolerable facility, so as to be able to take up a work and peruse it with satisfaction to themselves. Such can hardly be affirmed to be the case; and if such is not, may it not be doubted whether instruction in the Latin and Greek languages is imparted in the best manner. Greek is often (although the practice is falling gradually into disuse) learned through the medium of the Latin,—an unknown, through the medium of an imperfectly known language. Again, the authors first read are, for the most part, poets: it may be worthy of consideration whether such should be the case. A prejudice against the use of the classics in education has of late been gaining ground, proceeding, it is considered, in great measure, from the indiscriminating and exclusive devotion which has been paid to them."

Now here are three cavils in a lump. First, it is objected that, although some few turn out good Greek scholars at the universities, the mass do not. From the little we know of human nature or the human mind, we are disposed to think that the same result will follow, whether Greek is to be taught, or the art of making breeches, watches, or tea-kettles; the few will do it well, the many will not. But the fault must be shewn to lie at the school doors. It is questioned whether the authors first read ought to be poets. This is needless: the first Greek books put into the hands of the schoolboy are either the Gospels or Xenophon. Again, a prejudice against classical education is said to be gaining ground. This is incorrect: the public schools are brim full; the colleges overflow.

The prejudice against classical literature exists only in the minds of those who have felt

the want of it; or is the mere reaction of parental disappointment, from having expected more than it ever pretended to bestow. We agree with the hint of Dr. Syntax, and do not look to receive what we have no reason to ask.

"Go to Homer, if you will,  
And see if he'll discount your bill."

Probably not. But a man is a fool who goes to him, or sends his son to him, for that purpose. Classical learning may not be of direct and immediate utility; but, if it be worth while to imbue the mind with liberal and enlarged views of human nature; if the habits of thought of the most refined and tasteful people are worthy our familiarity; or if the purest models of style and diction are deserving of imitation, this outcry against Greek is indeed very silly.

The following is, also, a party statement. Such blemishes spot the book with too great frequency.

"The central school of the National School Society resembles, in the mode in which instruction is conveyed, that of the British and Foreign School Society, but the quantity of knowledge imparted is much more restricted; *the greater proportion of the time being occupied in giving instruction in the doctrines of the church of England.* The mode in which the children practise spelling is in a measure good; as they mention the letters of which a word is composed, they write them down upon their slates, and thus learn to spell in writing. The words are, however, taken singly, as they are found in most spelling-books, and not as parts of a sentence. If the children wrote passages, with the sense of which they had previously become acquainted, they would probably attach an appropriate meaning to each word, which, as unconnected sounds, it is not probable that they can do. Although the two societies differ in some respects, neither the one nor the other have contemplated carrying education beyond literary instruction. How small a branch this is of the subject, all who are at all conversant with it well know. In neither of the schools can we discover any arrangements for connecting the knowledge acquired with the probable pursuits of life; any system adopted for the formation of habits of patient industry; any instruction in a useful art, which may minister to domestic comfort, while it increases the small modicum of a labourer's means of support; or any systematic plan adopted for the formation of habits of virtue."

This is very unfairly written. The time is first said to be wasted in teaching the doctrines of the church of England; and then it is denied that any systematic plan is adopted for the formation of the habits of virtue. The fact is, that not the doctrines of the church of England, but the duties of Christianity are taught. This is sought to be slurred over by a sneer at the doctrines, and then it is followed up by the direct charge, that "no systematic plan is adopted for the formation of the habits of virtue." This is altogether unbecoming the professed liberality of the book. All that the friends of Christian instruction need to urge is, We seek to teach the habits of virtue after the best model, and on the most secure basis we have. If the Gospel can give us no hopes of success, no other foundation can.

The subjoined facts are far better worthy of notice, and much more calculated to advance the interests of the cause of national education, than any carping comments of rival systems.

"It will be highly gratifying to the advocates for efficient education, to see in how remarkable a degree the conclusions drawn

from the French returns are confirmed by the fact in our own country, where, with all its imperfections and deficiencies, we must believe that the proportionate number of well-educated persons is much greater than it is in France. We have seen that the proportion borne by the well educated to the other three classes of the accused in that country was, on the average of seven years, 227 to 9773. In Scotland, that proportion, in 1836, was 188 to 9812; while in England, the proportion was no more than 91 to 9909.

	Scotland.			England and Wales.	
	Number accused.	Centesimal proportion.		Number accused.	Centesimal proportion.
Unable to read and write—	539	18.45		7,033	33.52
Able to read and write—	1,427	46.74		10,963	52.33
Superiorly instructed not ascertained	480	14.73		2,215	10.56
	55	1.68		191	0.91
	412	14.10		562	2.63
		100		20,964	100

Of the 55 educated persons accused in Scotland, 41 were convicted, viz. 15 for common assaults, 15 for simple thefts, 2 for frauds, 3 for forgery, 1 for subornation of perjury, 2 for housebreaking, 1 for a nameless offence, 2 for other slight offences. The punishments awarded were as follows:

Fined and discharged	11
Imprisoned 1 month and under	3
above 1 and not exceeding 2 months	5
3	12
6	2
Outlawed	1
Transported for 7 years	1
14 years	1
life	2
	41

The papers on the industrial schools for the peasantry, and on the education of the senses, as exhibited in the instruction of the blind, and the deaf and dumb, are full of pleasing and practical information. We must not omit to specify, that intelligence and research characterise the observations on the treatment of juvenile offenders. The friends of education should possess the book, were it only for the statistical facts which are collected; as such evidence is the demonstration of what education is worth.

*Zinzendorf, and other Poems.* By Mrs. L. H. Sigourney. 2d edition. New York, 1837. Leavitt, Lord, and Co.

THE nature of this volume is essentially feminine. We use the term in its highest acceptance, and as its highest praise. Tender in its affections, enthusiastic in its religious feelings, gentle and yet elevated—such are the characteristics of the present work. Witness the following poem.

“‘Let there be Light!’—A Mission Hymn.  
Light for the dreary vales  
Of ice-bound Labrador!  
Where the frost-king breathes on the slippery sails.  
Till the mariner wakes no more.

Lift high the lamp that never fails!  
To that dark and sterile shore.  
Light for the forest child!  
An outcast though he be  
From haunts where the sun of his childhood smiled,  
And the country of the free.  
Pour the hope of Heaven o'er his desert-wild,  
For what home on earth has he?  
Light for the cliffs of Greece!  
Light for that trampled clime!  
Where the wrath of the Spoiler refused to cease  
Ere it wrecked the boast of time.—  
See! the Moslem hath dealt the gift of peace.  
Grudge ye your boon sublime?  
Light on the Hindoo shed!  
On the maddening idol-train;  
The flame of the Suttie is dire and red,  
And the Fakir faints with pain;  
And the dying moan on their cheerless bed,  
By the Ganges laved in vain.  
Light for the Persian sky!  
The Sophi's wisdom fades,  
And the pearls of Ormus are poor to buy  
Armour when Death invades!  
Hark! hark! to the sainted martyr's sigh  
From Ararat's mournful shades.  
Light for the Burman vales!  
For the islands of the sea!  
For the land where the slave-ship fills its sails  
With sighs of agony!  
And her kidnapped babes the mother wails,  
'Neath the lone banana-tree.  
Light for the ancient race  
Exiled from Zion's rest!  
Homeless they roam from place to place,  
Bewitched and oppressed;  
They shudder at Sinai's fearful base,—  
Guide them to Calvary's breast.  
Light for the darkened earth!  
Long midnight fleets away,  
The Gospel day-star springs to birth,  
Whose bright, prelusive ray  
Shall glow, till a glorious morning brings  
Eternity's cloudless day.”

We must say, that every volume we receive across the Atlantic, impresses us with a most favourable idea of the morals and intellect of woman in America.

*Wanderings in Greece.* By George Cochrane, Esq., Knight of the Royal Greek Military Order of the Saviour, &c. &c. 2 vols. 8vo. London, 1837. Colburn.

WITH all the usual appurtenances of a modern book, portraits, maps, plans, and sketches on stone, these volumes hardly aim at more than amusing an idle—we might say a very idle—hour of the reader. They contain, in fact, the chit-chat of Athens, the fashionable news of its court, and notes of a few pleasant excursions into various parts—receptions, balls, sketches of individuals, &c. &c.; and the whole dashed with certain political opinions, the results of a scheme for establishing steam-navigation between England and Greece (in which Mr. Cochrane was anticipated by the French government), and another project for colonising Greece, so as, in twenty-five years, to give it a population adequate to its defence against all comers.

Such being the general features of this publication, we need not observe that it offers little for us to extract. The author, during the period of his sojourn and travels, having seen and heard more of fights than of science, more of levees than of antiquities, and more of politics than of the fine arts, has not produced much for literary lucubration. We will, however, copy out some passages, as illustrations of national manners and of his style, and leave the rest to the perusal or imagination of our readers. The following curious anecdote is told of the Greek General Karaïskaki (1826), one of the best and bravest of the leaders of the revolution, who came to visit Lord Cochrane on board his ship:—

“Among his followers was an orderly, who attended him every where, and of whom I must pause to give a brief account. This orderly was a Turkish woman, dressed partly in

man's attire, and partly in female. She had been taken prisoner by Karaïskaki at Tripolitza, when that city fell into the hands of the Turks; and Karaïskaki became attached to her, and she to him. She watched him night and day. She carried over her shoulder a light Greek musket, and in her girdle a brace of pistols and an ataghan. Her countenance was very pleasing, but possessing more of the Turkish than the Greek character. Her face was rather round than oval; she had a perfectly straight nose, dark eyes and eyebrows, and a complexion not at all dark, but of a healthy and beautiful white and red. Her hair was dark auburn, and was plaited, and part of it wound round a Greek red cap with a blue tassel. She wore white cotton trousers, with a white sheep-skin jacket, coming down to her waist only, which latter was encircled with a red leathern girdle, as I have said before, containing arms. Her manners were very mild and unobtrusive, and, when noticed by us strangers, she cast down her eyes with a very becoming and attractive modesty. The conduct of this woman offered a fine specimen of what female attachment is capable of effecting. No danger, however great, kept her from the field; and, although she did not fight, still she was regardless of her life while following her lord. At the hour of two, the general and his staff signified their wish to depart; mutual expressions of good will were accordingly interchanged. The orderly then came up to the general, received his commands with every mark of respect, and preceded him into the boat. The following day the admiral went on shore to visit General Karaïskaki, having previously sent to apprise the general of his coming. He was accompanied only by Mr. Masson and myself. Having entered the boat, the Greek youths dipped their oars, and in a few minutes we were landed on a little neck of land, running out into the sea, about a hundred yards from which was the tent of the general. Upon the admiral's arriving within twenty yards, the Greek band struck up an air, of what kind I could not make out. The band was not a very ambitious one, being composed of two drums and three fifes only. But these made up in noise for what they wanted in number. The tent was large enough to contain twenty persons, and was made of white canvass. The general came out, with several of the Capitani, who had assembled to receive Lord Cochrane, and then returned with him into the tent. Three rush chairs were placed for us, upon which we sat. The general sat upon a rug, after the Turkish style, about two yards from the admiral; to the right of the general was the orderly I have before spoken of, who was seated in the same position as the general. It appeared that, in the general's tent, she exercised that prerogative which her beauty and attachment had acquired for her; there she was evidently second in command.”

Mainote justice is singularly exhibited in the following:—

“A Mainote had just been cited before the attorney-general, for killing a man in his province. The man frankly acknowledged the affair, and said, that his reason for the act was, that the deceased had killed one of his relations; that through the death of his relative his clan had been reduced to thirty-five; and that the clan of the deceased, a rival one, was thirty-six in number; he, therefore, killed the man in question solely with the view of reducing the antagonist clan to the same number as his own! The province in which this occurred is called Maina, the most southern of the

Morea, and a country so rude and barbarous, that the Turks could never subjugate it; nor did they make many attempts to that end. At every two or three miles there are small fortifications of houses, and, like the barons of old, the inhabitants carry on a predatory warfare, when the ire of the clan is raised by any insult offered by a neighbouring one."

The sporting in Greece is *sui generis*; and leeches, it seems, are an important article in the trade of the country. Thus, our author tells us—

"There are four very good seasons of the year for shooting in Greece: in the month of April the pigeons remain about three weeks; the quails then follow, and remain a month; then, in September and October, come the partridges; and in the months of November and December, the woodcock and snipe, which arrive at that period in myriads. There are certain game laws in force, but the fees are very inexpensive. You take out a certificate for three months for a drachma and half (about one shilling); or for a year you pay three and a half drachmas (two shillings and sixpence). The *gens d'armes* are very severe if they find you shooting without a license; your gun is taken from you, and not restored till you have paid the fine, which is about 100 drachmas—nearly 4l. sterling. The cheapness of the license, one would almost think, would occasion so many sportsmen, that the game would sensibly diminish, until it almost disappeared; but such is not the case. In the interior of the country there are but few inhabitants, and the game enjoys an undisturbed repose. Partridges and hares are found all over Greece, and pheasants are found in great numbers in the neighbourhood of Missolonghi, and at Zeitouni; and in Negropont and the frontiers, the wild boar and deer are numerous. The other game mentioned is only transient, and they come in such flocks that they never appear to diminish. The inhabitants pickle the pigeons and the quails, which are eaten at breakfast. Having partaken of my excellent friend's hospitality, and the evening drawing in, I bent my steps homeward, at which I arrived at the hour of nine. I was attracted to the coffee-room by a new arrival, who was talking dreadfully loud, and speaking the patois of the South of France. I inquired of Louis, the hotel-keeper, who he was, and learned that he was a Frenchman, who had come to Athens to bid for the exclusive right of seeking leeches in the brooks of Greece, and that he had that morning made the purchase. Every body in the room were [was] in a roar of laughter at the oddity of the man, and, wishing to enjoy the fun, I entered. The moment I entered he addressed me, and immediately began telling me all his affairs: every now and then taking up his knife (for he was waiting for his supper), and throwing it down on the table again, whenever he wished to give emphasis to what he said. He informed me that he had that morning purchased the monopoly of leeches in the province of Attica, for the sum of 12,500 drachmas, and that he had it for five years, and that he expected he should make a very good thing of it. Previous to this arrangement, a great many leech merchants used to come from Marseilles. They would arrive with twenty pounds in their pocket, and in three months would, by their own labour and industry, collect a sufficient quantity to yield them a profit of 4000 francs (160l.) at Marseilles. The government, hearing of the great sums of money made by this traffic, claimed to themselves the natural advantages arising from their brooks and lakes, which

swarm with leeches; and I have no doubt that, from the ten nomarchies, the government may obtain the sum of 6000l. a year, for the first five years."

Another description, illustrative of the habits of modern Greece, is worthy of notice. Mr. C. says:—

"This evening, in pursuance of my old habit of strolling out alone into the 'highways and byways' of the city and suburbs, in search of information and adventure, I fell in with an occurrence worth relating. In passing through one of the small streets, my attention was attracted by the sound of music, and having entered a little hovel whence it issued, I saw several people, of both sexes, celebrating a marriage, in which I observed that no garland was employed. Now, the garland is always placed upon the bride's head, at a regular and orthodox wedding; I was, therefore, induced to inquire into the circumstances. They presently explained themselves, however, as follows: after I had been there a little while, without any body objecting to my presence, but the contrary, a man got up, personating the priest, and addressed the assembled party to the following effect:—'Here are two young folks who wish to be married without the garland. What is your wish and pleasure, ladies and gentlemen? Have you any objection thereto?' Nobody expressed any; the only difference of opinion being relative to the time the marriage should last! Some said that they should be married for two months, others only six weeks. Two months were at last decided upon; the rings were placed on the respective fingers of the man and woman; and they were duly pronounced man and wife for the space of two months. The music, composed of a fiddle and guitar, then struck up, and the evening passed off with mirth and jollity."

It is facetious enough to call these "left-handed marriages," being, in fact, something else—a formal dissoluteness and profligacy; and it is not very clear whether the annexed explanation limits the practice to the parties mentioned, or whether it is a ceremony common to all.

"I was mentioning this circumstance the next morning to a friend, and he informed me that some time since, a colony of three hundred men and women had arrived from Cyprus, the inhabitants of which, being tired of living under the thralldom of the Turks, had come to Athens, and had demanded permission to locate themselves in the town. The kingdom of Greece being free to all the world, the government could not refuse them admission, but on account of the moral habits of these modern Cyprians not being precisely in accordance with those of other well-conducted Greeks, the government had chosen to take them under its especial surveillance."

We conclude with a tobacco story, which the author's Greek tutor gave him as a lesson; it is new to us, and if a moral is to be drawn from it, we should say that smoking is the greatest solace to which a man can resort in the event of losing his wife. Real Virginia, Orinoko, or Havannah, it is true, can hardly be esteemed "the spiritual essence" of a buried English female; but as we grow so little tobacco in the British isles, a whiff of any of these must be received as the best succedaneum. But thus runs the tale:—

"In times of old, before man had made use of the herb tobacco, there was a Persian and his wife, who were excessively attached to one another; so much so, that when the good man went to work in the fields (for he was a

peasant), his wife always accompanied him. Through some unfortunate accident, the wife died, and the husband was inconsolable. Having buried his beloved, he erected a very handsome monument to her memory, and was wont to go every day to mourn over her tomb; for he found solace in the utterance of his grief. One day, while he was, as usual, at the tomb, he observed a plant emerging from the earth where his wife was buried. Struck by it, an idea came across his mind that this plant was sent by his departed wife, for him to cherish. He, therefore, fostered it, and it soon grew to be very large. After some time, he reported the occurrence to a dervise who resided in a neighbouring village, and asked his advice. The dervise, upon hearing it, pondered some time, and then told him to return next day. The dervise then informed him, that, having put up prayers, he had been instructed in the night, by a vision, that the said plant was sent for his use and consolation, under his affliction for the loss of his beloved wife; and that he must take the leaves and dry them, and roll them up in the shape of a hollow tube, and that, whenever grief came over him for the loss of his departed, he was to take one of these tubes, light it at one end, and place the other end in his mouth; and that he must inhale the smoke arising from the leaves, which was no other than the spiritual essence of his departed wife. The fame of this circumstance spread abroad, and numbers came round the poor man, to hear of this phenomenon. They who were placed in a similar situation, entreated the good man to give them a few leaves, and they found, or fancied, that it equally imparted a solace to their cares and difficulties. The leaves of one plant not sufficing for the increased demand, the peasant planted the seeds, and raised a large field, and many more in the process of time; and in a few years, by disposing of these balm of Gilead, he became one of the most wealthy men of Persia, and the sultan gave him a province to rule over."

He should have made him his pipe-bearer.

#### MISCELLANEOUS.

##### *Rise and Progress of the British Power in India.*

By Peter Auber, M.R.A.S., late Secretary to the Hon. Court of Directors of the East India Company. Vol. I. 8vo. pp. 699. London, 1836. Allen and Co.; Calkin and Budd.

POSSESSED of every advantage for research, and gifted with ability to make the best use of the fruits of his investigation, Mr. Auber has here given us the first portion of an excellent history of the wonderful empire of the East. It commences with a glance at the early annals of Hindostan and the native powers, notices the Portuguese settlements, and describes the origin of the British East India Company. He then carries down the account in a clear and perspicuous manner to the end of 1786; and the memorable party persecution of Warren Hastings concludes the interesting narrative.

*Scenes and Characters of Hindostan, with Sketches of Anglo-Indian Society.* By Emma Roberts. Second edition. 2 vols. London, 1837. Allen and Co.

WE rejoice to see this pleasant work receive its just reward in a second edition. No one has described Anglo-Indian manners with such tact and discrimination as Miss Roberts, and two new and additional chapters on Griffins and Indigo Planters, in the present version, are characteristic improvements in this inter-

esting branch of her subject. Altogether, with the moderate cost of the publication, we should not be surprised to see its popularity increased rather than diminished by being more widely diffused; and, consequently, that we should be called upon to notice a third edition.

*Sketches of Young Ladies; in which these interesting Members of the Animal Kingdom are classified, according to their several Instincts, Habits, and General Characteristics, by "Quix;" with Six Illustrations by "Phiz." Pp. 80. (London, Chapman and Hall).—The illustrations are humorous and entertaining, and the letter-press sketches playfully satirical and amusing. About two dozen of species are described: such as the lazy young lady, or sloth; the clever young lady, or monkey; the busy young lady, or squirrel; the interesting young lady, or lamb; the whimsical young lady, or butterfly; the mysterious young lady, or mole; and we offer our readers the petting young lady, as a fair specimen of the talent displayed in the volume.*

"Were we to define the petting young lady, we should say that she is one who loves every living thing which is small. The fact of being small is quite sufficient to guarantee her affections without any additional requisite whatever. So strong is this love of hers for smallness in any shape, that her favourite term for expressing intense admiration is the word 'little.' Thus, if she see a horse which pleases her, she instantly cries out, 'What a dear little horse!' although the horse be as big as a hay-stack; if a dog, 'What a nice little dog!' if a house, 'What a sweet little house!' Her whole language is a compound of diminutives. Instead of saying 'mouse,' she says 'mousey'; instead of 'aunt,' 'aunty'; instead of 'shoe,' 'shoeey.' The petting young lady began her small existence with loving a little doll. When she was three years old she fell in love with a little lamb, an affection which lasted till the little lamb became a large sheep, on which act of insubordination she discarded him into the hands of the butcher. Her next attachment was a little dog, till the little dog became a big dog; on which she took a little canary and a little kitten. Of late she has been petting a little pony, till it is ready to burst; and finds no delight so great as in nursing a most particularly small baby, belonging to the married housemaid, which she calls a sweet dear little thing, and half suffocates with hugging, at least a dozen times a day. If you call at the house, you will be sure to find her in tribulation about some favourite. Either her chicken has broken its leg, or her spaniel has shattered his constitution by tumbling off her lap upon the rug; or her pet pig has been slaughtered for salting; or her canary has been killed by the cat. It is quite surprising what a host of troubles she has; you would fancy her the mother of a dozen children at least. And yet, with all this excessive love for animals, a hundred to one but she is unkind towards her younger sisters, if she have any. Her selfishness knows no bounds. She is always appropriating. When you call, take care how you lead the conversation to zoology. She will be sure to coax you for a little Chinese pig, or a little Andalusian cat, or a little Mexican dog, the uglier the better. A much cheaper way of gaining her regard is to kiss severely each and all of her pets in regular rotation. This will be sure to please her, and when you go away, she may, perhaps, eulogistically say of you, 'If you are particularly lucky, 'What a nice little man!'"

*The Naturalist's Library, by Sir W. Jardine: Vol. V. of Foreign Butterflies, by James Duncan. (Edinburgh, Lisars; London, Highley; Dublin, Curry).—A beautiful volume, with a portrait and memoir of Lamarck, and an excellent introduction. To sing 'I'd be a butterfly' is the voluntary induced by looking on these accurate and exquisite plates, which so faithfully represent the brilliant hues which nature has lavished on these gay and lovely insects.*

*The Magazine of Domestic Economy, Vol. II. (London, Orr and Co.; Edinburgh, Chambers).—A useful continuation of a very various and generally useful work. Such a medley can hardly be conceived. From preparing sheep's tongues to the registration of voters; from removing corn to the dressing of meadow lands; from lip salve to American blight; from the dentition of children to the shoeing of horses; every thing is touched on; and if people are not taught how to manage a hundred daily matters in domestic economy, it is no fault of the compilers.*

*The Progress of Creation considered with reference to the present Condition of the Earth, by Mary Roberts. Pp. 285. (London, Smith, Elder, and Co.)—Miss Mary Roberts is the author of several very instructive and pleasing publications, and her merit in framing these is not diminished by the present performance. Miss R. sticks literally and religiously to the six days of creation; but in other respects her expositions are very well written, and illustrated in a manner to be at once a source of popular attraction and improvement. It is a very fit volume for youth of both sexes.*

*Byron's Miscellanies, Vol. II. (London, Murray).—With a beautiful vignette of Athens, Mr. Murray here continues his pretty miniature edition of Byron. "The Curse of Minerva," "The Walts," "Ode to Napoleon," "Hebrew Melodies," "Pulci's Morgante Maggior," "The Prophecy of Dante," "The Blues," "The Vision of Judgment," and the "Age of Bronze," are all neatly printed in its three hundred pages.*

## ARTS AND SCIENCES.

## GEOGRAPHICAL SOCIETY.

[Major Mitchell's Report concluded.]

"WHEN we gained the head of a small ravine falling towards the principal river rising in the Grampians, we found firmer ground; and our progress was much better, although still occasionally impeded by the soft and boggy state of the earth. The river, which I named the 'Glenelg,' flows first westward, and then southward, entering the sea at the deepest part of the bay between Cape Northumberland and Cape Bridgewater. I explored the last fifty miles of its course in the boats, having left Mr. Stapylton with a dépôt, for I had great reason to hope that it led to some important estuary; the average width was one hundred yards, the mean depth four fathoms. In this I was, however, disappointed, for the river terminated in a shallow basin within the sand hummocks of the coast, the outlet being between two low rocky heads, but choked up with the sands of the beach. In the higher part of the Glenelg, the rock over which it flows is granite; but after it passes through a ridge of primitive sand-stone, covered with forests of iron bark (and which forms there a kind of coast range), the banks consist wholly of a secondary limestone. The soft state of the earth had rendered our progress by land almost hopeless, when I launched the boats on the Glenelg; but, on quitting that river with the party, I succeeded in re-crossing the iron-bark range with the drays, by following up a tributary flowing to the Glenelg from the eastward. The difficulty of this movement was much increased by numerous swampy creeks and swamps which we had to cross. The eastern part of that range is highest; and on the higher parts, where the basis of the soil is trap-rock, the enormous growth and thickness of the trees presented a new impediment to the progress of our drays, the fallen timber covering so much of the surface. The trees, consisting of stringy bark and blue gum, were many of them six feet, and some as much as eight feet in diameter. Beyond this range, which terminates in Cape Bridgewater, I expected to have found some considerable river entering the sea at Portland Bay; I found only, however, three small rivers, which I named the 'Turry,' the 'Fitzroy,' and the 'Shaw,' entering the bay at different points east of the anchorage. On approaching this bay, situated on what I considered an unexplored coast, the unwonted sight of houses drew my attention, and a vessel at anchor. I soon ascertained that Messrs. Henty, from Swan River, had formed a whaling and farming establishment there. These gentlemen accommodated me with a small supply of flour, although the supply for their own establishment was nearly exhausted. Portland Bay appears to be a good anchorage in all winds, save those from the S.S.E. It is much better sheltered from the prevailing winds by the lofty promontory of Capes Bridgewater and Nelson, than any part of Port Philip is (which harbour I reconnoitred from Mount Macedon on the 1st instant), and the position of two reefs seems favourable to the formation of a small harbour. I still entertained hopes of finding a good port on the coast; and should have thoroughly examined it, for an object so desirable to the valuable and extensive territory I had explored, but the almost impassable state of the ground, and our very limited stock of provisions, confined me to a direct line homewards from Portland Bay, by which I travelled completely round the Grampians, crossed all the rivers, and determined the position of the prin-

cipal heights. I wished much to have examined 'Cadong,' which, according to the natives, is a large piece of water on the coast, westward of Cape Otway. This receives, as they said, several small rivers which I saw flowing southward, over the plains from the Australian Pyrenees, a group of very fine forest hills of considerable height, eastward of the Grampians. From one of these, I observed the eastern shore of a piece of water, in the direction indicated by the natives. The country on that coast generally, is low, and almost swampy, but the soil is rich, and the climate being sufficiently moist, and water abundant, it appears better adapted for agriculture on an extensive scale, than any other part of New South Wales. The soil consists chiefly of decomposed trap or limestone,—these being the rocks immediately below it. The whole of the coast country eastward of Cape Nelson is of volcanic formation, as many interesting geological phenomena attest; amongst others, an extinct volcano (which I named 'Mount Napier') is not the least remarkable, having an open crater, and being surrounded with ashes and scorie to the distance of two miles around its base. From the fresh appearance of the lava at the summit, I thought it might have been in activity within the memory of man, but I could not find any allusion to fire in the aboriginal name (Murrowan). We encountered much soft ground near Mount Napier and by the time the party attained the southern extremity of the Grampians—most of the cattle were exhausted—one poor animal died in the shafts. Some weeks of repose were absolutely necessary, and this our stock would not admit of; on the contrary, I could only hope that they would last to the end of the journey, by allowing the men a very reduced ration. Having some spare cattle, I decided on proceeding in advance with a light party, and a month's provision, leaving the rest to refresh for two weeks, with a party under Mr. Stapylton, whom I provided with two months' provisions, that he might, at the end of two weeks, follow my track at leisure, through Australia Felix. I hoped, by proceeding faster, to survey and reconnoitre the country with more freedom, and also to reach the colony in time to send back a supply of provision to meet Mr. Stapylton on the banks of the Hume. My route homeward from the vicinity of the Australian Pyrenees, passed through a country of the most varied and fascinating description. At intervals of fifty or sixty miles, we crossed ranges of granite, through all of which I found passes for the carts across the very lowest parts, reconnoitering the ranges as far as possible, in advance. The districts between the different ranges, consisted of excellent land, thickly covered with the *Danthonia* grass, and well-watered. I hoped to have met with some advanced station before we reached the Murrumbidgee, but although we did not, we were fortunate in finding a way for the carts to this point, unobstructed by mountains or swamps. It is near the station of Mr. Thompson, a gentleman who has accommodated me with a supply of provisions, to be sent back to the other party tomorrow. We reached the station the third day after our supply had been exhausted. I have succeeded in working a continual chain of triangles along the heights between Cape Nelson and the banks of this river, thereby connecting my work on that coast with the survey of the colony. I trust that the results of this expedition will prove satisfactory to his majesty's government, considering the various difficulties surmounted, and the elements with which I have had to contend. Besides

establishing the fact of the identity of the Upper and Lower Darling, it has been in my power, under the protection of Providence, to explore the vast natural resources of a region more extensive than Great Britain, equally rich in point of soil, and which now lies ready for the plough in many parts, as if specially prepared by the Creator for the industrious hands of Englishmen. I have much pleasure in stating that I have had reason to be well satisfied with the zeal and perseverance of Mr. Stapledon on all occasions. It will be seen by this report, and more fully by my journal, how well I could rely upon both. All the men of the party have behaved well, and are returning in safety, with one exception, James Taylor, who was unfortunately drowned in endeavouring to swim a horse across a swampy river on the 18th inst. I beg leave to bring also under his excellency the governor's notice, 'Piper,' an aboriginal native of Bathurst, who has accompanied me throughout this eventful journey, and has proved a valuable auxiliary, as will appear in almost every page of my journal.—I am, &c.

"T. L. MITCHELL, Surveyor-General."

#### ELECTRICAL SOCIETY.

THE following papers were read at the meeting on Saturday evening last:—On lightning conductors for ships, by Mr. Roberts. On the theory of a single and double fluid, by Mr. Gassiot. The Rev. John Shillabeer presented one of his new arrangements of voltaic battery to the society, and explained its peculiarities. Andrew Crosse, Esq. and Lieut. Morrison, R.N. were elected non-resident members.

#### BRITISH ASSOCIATION.

THE official circulars, appointing the meeting of the Association at Liverpool, on Monday, the 11th of September (as announced in the *Literary Gazette* a fortnight ago), have been issued; and it is stated that the Earl of Burlington, the president elect, will take the chair on that evening. The sections, however, will be formed on the preceding Saturday, at the library of the Athenæum, in Lord Street; and reports, memoirs, apparatus, models, &c. are desired to be forwarded before the end of August. As this is absolutely necessary, for the sake of convenient arrangement, we trust the notice will meet with the attention it deserves.

#### COAL FINDING.

IN a search of such great importance as the discovery of coal in any part of the country where collieries are far distant, the associates of coal, even those of most casual occurrence, are worth attending to. Salt, in various parts, is an associate of coal, although coals are not yet proved to underlie our great salt district of Cheshire. Basalt, or whinstone, though of common occurrence among the elder rocks, and known also to overlie chalk, is so commonly found in our northern parts, lying in the coal-measures, and even upon the coal, that it must be considered a not infrequent associate; and in the red rocks, either over or under the coal series, whinstone is, in Scotland, a near neighbour to the collieries; and, therefore, upon the principle of what occurs in one place may occur in another, the vicinity of whinstone rocks in certain localities may be worth searching. Places which are, also, in other respects not unfavourable, will, of course, be preferred. The vicinity of stone in Gloucestershire, and Thorverton, and Upton Pyne, in Devonshire, may be mentioned. Mountain limestone and millstone grit, the common underliers of

coal, are also within a short distance of the former place; and it appears, by Mr. De la Beche's sections of Devonshire strata, which have been exhibited at the Bristol meeting of the British Association, and elsewhere, that the granite and the coal-measures may be such near neighbours as to lie almost in contact. With such deviations from the order of superposition as opposite sides of the cross section of the Devonshire cavin in the strata, present, how can the theory of "must have been formed level on the bed of the sea, and subsequently elevated or depressed," be applied to such inexplicable phenomena as in the two sides? What, on the Dartmoor side, either by the elevation of granite, or by the sinking of the superincumbent rocks, could have caused all in the series, between granite and the coal-measures, to disappear? or, what could annihilate all those rocks which, on the opposite side, stare us in the face? But, to something more useful: by the help of this section, and the fossil vegetables served up on the table, which, at the feast of reason and common sense, would be coal-measures; and that, not merely those next the granite, but the whole of the coal-series, and the coal itself (now anthracite, or culm), may be, altogether, considered as "altered rocks;" and for the accuracy of this opinion, we have the analogy of experience on the opposite side of the Channel; of stone-coal, or culm, easterly, becoming less and less culmiferous, and, finally, good coal; and why not so between the Bristol and English Channels? Unconformity in the upper strata prevents our seeing the easterly extension of the Danmorian cavin of coal-measures, but judicious boring might prove it.

WILLIAM SMITH, LL.D.

#### LITERARY AND LEARNED.

##### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological 8 P.M.  
Thursday.—Zoological, 3 P.M.; Botanical, 8 P.M.  
The Conversazione of the Architectural Society postponed from the 27th ult. to Tuesday the 11th.

#### FINE ARTS.

*Remarks on Ancient and Modern Art, in a Series of Essays.* By an Amateur. 12mo. pp. 396. Edinburgh, 1837. Blackwood and Sons; London, Cadell.

ARCHITECTURE, sculpture, and painting, but especially the first two, are the subjects treated of in these Essays, with the view of diffusing a taste for the elevated branches of the Fine Arts. We have read the volume with much attention and pleasure, and cordially concur in the opinions expressed by the author in the following, which are some of its concluding passages:—"The object of elevated art is to ennoble human nature; to raise it in the scale of creation; to impart solid instruction along with the most refined pleasure; to illustrate the truths and sublime emotions of religion; to perpetuate the inspirations of patriotism, liberty, and national glory. Such was Grecian and Roman, such is Italian art. It exercises a powerful influence over the private feelings, public fortunes, and national achievements of a people. It conduces to their wealth, prosperity, and renown. Nay, after the loss of their liberties, and decline of their power, it is the means of sustaining their fortunes, and shedding a never-fading lustre over their fall. How extraordinary that a great and powerful empire like Great Britain, uniting as she does every facility and requisite for its cultivation and development, should be so insensible to its value; a country which has produced a

Bacon, a Newton, a Milton, a Shakespeare, and a Scott; a country which has excelled in every other walk of human genius and enterprise! She wants but this one jewel to complete her crown, to fill up the measure of her glory. The late Sir George Beaumont, and a few other enlightened patrons, might be named; yet they have failed in kindling one spark of enthusiasm or taste in the nation at large. There is, it is true, a certain encouragement for the subordinate branches; but representations of mere ordinary and low life, however well executed, lead more or less to debasement of taste and moral degradation. A taste for elevated art is neither innate nor intuitive—it must be acquired by study and cultivation; and, until so acquired and diffused among the community, nothing like steady or consistent encouragement can be expected. It is a great mistake to suppose that classic art can only be appreciated and enjoyed by the higher and educated classes. Ancient Greece and modern Italy prove the reverse. But where the higher orders, the wealthy, the learned, the professional, and scientific, are, as in this country, with a few exceptions, utterly ignorant of its first principles, what hope is there for its advancement? The most effectual remedy would be to establish in each of our universities a professorship of art, embracing a course of lectures on architecture, sculpture, and painting, and accompanied with a collection of casts, models, books, &c. The National Gallery is still in its infancy; but, unless a very decided change take place in its management and system of selection, there is little prospect of its ever rivaling the continental galleries, or being commensurate with the wealth and greatness of the British empire. Rich as the united kingdom is in private collections of pictures and statues, they are so dispersed over the mansions of the nobility and aristocracy throughout the country, that it is a matter of difficulty to gain access for inspection—copying being rarely or ever permitted. To think of producing elevated art exclusively by founding academies and institutions, without public encouragement and national works, were as absurd and vain as to found schools for rearing epic and tragic poets, with a determination never to read or countenance their works."

In an episodal chapter, the completion of the National Monument—the Restoration of the Parthenon—on the Calton Hill, at Edinburgh, is strongly recommended.

*A Complete Scientific and Popular Treatise upon Perspective; with the Theories of Reflection and Shadow.* By a Pupil of Monsieur J. P. Thénot. London, 1837. Simpkin and Marshall.

THIS unpretending, but really scientific publication, is, we understand, the production of a lady, of considerable attainments in the fine arts; and the principles that are laid down, as well as the rules founded on them, are well calculated to assist the pupil to a perfect knowledge of one of the most essential points in drawing, planning, &c. In fact, as is well observed by Mr. A. W. Hukewell, member of the Architectural Society, in London, who has written the Preface, "The influence of perspective is so universal throughout the arts which minister to intellectual enjoyment and information, that, in a civilised state, the study cannot be too generally cultivated and encouraged." Persons ignorant of perspective, are not aware how much delight they lose whilst contemplating the beauties of architectural design; even the scenic department in

a theatre is rendered infinitely more interesting to those who rightly appreciate this valuable branch of knowledge. With respect to the former, the Preface remarks, "To take an example from modern times, Greenwich Hospital may be cited as strongly exemplifying this truth. In that complicated and beautiful structure, the fascinating union of art with nature, achieved by laying open the centre to the distant view; the intelligent disposition of the plan in receding planes, with the gradual approximation of the more distant parts; the widely extended opening in front, and the subordinate character of the foremost parts of the building, which, both combined, give depth, and lead the eye imperceptibly to the contemplation of the more dignified features. All combine in producing a sublime pictorial result, only to be anticipated by a mind which, like that of Wren's, was imbued with the poetry of perspective." This is a very just tribute; yet, how few of the many thousands who visit this admirable structure—excellent both in its architecture and present uses—ever give a thought to the beauty of the building itself. The study of perspective, however, would very soon produce a better feeling; and the plain, simple, yet perfect, manner of the work before us, renders the acquisition peculiarly easy. The engravings, twenty-four in number, are very fairly executed, and so arranged, on folding sheets, as to make them easily available for reference. A clever line engraving of Greenwich Hospital forms the frontispiece, illustrating the remarks offered in the Preface.

*Zwölf Bilder zu Göthe's Faust.* Gezeichnet von Peter von Cornelius, Director der Königl. Mahler-Akademie zu München.—*Twelve Pictures to Göthe's Faust.* Drawn by Peter Cornelius, Director of the Royal Academy of Painting at Munich. London. Schloss.

*Six Designs, illustrative of the Niebelungen Nôt.* By Peter Cornelius. London. Schloss. THE works of the modern German artists are very little known in England,—much less, certainly, than they deserve. Accident, perhaps, more than any thing else, added to their comparative cheapness, has introduced amongst us the outlines of Retsch and his imitators, and they have at once gained a reputation which they decidedly merit; but few of the numerous admirers of Retsch's "Illustrations of Faust" are aware that, long before they appeared, there had been published in Germany a series of illustrations of that extraordinary drama, which are quite as worthy of our attention, and to which, if we mistake not, Retsch himself is indebted for some of his ideas. The illustrations to which we allude are by Peter Cornelius, a painter of great genius, and deservedly classed in the very first rank of the German artists of the present day. Some of them are, in our opinion, superior in composition to the analogous designs of Retsch; and we would particularly point out, for their grandeur of design, the prison scene between Faust and Margaret, and the scene of the apparition at the place of execution. Our readers may see at Schloss's (we believe the only bookseller who has them on hand), both these and Cornelius's six designs, illustrative of the old German poetical legend, the "Niebelungen Nôt, or Fate of the Niebelungs, of which latter, a very poor attempt was lately made to give some idea in the woodcuts of the *Penny Magazine*. It is quite astonishing how much the Germans are doing for their ancient poetry and legends, and with what taste and judgment they take

up the subject. It is but a few days since, among the numerous editions of the "Niebelungen Lied," we put our hand on one edited "for the use of schools," with a grammar and glossary for that purpose. Why has no one in England attempted to produce parts of Chaucer, or Piers Plowman, or some such works, in such a form and manner as to give encouragement to, and at the same time make easy, the study of them? We would ask, also, why does not some enterprising artist seek a series of subjects in Chaucer? We think it might be done with advantage.

*Histoire de l'Art Moderne en Allemagne.* Par Le Comte A. Raczynski. Vol. I. 4to. with Atlas of Plates in large folio. Paris, 1836. Renouard; London, Schloss.

WE think that this interesting and richly decorated work on the German Artists of the present age, deserves to be much better known in England. It is, in the highest sense of the word, an *original* work; even the biographical sketches with which it abounds, being drawn often from a personal acquaintance with the men to whom they relate. Besides the atlas of finely executed plates which accompanies it, almost every page is adorned with woodcuts by the best engravers of London, Paris, and Germany; and we confess that the French and German cuts shew to advantage by the side of our own. The French wood-engravers have much of the style of the age of Albert Durer, distinguished especially by boldness of outline. We notice this work at present, more particularly with the object of giving from it a sketch of Peter Cornelius, to whose illustrations of "Faust," and the "Niebelungen," we have just called the attention of our readers.

"Peter Cornelius had already (when Overbeck was forming a school at Vienna) made himself known in Germany by his compositions of 'Faust,' and had acquired the reputation of an eminent genius. From his tenderest youth, having been obliged to work for his livelihood, and being opposed, by the bent of his mind, to the academy of Dusseldorf, as Overbeck was to that of Vienna, his education of artist, under such unfavourable circumstances, was necessarily incomplete. We have the more reason to admire the power of his genius, which already, even in his designs of 'Faust,' the work of his first youth, could overcome such great obstacles, and supply the want of a guide by the force of the imagination. It was in the same manner that he drew his scenes from the 'Niebelungen,' the first works which he did at Rome. After having finished the drawings, he received the first order for a great painting. M. Bartholdi changed him with the execution, in fresco, of two scenes of the Life of Joseph, in the hall which he dedicated to the representation of the life of this patriarch. Cornelius painted the 'Interpretation of the Dreams,' and afterwards, 'Joseph recognised by his Brethren.' This last work is, undoubtedly, one of the best by this master; in no other painting has he shewn such depth of sentiment, or has he so entirely avoided mannerism,—a defect into which this great genius has frequently fallen, and which often diminishes the charm of his works; yet he preserves, even in this failing, a certain character of grandeur; in fact, we must seek the cause of his leaning to mannerism, much less in his sentiments of painter, than in the imperfect direction of his first studies. With the exception of a little painting in oil, representing a *deposition*, in the possession of Thorvaldsen,

I know no finished painting by this master. Called by the King of Bavaria, then prince royal, to paint the frescoes of the Glyptothèque at Munich, he composed, at Rome, several cartoons for the first hall. In the class of mythological design, nothing to excel them has been done in modern times; and this work was the commencement of a new epoch for the *grandiose* style of painting in Germany. This artist next composed a series of mythological paintings in the two halls of this same Glyptothèque, and he is now occupied in the composition of cartoons for the frescoes which are destined to adorn the church of St. Louis, at Munich. His genius is so universal, that it would be difficult to say what class of poetical production is the most congenial to his talent."

#### NEW PUBLICATIONS.

*The White Mouse.* Painted by R. Edmonstone; engraved by G. H. Phillips. Moon. THE picture from which Mr. Phillips has engraved this singularly beautiful print was exhibited some years ago, if we mistake not, at the Gallery of British Artists, and was, in our opinion, poor Edmonstone's *chef-d'œuvre*. Its technical execution was admirable; but it had higher claims to notice, and those claims are here finely maintained. The great charm of the composition is the simplicity and unity of the sentiment. The focus of attention is the timid little animal which gives its name to the subject. By its owner it is regarded with fondness and friendship; by the child, and his lovely female attendant, with surprise and delight. The spectator is reminded of Pratt's interesting and affecting story of the Canary-bird, and is apprehensive of a similar catastrophe.

*The Fall of Napoleon.* Painted by G. Wallis; engraved by G. Zobel. McCormick. WE confess that we do not quite understand the incident that forms the subject of this print; which is, in all respects, one of very moderate pretensions.

*Portrait of the Right Hon. Lord Bessley.* Painted by J. Rand, Esq.; engraved by C. Turner. Nisbett and Co.

A STRIKING and pleasing resemblance of this pious and respected nobleman. Mr. Rand is the American artist, a print from whose fine picture of the Rev. — Melville we noticed some time ago.

*Hints upon Colour, as affected by Light, Shade, and Reflection, and its Appearance under various states of the Atmosphere.* By W. Fletcher. Reading, Blackwell; London, Ackermann and Co.

ALTHOUGH we cannot say that there is much of novelty in this little manual, the information which it contains, and which has been derived from various sources, is arranged and presented in a pleasing, comprehensive, and instructing form.

#### MUSIC.

*Great Concert Room, King's Theatre.*—This room, we are glad to say, was well filled on Monday morning, when Madame Castilli and Signor Pionzi held their annual concert; modest and deserving servants of the public for many years, to say nothing of the great attraction held forth by their programme, the *fall* room was a tribute to which they were *fully* entitled. The concert was one amongst the many rich musical treats of the season. Pasta and Grisi, in a duet from *Andrenico*

(Mercandante), were most exquisite; they were, of course, encored. It is much to the honour of both these ladies that they contributed so liberally, as on Monday, to the benefit of their less-gifted sister *artiste*. The well-known "Cielo in quel estasi" was splendidly executed, by Grisi and Rubini. "Ah! che forse" was, also, delightfully sung by Pasta. Lablache, Tamburini, Schroeder Devrient, Albertazzi, Assandri, all lent their aid. We need scarcely say, the entertainment was a rich one. It is scarcely probable we may ever again have such a combination of genius and talent in our known world.

## NEW PUBLICATIONS.

*Beautiful are the Hues, a Song.* The Poetry by L. E. L., taken, by permission, from the "Literary Gazette;" the Music by Fanny Steers. Lonsdale.

THE first two or three bars of this air will convey a slight reminiscence of Handel's song, "How beautiful are the feet," the key, G minor, being the same, and the 6-8 time having the same effect on the ear as the 12-8 time in which Handel's song is written. The word "beautiful," too, hardly admits of any other setting than the one here adopted, so that the resemblance, if it be deemed such, was almost unavoidable. But the song assumes a distinctive character as it proceeds; and it is written in that unaffected easy style which distinguishes all Miss Steers' compositions, being equally removed from hacknied commonplace, and an ostentatious display of learning. The symphonies and accompaniment are also in excellent taste, and the song is altogether worthy the composer of the popular duet, "The last links are broken."

*My rest is gone; Margaret's Song in Faust.* The Words translated from the German of Goëthe, by J. S. Blackie, Esq.; Music by Fanny Steers. Lonsdale.

THE melody of this attractive little song is simple, yet far above the threadbare insipidity of too many modern ballads. Its only fault is its extreme brevity; a circumstance, however, that, in addition to its plaintive, unpretending beauty, must ensure a call for its repetition wherever it may be performed. A singer possessing good middle notes, and an expressive style, might procure unbounded popularity for *My rest is gone*, which is not unworthy the notice of Miss Massan, the accomplished vocalist to whom it is inscribed; or of Mrs. A. Shaw, whose beautiful voice would tell admirably with the harp accompaniment.

*New Edition of the Vocal Melodies of Scotland, united to the Songs of Burns, Ramsay, Scott, and other distinguished Poets. Arranged with Symphonies and Accompaniments for the Piano-forte.* By Finlay Dun and John Thomson. Vol. II. Edinburgh, 1837. Paterson and Ray; London, Cramer, Addison, and Beale.

THE first volume of this delightful publication obtained our warmest praise; and the second is equally worthy of encomium. It possesses all that such a work should possess—nationality and character. The beauty of Scottish music breathes throughout the selection, and the editors have truly done their duty, by adopting the best versions of the words and the melodies, and restoring the genuine ancient forms where they had been tampered with and corrupted. The accompaniments are sweet and appropriate, and altogether the work reflects honour on the talents and taste of the editors, and is well

worthy of becoming a very popular and universal favourite. Several of the songs are said to be published for the first time; but which, are not pointed out.

## DRAMA.

*Haymarket.*—On Monday, *The Maid's Tragedy*, under the name of *The Bridal*, altered and amended from Beaumont and Fletcher by Macready, shorn of its impurities, but retaining all its numerous beauties, was produced. Powerful in language, rich in dramatic incident, and finely acted, what could it be, but eminently successful? We will give no sketch of the plot; in our minds, it takes so much from the interest an audience has in witnessing the performance, which we strongly recommend our readers to do forthwith. Enough to say, the hearer is completely carried on, and expects the dénouement with the most intense interest. Miss Huddart, as *Evadne*, played better than we have ever seen her. She possesses a fine person, and looked the character well. She has also, the great advantage of being the first actress of the part; consequently, she loses nothing by comparison. Her scene with *Melan-tius* (Macready), in which he swears her to murder the king, was splendidly acted, and left us nothing to wish. Miss Taylor, as the wronged and broken-spirited *Aspasia*, played her two or three sweet scenes with much feeling: hers is the character claiming the deepest sympathy; her dejected misery in the first scene, and her dignified rejection of the king's offers, were naturally and touchingly given. With so much of praise, we may be permitted to point out one fault. Miss Taylor does not articulate distinctly, and often drops her voice at the end of a sentence; by this some of her best points are lost to the part of the audience not close to the stage. It is decidedly not a natural defect, and can, therefore, be easily overcome. Mr. Elton is scarcely equal to the part intrusted to him; but he never tears the passion "to rags," and never offends. Macready's *Melan-tius* is a noble piece of acting; every thing he does or says is in perfect keeping; and the occasional touches of passion or sarcasm are most true to nature. Who, after seeing this tragedy, will ever forget his "Oh! then he told you." We could wish the chorus at this pleasant theatre were not allowed to sing *ad lib.* The house at first price was thinly attended; but, if there be any taste left for sterling plays, it will not be so again when this tragedy is played. Two or three farces, in which Farren plays so well, generally fill the Haymarket at half-price.

## VARIETIES.

*Steam Improvements.*—The editor of the *Hull Packet* (and deplorable has been the catastrophe to cause him to take a deep interest on the subject) speaks in terms of great approbation of an improvement in steam-vessels, illustrated by the arrival of the Sea Horse steamer, at that port. "1st, The motion (he states) is so perfectly smooth, that, unless a person on board were aware of the fact, he would scarcely believe that the engines were at work. The boilers are supplied with distilled water, which prevents the usual saline deposit and corrosion of the boilers. 2dly, As no deposit or incrustation can possibly take place, the transmission of heat to the water is more uniform, the boiler-plates are prevented from burning, and, consequently, a saving of fuel is the result. 3dly, As the steam is condensed through the medium of copper-pipes (the steam being prevented from coming in contact with

the jet of cold water, as in the common mode) the air-pump has less work to perform, and additional power is therefore gained. 4thly, Muddy salt-water is entirely shut out from the interior of the engine, and an immense saving is effected in the wear and tear of the moving parts."

*Carthage.*—Sir Grenville Temple, it is stated, is about to return to Carthage, to resume his antiquarian researches; and under very promising auspices, as the Bey of Tunis has granted him privileges, and he may employ Arabs in the work of excavation.

*Box.*—A most stupid and mischievous report has been industriously circulated, during the last fortnight, that our inimitable *Box* was very ill, there would be no more "Pickwicks," &c. &c. &c.; of which, we rejoice to notice, that the best possible refutation is in a long and excellent paper of Oliver Twist, in "Bentley's Miscellany," and, we believe, a clever No. of "Pickwick," though we have not seen it.

*Faults on both Sides.*—Why will the audience persist in making the dead hero or heroine of a tragedy come and make them a bow or courtesy; and why will actors and actresses do a thing so absurd? If they had the courage either to resist the call altogether, or to insist upon re-dressing for the new part, it would, perhaps, put a stop to the foolish fashion. Managers should, we think, in such cases, prepare a shroud, and have the actor carried on the stage, the illusion then would not, as it now invariably is, be utterly destroyed, and good taste could not be more offended.

*Streetology, No 1.* (Hodson).—A first No. of a production under the *nomen* of Jack Rag, and which proposes to give graphic descriptions of remarkable individuals of the lowest class, who pursue such callings, in the streets of London, as crossing-sweepers, beggars, board-bearers, *et hoc genus omne*. It sets out with a curious description of a conservative board of the first-mentioned class, who sit in St. Giles's, and govern the crossing department; and gives part of the biography of the black giant, whom most perambulators of the metropolis may have noticed. There have been similar works of the same kind before; and the writer seems competent to his task, such as it is.

*Weather Wisdom.*—We, last week, accidentally omitted to notice this subject. Suffice it to say, looking back to Lieut. Morrison's Almanac, that "the weather changeable about the 27th and 28th, and by no means hot. Sun aspects Herschel; cold, unseasonable weather, with many changes; windy and storms" (29th and 30th), has been unfortunate, as predicated of all the past dry, hot week. Mr. Murphy, also, has written to us to explain why his prophecies, for the same period, have been disappointed. He confesses that the drought has set in a fortnight sooner than he expected; which he attributes to the moon not exercising her usual influence on the changes of the weather, within a certain range of the solar action, at this season of the year, and, generally, to the present season being, altogether, an exception to common rules. He now thinks the drought and heat will continue to the 17th July; and Lieut. Morrison says—"Stormy, cold, and cloudy, with hail, rain, and thunder, about the first three days. This will be a very rainy season, particularly this month. Changes about the 5th and 6th—rather fairer."

*Henry Fisher, Esq.*—Connected with the literature and publishing of the country, and having given to the world not only many works of merit, but, also, a vast number of interesting

Connected with Literature and the Arts.

**BRITISH INSTITUTION, PALESTINE.**  
M.A.L.—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, is now open, and will continue open daily, from Ten in the Morning until Six in the Evening.

Admission 1s.—Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

**THE THIRTY-THIRD ANNUAL EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS**, at their Gallery, Pall Mall East.  
In consequence of Saturday, the 8th, being fixed on for the Funeral of His late Majesty, this Exhibition will be closed for the Season on Friday Evening, July 7th. Open each Day from Nine till Duck.

Admittance 1s.—Catalogue, *ad.*  
R. HILLIS, Secretary.

**JUST OPEN.—DIORAMA, REGENT'S PARK.**—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.

Open daily, from Ten till Five.

**GLASGOW EXHIBITION.**—The Tenth Annual Exhibition of the Works of Living Artists, under the Patronage of the Glasgow Dilettanti Society, will open this season on the 14th August.  
The Works of Art, which the Directors hope to be favoured with from London, may be sent, on or before the 29th of July, to Messrs. Reynolds and Co. Dundee Wharf, Lower Hermitage, by whom they will be forwarded to Glasgow.

CHARLES HUTCHESON, Secretary.

Glasgow, 9th June, 1857.

**TO BOOKSELLERS, STATIONERS, and PRINTERS.**—An excellent Business, in these Professions, to be disposed of, in a good Market Town in the Northern Division of Lincolnshire, well worthy the notice of any clever industrious Young Man, with a moderate Capital.  
Letters (post-paid) to be addressed to Mr. Thomas Albin, Holbeach, Lincolnshire.

**TO ARTISTS, TOURISTS, AND ADMIRERS OF THE FINE ARTS.**

**PARLOUR PORTABLE SKETCHING-CASE, or DELINEATOR.** is confidently recommended to the notice of all persons attached to the Science of Drawing, as being infinitely superior to the Camera Lucida, and all other instruments hitherto invented, for the purpose of Sketching. The Sketching-Case may be held in the hand, and a correct Drawing made of any object or landscape; or it may be attached to a table, in the same manner as the Camera Lucida. It is simple in its management, and does not excite, in size, the common Sketching-Book. Manufactured for the Patentee, by Reeves and Sons, 130 Cheapside; may be had, also, of Smith and Warner, Marlborough Street, Piccadilly; Jones and Nott, Opticians, Charing Cross; and at all other Opticians and Artists' Repositories. Ladies and Gentlemen who have the Camera Lucida may have the Delineator added to their own stock.

**HER MAJESTY, QUEEN VICTORIA.**  
J. Mitchell, 33 Old Bond Street, has the honour to announce the publication of a Portrait of Her Majesty, from a Drawing recently executed by special command of Her Royal Highness the Duchess of Kent, by H. J. Lane, Esq., A.R.A., and engraved in the finest style by P. C. Lewis, Esq., Engraver to His late Majesty. Proofs, 7s. 6d.; Prints, 5s.; a few Impressions before the Writing, 10s. 6d.  
Royal Library, 33 Old Bond Street.

Nearly ready for publication.

**A FULL-LENGTH PORTRAIT OF THE REV. DR. CHAMBERS**, from a Picture by Watson Gordon, and engraved by Leighton, London.  
Prints, 1s. 1s. Proofs, 2s. 3s. Proofs before Letters, 2s. 3s. Copies to be distributed strictly in order of subscription.  
Subscribers' Names received at the Proprietors, Messrs. Anderson, 35 North Bridge Street, Edinburgh; and Hodgson and Graves, 6 Pall Mall East, London.

**SIX VIEWS OF KIRKSTALL ABBEY**, highly executed in the imperial style of tinted lithography, from Drawings by W. Nelson. Imperial folio, price 10s.  
London: Adkins and Co., J. Cross, Leeds; W. Nelson, Fulneck.

**A PORTRAIT OF H.M.S. INCONSTANT**, lying off Plymouth Dock-yard, on Zinc, by Day and Haghe, from a Drawing by O. W. Brierly.  
Edmund Fry and Co., Edinburgh; and Edmund Fry, Junr., Plymouth.

**On the Unchangeable Character of all Wars in Spain.**  
8vo. 5s.  
John Murray, Albemarle Street.

4th edition, with Eleven Plates, foolscap 8vo. 7s. 6d.  
**BUBBLES from the BRUNNEN of NASSAU.**  
John Murray, Albemarle Street.

Post 8vo. with many Engravings, 14s.  
**A TOUR round IRELAND** (through the Counties on the Sea-coast), in the Autumn of 1835. In a Series of Letters to his Family.  
By JOHN BARROW, Esq.  
Author of "Excursions in the North of Europe," and "A Visit to Iceland."  
John Murray, Albemarle Street.

**THE CARTHUSIAN.** No. II.  
Contents. Brooke Hall—Tales of Charterhouse—Conversation—On Jim Crowism—Public Schools—Charles the First—Bism—Mythologies, No. 2, 4—Duke of Brunswick and Mrs. Graham—The Skull—Translation from Herder—Triumvirate, &c. &c.  
S. Walker; Sherwood and Co.; Simpkin, Marshall, and Co.

7th edition, price 10s. 6d.  
**PAROCHIAL SERMONS,** preached at Glasbury, Brecknockshire.  
By the Rev. C. BRADLEY, Vicar of Glasbury.  
Hamilton, Adams, and Co. Paternoster Row; and Hatchard and Son, Piccadilly.

**Practical Sermons,** 2d edition, 8s.

**Sermons preached at Clapham.** 4th edition, 16s. 6d.

**Sermons at High Wycombe.** 2 vols. 10th edition. 21s.

**THE PENNY SUNDAY READER.**

The Fifth Volume (for January to June 1837) is just published, price 2s. 9d. in cloth boards. The Work is continued in Weekly Numbers, and forms a cheap Manual of Sunday Reading, adapted to the sacred character of the Lord's Day, especially connected with its devotional offices. It contains also Miscellaneous Papers: Sacred Poetry: original and selected; Communications from Eminent Divines; and Communications from Correspondents.  
Rivingtons, St. Paul's Churchyard, and Waterloo Place; and sold by all Booksellers.

Royal 8vo. price 2s.  
**THE NATURALIST;** a Monthly Journal, illustrative of the Animal, Vegetable, and Mineral Kingdoms. With Woodcuts.  
Edited by NEVILLE WOOD, Esq.  
(Joint Editor of "The Analyst," Author of "British Song-Birds," &c. &c.)

No. X. for July, contains—A Catalogue of the Mammalia, Birds, Reptiles, and Amphibians of Dorsetshire, by J. C. Da'le, Esq. A.M. F.L.S. On the Decrease of the Oak in Great Britain—On the Lemnards, or Family of Lemurs—A Botanical Tour through Herefordshire, Monmouthshire, and South Wales, by Edwin Lees, F.L.S. M.B.S.L.—On the Varieties of Animals, by the Rev. F. Orpen Morris, B.A. &c.—Correspondence: Letters from J. L. Leconte and Edwin Lees, Chapter of Criticism, by E. Charlesworth, F.G.S. and R. Leyland—Proceedings of Nat. Hist. Societies—Chapter of Miscellaneous—Reviews.  
\* \* \* This No. contains an increase of Letterpress upon No. VI., by ten pages, without any advance in price.  
Communications for the Editor, Books for Review, Advertisements, &c. to be addressed to the care of the Publisher; or to Neville Wood, Esq. Campbell Hall, near Doncaster.  
London: R. Groombridge, Panzer Alley, Paternoster Row.

**THE NEW COMIC PERIODICAL WORK.**  
EDITED BY "BOZ."  
AND ILLUSTRATED BY GEORGE CRUIKSHANK, &c.  
With two humorous Illustrations by George Cruikshank, No. VII. (for July), price Half-a-crown.

**BENTLEY'S MISCELLANY.**  
Among the Contents will be found—  
Song of the Month, by Father Prout  
Oliver Twist (No. V.), by "Boz," with an Illustration by George Cruikshank  
The Butterfly Bishop, by Delta  
A New Song to Kate Kearney  
What Tom Binks did, when he didn't know what to do with himself  
A Gentleman Quite  
The Foster-Child  
The White Man's Devil-house, by F. Harrison Hankin  
A Lyric for Lovers  
Haji Baba's Last Visit to England (No. IV.), by the Author of "Zohrab"  
Shakespeare Papers (No. III.), Romeo, by Dr. Magian  
The Monk of Ravenna  
Adventures of Darby the Swift, by J. A. Wade  
The Duel, by Captain Medwin  
The Piper's Progress, by Father Prout  
A Marine's Courtship, by M. Beebe Bonham, with an Illustration by George Cruikshank  
The Leech of Falkenstein, by Thomas Ingoldby, &c. &c.  
Richard Bentley, New Burlington Street.  
Orders received by all Booksellers.

**A NEW WORK FOR CHILDREN.**  
Dedicated, with permission, to her Majesty Queen Victoria.  
Demy 18mo. neat stiff covers, price One Shilling.

**THE CHILD'S HAND-BOOK of a RATIONAL SYSTEM of EDUCATION;** Rudiments of Reading and Thinking, Part I.  
By the Rev. W. FLETCHER, F.R.A.S.  
Author of "The Little Grammarian;" "Hymns for Children;" and other popular Works for the Young.  
Published by Routledge and Varty, 41 Strand; and sold by all Booksellers.

2d edition, enlarged, with coloured Plates, cloth gilt, 5s.; silk, 6s.  
**THE WILD GARLAND;** or, Prose and Verse, illustrative of English Wild Flowers and Forest Trees.  
Author of "The Ministry of the Woods," &c.

2d edition, improved, with Woodcuts, square, in cloth, 3s. 6d.  
**The Youth's Book on Natural Theology.**  
By the Rev. T. H. Gallaudet.  
Edmund Fry and Son, Bishopsgate, London; and Edmund Fry, Jun. Plymouth.

**TEGG'S REMARKS ON TALFOURD'S COPYRIGHT BILL.**

In 8vo. price 1s. stitched.  
**REMARKS on the SPEECH of SERJEANT TALFOURD,** on moving for leave to bring in a Bill to Consolidate the Law relating to Copyrights, and to Extend its duration.  
By THOMAS TEGG, Bookseller.  
London: Printed for Thomas Tegg and Son, No. 73 Cheapside.

**TO SCOTTISH TOURISTS.**  
Cloth boards, price 5s.  
**ANDERSON'S TOURIST'S GUIDE** through SCOTLAND, with Maps and Charts.  
This will be found an excellent Guide for Travellers to all parts of Scotland. The Charts and Descriptions of the principal Pleasure Tours are on a strictly new and much simplified Plan, and John Anderson, Jun. 25 North Bridge Street, Edinburgh; and Simpkin and Co. London.

13 Great Marlborough Street, July 1, 1837.

## MR. COLBURN'S NEW PUBLICATIONS.

## THE WAR IN SPAIN AND PORTUGAL.

In 2 vols. 8vo. with Portraits of Admiral Napier and General Evans, price 28s.

## MEMOIRS OF COLONEL CHARLES SHAW, K.C.T.S.

Late Brigadier-General Spanish Auxiliary Legion, &amp;c. Written by HIMSELF.

## CAPTAIN MARRYAT'S NEW NOVEL,

SNARLEY YOW; or, THE DOG FIEND. 3 vols.

## TRAVELS IN PALESTINE AND SYRIA.

By GEORGE ROBINSON, Esq.  
2 vols. post 8vo. with Illustrations.

"Some idea of the comprehensive nature of this work may be formed from the following brief sketch of the author's route. He embarked from Smyrna, in 1830, for Egypt. His excursion up the Nile extended to the second cataract. Returning to the shores of the Mediterranean, he crossed from Damietta to Jaffa, traversed the whole of Syria and Palestine (including the countries lying east of the Jordan, and the Anti-Libanus), wintered in Aleppo, and again repaired to Constantinople. He returned to Western Europe by Adrianople, Salonica, Thessaly, and Athens; and the day on which he entered Ancona, completed the third year since he had embarked for Corfu. No man had previously attempted the task which Mr. Robinson has here executed; and no performance of the kind can be more desirable or advantageous to the public, than the present is likely to prove."—*Court Journal*.

## MISS PARDOE'S CITY OF THE SULTAN.

In 2 vols. 8vo. with numerous Illustrations, 32s. bound.

"We have followed Miss Pardoe, at once thrilled and excited, from the regal hall to the mad-house—from the marble-lined mosque of St. Sophia, to the boatman's mud-built hovel—from the subterranean cisterns of Constantinople, to the cloud-enveloped summit of Mount Olympus. In her delightful society we have feasted with pachas, and conversed with patriarchs—gossipped with deep-eyed Circassian beauties, and bowed beneath the spell of Georgian loveliness—we have loitered away the sunny hours of summer in the 'Valley of Sweet Waters,' and galloped over the plain of Broussa. Miss Pardoe has left nothing unobserved, and she has produced a work as instructive and amusing as it is curious."—*Court Journal*.

## WANDERINGS IN GREECE.

By GEORGE COCHRANE, Esq.

Late of Queen's College, Cambridge; Knight of the Royal Military Order of the Saviour, &amp;c. 2 vols. 8vo. with Portraits of the King and Queen of Greece, and numerous other Illustrations.

## ILLUSTRATIONS OF JERUSALEM AND MOUNT SINAI.

Consisting of Twenty-Two Tinted Views, including the most interesting Sites between Grand Cairo and Beirout.

From Drawings by F. ARUNDALE, Architect.

With a Descriptive Account of his Tour and Residence in those Countries. In an elegant 4to. vol. 25s. bound.

## VENETIA.

By the Author of "Vivian Grey," "Henrietta Temple," &amp;c. 3 vols.

"The story is shaped upon the character of Lord Byron, and some of the events of his life. He figures here, as in his own poems, as the hero of the piece, and is introduced as Lord Cadurcis, at the age of eleven years. His fond, passionate, and inconsistent mother, is also prominent; whilst Miss Chaworth, somewhat metamorphosed, appears as Venetia Herbert. There is much of poetical beauty and vivid description throughout the volumes."—*Literary Gazette*.

## A SUMMER IN GERMANY.

Dedicated to Lady Chatterton. In 2 vols. post 8vo.

"These volumes are well calculated to be valuable travelling guides to whoever may visit the country to which they relate. There runs through the whole a vein of playful humour, and a spirit of keen observation, which is highly attractive; and which reminds us more of Head's popular 'Bubbles from the Brunnens,' than any tour we can call to our recollection."—*Literary Gazette*.

## PART XIV. OF

## MR. BURKE'S HISTORY OF THE LANDED GENTRY.

TO BE COMPLETED IN TWO MORE PARTS.

THE FOLLOWING WILL APPEAR IMMEDIATELY:—

## THE SPAS OF GERMANY.

By Dr. GRANVILLE, Author of "Travels to St. Petersburg," &amp;c. In 2 vols. 8vo. with numerous Illustrations.

## TRAVELS IN CIRCASSIA, KRIM TARTARY, &amp;c. IN 1836-7.

Including a Steam Voyage down the Danube, from Vienna to Constantinople, and round the Coast of the Black Sea.

By EDMUND SPENCER, Esq. Author of "Germany and the Germans," &amp;c. In 2 vols. 8vo. with Map and numerous Illustrations.

## THE GURNEY PAPERS,

By THEODORE HOOK, Esq.

Are continued in the July Number of COLBURN'S NEW MONTHLY MAGAZINE and HUMORIST, which also contains, besides a Memoir and an engraved Portrait of His late Majesty, the following interesting original Papers, by the most distinguished Writers of the day:—

Confessions of Ralph Rastless. By Capt. Marryat  
Subjects for Pictures. By Miss Landon  
Pleasures of Relationship  
Fanny Larkspur's Watch. By Douglas Jerrold, Esq.  
A Ride in the Great Western Jungle. By an Old Forest Ranger

The Poetry of Early Rising. By the Author of "Glances at Life"  
The Phantom Ship. By Capt. Marryat  
Lines. By Leigh Hunt, Esq.  
High Concoction  
The Inconsolables. By Laman Blanchard, Esq.

A Case of Furious Driving. By Alfred Crowquill

LONDON, SATURDAY, JULY 8, 1837.

PRICE 8d.  
Stamped Edition, 9d.

### REVIEW OF NEW BOOKS.

*Travels in Circassia, Krim Tartary, &c. in 1836-7; including a Steam Voyage down the Danube, from Vienna to Constantinople, and round the Coast of the Black Sea.* By Edmund Spencer, Esq. author of "Germany and the Germans," &c. 2 vols. 8vo. London, 1837. Colburn.

WE are delighted with this work; and yet we do not know whether to say it is more interesting or important. Circassia has assumed a position of European importance as a test of the political or ambitious views ascribed to Russia; and the country is no less an object of interest from its original and patriarchal features, and the paucity of our information respecting it. Having received Capt. Spencer's volumes, however, at too late a period in our present, abridged, week, to do their general contents any thing like justice, and being allured by the particular portion to which we have just alluded, we trust our readers will be satisfied with the limitation of our attention to that branch of the subject; leaving for future occasion the remarks on the national relations involved in the existing condition of the Circassians, as well as the novel incidents of a pleasant voyage round the Black Sea with Count Worronzow, the chief authority in these parts.

At once, therefore, we start from Trebizond, whence our author sailed on his Circassian expedition, and approach the longed-for coast.

"On our captain hoisting a signal, well known to the Circassians, we heard several musket-shots fired in various directions through the woods, when, instantly, thousands of armed men lined the beach and sides of the mountains, appearing as if they had sprung up out of the earth; for, only a moment before, there was not a human being visible. Presently, several long boats, borne on the shoulders of the men to the beach, were launched, and we were boarded by dozens of stout fellows, singing in chorus their 'ka, ri, ra,' who commenced unloading the cargo; and, in an incredibly short time, the whole, including our vessel, was ashore: the latter, snugly concealed from view, in a small river, shaded by majestic trees. This precaution was used in consequence of the destruction of several of their little barks, some days previous, by the Russians, who paid them an unwelcome visit; but, so far as we could understand from the natives, the enemy had suffered considerably in return, which obliged them to make a precipitate retreat to their ships.

"I was now about commencing a tour under disadvantages such as I had never before experienced, having always made it a rule to acquaint myself with the history, customs, manners, and, above all, the language, of whatever country I might be about to visit: but here was a country and a people of whom the civilised world know little; and a language, according to the opinion of linguists, without the slightest affinity to any other on the face of the earth—a language, not only without literature, but any rule or compass to guide the student, rendering it nearly impossible to convey any correct idea of its sounds by Euro-

pean characters. Not, however, that this is the only difficulty, for every one of its tribes speak a different dialect of the Circassian; and, although I had made myself master of several phrases, through the assistance of my Circassian friends at Constantinople, yet I found them nearly useless, when attempting to convey my wishes and desires to the people by whom I was now surrounded. An anecdote is related of one of the Sultans of Turkey, famous for his love of letters, who sent a learned Turk to the Caucasus to learn the language of the inhabitants, and reduce it to established rules. After some time he returned to his master hopeless of success in his enterprise, carrying with him a bag of pebbles, which he shook, saying, that he could give no better imitation of the sounds of the language spoken by that people."

Having gone a little way inland, with the Captain, the writer says:—

"Numerous herds of cattle, enclosed by palisades, were seen, in one place, enjoying the richest pastures; in another, men, women, and children, were engaged in their various labours of husbandry; giving to the landscape that beautiful rural aspect so characteristic of a pastoral people; and I was not a little amused to see the men and boys, at work in the fields, on perceiving our party, desert their labours, fly to their cottages, arm themselves, and mount their horses, in order to swell our ranks."

He arrives at the residence of a person of some rank, who is from home, but the guests are hospitably received and entertained by his cousin.

"During the repast, we were waited upon, in addition to our host, by several female slaves. The drink was a species of mead, and the boza of the Tartars, made from millet, in taste not unlike small beer. The bread was a composition of wheat and maize, of excellent flavour; and, in the plaff, which was not to be despised, buck-wheat formed a very good substitute for rice. Of course, we had a pewter tray for a tablecloth, wooden bowls for glasses, poniards for carving knives, fingers for forks, and the palms of our hands for spoons: but all these inconveniences, common to the East, were to me but as a feather in the balance, compared with being obliged to sit for an hour on a carpet, cross-legged; and, I assure you, I felt not a little pleasure, when the ceremony was over, to take a ramble through the grounds."

"In this pastoral country, like that of the patriarchs of old, the riches of the Circassians consist in the number of their flocks and herds, to which we may add their wives and children. Those of my host, Ghatkhe Atiokhai, were numerous, and remarkably fine, particularly the horses, the greatest attention being paid by every Circassian to their breed, which are highly esteemed in the neighbouring countries, Russia and Turkey; and I remarked, that the character with which the cattle were branded bore some resemblance to the Grecian alphabet. During our rambles through the grounds, we found the wives and children of my host, with their slaves, employed in agricultural pursuits, or tending their flocks and herds. Some were

engaged in reaping, others in milking the cows; and one fine-looking princess, with the force of an Amazon, was repairing a wooden fence with a hatchet. Among the children, there was a remarkably good-looking, curly headed boy, and a girl, about eight or nine years of age, who seemed, in an especial degree, to possess the affection of the father. I was just in the act of extolling the beauty of the children, when I was fortunately checked in time by the captain; for though, in Europe, you win the heart of a parent by praising his offspring, yet here, for the same compliment, you are accused of intending to extend over them the malign influence of the evil eye. The young urchins were not inappropriately named the 'Look of a Lion,' and the 'Speed of a Deer,' for the one was playing with the half-wild horses as if they were kittens, while the fair young princess displayed the utmost agility in driving her refractory charge of goats, cows, and buffaloes, to water."

Of the natives we are told:—

"Beauty of feature, and symmetry of form, for which this people are celebrated, is no chimera (and some of the finest statues of the ancients do not display, in their proportions, greater perfection); but, it is the singular degree of animation in the eye, so generally observable, that most arrests attention: when this is exhibited in a high degree in the men, it gives an expression of great ferocity to the countenance; and, when we see a warrior, mounted on his fiery steed, armed and equipped for battle, brandishing his scimitar in the air, bending, turning, and stopping at full gallop, with unequalled agility and grace of action, he realises every idea of Homer's Hector. The complexion of both sexes is far more ruddy and fresh than might be expected in such a latitude. In that of the women, delicately so, who, aware, like their sex in Europe, of the advantage of a pretty person, use every artificial means, by cosmetics, &c., to improve their beauty. Still, the traveller who may read my account, and expects to find the whole population such as I have described, will be wofully disappointed, should he find himself, on arriving in Circassia, surrounded by a tribe of Nogay Tartars, Calmucks, Turcomans, or even the Leaghi. The latter, however, a fine warlike race, are nearly equal, in personal appearance, to the Circassians, but more ferocious in character, and less refined in manners. The Caucasian valleys having been, in all ages, the asylum of those who fled from oppression in the neighbouring countries, we every where find tribes differing from each other in appearance, customs, and manners. Still, as the Circassian men never intermarry with any other race than their own, they preserve their lineage uncontaminated, a father paying more attention to the beauty of feature and form in a wife for his son, than any other consideration; and, if I have been rightly informed, a prince, or usden, never sells his daughter, except to one of his own nation and rank. My first impression at Fetzounds, on seeing a number of Caucasians together, was, that they were decidedly of Grecian origin. This, however, I found, did not correspond with the general physical cha-

racter of the people, as I advanced into the interior of the country, there being a greater proportion with the small aquiline nose, and fine arched eyebrow, than any other. This remark may be more particularly applied to that powerful tribe, called the Nottakhaizii, celebrated as being the bravest, handsomest, and purest race among the Circassians; and who still preserve the tradition that their ancestors came from beyond the seas. Were it not that we are ascending into the regions of fable, we might almost suppose them to be descended from a remnant of the Trojans. \* \*

"Owing to their robust frames, and temperate manner of living, the Caucasians generally attain an advanced age, their diseases being neither numerous nor dangerous. This we must attribute, independently of their simple diet, to their constant exercise, pure air, freedom from anxiety, and exemption from every employment not congenial with health. The more I see of the Caucasians, the more I am convinced, notwithstanding the bad character they bear abroad, that they are naturally a kind-hearted people; and though travellers, no doubt, have had abundant reason to complain of their brigandage, this does not emanate from cruelty, but long-established usage. This sanctions the custom, that every foreigner who enters their country, without placing himself under the protection of a chief, who will be answerable for his good conduct, becomes the property of the first Circassian who chooses to seize him as a slave. This chief, or elder, receives the appellation of Konak. On the other hand, the traveller who, on entering the country conforms to the above rule, may confide to the care of a Circassian not only his property but his life; and any one of these people would, if it were necessary, die in his defence. In short, in all my wanderings, and they have been not a few, I never found the inhabitants of any country more hospitable, generous, courteous, or courageous. Remember, however, that these commendations are only deserved by the Circassian so long as he is among his own people; for, when at enmity with a neighbouring tribe, or engaged in war, he is a most reckless robber; a natural consequence of the belief in which he has been educated, that to plunder adroitly and successfully, is a part of military discipline."

The following remarks are suggested by further travel through the country, and more time for observing its peculiarities.

"Here I was made acquainted with their manner of procuring sugar, which is derived from the walnut-tree, that flourishes here in extraordinary perfection. During spring, just as the sap is rising, the trunk is pierced, and a spigot left in it for some time. When this is withdrawn, a clear sweet liquor flows out, which is left to coagulate; and on some occasions they refine it. For diseases of the lungs and general debility, they consider it a most valuable medicine. Clarified honey, bleached in the sun till it becomes quite white, is another substitute for sugar."

"The most common musical instruments I observed among them, were the two-stringed lyre and a sort of pipe: the latter is sometimes made of silver, or any other metal, and, not unfrequently, from the large canes that grow in the marshes near the Kouban. The form is not less curious than the mode of playing on it, and the sounds it produces. The length is about two feet, with only three finger-holes at the lower extremity; and the mouth-piece, projecting about an inch in length, being open at each side, the performer presses it against

the roof of his mouth, when it gives forth sounds similar to those of a bagpipe. Sometimes I have seen them play a sort of march on two of these at the same time, which was by no means disagreeable to the ear. I have also observed the harp in use, but it is not national; neither is the drum, nor the tambourine; the performers on these instruments being generally wandering Calmucks, or gipsies. I was much pleased with the originality of the Circassian melodies; and the music, when compared with that of the Tartars and Turks, is harmonious enough. Their ka-ri-ra, a boat song, chanted by the whole population, is admirable; also a sort of march, performed on the pipe: but their greatest favourites are the war songs, generally sung in chorus while marching, when the woods and mountains re-echo the martial strain, and the enthusiasm of the people is excited to a degree only found in an eastern clime. Their songs usually refer to some victory obtained over the Cossacks or the *fana Muscov*; or are expressive of an animated call to battle." Thus:—

"War Song.

Hark! oh, hark! the life and drum!  
Onward, on the Cossacks come:  
Sound the war-cry, sword and lance  
Gleam in air, advance, advance!

Raise, oh, raise the banner high!  
Arm! arm all, for *Attegh!*  
Guard the valley, guard the dell!  
Hearth and home, farewell, farewell!

We will dare the battle strife,  
We will gladly peril life;  
Death or liberty's the cry!  
Win the day, or nobly die!

Who would fly when danger calls?  
Freemen's hearts are freedom's walls!  
Heaven receives alone the brave—  
Angels guard the patriot's grave!

Beats there here a traitor's heart,  
Draped by wily *Muscov* art,  
Who his land for gold would give?  
Let him die, or childless live!

Hark! oh, hark! the cannons roar!  
Foe meets foe, to part no more!  
Quail, ye slaves, beneath freemen's glance!  
Victory's ours!—advance! advance!

Our next is a notice of some antiquities:—  
"While wandering through the valleys, I frequently found tumuli, similar to those of Krim-Tartary, except that here they are more varied in their form, and of larger dimensions; sometimes composed of earth, resembling beautiful green hills; sometimes girt by a stone wall, and sometimes nothing better than a vast heap of loose stones; and, to give you an idea of their great antiquity, I have generally found them crowned by a majestic oak, which, to judge from the parent stem, must have been at least a descendant of the third or fourth generation. The traditions of the natives give no other explanation as to their origin and purpose, than that they were the burial-places of the people who occupied the country previous to themselves, and that it was only distinguished warriors who were entitled to such a sepulchre. However, most certain it is, they have no feature in common with those of the Circassians of the present day, whose mode of interment only differs from that of the Turks in the single circumstance that the grave of the warrior chief is generally covered either with a wooden roof, or a large stone slab, intended to shelter the wanderer alike from the tempest and the burning rays of the sun. The only indication we have of the sort of people that inhabited the Caucasus in days of old, is, now and then, an antique statue of common stone, rudely carved, representing a human figure, of either sex, with a large head, flat breast, short neck, broad face, high cheek bones, and flat nose, exactly like a Calmuck; and the head-dress is precisely similar to that worn by a Calmuck woman of the

present day. Being extremely desirous of opening a tumulus, I at length, after repeated solicitations, obtained the consent of my Konak; but, alas! not a single Circassian could be prevailed on to assist in so dreadful an enterprise as to invade the rights of the demon that guarded the treasure, consequently, I was obliged to resign every hope of gratifying my curiosity. To this singular superstition, so prevalent, also, among the Turks and Tartars, we may principally attribute the circumstance that the tumuli of these countries have been left to the present day unmolested. I had, however, the pleasure of descending into the interior of one, during my rambles on the coast, near Soudjouk Kalé. To judge from its appearance, and the age of the trees that had sprung up on the excavated earth in the vicinity, it must have been opened some centuries ago, most probably by the Genoese. On examination, I discovered a few fragments of unglazed terra cotta vases, containing charcoal and earth, remarkable neither for beauty of design nor elegance of form. There were also strewn about several pieces of white sea-weed, of the same species as that I had seen in the tumuli of Krim-Tartary. Nevertheless, the interior of this differed not only from those of that country in the construction—in the vases being less beautiful, but in the circumstance that the entrance was placed due east; probably originating in a superstitious feeling of the people for the glorious luminary of day. Whether this arose from accident or intention, I cannot determine; it may, nevertheless, serve as a guide to future travellers in their research. The interior consisted of a large arched vault, built of cut stone, united without cement; and, from the skill displayed in the construction, and the admirable turn of the arch, there was sufficient evidence to prove that it must have been the work of a people far advanced in the arts of civilised life. That they were a people wealthy and powerful, is equally apparent; for, who can behold one of those mountains, raised to immortalise the memory of the illustrious dead, without being astonished at the prodigious labour and enormous expense that must have been incurred in erecting one? And what monument could any people raise to the memory of their forefathers so simple and enduring? for while the vast and empty edifice, the triumphal arch, even the gigantic pyramid, have crumbled, and continue crumbling, into dust,—these alone have remained unchanged for ages, and will continue to the end of time; appearing as if left to mark the path of the first inhabitants of the earth, as they passed onward from the East to people the more distant parts of the globe."

We conclude with a general description of the habits of the people; and a particular description of their simple marriage ceremonies.

"The general food of the Circassians differs little from that of the Tartars who inhabit the mountainous parts of the Crimea; mutton, kid, fowls, rice, buck-wheat, millet, dried fruits, and honey, form the principal ingredients of the cuisine. Fish, notwithstanding it abounds in the Euxine, and in the rivers of the country, I never found served at their tables. Almost every species of game is eaten, except the bear and porcupine; and, like the Turks, they are accustomed to season their meat somewhat too plentifully with capricious. The quantity of raw cucumbers consumed by the whole population is astonishing: they may be seen eating them during the whole day. Unlike ours, the mind is perfectly white; and although they

grow to a prodigious size and length, yet they retain all the crispness and flavour peculiar to a young cucumber. During the summer, quantities are collected and preserved in salt for the winter, in the same manner as the Germans do *saur-kraut*. The tendrils and young fruit of the pumpkin are also much in demand. These are boiled, and eaten with butter, salt, and capsaicum. I frequently partook of this vegetable, when I found it by no means despicable. Wild asparagus, carrot, and the leaves of the dandelion, are held in high estimation. The honey is indebted for its very superior quality and flavour to the wild thyme, and other aromatic flowers of the mountains, upon which the bees feed; and forms a most important article in the husbandry and *cuisine* of a Circassian. It is not only eaten in the comb, but used in a great variety of dishes. Their mode of keeping the bees is extremely simple: sometimes a hive is plaited together from the bark of the linden, into a cylinder-like form, of six or seven inches in diameter; but, most generally, the bark of a young tree is preferred, the extremities of which are closed up, and placed horizontally in piles upon each other. When detaching the bees from the hive, they use a little burned straw instead of sulphur. Wines, spirituous liquors, even the *boza* of the Tartars and Turks, called here *bak-sima*, is rarely used by the Circassians, their favourite beverage being the *skhou*: a species of sour-milk, peculiar to the East, and which I found to be a most healthy, refreshing, and agreeable beverage, during my travels in these countries. Fresh milk (*skéend*) is never used by the Circassians, being considered unwholesome, and certain to originate fevers: hence they are accustomed to boil it every morning and evening after the cows are milked, and, when cool, mixing with it a little of the old *skhou*. In three or four hours afterwards it becomes thick, and fit for use; and, when flavoured with a little rose-water and sugar, or indeed in any form whatever, it is a most grateful and refreshing drink. Even now, I recall with gratitude the deliciously cool draught, which I frequently drank, while suffering from a heat of at least 40 degrees of Fahrenheit. It is worthy of remark, that the *skhou* alone gives to the milk that peculiarly agreeable taste which we find in the East; and preserves it, during the hottest weather, in a fit state for drinking. From whence the *skhou* had its origin, is a matter of great contention among the people of the East. The Turks and Tartars, who call it *gourme*, say, in accordance with their traditions, that the Almighty himself revealed the knowledge of its use to Abraham, who transmitted the art of preparing it to posterity; while the Circassians, and, I believe, the Arabs, contend that Hagar, when driven from the house of her lord, and fainting with heat and thirst in the desert, was presented by angels with a cup of the oriental nectar: from which time it has been preserved to the present day, as a corrective to the milk. However, be this as it may, the *skhou* constitutes the principal article in the food of a Circassian: boiled with millet, or maize, it forms his breakfast; while his pilaff, at noon and evening meal, are alike mixed with it. During winter, that the supply should be unfailing, it is preserved in tubs, with a little salt, when it forms a consistency like curd. Next to *skhou*, the article of food most necessary to these primitive people is millet—without which, and a bottle of their favourite beverage, no Circassian ever leaves home; and as flint and steel form an indispensable part of his travelling apparatus, he is never at a loss for subsistence, even in the most

desolate regions. While bivouacking, it is an interesting sight to see hundreds seated around their fires, each with his little casserole, preparing his slender repast, which, from their temperate habits, they enjoy with as keen a relish as the professed gourmand of Europe would the most *rêcherché* viands of the *cuisine*."

*Marrying*—"When the accepted lover has fulfilled his engagements, or given security for their performance, arrangements are made for the marriage; the girl is decked in all her finery, and completely covered by a long white veil, which, among the wealthy, is flowered with gold or silver. A friend of the bridegroom officiates as bridesman, and gallops away with the girl to the house of some relative where the wedding is to be celebrated. On arriving at their destination, the bride is received by the matron of the house with all the solemnity observed on such an important occasion. She is then conducted to the apartment destined for the happy pair, where she is left alone, with a bundle of pine torches, or a fire of the same material; the replenishing of which, so as to preserve a continued blaze until the arrival of her destined lord, is an indispensable duty. This is done to prevent the entrance of any supernatural enemy, who might be tempted to run away with the prize. We must not, however, forget to mention, that an elderly matron, one who usually officiates on such occasions, after the entrance of the bride, performs the mystic ceremony of walking three times round the nuptial-bed, repeating the words of some charm in Arabic, commencing with the head, and finishing with the feet; after which she places three earthenware pots, filled with corn, at the head, foot, and side, in each of which a lamp is left burning. The happy moment, midnight, having arrived, the bridegroom mounts his horse, and seeks his friend, who, in the interim, takes up his abode in the neighbouring woods. On being introduced to his bride elect, he draws his poniard, and instantly performs the ceremony, so peculiar to the whole of the Caucasian tribes, of cutting open the corset that has confined her form from infancy. It is owing to this singular custom of wearing the corset, that we so frequently see the countenances of the young girls sallow and unhealthy in Circassia, and their forms often ill-shaped; for it is not until being divested of the virginal corset, that they expand into what nature had intended them to be. No other ceremony is observed at a Circassian bridal, except feasting and merry-making. At the break of day the youth departs with his wife, presents her to his parents, and she is installed in the dwelling appropriated for her near their house; but, according to the custom of the people, her husband never visits her except by stealth,—a degree of disgrace being attached to the man who devotes his time to the society of his wife. Polygamy is allowed; but a Circassian is generally contented with one wife; or, at most, two."

It is with difficulty we can bring ourselves to close here, having merely strung together a few striking passages; and left we know not how many valuable matters untouched. The spreading of the independent flag of Circassia is alone a scene of animation to inspire enthusiasm: but the whole—the mixture of manners, which remind us strongly of the earliest Eastern, of the most warlike Roman, of our own Feudal times—presents a series of pictures hardly to be surpassed in interest.

*Personal Memoirs and Correspondence of Colonel Charles Shaw, K.C.T.S., &c., comprising a Narrative of the War in Portugal and Spain, from its Commencement in 1831, to the Dissolution of the British Legion in 1837.* 2 vols. 8vo. London, 1837. Colburn.

A GALLANT, intelligent, and honourable Scotsman, who has seen much of the world, and, as an officer, much dashing service, could not give an account of his personal "whereabouts," without furnishing a narrative of much curious and entertaining matter. Such is the work before us; and, with the autumnal holidays before our readers (if the approaching political turmoil will allow of any holiday-making), we can safely recommend it to their attention, as a pleasant and excellent *passé-temps*. For ourselves, we shall meddle little with the war which occupies three-fourths of the volumes (and the two contain 1100 pages), for we have already gone through them with several campaigner-authors; and we are not of that squad who like to fight all our battles o'er again.

Young Shaw was, he tells us, fond of fishing in his boyhood; and fancying that the lawyers' long vacation would enable him most readily to gratify that piscatorial taste, he began life with the study of the law. Discovering, however, that to bar and torture men, to look and play them, to look at and enjoy their dying struggles, was not quite so compatible as he had imagined with the like procedure towards trout and salmon, he abandoned the law for the army, and became himself a lobster in the distinguished 52d regiment, in January 1813. He was employed under Lord Lynedoch in the expedition against Bergen-op-Zoom and Antwerp; but had not the good fortune to be present at Waterloo. After the peace, he settled as a wine-merchant in Edinburgh; and tired of this at length, took an interesting pedestrian tour through France; and thence visited Savoy, Switzerland, Bavaria, the Tyrol, and Italy; and in Sept. 1831 returned to his native land. It is from his marches, and long continental walk, that we select the following illustrations. At Yprés we are told of a curious custom, the origin of which is lost in a night of antiquity, so dark as to be impenetrable even to the eyes of a cat.

"A cat is taken to the top of the high steeple in the square; about twenty blown bladders are then attached to its body, when it is flung into the street below. The poor creature sails quietly and slowly through the air, moving piteously all the while. As it approaches the earth, all hands are extended ready to seize it, for the lucky person is free from municipal taxes during the ensuing year. The cat's claws and feet are left at liberty; and it sometimes happens that the happy man who is to pay no taxes gets well scratched for his pains."

Nevertheless, the cat in preference to the tax-gatherer, against the world! Our next is an ingenious anecdote of smuggling.

"St. Maloes was, during the war, noted for the number of its privateers, and for the boldness of the sailors. They were, and still are, smugglers. Their method of smuggling French gloves was clever. They wrote to their friends in England, giving them notice, on such a day, a boat would leave St. Maloes with a cargo of right-hand gloves, and would put herself in the way, so as to be captured by one of the English cruisers. The boat sailed, was captured, and, to the astonishment of the captors, was found full of gloves only for the right hand. At this time little was known of France, and the custom of the French wearing only one glove was quite like their niggaridness; so the

gloves were exposed for sale at the Custom-house, and sold as waste stuff for a mere trifle to the English smuggler, who immediately, on making the purchase, sent intimation to France. His friends there instantly load a boat at Cherbourg with left-hand gloves, and despatch her with orders to be captured. This of course happens; she is carried into another English port, and the left-hand gloves are exposed for sale, and again bought in for a trifle by the friend or partner of the smuggler who bought the right-hands. Thus the smugglers obtain a cargo of gloves for almost nothing."

We can hardly consider this the practice of Scriptural charity; for, evidently, their right hands know very well what their left are doing. But *allons!* In his travels, the author tells us,

"Next to the abuse of Sir Hudson Lowe, the French indulge in attacks on Sir Walter Scott, whom they do not hesitate to designate, very unjustly, as being ready to sacrifice truth at the shrine of those who are in power. They read his novels, perhaps, more than the English, and admire them as much. They know every particular of his private history, and blame him much for omitting the name of Sir John Moore, in his poem written for the benefit of the Spaniards. Sir John Moore is always spoken of in France as the best English general; and they say Sir Walter neglected him in order to please Lord Castlereagh. In a word, all parties shamefully agree in abuse of him for his *Life of Napoleon*."

Nor is this surprising. National vanity can make a tolerably flattering story out of the glorious victory of Corunna, because it was the end of a retreat, and could not be followed up offensively; whereas Waterloo, not to mention any of Wellington's Spanish triumphs, are too intractable to be moulded even by French ingenuity into agreeable fictions. As for the *Life of Napoleon*, it has its faults; but its truths are as unpalatable as its mistakes to the majority of French readers.

But to come to more useful and less disputable matters, our author gives a receipt for avoiding thirst: indeed, he gives two receipts; for in one he states that wetting the legs affords much relief; and again,

"To prevent thirst in hot weather, nothing is better than to take a great quantity of fresh butter with your bread at breakfast. Avoid drinking water as you would poison; in short, drink as little as possible of any thing, and do not give way to the first sensation of thirst."\*

Our next quotation furnishes the interesting details of a visit to the celebrated monastery of La Trappe.

"In a short time" (says Colonel Shaw) I saw an extensive sheet of water, with a building on one side. A dog began to bark furiously, when a man, covered with a dark, short, brownish cloak, a large cowl of the same colour, stockings which had once been white, and wooden shoes, came forward, and made signs

\* Have our readers heard aught of a very extraordinary individual now on a professional visit to London, of the name of Gardner? Among his other remarkable lessons for the benefit of mankind, he suggests a very simple remedy for thirst, which is in the power of every body, without apparatus, accidental circumstance, or trouble. But his grand *panacea* is one by which sleep may be wooed and won by the most restless and disturbed. It is too important a subject, however, to be discussed in a note; and we only mention it to say, that the secret has been communicated to us (under the usual stipulations), and that we here every reason to believe that it will be very generally efficacious. We abstain from more till further trial enables us to speak positively of so easy, and yet so blessed, a boon: for if, as Sancho says, "Blessed be the man who first invented sleep, it covers us all over like a mantle;" what shall we say of the man who instructs us how to pull on this delightful cloak at all times, whenever we please!—*Ed. Lit. Gaz.*

to me to enter the porter's lodge. I was then, by signals, handed over to another person similarly dressed, and by him conducted into the saloon of the monastery. There the questions, Are you a Catholic or Protestant? and, How long do you intend to gratify them with your company? are immediately put. My cicerone then retired and left me alone. In a short time, one of the Trappists, dressed in a white flannel cloak and black cowl, with white stockings and wooden shoes, came to do the honours of the house. Remarking that my shoes were wet and dirty, he begged me to change them, at the same time regretting that dinner was over. Ah, however, they supped early (at five o'clock), perhaps I would then like to take a glass of wine or beer to refresh myself. He was a nice gentleman-like old man, of about seventy, with most insinuating manners. We sat down and conversed, the monks having a dispensation to speak in particular parts of the house, whilst shewing hospitality to strangers. While listening earnestly, I started up on a sudden, on perceiving one of those sturdy fellows in the brown cloak making threatening signs behind me, when it was explained to me, that those dressed in the brown cloaks were in general noviciates, and expressly commanded not to speak. I requested to see the establishment, when I was first led into the study, where I found a number of stout-looking fellows, busy with books in their hands, but not speaking a word: with the exception of one young man, who seemed tired of the discipline, no one raised his eye to see who entered. From this I went to the chapel, which is a very simple building. Here not a word is allowed to be spoken. My guide remained a long time before the altar, apparently in prayer. We then ascended to the dormitory, which consists of a very long and narrow hall, with sleeping boxes on either side, each having a name on it, which must be assumed from the Scriptures, or the History of the Crusades. There were beds here for 180 Trappists, of whom upwards of forty were English. The bedstead consists of the plainest deal wood, the mattress, a very narrow coarse blanket, a straw pillow, very low, and over all a slight canvass coverlet. I should suspect they sleep in their clothes. We are led to suppose that Trappists have once been gentlemen: but from the absolute dirt which they allow to be around them, I think they never can have been accustomed to cleanliness. The beds in the hospital are supplied with mattresses; but it has long been a matter of wonder how seldom a Trappist is sick. The dining-room is a handsome hall, with many printed remarks on the walls, satisfactorily proving that an empty stomach is better than a full one, that water is preferable to wine, and a great deal of such nonsense. In this hall there were three long narrow tables, without table-cloths. To each monk was placed a brown jug of water, a large plate of cold milk *brosse*, a bit of dark brown bread, and a spoonful of treacle on a small-sized pewter plate. I admired the kitchen, which was neat and clean, and my appetite was excited at seeing a sturdy monk making what was in Scotland a favourite dish with boys, I mean a pot of rumbled potatoes. He looked as if he had been accustomed both to make and eat it. Breaking through the rules of silence, I plumply said, 'I see you are from Ayrshire?' I believe I was right, although I confess I could not understand his signs. From the kitchen I went to the laboratory, where four monks were at work, under the direction of a very gentleman-like Englishman, who told me they prepared the greater part of the

medicines for the neighbouring peasantry. This gentleman pretended not to care about what was going on in the world, or to be the least interested in politics, although he contrived to get a good deal out of me. I found he had been at Greenock when the United Kingdom steamer was launched; and had made the passage with her north about to Leith. He said he felt certain that the Trappists were pitied, and thought to be in a state of misery by the English, but that was quite a mistake, as 'where the mind is quiet there is happiness.' The brewery was in excellent order, and the beer good, which they sell to the neighbourhood. The smith's and wright's shops were well supplied with English tools, and most of the workmen English and Irish. The printing-office, the tannery, the bakery, all seemed well managed. Not a word was to be heard in any of these establishments, but all signs. An English gentleman lately presented the monastery with a very valuable threshing machine. The dairy is in trim order, and no where have I seen a cow-house so well laid out. The cows are mostly from Normandy. The farm attached to the monastery consists of about one hundred and fifty acres, and seems to be well managed. The soil is not of the best, being wet and clayey; but they have paid particular attention to the draining and manuring of the land. Some of the fields you see covered with large hillocks of earth. Old firewood and weeds compose the interior of these hillocks; they are then set fire to and allowed to burn slowly. In the course of a few days the hillocks become quite black, and the deposit is scattered over the field. I was informed this is the best method of destroying weeds. They likewise allow the land to lie long fallow. The manure, which they use both for the garden and the fields, consists mostly of heather. After some weeks of dry weather, the heather is cut and brought to the farm, and there built up in ricks. With this they bed the cows for two nights, when it is scattered over the farm-yard, in which there are plenty of pigs and young cattle. A little of the straw, which has been used in the stable and which had begun to decay, is then sprinkled over the heather; the decomposition then commences, which is further increased by a simple method of irrigation from all the sluices and outlets of the stables and cow-houses. This manure is found to produce very heavy crops, while it costs little or nothing. The proof of its being beneficial to the ground may be gleaned from the fact, that all the neighbouring farmers, who laughed at it at first, now use it. There are very large gardens and orchards attached to the monastery; the gardens being managed by two Jersey men, who likewise superintend the orchards, and the manufacture and sale of cider. After having seen every thing, I sat down at five o'clock to supper, consisting of excellent onion soup, a very good omelette, and nicely-baked small rice puddings, apples, pears, bread, butter, and as good cheese as I ever tasted. We had good cider and excellent beer, but the white wine was execrable: the kindness, and apparent hearty welcome, made all taste well. There were five other intruders, like myself, supping gratis. At seven o'clock we rose from the table to be conducted to our bed-rooms. I was conducted to the chamber which I understood was generally reserved for the bishop when he visited the monastery. The walls were covered with religious prints; the furniture was comfortable and good. I had two wax candles, a blazing fire, and an excellent bed. I slept soundly till

awakened by the tolling of the bells for prayers, at two in the morning. The singing sounded to my ears solemn and sweet. At five o'clock, one of the noviciates entered to light the fire, and brush my clothes and shoes. At seven o'clock I found the same party assembled in the saloon, when we sat down to an excellent breakfast of tea, coffee, milk prepared in different ways, bread, newly churned butter, and fresh eggs. This is given as a 'make believe' gratis; but it has been so long the custom, that it is now expected that you leave something for the monks to give away in charity. I suspect, from the bows and thanks I got, that I was considered liberal in giving five francs; as a French *émigré* baron, who had been in the English service at a guinea per day (although he had been living in the monastery for a week), only gave three francs. Although I felt pity, or rather contempt, for so many men entering voluntarily into such a life of idleness and niggardly misery, still their solemn countenances, their music, and the absolute stillness (with the exception of the clattering of the wooden shoes in the long passage), produced a deep feeling of thoughtfulness on my mind, which no exertion could throw off. I quickly desired to quit this house of misery, where each countenance expressed sorrow for crimes committed, or losses sustained. I took a different path through the forest; and, after having been obliged to halt in order to shew my passport seven times in twelve miles, I got to *Nort* on board the steam-boat, and reached Nantes late that evening."

We conclude this part of our notice with one brief extract more—a sample of travelling chances.

"I arrived late at the village of Corps, situated at the bottom of a mountain, but still having the view of a deep valley below it. Here I entered an inn, where every thing appeared most miserable, but still they had a *chef*. The dinner placed before me was a stew of chamois, and a dish of newly fledged sparrows, which looked so disgusting that they destroyed my appetite. On wishing to pay my bill early the next morning, I could not, as I found all the people of the house were gone to confession. On their return, I asked the landlady for my bill, who, after some consideration, said, thirteen francs. Knowing she had only charged two and a half francs to my fellow-traveller, I was very angry, and asked her if she was not ashamed to cheat so soon after confession? but I saw she was opening a new confession account with me: I therefore threatened to go to the mayor. This had the desired effect; she thanked me for three francs, and we parted."

Entering now upon the Portuguese war, we have merely to state, that after some droll negotiations with Sir J. Milley Doyle, which Colonel Shaw denominates as a chimera, he embarked for the Azores, and joined Don Pedro at Terceira. Thence he went on the expedition to Oporto, and shared in all the dangers, the honours, and the want of reward, incident to that adventurous struggle. Still the spirit was strong; and our author next accompanied the English legion to Spain, and, in the ensuing difficulties and dangers, he may truly say, "*quorum pars magna fui*." It is not, however, much in our province to go into the particulars; and we shall only notice, that at first he was a little deceived as to rank; that he speaks of General Evans as a brave soldier, but considers him one not fitted, by his previous regular service, for the desultory and anomalous warfare in which he now engaged; and that he draws a dreadful picture of the

sufferings of the men embarked in this distressing enterprise. We shall close with some extracts relative to their discipline and miseries.

"There was here a detachment of the 4th regiment, in beautiful order, from the exertions of a most intelligent officer, Major Abthorpe, of the East India Company's service. The officers who went to Bilboa said the men were getting on excellently; but neither they nor I approved of men in some regiments being liable to be punished at the discretion of a subaltern officer, which power was of course much abused, as many of the subalterns had less idea of soldiering than the men they punished. Still, with all these defects, I am inclined to think, prompt punishment by the provost prevents much great crime; the only objection to it is, that if you once begin the system, there is a difficulty of keeping it within bounds.

"The whole of the Spanish troops left this under Espartero, to make some movement, as was supposed. The chapelgories were quartered in some villages about a league distant. They were called out and formed, they supposing for a fight, all happy and pleased. As soon as they were formed, the Spaniards surrounded them with artillery, cavalry, and infantry; and the regiment, which consists of about 1000, were in some sense decimated, ten men being marched to the front, and there shot and left. The reason of this detestable cruelty was, that a chapel had been pillaged, and the report was made to Espartero that it had been done by soldiers with red trousers. An inquiry was instituted, but the guilty could not be found, so he resorted to decimation; and as ill-luck would have it, with the exception of two, the sufferers were the best characters in the regiment."

At last these horrors became jokes.

"I must tell you I got famous fun with the Irishmen. When flogging the thief before sending him over to the Carlists, one of the Cork boys, the 10th, said to another, 'I say, Pat, do you think they will give him his arrears before they send him away?' 'By the powers! what a question! don't you see they are now giving him his back pay?' Some of them, in marching home through the clay-fields, had a great quantity sticking to their shoes. They knew me in Portugal; so the joke passed quickly about their now getting the Portuguese contract fulfilled, about having a certain quantity of landed property."

Alas! alas! for our countrymen, fighting as mercenaries in quarrels not their own—not their country's: look at their fate.

"The Legion marched out at twelve o'clock. The hospitals at this time were choke-full, four or five in a bed; discharging none, except to their graves (about fifteen or twenty daily); and having, exclusive of those in hospital (twelve hundred), a *dépôt* of convalescents of nearly eight hundred. To this *dépôt* I bent my steps, seeing numbers of officers in the streets. I fell in all the men who could stand, taking a Portuguese surgeon with me; and in less than one hour had turned out upwards of three hundred stout fellows, by means of words and the flat side of my sabre. I ordered them to march next morning to join their regiments. They were very knowing, only two hundred and fifty getting ready; all the officers, except two, having disappeared. I was resolved not to be beaten. I stopped all officers' rations who did not make their appearance. This brought two or three to light; and next morning I managed to march them away with one hundred and fifty more men. Still, no more

officers presented themselves. I then stopped the rations of the servants, as well as of the masters, and on the second day brought upwards of twenty to light. In less than five days I sent upwards of five hundred men to join their regiments. The hospitals were very bad, but this convalescent *dépôt* was terrible. I believe no officer had gone through it; and no wonder, as the filth was shocking. All were lying huddled together on the bare stones of a convent, without windows, and no blankets. I entered where there were a lot of Scotch. I said, 'Boy, what's the matter wi' you?' 'An awfu' sair head.' Another, 'Unco sair taes,' i. e. death! 'And what is the matter wi' you?' 'Oh, he is dead, and so is the man near him; and sure enough there were three poor devils all dead, with their mouths close together, to keep each other warm. I picked up in this way about twelve dead, or in the act of dying. Entering a small room in a corner, I was nearly knocked down by the effluvia. Here nine men had been for four days without any surgeon to look after them. I suppose they are now all dead. I proceeded to another dark room, and there seventeen men had been for forty-eight hours abandoned, all suffering from severe dysentery. How to remedy this was difficult, as I was told there were no blankets, nor sheets, nor beds, to send to the hospital. You will not believe it, but I set to work, and in two days obtained about six hundred blankets and nine hundred pair of sheets. I then employed the whole of the 8th regiment in removing people to the hospital and burying, and thus had a beginning. The scarcity of medicines was dreadful; but, with the active and willing assistance of Alcock, and the Portuguese medical gentlemen, it is quite wonderful what has been accomplished. The hospitals are now tolerably comfortable; and I managed so that the convalescents have a comfortable breakfast and dinner. All are getting better; but there must be still nine hundred on the list. About two-thirds of the medical men have died, and a great many officers. Poor Cadogan and Codd, who were with me, are in their graves; and at this very moment the funeral of Captain Montgomery (a friend of Hodges') is passing my window."

We have nothing to do with the intrigues described by Colonel Shaw—General Evans's ineffectual efforts to surmount the difficulties which environed him—the treason of Cordova—the jealousy of Espartero—the backbitings of his own officers—the disputes about sending intelligence to the *Courier* newspaper, of which Colonel Shaw was falsely accused. Suffice it to say, that the accounts of the actions fought, and all the doings of the combatants, are full of interest; and that our author, finding it impossible to effect any actual good, finally resigned, and is now, we hope, contentedly and happily settled at home among his numerous affectionate relations and warm friends.

*The Letters of Charles Lamb, with a Sketch of his Life.* By T. Noon Talfourd, Esq. M.P. 2 vols. post 8vo. London, 1837. Moxon. On July 10th, 1830, so exactly seven years ago, it was our lot to notice (*Literary Gazette*, No. 703) a publication of Mr. Lamb's, entitled, "*Album Verses, with a few others*," in a manner which provoked the animadversions of some, and the scurrility of others, of his friends and satellites. We thought these effusions unworthy of publicity, if not of the writer; and to that opinion, even after the lapse of time to which we have alluded, and the occurrence of circumstances which would

disparaging criticism of all severity, a sense of truth and justice compels us to adhere. To what the respected editor of this work says on the subject we shall advert by and by; but, meanwhile, have to observe, that we waited for no event to cause us to pay the tribute of our applause to Mr. Lamb, and to bury in oblivion what we originally and always despised, the miserable personalities which were levelled against the *Literary Gazette*, for an honest expression of its sentiments in regard to these "Album Verses." In July 1831 (No. 758, p. 488), unaffected by such impertinences, we spoke in high terms of commendation of the "*Tales from Shakespeare*," "the design being as excellent as the execution is graceful;" and, in March 1833 (No. 841, p. 130), "*The Last Essays of Elia*" met with an equally cordial reception from us.\* And when Nature had demanded and received her last great debt from this "amiable man and gentle poet," we, though not with the particularity of his intimate friends, nor, perhaps, with quite so exalted an estimate of his productions, inscribed our record of sympathy, admiration, and regret, upon the stone which we placed upon his cairn. — (*Lit. Gaz.* No. 937, p. 12, Jan. 3, 1835.)

Having troubled our readers with this brief retrospect, we do not think it worth while to revive the wretched attempts at wit and satire which appeared in the "Times" and the

\* Our introductory words were, "We could as soon criticise a happy child in a summer-garden, now snatching a flower, now in glad pursuit of a many-coloured butterfly, now approaching a tree of ripe red fruit with a somewhat more reverent air; or, wearied with sunshine and sport, sitting down in a shady nook, thinking and feeling unconsciously 'heaven is about us in our infancy,' and shaping, in that sweet silence,

Some little plan or chart,  
Some fragment in his dream of human life."

We could as soon criticise the look or motion of the child, as these pages. We have but one feeling, and that is affection. They come appraised with memory's most touching graces, and stir up within the heart all that it ever knew of good and kind. All have had their unworldly moments; and the great charm of this work is, that such are recalled, as if we had never seen

Them die away,  
And fade into the light of common day."

A perpetual chime is kept up, musical with human sympathies. We feel as talking to an old familiar friend, with whom we had so much in common, that the one could recall no impression that brought not back something to the mind of the other; something, too, fresher and dearer than belongs to daily life; something treasured chiefly because it happened long ago. Let any one read "Blakesmoor, in H-shire," "Poor Relations," "Captain Jackson," "The Superannuated Man," "Old China," and not find the fountain of tears, hidden even in the most worldly natures, troubled as by an angel, but with a healing and purifying influence; such a reader must have something so dry in his temper, so little love of literature in his taste, that we feel our reproaches would be thrown away—and we hate throwing away any thing. We have been accused of harshness, not to say injustice, in our estimate of a former work of Mr. Lamb's. To the charge of a bias, we will only reply by two lines of Dryden's—

For ill men, conscious of their inward guilt,  
Think the best actions on bye ends are built."

These ready to ascribe the personal motive usually take the hint from themselves. As a question of taste, we still adhere to our original opinion. Never more than in these *Essays* is the distinction shewn between simplicity and puerility; they are always simple, but never silly. The reader never smiles but when Elia (we cannot use the formal phrase, the author) intends he should smile. His own *Essays* are his own severest criticism. But such verifiers are to poets what your pebble-polishers are to geologists. They go picking up odd-looking stones along the beach; they get a machine, and polish with all their might and main; the work is accomplished, and there is material for a very pretty brooch, or a most charming pair of sleeve-buttons. Very innocent employment, we are ready to admit; but where is the power and the beauty of the science that could measure the depths, and calculate the old age of the earth? Verily gone, we know not whither. Now, writers who deal in pretty affectations and conceits, brought from such a distance that it is a marvel they were not lost upon the road, and little dictionary delicacies—may they not be called the pebble-pickers of poetry? But to return to this delightful volume, which shall be bound in green, fresh, glad, hopeful green—we were going to have said gold, but that is too costly for the daily wear and tear which is its future destiny."

"Examiner" on the occasion to which Mr. Talfourd thus refers.

"In 1830, a small volume of poems, the gleanings of some years, during which Lamb had devoted himself to prose, under his name of 'Elia,' was published by Mr. Moxon, under the title of 'Album Verses,' and which Lamb, in token of his strong regard, dedicated to the publisher. An unfavourable review of them in the *Literary Gazette* produced some verses from Southey, which were inserted in the 'Times,' and of which the following, as evincing his unchanged friendship, may not unfitly be inserted here. The residue, being more severe on Lamb's critics than Lamb himself would have wished, may now be spared."

"Severe!"—"more severe!!"—surely the worthy and gifted writer could not have seen the trash to which he has applied such epithet. Nothing ever so perfectly illustrated Peter Pindar's poem, in which the lines are found,

"Meaning, indeed, by this severity,  
His name would live to all posterity;"

but the first line of the preceding couplet concludes with the word "*inferiors*;" and nearly the whole of the dirty would-be squibs and epigrams, which issued from the scribbling clique alluded to, rung the changes on Peter Pindar's filthy idea expressed in the corresponding rhyme.

But we turn from such poor and paltry matters to the grateful task of walking along with Mr. Talfourd through these pleasant pages. If Lamb was, during his life, dear to his friends and companions, loved by all who knew him, his very weaknesses creating a degree of regard and interest which might have been denied to a firmer character; we are convinced that these volumes must extend the feeling (alas, the posthumous feeling) over every class of the community. His affections were so strong and natural; his imperfections so venial, harmless, and undisguised; his heart so kind and warm; his friendships so steady; his resentments so slight; his whole temperament and course of life so uniformly mild and pure, that it is impossible to see these fine qualities exhibited as they are in his correspondence, and judiciously pointed out by the editor, without inhaling a considerable portion of that love which was devoted to him by his living intimates. With most of these it has been our good fortune to share many a happy hour, and interchange many a friendly office—several of the most popular of them have commenced their literary career in this journal; and though we could neither, on that account, think nor speak as well of their failures as of their successful efforts (and every author fails now and then), nor force up our admiration to the pitch required in respect of others, their associates, and fellow-labourers, still, consistently with our public duty, we ever exercised towards them all forbearance when error, and encouragement when merit, prevailed.

Be to their faults a little blind,  
Be to their virtues ever kind,

is a fair canon of criticism between reviewers and authors; and we think it is no bad improvement of the system, if the former would be at the pains of judging every work upon its own merits, without reference to past offences, extraneous prejudices, or private motives.

Lamb's biography being fervently sketched by Talfourd, we proceed from his own beginning, Feb. 18, 1775, to the beginning of his correspondence with Coleridge in 1796. Of the first we may remark, that it possesses the eloquence of the learned writer—eloquence al-

most too glowing for the style of personal memoir. *Ex. gr.*—

"Lamb saw his schoolfellows of his own standing depart, one after another, for the university without a murmur. This acquiescence in his different fortune must have been a hard trial for the sweetness of his disposition; as he always, in after life, regarded the ancient seats of learning with the fondness of one who had been hardly divorced from them. He delighted, when other duties did not hinder, to pass his vacations in their neighbourhood, and indulge in that fancied association with them which he has so beautifully mirrored in his 'Sonnet written at Cambridge.' What worldly success can, indeed, ever compensate for the want of timely nurture beneath the shade of one of these venerable institutions—for the sense of antiquity shading, not checking, the joyous impulses of opening manhood—for the refinement and the grace there interfused into the long labour of ambitious study—for young friendships consecrated by the associations of long past time; and for liberal emulation, crowned by successes, restrained from ungenerous and selfish pride, by palpable symbols of the genius and the learning of ages? . . .

"The warmth of Coleridge's friendship supplied the quickening impulse to Lamb's genius; but the germ enfolding all its nice peculiarities lay ready for the influence, and expanded into forms and hues of its own. Lamb's earliest poetry was not a faint reflection of Coleridge's, such as the young lustre of original genius may cast on a polished and sensitive mind, to glow and tremble for a season, but was streaked with delicate, yet distinct traits, which proved it an emanation from within. There was, indeed, little resemblance between the two, except in the affection which they bore towards each other. Coleridge's mind, not laden as yet with the spoils of all systems, and of all times, glowed with the ardour of uncontrollable purpose, and thirsted for glorious achievement and universal knowledge. The imagination, which afterwards struggled gloriously, but perhaps vainly, to overmaster the stupendous clouds of German philosophies, breaking them into huge masses, and tinting them with heavenly hues, then shone through the simple articles of Unitarian faith, the graceful architecture of Hartley's theory, and the well-compact chain by which Priestley and Edwards seemed to bind all things in necessary connexion, as through transparencies of thought; and, finding no opposition worthy of its activity in this poor foreground of the mind, opened for itself a bright succession of fairy visions, which it sought to realise on earth. In its light, oppression and force seemed to vanish like the phantoms of a feverish dream; mankind were disposed in the picturesque groups of universal brotherhood; and, in far distance, the ladder which Jacob saw in solemn vision connected earth with heaven, 'and the angels of God were ascending and descending upon it.' Lamb had no sympathy with these radiant hopes, except as they were part of his friend. He clung to the realities of life; to things nearest to him, which the force of habit had made dear; and caught tremblingly hold of the past."

Lamb's affectionate disposition was particularly evinced in his ardent attachment to his parents and sister. Nothing can be more touching than the following, at the death of his mother:—

"I am (he says) wedded, Coleridge, to the fortunes of my sister and my poor old father. O! my friend, I think sometimes, could I recall the days that are past, which among them

should I choose? not those 'merrier days,' not the 'pleasant days of hope,' not 'those wanderings with a fair-hair'd maid,' which I have so often and so feelingly regretted; but the days, Coleridge, of a mother's fondness for her school-boy. What would I give to call her back to earth for one day, on my knees to ask her pardon for all those little asperities of temper which, from time to time, have given her gentle spirit pain; and the day, my friend, I trust, will come, there will be 'time enough' for kind offices of love, if 'Heaven's eternal year be ours. Hereafter, her meek spirit shall not reproach me. O, my friend, cultivate the filial feelings! and let no man think himself released from the kind 'charities' of relationship; these shall give him peace at the last; these are the best foundation for every species of benevolence."

Pursuing our miscellaneous track, we come to Lamb's criticism on the "Farmer's Boy."

"You ask me about the 'Farmer's Boy;' don't you think the fellow who wrote it (who is a shoemaker) has a poor mind? Don't you find he is always silly about poor Giles, and those abject kind of phrases which mark a man that looks up to wealth? None of Burns's poet dignity. What do you think? I have just opened him; but he makes me sick."

Lamb was a citizen, almost a cockney, an inspired cockney, if you please, and saw rural nature chiefly through the reflected images of our old writers. Bloomfield could have no charms for him, and he, consequently, underrated him as much as he was over-rated by Capel Loft and others. In a letter to Wordsworth, he thus paints himself:—

"I ought before this to have replied to your very kind invitation into Cumberland. With you and your sister I could gang any where; but I am afraid whether I shall ever be able to afford so desperate a journey. Separate from the pleasure of your company, I don't now care if I never see a mountain in my life. I have passed all my days in London, until I have formed as many and intense local attachments as any of you mountaineers can have done with dead nature. The lighted shops of the Strand and Fleet Street, the innumerable trades, tradesmen, and customers, coaches, wagons, playhouses; all the bustle and wickedness round about Covent Garden; the watchmen, drunken scenes, rattles; life awake, if you awake, at all hours of the night; the impossibility of being dull in Fleet Street; the crowds, the very dirt and mud, the sun shining upon houses and pavements, the print-shops, the old book-stalls, parsons cheapening books, coffee-houses, steams of soups from kitchens, the pantomimes—London itself a pantomime and a masquerade—all these things work themselves into my mind, and feed me, without a power of satiating me. The wonder of these sights impels me into night-walks about her crowded streets, and I often shed tears in the motley Strand, from fulness of joy at so much life. All these emotions must be strange to you; so are your rural emotions to me. But consider, what must I have been doing all my life, not to have lent great portions of my heart with usury to such scenes? My attachments are all local, purely local—I have no passion (or have had none since I was in love, and then it was the spurious engendering of poetry and books,) to groves and valleys. The rooms where I was born, the furniture which has been before my eyes all my life, a book-case which has followed me about like a faithful dog (only exceeding him in knowledge), wherever I have moved,—old chairs, old tables,

streets, squares, where I have sunned myself, my old school,—these are my mistresses—have I not enough without your mountains? I do not envy you. I should pity you, did I not know that the mind will make friends of any thing. Your sun, and moon, and skies, and hills, and lakes, affect me no more, or scarcely come to me in more venerable characters, than as a gilded room with tapestry and tapers, where I might live with handsome visible objects. I consider the clouds above me but as a roof beautifully painted, but unable to satisfy me; and at last, like the pictures of the apartment of a connoisseur, unable to afford him any longer a pleasure. So fading upon me, from disuse, have been the beauties of nature, as they have been confinedly called; so ever fresh, and green, and warm, are all the inventions of men, and assemblies of men, in this great city."

We will now give his sentiments respecting an author of another kind, which, at the same time, shew his indifference to party politics.

"I am reading 'Burnet's own Times.' Did you ever read that garrulous, pleasant history? He tells his story like an old man past political service, bragging to his sons on winter evenings of the part he took in public transactions, when 'his old cap was new.' Full of scandal, which all true history is. No palliatives; but all the stark wickedness that actually gives the *momentum* to national actors. Quite the prattle of age and outlived importance. Truth and sincerity staring out upon you perpetually in *alto-relievo*. Himself a party man, he makes you a party man. None of the cursed philosophical Humelian indifference, so cold and unnatural and inhuman! None of the cursed Gibbonian fine writing, so fine and composite. None of Dr. Robertson's periods with three members. None of Mr. Roscoe's sage remarks, all so apposite, and coming in so clever, lest the reader should have had the trouble of drawing an inference. Burnet's good old prattle I can bring present to my mind; I can make the revolution present to me—the French revolution, by a converse perversity in my nature, I fling as far from me. To quit this tiresome subject, and to relieve you from two or three dismal yawns, which I hear in spirit, I here conclude."

Of early education we copy Lamb's ideas:—

"Mrs. Barbauld's stuff has banished all the old classics of the nursery; and the shopman at Newbery's hardly deigned to reach them off an old exploded corner of a shelf, when Mary asked for them. Mrs. B.'s and Mrs. Trimmer's nonsense lay in piles about. Knowledge, insignificant and vapid as Mrs. B.'s books convey, it seems, must come to a child in the shape of knowledge, and his empty noddle must be turned with conceit of his own powers when he has learnt that a horse is an animal, and Billy is better than a horse, and such like: instead of that beautiful interest in wild tales, which made the child a man, while all the time he suspected himself to be no bigger than a child. Science has succeeded to poetry no less in the little walks of children than with men. Is there no possibility of averting this sore evil? Think of what you would have been now, if, instead of being fed with tales and old wives' fables in childhood, you had been crammed with geography and natural history! Hang them!—I mean the cursed reasoning crew, those blights and blasts of all that is human in man and child."

[To be continued.]

#### Lookhart's Life of Scott, Vol. IV.

[Second notice: conclusion.]

THE opening of the chest in Edinburgh Castle, in which the Scottish regalia had been deposited from the Union, seems strongly to have interested Scott; and there is one portion of the description of it, the touching simplicity of which has affected us deeply. It relates to his eldest daughter, whose recent loss is deplored by all who knew her. On the day after the solemn opening of the chest, "Scott, and several of his brother commissioners, revisited the castle, accompanied by some of the ladies of their families. His daughter tells me that her father's conversation had worked her feelings up to such a pitch, that when the lid was again removed she nearly fainted, and drew back from the circle. As she was retiring, she was startled by his voice exclaiming, in a tone of the deepest emotion, 'something between anger and despair,' as she expresses it,—'By G—, no!' One of the commissioners, not quite entering into the solemnity with which Scott regarded this business, had, it seems, made a sort of motion as if he meant to put the crown on the head of one of the young ladies near him, but the voice and aspect of the poet were more than sufficient to make the worthy gentleman understand his error; and, respecting the enthusiasm with which he had not been taught to sympathise, he laid down the ancient diadem with an air of painful embarrassment. Scott whispered 'pray, forgive me;' and, turning round at the moment, observed his daughter deadly pale, and leaning by the door. He immediately drew her out of the room, and when the air had somewhat recovered her, walked with her across the Mound to Castle Street. 'He never spoke all the way home,' she says, 'but every now and then I felt his arm tremble; and from that time I fancied he began to treat me more like a woman than a child. I thought he liked me better, too, than he had ever done before.'"

Our next brief extracts relate to a singular story of superstitious import. April 30, Scott writes from Selkirk:—

"The exposed state of my house has led to a mysterious disturbance. The night before last we were awaked by a violent noise, like drawing heavy boards along the new part of the house. I fancied something had fallen, and thought no more about it. This was about two in the morning. Last night, at the same witching hour, the very same noise occurred. Mrs. S., as you know, is rather timorous, so up got I, with Beattie's broadsword under my arm,

'So bolt upright,  
And ready to fight.'

But nothing was out of order, neither can I discover what occasioned the disturbance. However, I went to bed, grumbling against Tenterden Street and all its works. If there was no entrance but the key-hole, I should warrant myself against the ghosts. We have a set of idle fellows called workmen about us, which is a better way of accounting for nocturnal noises than any that is to be found in Baxter or Glanville."

Now comes the context.

"On the morning that Mr. Terry received the foregoing letter in London, Mr. William Erskine was breakfasting with him; and the chief subject of their conversation was the sudden death of George Bullock, which had occurred on the same night, and, as nearly as they could ascertain, at the very hour when Scott was roused from his sleep by the 'mysteri-

disturbance' here described, and sallied from his chamber with old Beadie's Killiecrankie claymore in his hand. This coincidence, when Scott received Erskine's minute detail of what had happened in Tenterden Street, made a much stronger impression on his mind than might be gathered from the tone of an ensuing communication."

A month later, Scott again writes to Terry:—"Counsellor Erskine is returned, much pleased with your hospitality, and giving an excellent account of you. Were you not struck with the fantastical coincidence of our nocturnal disturbances at Abbotsford with the melancholy event that followed? I protest to you, the noise resembled half-a-dozen men, hard at work, putting up boards and furniture; and nothing can be more certain than that there was nobody on the premises at the time. With a few additional touches, the story would figure in Glanville or Aubrey's collection. In the mean time, you may set it down with poor Dubisson's warnings, as a remarkable coincidence, coming under your own observation."

About this portion of his work, Mr. Lockhart gives us a charming and interesting sketch of Scott's domestic life and habits; which we need hardly recommend to attention. We can only find room for a few lines:—

"Breakfast was his chief meal. Before that came, he had gone through the severest part of his day's work, and he then set to with the zeal of Crabbe's Squire Tovell—

And laid at once a pound upon his plate."

No foxhunter ever prepared himself for the field by more substantial appliances. His table was always provided, in addition to the usually plentiful delicacies of a Scotch breakfast, with some solid article, on which he did most lusty execution—a round of beef, a pasty, such as made Gil Blas' eyes water, or, most welcome of all, a cold sheep's head; the charms of which primitive dainty he has so gallantly defended against the disparaging sneers of Dr. Johnson and his bear-leader. A huge brown loaf flanked his elbow, and it was placed upon a broad wooden trencher, that he might cut and come again with the bolder knife. Often did the Clerks' coach, commonly called among themselves 'the Lively,' which trundled round every morning to pick up the brotherhood, and then deposited them, at the proper minute, in the Parliament Cloze; often did this lumbering hackney arrive at his door before he had fully appeased what Homer calls 'the sacred rage of hunger;' and vociferous was the merriment of the learned *uncles*, when the surprised poet swung forth to join them, with an extemporised sandwich, that looked like a ploughman's luncheon, in his hand. But this robust supply would have served him, in fact, for the day. He never tasted any thing more before dinner; and at dinner he ate almost as sparingly as Squire Tovell's niece from the boarding-school—

'Who cut the sanguine flesh in frustums fine,  
And marvelled much to see the creatures dine.'

The only dishes he was at all fond of were the old-fashioned ones, to which he had been accustomed in the days of Saunders Fairford; and which really are excellent dishes—such, in truth, as Scotland borrowed from France, before Catherine de Medici brought in her Italian *virtuosi* to revolutionise the kitchen like the court. Of most of these, I believe, he has, in the course of his novels, found some opportunity to record his esteem. But, above all, who can forget that his King Jamie, amidst the splendours of Whitehall, thinks himself an ill-used monarch unless his first course in-

cludes *cockyleekie*? It is a fact, which some philosophers may think worth setting down, that Scott's organisation, as to more than one of the senses, was the reverse of exquisite. He had very little of what musicians call an ear; his smell was hardly more delicate. I have seen him stare about, quite unconscious of the cause, when his whole company betrayed their uneasiness at the approach of an over-kept haunch of venison; and neither, by the nose nor the palate, could he distinguish corked wine from sound. He could never tell Madeira from sherry; nay, an oriental friend having sent him a butt of *sheeras*—when he remembered the circumstance some time afterwards, and called for a bottle, to have Sir John Malcolm's opinion of its quality, it turned out that his butler, mistaking the label, had already served up half the binn as *sherry*. Port he considered as phsyic; he never, willingly, swallowed more than one glass of it, and was sure to anathematise a second, if offered, by repeating John Home's epigram—

'Bold and erect the Caledonian stood,  
Old was his mutton, and his claret good;  
Let him drink port, the English statesman cried—  
He drank the poison, and his spirit died.'

In truth, he liked no wines, except sparkling champagne and claret; but even as to this last he was no connoisseur; and sincerely preferred a tumbler of whisky-toddy to the most precious 'liquid ruby' that ever flowed in the cup of a prince. He rarely took any other potation when quite alone with his family; but at the Sunday board he circulated the champagne briskly during dinner, and considered a pint of claret each man's fair share afterwards. I should not omit, however, that his Bourdeaux was uniformly preceded by a small libation of the genuine mountain dew, which he poured with his own hand, *more majorum*, for each guest—making use, for the purpose, of such a multifarious collection of ancient Highland *quaghs* (little cups of curiously dove-tailed wood, inlaid with silver), as no Lowland side-board but his was ever equipped with; but commonly reserving for himself one that was peculiarly precious in his eyes, as having travelled from Edinburgh to Derby, in the canteen of Prince Charlie. This relic had been presented to 'the wandering Ascanius' by some very careful follower, for its bottom is of glass, that he who quaffed might keep his eye the while upon the dirk-hand of his companion."

Whilst writing "The Bride of Lammermoor," "The Legend of Montrose," and "Ivanhoe," Scott was suffering agonies from the cramp.

"His amanuenses were William Laidlaw and John Ballantyne; of whom he preferred the latter, when he could be at Abbotsford, on account of the superior rapidity of his pen; and also because John kept his pen to the paper without interruption, and, though with many an arch twinkle in his eyes, and now and then an audible smack of his lips, had resolution to work on like a well-trained clerk; whereas, good Laidlaw entered with such keen zest into the interest of the story as it flowed from the author's lips, that he could not suppress exclamations of surprise and delight—"Gude keep us a!—the like o' that!—eh, sirs! eh, sirs!" and so forth—which did not promote despatch. I have often, however, in the sequel, heard both these secretaries describe the astonishment with which they were equally affected when Scott began this experiment. The affectionate Laidlaw beseeching him to stop dictating, when his audible suffering filled every pause. "Nay, Willie," he answered, "only see that the doors are fast. I would fain keep all the cry as well

as all the wool to ourselves; but as to giving over work, that can only be when I am in woollen." John Ballantyne told me, that after the first day he always took care to have a dozen of pens made before he seated himself opposite to the sofa on which Scott lay, and that, though he often turned himself on his pillow with a groan of torment, he usually continued the sentence in the same breath. But when dialogue of peculiar animation was in progress, spirit seemed to triumph altogether over matter; he arose from his couch and walked up and down the room, raising and lowering his voice, and, as it were, acting the parts. It was in this fashion that Scott produced the far greater portion of "The Bride of Lammermoor," the whole of "The Legend of Montrose," and almost the whole of "Ivanhoe." Yet, when his health was fairly re-established, he disdained to avail himself of the power of dictation, which he had thus put to the sharpest test, but resumed, and for many years resolutely adhered to, the old plan of writing every thing with his own hand."

"The Bride of Lammermoor," and the 'Legend of Montrose,' would have been read with indulgence had they needed it; for the painful circumstances under which they must have been produced, were known wherever an English newspaper made its way; but I believe that, except in numerous typical errors, which sprang, of necessity, from the author's inability to correct any proof-sheets, no one ever affected to perceive in either tale the slightest symptom of his malady. Dugald Dalgetty was placed, by acclamation, in the same rank with Ballic Jarvie; a conception equally new, just, and humorous, and worked out in all the details, as if it had formed the luxurious entertainment of a chair as easy as was ever shaken by Rabelais; and though the character of Montrose himself seemed hardly to have been treated so fully as the subject merited, the accustomed rapidity of the novelist's execution would have been enough to account for any such defect. Of Caleb Balderston—the hero of one of the many ludicrous delineations which he owed to the late Lord Haddington, a man of rare pleasantry, and one of the best tellers of old Scotch stories that I ever heard—I cannot say that the general opinion was then, nor do I believe it ever since has been, very favourable. It was pronounced at the time, by more than one critic, a mere caricature; and, though Scott himself would never, in after days, admit this censure to be just, he allowed that 'he might have sprinkled rather too much parsley over his chicken.' But even that blench, for I grant that I think it a serious one, could not disturb the profound interest and pathos of the 'Bride of Lammermoor'—to my fancy, the most pure and powerful of all the tragedies that Scott ever penned. The reader will be well pleased, however, to have, in place of any critical observations on this work, the following particulars of its composition, from the notes which its printer dictated when stretched on the bed from which he well knew he was never to rise. 'The book,' says James Ballantyne, 'was not only written, but published, before Mr. Scott was able to rise from his bed; and he assured me, that when it was first put into his hands in a complete shape, he did not recollect one single incident, character, or conversation it contained! He did not desire me to understand, nor did I understand, that his illness had erased from his memory the original incidents of the story, with which he had been acquainted from his boyhood. These remained rooted where they had ever been; or, to speak more explicitly, he remembered the

general facts of the existence of the father and mother, of the son and daughter, of the rival lovers, of the compulsory marriage, and the attack made by the bride upon the hapless bridegroom, with the general catastrophe of the whole. All these things he recollected, just as he did before he took to his bed; but he literally recollected nothing else: not a single character woven by the romancer, not one of the many scenes and points of humour, nor any thing with which he was connected as the writer of the work. 'For a long time,' he said, 'I felt myself very uneasy in the course of my reading, lest I should be startled by meeting something altogether glaring and fantastic. However, I recollected that you had been the printer, and I felt sure that you would not have permitted any thing of this sort to pass.' 'Well,' I said, 'upon the whole, how did you like it?' 'Why,' he said, 'as a whole, I felt it monstrous gross and grotesque; but still the worst of it made me laugh, and I trusted the good-natured public would not be less indulgent.' I do not think I ever ventured to lead to the discussion of this singular phenomenon again; but you may depend upon it, that what I have now said is as distinctly reported as if it had been taken down in shorthand at the moment; I should not otherwise have ventured to allude to the matter at all. I believe you will agree with me in thinking that the history of the human mind contains nothing more wonderful."

*Burke's Genealogical and Heraldic History of the Commoners of Great Britain. Part XIV.* London, 1837. Colburn.

MR. BURKE proceeds, without diminution of industry or spirit, with this interesting work. The present No. contains much curious matter, from which we offer a quotation, touching the celebrated Edward Burton, who suffered much persecution during the reign of Queen Mary. The following quaint narrative is given by Mr. Burke, and was written more than two centuries since by one of the family:—

"Edward Burton, Esq. a religious asserter of the Gospel in Queen Marie's time, was one day sitting alone in his upper parlour at Longner, in meditation, no doubt, of God's deliverance of his people, when he heard a general ring of all the bells in Shrewsbury, whereunto, in St. Chladda's parish, his house belonged, and strait his right divining soul told him it was for Queen Marie's death; yet, longing to know the truth more certainly, and loath to trust his servants therein for some reasons, he sent his eldest son, then but a boy of sixteen years of age, willing him to throw up his hat if it were so, so impatient was his expectation, who finding it, and doing accordingly as he was directed, the good man retiring presently from the window and recovering his chair, for extremity of joy which he conceived for the deliverance of the saints of God, he suddenly expired. And this was his *Nunc dimittis, Domine*. But neither was the storm of persecution so quite blown over hereby, but that still some scatterings did fall upon the servants of God, for they suffered some grievances still; among which was their being debarred from Christian interment in churches. But, *facilis iactura sepulcri*. His friends made a shift to bury him in his garden by the fish ponds, and set a monument over him; which, being defaced by time and rain, it happened—in the year 1500—that Edward Burton, Esq. his grandson, inviting to dinner the noble Sir Andrew Corbet, then lieutenant of the shire, with divers other gentlemen of quality—that the good baronet, desirous to see

the place which preserved the reliques and memory of that excellent man, as good men are still inquisitive after them whose virtues they honour; but finding it much decayed by the weather, after a friendly correction of his host, and serious injunction to repair the tomb, whereby the memory of his most deserving grandfather was kept alive, he, without any ado, effected what he spake for, and promised himself to become the poet for an epitaph, which he accordingly wrote."

## MISCELLANEOUS.

*Standard Novels, No. LVIII.: Trevelyan.* (London, R. Bentley.)—Trevelyan was a justly popular novel, and must be welcome again in its well-deserved place in this pleasant series, which embodies so many of our best works of fiction.

*A System of teaching Congregations to sing from Notes.* E. Merriott. (London, D'Almeida and Co.)—A lesson-book of twenty pages, with clear and simple instructions. *On the Antidotal Treatment of Epidemic Cholera, &c.* by J. Parkin. Pp. 112. (London, Highley.)—Carbonic Acid is the specific recommended in this treatise; and strong arguments, as well as practical results, are brought forward in support of its efficacy.

*Lardner's Cabinet Cyclopædia, XCII. Vol. II. of Swainson's Natural History: Birds.* (London, Longman and Co.)—Another volume of this excellent scientific production: it treats of the laniidae, merulidae, sylviidae, ampelidae, muscipidae, conirostres, scansores, tenuirostres, falcirostris, grallatores, and natores; and treats of each in the most lucid manner.

*The Interrogator; or, Universal Ancient History, in Questions and Answers, by a Lady.* Pp. 343. (London, Hatchard.)—A very well-constructed and useful book for young students.

*Transactions of the Philosophical and Literary Society of Leeds, Vol. I. Part I.* (London, Longman and Co.; Leeds, Knight.)—These papers, read before the Society, do credit to the inquiring spirit and talents of the Leeds society. The subjects are, the Bed of the Mississippi, by the late J. Lubbock; the Varieties of Water, by W. West; the Structure of Limaces, by T. Nunneley; Roman Coin-moulds found near Wakefield, by J. Hey; the Anatomy of Actinea Corallacea and Alcyonella stagnorum, by J. P. Seale; and the Yorkshire Coalfield, by the late E. St. George.

*Stratford's English Grammar, with Exercises and Key.* Fourth edition. (London, Edwards.)—Among the many well arranged and useful elementary works for the early instruction of the young, we noticed the first edition of this Grammar with the commendation it deserved; and we are glad to see that its utility has been so well discerned as to lead to a call for four editions, and thus experimentally confirm our judgment.

## ARTS AND SCIENCES.

## GEOGRAPHICAL SOCIETY.

JUNE 26. W. R. Hamilton, Esq. president, in the chair.—Read, extracts from the following papers: 1. A letter from Captain Alexander, in Southern Africa, on his route from Cape Town to Walvisch Bay.

To the Secretary of the Royal Geographical Society.

On the Banks of the Kamoo, three days east of the Great Fish River, and about 170 miles north of the Warm Bath, Great Namaqua Land, 18th February, 1837.

Sir,—I had the pleasure of writing to you about a month ago, before I left the Warm Bath, and now, having unexpectedly an opportunity of sending letters to the Cape, by three Namaquas, who brought me here merchandise (shirts, cotton handkerchiefs, brass wire, and buttons), of which I stood in need, I beg to give you a short account of my journey so far, in the direction of Walvisch Bay, &c. I left the Bath on the 18th of January, having waited in vain till then for rain, and for the above-mentioned goods; fortunately, immediately after I left the Bath, I had abundance of thunder-rain, and have had no want of water or grass on my way hitherward. I hear also, that, since I left the Bath, no rain has fallen there, so it was as well that I risked leaving that place. The captain of the Bon-diezwaart Namaquas (Abram) accompanied me, with sixteen armed men, on pack oxen. On the second day I was joined by the petty chief, Daniel, and three men; which last chief I have engaged to accompany me all the way to Wal-

visch Bay, under the promise of supplying him with powder and lead to shoot elephants on his way back. I have agreed to try to obtain for him, by negotiation, the property of which he had been robbed by Henrick, a petty chief of Abrams, lying fifty miles out of our road. With my wagon and pack oxen I travelled up the Hoom (the river which runs past the Bath), nearly north for six days, and, leaving the wagons on its banks, with a guard of twelve men, I set out with two white men, the two chiefs, and eleven Namaquas, for the craal of the robber Henrick. We travelled fifty miles N.N.E. with horses and oxen, and got among the 'Cards (or rugged) Mountains, a range of various height, from 300 feet to about 2000, flat topped, and composed of clink-stone, principally arranged in horizontal strata. Spring-boks, in large flocks, were seen; many ostriches and zebras; a cameleopard, and the *spoor* of a lion; the weather was very hot, both day and night, 95° at mid-day commonly, and 80° at sunrise. We found Henrick in a rocky glen, very difficult of access; he refused, to his own chief, to deliver up Daniel's property, which he had seized (*viz.* thirty cows and forty goats), because a year before, on a hunting party, Daniel's brother-in-law had accidentally shot Henrick's father. Henrick also prepared his people, before us, to the number of thirty-three, armed with guns, to take Daniel's life, because he could not get that of his brother-in-law; we defied Henrick to take Daniel from us, or to kill him; kept strict watch all night, and brought off Daniel in safety next day. Henrick would not listen to the proposal I made him, of receiving a fine for the life of his father; he and his mother both cried, "Blood for blood!" We rejoined the wagon, and I let Abram leave us with his people, that he might force Henrick to restore Daniel's property, and thus prevent war in the land; for Daniel threatens to raise a commando of the people around, and the Africans, and go against Henrick. After travelling a degree further north, I arrived at the Kaap River, a branch of the Great Fish River: there we saw a good deal of honey-beer drinking and dancing. We staid for some days at Daniel's craal, and, having been assisted with a span of oxen, came on here to a craal of the great captain's, William Zwaartboy. (The Namaquas adopt Dutch names, *i. e.* those of any note.) Here we have been obliged to fortify ourselves with an abattis of bushes round the tent and wagon, for we heard that Henrick was come with a commando against Daniel's craal again, fifty miles south of us, and that he is likely to attack us too; but we are quite ready for him. However, if Zwaartboy comes first from the Fish River to see us, there will probably be no fight. Before the rain fell on the 16th, the heat was 110°; now it is 80°, and the river is running briskly. I have fallen in with a man here, who was at Walvisch Bay three days ago, and he says, that our route will probably be to Zwaart Morass, 14 days; to the Fish River, 14 days; up it, 6 days; to Buffel's Poost (through a field abounding with lions, cameleopards, rhinoceroses, &c.), 10 days; to the Kooisap, 3; to the Bay, 8; beyond that, on the Squakop (Somerset?) the Dámaras abound. The other day I bought a fine Dámará Negro (a boy), ten years old, for about 4s.; that is, for two cotton handkerchiefs, and two strings of glass-beads; his mistress was a Namaqua woman. The boy was half starved, and he is now well fed and clothed, and is my shepherd. We see many Dámará slaves among the Namaquas. My medicine chest is in great request;

sometimes I save it by administering doses of bay salt. We have the usual annoyances of heat, dust, very stony roads, if roads we can call them, where no wagons ever passed before; disputes to settle; bargaining for horses, for sheep, and cattle; but we manage to keep a good heart, and, though old gray-beards sometimes try to frighten us, we will try our luck, and go as far as we possibly can; human nature can do no more. I am, &c.

J. E. ALEXANDER.

2. Extracts from a voyage round the world, by Mr. F. D. Bennett, Surgeon and Naturalist, in the years 1833-36. The greater part of this time was spent in the Pacific Ocean, when the vessel touched at Juan Fernandez, Pitcairn's Island, Tahiti, Huheine, Ulitea, &c. of the Society Islands; at Maci of the Sandwich Islands; at Christians and Roapua of the Marquesas; at Carolina Island, Christmas Island, and at Cape St. Lucas, the southern extreme of California.

"March 7, 1834.

"Daylight," says Mr. Bennett, "disclosed the dark and elevated form of Pitcairn's Island directly ahead; and shortly after noon we effected a landing, at a small and half-concealed cove, known by the name of 'Bounty Bay,' having been the spot of the final destruction of the ship *Bounty*, whose relics were yet visible on the beach, as iron ballast, nails, shreds of copper, &c. The eastern side of the island, on which the settlement is placed, presents a very picturesque appearance; an amphitheatre rising from the sea, luxuriantly wooded to its summit, and bounded on each side by precipitous cliffs, and naked rocks of rugged and fantastic forms. The simple habitations of the islanders are scattered over this wooded declivity, and half concealed by the abundant verdure. The coast is abrupt, rocky, beaten by a heavy surf, and almost inaccessible: some coral and coral debris are found on the beach of the small coves, but here are no distinct reefs of coral. The population of this small island, only about seven miles in circumference, consisted, at this time, of eighty persons, the majority of whom were children, and, with the exception of three families of English residents, the whole are the offspring of the mutineers of the *Bounty*. They are a fine and robust people, but far from handsome: they are high-spirited and intelligent, and speak both the English and Tahitian fluently. In intellect and habits, they form an interesting link between the civilised European and unsophisticated Polynesian. Their food is chiefly vegetable; yet swine, goats, poultry, and fish, are not wanting. Water is rather scarce, as the volcanic structure of the island forbids the formation of wells; yet it is not till rain has been wanting for seven or eight months that any scarcity is felt. Disease is rare, and 'Fefe' or Elephantiasis, so prevalent among the Polynesian islands, is here unknown. The injurious effects of the emigration of the islanders to Tahiti, is still evident in the restless state of many among them, and also in their licentious conversation. Yet, they invariably speak well of the treatment they experienced there.

"March 23.

"The island of Raiatea (Ulitea of Cook), situated about eighty miles N.W. of Tahiti, is about forty miles in circumference. It is of mountainous character, and profusely covered with vegetation. Water abounds. Accompanied by some natives, I ascended an extensive range of mountains occupying the centre of the island, extending in a direction nearly north and south, and rising about 2000 feet above the

sea. The summit of the mountain presented a level and extensive plain of bleak aspect, over-spread with swamps, and streams of water running over exposed rocks, of a red colour, and entirely destitute of verdure, with the exception of short grass and mosses; although, but a few feet below, on the less exposed spots, vegetation was lofty and abundant. I was here shewn a remarkable natural excavation, resembling a large well, about thirty-six feet in circumference and forty feet deep. Might it not be a small volcanic crater? It is singular that a stream of water, flowing over the declivity of this elevated mountain, abounds with eels and other fish, several varieties of which I observed sporting in the water."

*Sandwich Islands.*—"The aspect of Maui is very mountainous, and, near the settlement of Lahaina, several mountains of much grandeur advance within a short distance of the coast, whilst the surface exhibits the strong contrast of luxuriant verdure and volcanic sterility, so common to islands in the Sandwich group. The population of Maui is estimated at 38,000. The natives are intelligent, orderly, healthy, and submissive to the control of the American missionaries, whose influence is great throughout all this group of islands. The settlement of Lahaina contains a neat wooden church, a reading-room for foreign visitors, and a market to regulate the trade between the native and foreign shipping. Numerous South-seamen annually visit this island to refresh; hence the natives are well supplied with European and American manufactures."

Among the donations presented to the Society, was one by Captain Fitzroy, R.N., namely, a very curious Spanish MS., being the Diary of an expedition to, and residence upon, the island of Tahiti, by Maximo Rodriguez, in 1774. This Maximo Rodriguez was a Spanish soldier and interpreter, who accompanied an expedition from Lima to the island of Tahiti; and he, with three other persons, were left upon the island for about thirteen months. Cook, in his voyage, mentions the fact of the Spaniards having visited the island, and heard much from the natives of one "Mateema," the Tahitian pronunciation of the Spanish Maximo; and, in a subsequent passage, he says, "Will any thing ever become known to the world of the proceedings of the Spaniards at this island?" By a very singular coincidence, after a lapse of sixty years, the original diary kept by the said "Mateema" was placed in the hands of a captain in the British navy, at Lima, by Don José Manuel Tirado, presented to him by the daughter of the before-mentioned Rodriguez, who, having heard that Captain Fitzroy, in H.M.S. *Beagle*, had been employed in surveying the coasts of Chile and Peru, and that he was making inquiry for all MSS. that could be obtained, sent it to him, begging his acceptance of the diary, saying, "that she felt sure it would be better placed in the hands of an Englishman, and more valued in England, than it ever could be as concealed from the world, and uncared for, in her library at Lima."—This being the last meeting for the season, the Society adjourned till November next.

#### ELECTRICAL SOCIETY.

On Saturday evening, a letter from the secretary of the Meteorological Society was read. It set forth the importance of electrical phenomena to investigate and explain meteorological effects, exhibited how closely connected were the objects and pursuits of the two Societies, and solicited co-operation. A paper on the agency of electricity in producing various dis-

eases, but more particularly those which are termed epidemic, was read by Mr. Leithead. The author observed, that if we could succeed in tracing those scourges to their cause, we should be the better enabled to apply a remedy; perhaps, even to prevent their recurrence, or, at all events, to mitigate their virulence; enlarged upon the superiority of the satisfaction derived from administering to the comforts, or alleviating the sufferings of our fellow-creatures, over the wide-spread glory of a warrior; and then proceeded to relate the facts upon which the electro-physiological theory is based, to point out the analogies by which similar facts are connected, and how nearly those analogies, confirmed by experiment, are allied to scientific truth. He stated, also, that the medical term "sympathetic action" furnished no explanation of the *modus operandi* of the inductive process of disease; that the explanations which medical authors attempt to give of "sympathetic action," involve a contradiction in terms, and do not remove the difficulties of elucidating the inductive process of disease; and that it is not a little singular, that what has always appeared to constitute the barrier between the phenomena and its explanation, is, on the contrary (by the electro-physiological theory), the very fact which prompts a ready solution. Mr. Leithead concluded by saying, that the very language employed by medical authors, is that which is precisely adapted to signify the mode of action of the electric fluid; and the reason why the unmeaning terms, "nervous influence—instinctive remedial process—sympathy," and others equally absurd and unphilosophical, have been substituted for ideas, is attributable to the study of electrical science having been neglected in medical education, or, at least, but little attended to.

#### ZOOLOGICAL SOCIETY.

At the monthly meeting, held on Thursday afternoon, twenty individuals were elected. Balance in favour of the Society, on July 1st, 783l. 11s. 8d. Visitors to the gardens and museum, in June, 38,768. Stock at the gardens, 313 mammalia; 711 birds; and 19 reptiles: total, 1043. The following are detached notes on a species of *rattus*, brought under the notice of the Society by Sir James McGrigor, bart. This animal was originally described by Pennant, as the Indian badger; and by Shaw, under the name of the *Ursus Indicus*; but it has been almost neglected by systematic writers; for, though alluded to by Pennant, it is in so short, vague, and unsatisfactory a manner, that it is impossible to form a distinct notion of it; and Shaw only copied the few words of Pennant which relate to it. Even, in the most cursory manner, to examine this animal, is impossible, without coming to the conclusion that it is wonderfully adapted for making its way beneath the surface of the earth. The powerful fore-leg, armed with enormous claws; the coniform head; the face deprived of hair; the minute and sunken eye; the entire absence of external ear; the strong and muscular neck and shoulder; the comparative diminution of the posterior extremities, whereby the bulk of the hinder parts is lessened; the naked abdomen—all unite to characterize it as a digger. And, in fact, among the population of its native regions, it is said that it seeks its choicest food in the cemeteries; and such is its dexterity in tearing open the graves of the dead, that no tomb is sacred from its attacks. It has, in those parts, obtained the appellation of the *grave-digger*. The generic term of Storr, *mellivora*, although

It may suit the African species, is, consequently, peculiarly inappropriate to this. It is a native of the upper provinces of Bengal, where, however, it is said to be rare.

#### AFRICAN NATURAL HISTORY.

IN our No. 1066, we very hastily noticed the admirable collection of African natural history brought to London by Mr. Smith; and which, we are happy to say, the public will, on Monday, have an opportunity of seeing in yet better order and arrangement.

We have recently availed ourselves of the opportunity of paying a second visit to this interesting exhibition, which, being now arranged preparatory to its opening to the public, appears to much greater advantage than at our first visit. The manner in which the specimens of natural history have been, to use a technical term, set up, reflects great credit on the artist, who, we understand, is a Frenchman, resident at the Cape. Not the least attractive part of the exhibition are the drawings, to the number of some hundreds, with which the walls of the room are decorated; they consist of views of scenery, and illustrations of the manners, superstitions, religious ceremonies, and amusements of the natives, from the able pencil of Mr. C. Bell, of the civil service; and of subjects in natural history, admirably executed, and elaborately finished, by Mr. G. Ford, an artist at the Cape. We sincerely hope that this exhibition, which we have already described as including some specimens perfectly new to the naturalist, may attract the attention it so eminently merits, to the promotion of the laudable objects contemplated by the society to which we owe the importation.

#### LITERARY AND LEARNED.

##### ROYAL ASIATIC SOCIETY.

JULY 1st. The Right Hon. C. W. W. Wynn in the chair.—In communicating to the meeting a paper on the authenticity of the Zend and Pehlevi languages, by Mr. Romer, Professor Wilson observed, that Mr. Romer's paper offered some valuable contributions to the elucidation of a subject of great literary importance, and on which the Orientalists of England and the Continent differed widely. All the great names of the Continent argued in favour of the genuineness of the works preserved by the Parsis of India, composed in what these Parsis declared to be the ancient languages of Persia; at least, so far as to their being composed in languages which were once spoken, though not, perhaps, to the extent of believing them to be the genuine compositions of Zoroaster. On the other hand, the Orientalists of England had, almost with one accord, pronounced them to be forgeries of recent times, composed in a heterogeneous jargon made up of various languages, put together without any rules, and never spoken by any nation whatever. Independent of its literary interest, the question seriously affected the character of the Parsis; who, it may be observed, have confessedly, in one instance—that of the Desatir—been guilty of a literary forgery. The Professor remarked, that these works in Zend and Pehlevi were unknown in India until the fifteenth century, when a single copy was said to have been brought from Persia, from which all the existing copies were taken; and it was certainly a suspicious circumstance that no such works were to be found among the Fire-worshippers of Persia, many of whom still remained there. The subject was worthy of investigation, and several of the first-rate continental scholars

were now giving it their earnest attention. Much of the paper by Mr. Romer was not adapted for public reading; it should rather be looked at, and its contents studied. It contained texts from the Zend-Avesta, Yagna, &c., interlined with Sanscrit and Guzerati, all in Roman characters, for the purpose of more easily instituting a comparison between them. Some extracts, read by Professor Wilson, shewed that the modern Parsis were not at all behind their predecessors in their attempts at mystification, of which some curious examples were given. Sir Charles Forbes stated, that the late Mr. Duncan, governor of Bombay, fully believed in the authenticity of the Desatir; that he had paid much attention to it; and that, if he was not the principal author of the English translation of that work, he, at least, materially assisted Mulla Firouz in its production. Colonel Briggs was inclined to believe in the genuineness of the disputed languages. He founded this opinion, partly on what appeared to him the impossibility of writing works of any length in a forged language; and partly on the denial made by foreign Orientalists, who had carefully studied the remains of the Zend and Pehlevi tongues, to the assertions of their opponents respecting the incongruity and inconsistency of the elements of those tongues. He knew, also, that there were dialects now spoken in parts of Persia quite unintelligible to the people of other districts; and that several words and sentences of these dialects were found to bear a great similitude to the Pehlevi. He was anxious that too strong an opinion should not go forth to the world; that we should not too hastily consider the question to be decided, now that, on the Continent, it was still undergoing much learned investigation. Selections from a translation by Dr. Wilson, president of the Bombay Branch Royal Asiatic Society, of the general Sirozé of the Parsis, containing curious details of lucky and unlucky days of the month, and of the things which may or may not be done on those days, were also read to the meeting. Colonel Goodfellow, E. R. Power, Esq., J. Ramsay, Esq., and K. Finlay, Esq., were elected resident members of the Society. G. Ashburner, Esq., and Lieut. Eastwick, were elected non-resident members. M. D'Avezac, of Paris, and Sir T. Reade, were elected corresponding members. The next meeting was announced for the 15th instant.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—British Architects, 8 P.M.; Marylebone Literary (Dr. A. T. Thomson on Diet); and on the 17th, 8½ P.M.

*Tuesday*.—Zoological (Science), 8½ P.M.; Architectural (Essay by Mr. B. Ferrey).

*Saturday*.—Royal Asiatic, 2 P.M.

#### FINE ARTS.

*The late J. Constable's Paintings*.—A desire having been very generally expressed among the admirers of the works of the late John Constable, that one of his pictures should be made permanently accessible to the public by being purchased and presented to the National Gallery, a meeting was recently held, and, after a careful examination of the works of the deceased artist, now the property of his family, it was unanimously resolved, that a private subscription should be opened for the purpose of effecting the immediate purchase of the landscape called "The Corn Field," for the sum of 300 guineas (that estimate having been sanctioned by the administrators to the estate), and its presentation to the National Gallery; and

a committee was appointed to carry the design into effect. Nearly half the required amount was immediately subscribed: and we rejoice to notice the design, not only as a tribute justly due to the merits of the artist, but as a pattern for imitation hereafter—at once doing honour to our national school, and enriching our national institution.

*National Monuments and Fine Arts*.—In pursuance of the resolutions carried at the meeting, Freemasons' Hall, on the 29th of May, and reported in the *Literary Gazette*, Mr. Hume, Sir G. Sinclair, Mr. Hope, Alderman Wood, and Mr. Wyse, M.P.'s, and Mr. George Rennie, have had an interview with Lord Melbourne and Lord John Russell, who assured the deputation of the interest Her Majesty took in the subject, and of their own favourable disposition towards it. This is as it should be. No doubt we shall soon see our great cathedrals, the Tower, and other public places, open to the public; and that will, as it ought to do, lead the way to other improvements in this respect. Give every one an interest in national monuments and fine arts, and the English people will shew that they are as worthy to be trusted with their care, as the warmest amateur amongst us.

#### IMPORTANT DISCOVERY OF PAINTINGS OF THE 14TH CENTURY.

THE following is a letter received at Munich, in which Dr. Ernest Forster gives the particulars of the important discovery of paintings which he has made at Padua:—

*Padua, April 8, 1837*.—It seems that my stars are auspicious. I have resuscitated what was dead, namely, perfectly restored a totally ruined work of art—for so it seemed to be. In a ruined church, which is used merely as a receptacle for lumber, I had before discovered some remains of good painting. Nothing, however, was left but a couple of heads; all the rest seemed to be scaled or scratched off, or mouldered away: in short, it had all the appearance of a decayed wall, black in some places, gray in others. So I found it in 1826, and again in 1829. I have not been here since till now. In the descriptions of the city, even those of an ancient date, the work is spoken of as entirely ruined. I did not fail to go again; and found the walls, precisely as they were ten years ago, covered with dust; and I got a sponge and water. I wash, and am filled with astonishment at the beauty of the brilliant colouring, the drawing, and the expression. Now I think I must see how much remains of the whole, and wash and wash till a whole figure appears, well preserved, and admirably painted. I have recourse to brushes and whisks of broom, and begin to brush away: the black gradually comes off, but a pale whitish-gray plaster wall appears. I continue to wash very carefully; the coat of dust is gradually detached; and the most beautiful painting is discovered. My delight was great; but it increased more and more. I looked to the principal wall, where the altar once stood. After sweeping, brushing, and washing, I here found a Crucifixion, more beautiful than any I had ever before seen. What I have besides raised from the grave is the history of Saint Lucia, in four large high fresco paintings, which adorn the lower part of the south side of the church. What is on the upper part I do not yet know: the two rows on the opposite side, the wall in which the door is, and the compartment over the Crucifixion, are still hidden by the dirt; in some places my curiosity has already brought out

here and there some admirable figures. The whole of the glorious work is of the year 1480-1490; and I repeat that I have never seen any thing of that age, in Florence, Sienna, or Pisa, to be compared with it. What glowing colours, what depth, what splendour! But how it is painted, I do not know. We, at least, no longer have these colours—this red, this glowing violet, this black; nor do I know any example of such delicacy of colouring, such smoothness in the execution. The interest excited by this discovery is general; but I wish I were not alone: had I but one companion to assist me in unveiling this treasure, that I might take faithful drawings of the whole across the Alps to my own dear native country.

## NEW PUBLICATIONS.

*Illustrations of Constantinople, made during a Residence in that City, &c. in the Years 1835-6.* Arranged and drawn on stone, from the original sketches of Coke Smyth, by John F. Lewis. London, M'Lean.

WE some time ago noticed two specimens which we had seen of the splendid work now lying in a complete state before us. It is well and justly observed in the prospectus of the publisher:—"On Turkey and its capital, offering to the eye of the painter, costumes and scenery as picturesque as any in the world, and habits as characteristic, and manners as peculiar, as ever presented themselves for the illustrations of the pencil, it is astonishing how few and imperfect are the traces in English works of literature and art, while our native school has been advancing and extending itself in every direction, seeking subjects from pole to tropic, in every country and of every people upon whom the sun shines,—it is, indeed, remarkable that it has so long and so much neglected the treasures of the Mussulman empire." The present publication, consisting of twenty-seven lithographic prints, by Mr. Lewis, from sketches taken on the spot by Mr. Coke Smyth, and forming a volume uniform in style and execution with Mr. Lewis's "Spanish Sketches," goes a great way to supply this deficiency. It exhibits the architecture, character, and habits of the "Ottomites" (as Othello calls them), in the most striking and varied points of view. Of the inhabitants, some of the most remarkable and interesting representations will be found in "The Interior of the Harem," "A Café on the Bosphorus," "Bazaar," "A Captive Greek Girl," "Interior of the Residence of the Pasha of New Orsova," "Interior of the Mosque at Brussa," "Turkish Female," and "Return of Sultan Mahmoud from the Mosque," "Scutari," "The Port of Constantinople," "Fountain of the Gate of Eski (the old), Serai," "Mosques of Yeri Jami and Saint Sophia, from the Golden Horn," "Seraglio Point," "Gate of the Mosque of Saint Sophia," "Artillery Barracks, Tophana," "Great Burial Ground, Pera," "Mosque of Suleyman," and "Sweet Waters (in Asia)," furnish beautiful specimens of the natural scenery and national architecture.

*A Catalogue Raisonné of the Works of the most eminent Dutch, Flemish, and French Painters.* By John Smith. Part VIII. Smith and Son. NICHOLAS POUSSIN, Claude Loraine, and Jean Baptist Greuze, are the pictorial worthies of whose productions Mr. Smith, with his accustomed knowledge and minuteness of detail, has here given an account, preceded by brief biographical memoirs. A supplementary volume, containing notices of pictures hitherto unavoidably omitted in the catalogue, and some

necessary corrections and observations, will complete this laborious work, so useful to the painter, and still more to the connoisseur of painting.

*Her Most Gracious Majesty the Queen.* From a Drawing, executed, by special command, for H. R. H. the Duchess of Kent, by R. J. Lane, A.R.A.; and engraved by F. C. Lewis Mitchell.

COLD must be his heart who can gaze at this sweet countenance, in which delicacy, spirit, dignity, and modesty, are so happily combined, without praying for many years of uninterrupted health and prosperity to our young and gracious Queen. God bless her!

*Sketches in Spain.* By George Vivian, Esq. Lithographed by Day and Haghe, and P. Gauci. Colnaghi and Co.

"COMPARISONS are odious," and, therefore, we will not make them in the present instance; but, if we were to do so, they could hardly be disadvantageous to the beautiful publication before us, which consists of four views in Spain, full of spirit and truth. That near Bilbao, and the View of the Pyrenees, are especially admirable. We believe that Mr. Vivian was one of the commissioners appointed by government to select the best plan for the new Houses of Parliament.

*Six Views of Kirkstall Abbey.* Drawn from Nature, and on Stone, by W. Nelson. Ackermann and Co.

THERE are few ruins in England more picturesque than Kirkstall Abbey; and we do not recollect to have seen any representations of it more pleasingly executed than these by Mr. Nelson.

*H. M. S. Inconstant, lying off Plymouth Dockyard.* Drawn by O. W. Briery; on Zinc by Day and Haghe. Fry and Son.

LUNBERS as we are, we can easily imagine how fond the officers and crew of so beautiful a craft must be of her; and how much obliged they must feel to Mr. Briery for this highly pleasing portrait of their favourite.

## ORIGINAL POETRY.

SAN SEBASTIAN.

THE sun has gone unto his rest: the glowing  
hue of day [gray]  
Is merged into a twilight tint, monotonous and  
The pine-trees wave their giant boughs, and  
and sway from side to side: [the tide].

Full mournfully they rustle to the murmur of  
There are tents upon the grassy field, and tents  
upon the sea; [waves of the sea:]  
In long unbroken lines they rise, like white  
And beside the mouldering watch-fire the  
sentinel is set, [glittering bayonet].  
With his long dark cloak, and purple cap, and  
The moon is rising lazily—all lazily and slow,  
And the stars around her congregate, and  
twinkle as they go:

Looking down upon the waters, which reflect  
them as they pass, [upon a glass].  
Like the eyes of Spanish maidens looking forth  
There is silence on the midnight breeze—a  
silence which is spread [their bed:]  
Like a veil above the multitude, a curtain o'er  
Save now and then, as on the ear there comes  
a wailing sound— [his round],  
'Tis the chapelchuri singing, as he walks upon  
An ave to the Virgin, a strain unto his love,  
A hymn of supplication to the mighty Lord  
above:

A stirring chaunt of other days, a song of Old  
Castile; [king Boabdil].

Of the gray-beard Moor Alfaqui, or the false

And, hark! the short sharp challenge, the  
clicking of the lock, [flinty rock:]

The steel-shod scabbard clattering against the  
The pass-word whispered hastily, as round the  
watch doth sweep; [steep].

And the tread of men departing adown the grassy

The shadows are retreating, they linger as they  
fly; [they lie:]

And yet around the mountain base in canopies  
A moment do they linger; on the morning may  
unfold

Her panoply of azure, of crimson, and of gold.

The morn again has broken—a flood of yellow  
light— [gird them for the fight].

The sleepers wake, and cross themselves, and  
And the rolling drum and squeaking fife ex-  
tinguishes the sound

Of the chapelchuri singing as he walks upon  
his round. H. M.

## SONNETS.

IT is my birth-day, and I stand alone  
Upon the mountain top in thoughtful mood;  
I trace the path that led me through the wood,  
And o'er the crags, on which the sun then shone.  
Now shadowing clouds frown on the old gray  
stone,

On which I rested half-way up the height;  
And o'er the wood, where spirits seem'd to moan,  
The sun hath cast a southern summer's light.  
Such is the past: and so its features change;  
Reflection sees them vary in their hue:  
The present is the spot whence now I view  
The past: the future is above man's range;  
He can but look upon the clouds above—  
Tis fancy shapes them to what'er we love.

I stood upon the shore and marked the sea;  
A sea-boy passed me, bathed in silent tears.  
'His mind, methought, stray'd o'er his bygone  
years,

Chequer'd with infant mirth and rustic glee:  
And still he gazed towards an aged tree  
Far up the glen, 'neath which a cottage smiled!  
Ah! there he first was cherish'd on the knee,  
There taught to lip and prattle when a child;  
But now to roam the ocean was his doom.  
'Even so (said I) the unprepared die:  
They look on life, and then on death; and sigh  
That now no more old joys they may resume.  
The sea-breeze play'd around me mournfully,  
A warning voice from dim futurity."

ALPHA.

## SKETCHES.

C. LAMB'S OPINIONS OF PUBLISHING.

MR. LAMB appears to have entertained a  
strong dislike to, or rather abhorrence of, the  
trade of publishing; and, as it may serve as  
corollary to some of the opinions in our last, we  
extract some of his dicta. Talking of his  
'Specimens of English Dramatic Poets contem-  
porary with Shakespeare,' he says:—

"Longman is to print it, and be at all the  
expense and risk, and I am to share the profits  
after all deductions, i. e. a year or two hence I  
must pocket what they please to tell me is due  
to me. But the book is such as I am glad  
there should be. It is done out of old plays at  
the Museum, and out of Dodale's Collection,  
&c. It is to have notes."

The next is to our friend Bernard Barton, in  
1823, to whom many of the best letters are  
addressed.

"Throw yourself on the world without any  
rational plan of support, beyond what the

chance employ of booksellers would afford you! Throw yourself rather, my dear sir, from the steep Tarpeian rock, slap-dash headlong upon iron spikes. If you have but five consolatory minutes between the desk and the bed, make much of them, and live a century in them, rather than turn slave to the booksellers. They are Turks and Tartars when they have poor authors at their beck. Hitherto you have been at arm's length from them. Come not within their grasp. I have known many authors want for bread, some repining, others enjoying the blessed security of a spunging-house; all agreeing they had rather have been tailors, weavers—what not? rather than the things they were. I have known some starved, some to go mad; one dear friend literally dying in a workhouse. You know not what a rapacious set these booksellers are. Ask even Southey, who (a single case almost) has made a fortune by book-drudgery, what he has found them. O, you know not—may you never know—the miseries of subsisting by authorship! 'Tis a pretty appendage to a situation like yours or mine; but a slavery, worse than all slavery, to be a bookseller's dependant, to drudge your brains for pots of ale, and breasts of mutton, to change your free thoughts and voluntary numbers for ungracious task-work. The booksellers hate us. The reason I take to be, that, contrary to other trades, in which the master gets all the credit (a jeweller or silversmith, for instance), and the journeyman, who really does the fine work, is in the background: in our work the world gives all the credit to us, whom they consider as their journeymen; and, therefore, do they hate us, and cheat us, and oppress us, and would wring the blood of us out, to put another sixpence in their mechanic pouches! \* \* \* Keep to your bank, and the bank will keep you. Trust not to the public; you may hang, starve, drown yourself, for any thing that worthy personage cares. I bless every star, that Providence, not seeing good to make me independent, has seen it next good to settle me upon the stable foundation of Leadenhall. Sit down, good B. B., in the banking-office; what! is there not from six to eleven P.M. six days in the week, and is there not all Sunday? Fie, what a superfluity of man's time, if you could think so! Enough for relaxation, mirth, converse, poetry, good thoughts, quiet thoughts. O, the corroding, torturing, tormenting thoughts, that disturb the brain of the unlucky wight who must draw upon it for daily sustenance! Henceforth I retract all my fond complaints of mercantile employment; look upon them as lovers' quarrels. I was but half in earnest. Welcome dead timber of the desk, that gives me life. A little grumbling is a wholesome medicine for the spleen; but in my inner heart do I approve and embrace this our close, but unharassing way of life. I am quite serious."

"Wordsworth, I see, has a good many pieces announced in one of the annals, not our 'Gem.' W. Scott has distributed himself like a bribe haunch among 'em. Of all the poets, Cary has had the good sense to keep quite clear of 'em, with gentle, manly, right notions. Don't think I set up for being proud on this point; I like a bit of flattery, tickling my vanity, as well as any one. But these pompous masquerades without masks (naked names or faces) I hate. So there's a bit of my mind. Besides, they infallibly cheat you, I mean the booksellers. If I get but a copy, I only expect it from Hood's being my friend. Coleridge has lately been here. He, too, is deep among the prophets, the year-servers,—the mob of gentle-

men annals. But they'll cheat him, I know. \* \* \* I have not received the annual, nor the slightest notice from — about omitting four or five of my things. The best thing is never to hear of such a thing as a bookseller again, or to think there are publishers. Second-hand stationers and old book-stalls for me; authorship should be an idea of the past."

## MUSIC.

## NEW PUBLICATIONS.

*The Shadow of the Heart.* The Poetry by W. H. Harrison, Esq.; the Music by Adela A. Hammond.

WE are given to understand that the composer of this beautiful air is but sixteen; if so, she is indeed a young lady of the greatest promise, for the composition would do credit to one of sixty—ay, even one who had grown gray among gamuts. There is what Dyer happily calls "the sweet diapason melancholy," sadly, and thrillingly interwoven with the words, which not only chains down the ear to "marble listening," but sinks deeply into the heart, like feelings arising from the remembrance of happy and bygone days. The poetry, too, is of an order such as we seldom meet with in songs of this class. It is exquisitely simple, without being maudlin, and touches the sweet cord of sympathy by the natural emotions which it awakens; for who has not sighed while contemplating the past? We give one stanza:

"The bird sings as sweetly his melody wild,  
From the old hazel copse, as when I was a child;  
And the sun shines as bright upon blossom and tree,  
And the river goes dancing as blithe to the sea.  
Whence the change that I feel? not in Nature, I trow,  
For she smiles at the mourner, and mocks at his woe.  
'Tis my heart! my own heart—which once knew not a care—  
Casts the shade of its sadness o'er all that is fair."

We would fain extract the whole song, were it not for infringing too much upon the rights of the publisher. To those, however, who understand and can feel poetry, we are certain that this verse will be sufficient to create an appetite for the remainder.

*The Lote Tree.* Words by Miss Costello; Music by Lady A. Kennedy Erskine. Willis and Co.

A SWEET idea, with sweet words and sweet music. It is perfectly simple, and will prove an acquisition to our ballad-loving friends. The air is too much like a previous composition of Lady Erskine, "Thy form was fair," to be called strictly original.

*A Lament on the Death of Sir John Stevenson.* Same author. Music by M. Costa.

A HEAVY, dull air, unworthy of the subject, and also of the words, which are almost the best Miss Costello has ever written. We are sorry to see them wasted.

*The Flowers of the Forest.* Sung by Mrs. Wood. Lee.

If this air had any other words it would meet with our cordial approbation. It is very sweet; but the old "Flowers of the Forest" is one of the most exquisite compositions ever written; and though the words of this are altered slightly, still it is "The Flowers of the Forest" with a new air; and we cannot like it. All who have heard Wilson sing the old song will, we are sure, agree with us, that no composition, however beautiful in itself, can be so appropriate as the exquisite one we have been accustomed to.

*Angel Woman's Tear.* Poetry by Capt. Addison; Music by Capt. Barton. A. Lee. CAPT. ADDISON has evinced his usual taste in

the words of this song; and the music is very pretty and appropriate. We congratulate Capt. Barton on, we presume, his first appearance as a composer. Mr. Lee has arranged the air with ability.

*My Swiss Home.* Music by W. H. Montgomery. Jefferys.

WE have not heard a more delightful little song for some time. To the lovers of the gentle class of German airs we could not recommend a more pleasing composition. We are sure it may take its place among the many songs Mrs. Waylett has rendered popular by her charming singing.

*Albion; a National Air.* El. Naylor. Mills and Co.

MISS NAYLOR's style does not suit words of any kind. We have often praised her pieces of music, and regret to blame her song now before us; but, in our opinion, it wants melody, it wants energy—in truth, it wants every thing a national song should have. We hope to see Miss Naylor again publishing in the line suited to her talents.

*The Ferry; a Barcarole.* Words by Miss Costello; Music by the Hon. M. A. Jervis. Willis and Co.

A MONOTONOUS chant with a monotonous accompaniment. As a song, we think it dwells too long on one or two notes: with a second and third voice, it would make an admirable trio. In fact, it is more like the first part of a trio than a song.

*The Hero of a Hundred Fights.* S. Nelson. D'Almaine.

ANOTHER, and yet another, "national song for public meetings, dinners," &c. &c. &c. This may be an excellent and spirited composition; but our great complaint of this, as of others of this class, is the utter want of originality. We would recommend "radical reform," if it had produced any thing like harmony hitherto; but unless one were certain of the result, perhaps it is better to "let well alone."

*England's Hope.* D'Almaine and Co.

ANOTHER national song, which is not at all to our taste; it has nothing striking,—nothing to distinguish it from the mass of music daily published, except a very good-looking portrait, which may be like England's hope, but is not very like Sir R. Peel.

*The Grand March, for Conservative Dinners.* H. Herz. Idem.

A SHORT, pleasant piece of music: the air is a well-known one, and is well introduced and arranged. To mediocre performers it will prove a great acquisition, as being pretty, and not difficult.

*Queen of my Soul: Rizzio's last Song.* Words by Miss Costello; Music by Miss Wollaston. Willis and Co.

A PRETTY song, though without any great merit either in words or music. The interest ever attached to even the most dubious parts of the history of the unhappy Mary Stuart, gives a great chance of popularity to any thing touching on the most trivial event of her troubled life.

*The Merry Mountain Lasses.* Words by Mrs. S. C. Hall; Music by F. Smith. Mori and Lavenue.

A PRETTY lively air; sung with much taste by Miss J. Smith, in the "French Refugee." The best proof of its being a favourite with the public is, that it is always called for twice.

*Les Brillants.* By T. Brown. Cramer and Co. As quadrilles, these are rather too long and

heavy, as a more simple arrangement of music is better calculated for the present style of dancing. As pieces for our young friends to practise, they are excellent; they should have been called lessons, and not quadrilles.

### VARIETIES.

**Weather-wisdom.**—Morrison horribly wrong, quite the opposite of right, from our last till now, gives us little cause to anticipate that the following will turn out any better than Francis Moore:—"The 8th warmer, yet some tokens of rain continue. Wind and rain about the 10th. The 12th gloomy, cloudy kind of weather; cool for the time of year. The 13th night changes, but the weather is not hot for July."

**Miss Chambers.**—We trust the powers of harmony in this young lady's case will, at least, prove powerful enough to moderate the harshness of legal discord. Again, we observe, she has appealed to a concert to enable her to aid her unfortunate father; still the oppressed victim of the law; and what a host of talent is announced for the occasion. Pasta, Grisi, Alibertazzi, Assandri, Mrs. A. Shaw, Clara Novello, Tamburini, Rubini, Lablache, Curioni, Ivanoff, De Begnis—a musical galaxy!

**New Parliament Houses.**—A grant of 88,000*l.* to commence the building of the new parliament houses, on Mr. Barry's designs, was passed by the Commons on Monday. The votes were 100 for to 20 adverse.

**Record Commission.**—18,172*l.* were voted to wind up the concerns of the commission under its existing constitution. It will henceforward be under the proper direction of the Master of the Rolls; and, it is to be hoped, be conducted in a very different manner.

**National Gallery.**—9030*l.* were voted for the purchase of "Mercury and the Woodman," by Salvator Rosa; the Murillo lately described in our *Literary Gazette*; and a Rubens, also from the Gallery in Bond Street, for this national institution. Pity there is not what can be called a *National Gallery* to place them in.

They say it takes nine tailors to make a man—apparently, one is sufficient to ruin him."—*Lockhart's Life of Scott.*

**The Pride of Birth.**—François de Clermont Tonnerre, Bishop of Noyon, under Louis XIV. so often mentioned by Madame de Sévigné, La Bruyère, and other contemporary writers, carried the vanity of birth to such an excess, as to become the object of universal ridicule and sarcasm, even in that age. An epigram describes the haughty prelate as disdaining to associate with the ignoble inmates of heaven; it ends thus:—

"On dit, qu'en entrant en paradis  
Il fut reçu vaillant que vaillie,  
Et qu'il eut sorti par mépris,  
N'y trouvant que de la canaille."

### LITERARY NOVELTIES.

#### LIST OF NEW BOOKS.

The Works of John Hunter, F.R.S., with Notes, edited by J. E. Palmer, Vol. III. 8vo. 17*s.* 6*d.*—Sketches from Life, Lyrics from the Pentateuch, and other Poems, by T. Bagg, 12mo. 5*s.*—A Traveller's Thoughts, or Lines suggested by a Tour on the Continent, post 8vo. 4*s.* cloth.—Illustrations of Jerusalem and Mount Sinai, from Drawings by F. Arundale, with his Tour, 4to. 1*s.* 5*s.*—Wanderings in Greece, by George Cochrane, Esq. 2 vols. 8vo. 2*s.*—The Story of the Three Bears, 18mo. 2*s.*—The Emigrant's Introduction to the British American Colonies, by S. S. Hill, 12mo. 5*s.*—Library of Useful Knowledge: Sheep, their Management, &c. 8vo. 10*s.* 6*d.* cloth.—Memoirs of W. Carey, D.D. second edition, 12mo. 7*s.* 6*d.*—Religion without Gloom, 12mo. 4*s.*—Sketches of Popular Tumults, 12mo. 7*s.*—The Philosophy of the Eye, post 8vo. 10*s.* 6*d.*—The Philosophy of the Ear, post 8vo. 10*s.* 6*d.*—Memoirs of Mrs. Hawker, late of Islington, by C. Cecil, post 8vo. 10*s.*—Guido Sorelli's Confessions to Silvio Pellico, 3d edition, 10*s.* 6*d.*

### METEOROLOGICAL JOURNAL, 1837.

June.	Thermometer.	Barometer.
Thursday... 30	From 38 to 77	30.07 to 30.03
Friday... 30	.... 48 to 75	30.05 .. 30.17
July.		
Saturday... 1	.... 35 .. 67	30.24 .. Stat.
Sunday... 2	.... 30 .. 75	30.22 .. 30.17
Monday... 3	.... 36 .. 75	30.16 .. 30.08
Tuesday... 4	.... 41 .. 74	30.17 .. Stat.
Wednesday 5	.... 40 .. 74	30.09 .. 30.05

Winds very variable: north-east prevailing. Generally clear, except the afternoon of the 6th, when a little rain fell.

Edmonton. CHARLES HENRY ADAMS.  
Latitude.....51° 37' 28" N.  
Longitude.... 3 51, W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the Meteorological Society. May 1837.

Thermometer—Highest.....	70.75 ..	the 17th.
Lowest.....	29.00 ..	9th.
Mean.....	48.1875	
Barometer—Highest.....	30.50 ..	16th.
Lowest.....	29.34 ..	9th.
Mean.....	29.69451	

Number of days of rain and snow, 11.  
Quantity of rain and melted snow, in inches and decimals, 0.86625.

Winds.—1 North-East—1 East—5 South—2 South-West—6 West—8 North-West—7 North.

**General Observations.**—Another month of cold weather was experienced, the mean temperature being lower than any, in the same month, during the last fourteen years. On five nights the thermometer was below the freezing point. The barometer was lower than usual, though not so low as in May 1835. Hall, rain, and snow, fell on the 10th; the quantity of rain, was more than the average. Thunder was heard in the distance on the 14th.

### TO CORRESPONDENTS.

PUBLISHING before our usual day—a day in this week set apart by a loyal and patriotic people to offer the last tribute of respect to the memory of their departed King—we trust our correspondents, advertising friends, and others, will make due allowance for any disappointments it may occasion to them.

**Celebrated Women.**—An error of ours has led to the following rather imperious letter, which we, notwithstanding, insert with pleasure, because it always our wish to discharge our duty faithfully, and "no mistake!" Overlooking the brief page of preface affixed to by our esteemed correspondent, we certainly treated the work with a degree of severity, which could only be justified by the very high opinion we entertain of Mr. James; but, consequently, also, with a degree of severity not fairly applicable to a new and a female writer, who should have been tried upon her own merits, and not upon the elevated standard of her nephew. To both we owe the *amende honorable*.

Hampton Court, July 3, 1837.

SIR,—I cannot help feeling both surprised and indignant at a review contained in your Journal of the 24th June, which, owing to my absence from my usual residence, only met my eye to-day. In the face of every advertisement of a work called the "Lives of celebrated Women;" in the face of the title-page of the book; in the face of the preface which precedes it, you are pleased to attribute that work to me, both in the heading of your notice, and your notice itself. The advertisements, even in your own Journal, you might very well never see; but the title-page of a book you reviewed, and the preface which was attached to that book, for the purpose of insuring the public against all deceit, direct or indirect, should have guarded you against the error you committed. In the title-page the book is stated only to be edited by me; and in the preface, I not only distinctly state that the work is the production of a lady who had intrusted the correction of the press to me, *her nephew*, but I declare that I had nothing whatever to do with the work, but as far as that correction of the press was concerned. With not one thought or opinion, suggestion or idea, that the book contains, have I any thing to do; and that such is the case is clearly stated in the preface, which must have been under your hand at the moment you thought fit to attribute the work to me. How such a misstatement found its way into your columns you best know; but I must request that it be immediately corrected, and in such a manner as to render the refutation as public as the assertion.—I am yours, &c.

G. P. R. JAMES.

R. a Subscriber, is declined with thanks. It is out of our literary province, and belongs rather to a political journal, to interfere in the matter brought under our notice by "A Friend to Seamen." We know nothing of the rules of the Trinity Society; but, surely, if our correspondent at Exeter addressed the secretary, his ears would not be shut to the cry of the sailor's widow and orphans.

ERRATUM.—In last week's *Gazette*, p. 400, col. 1, line 2, for *Home read Home*.

### ADVERTISEMENTS,

Connected with Literature and the Arts.

### BRITISH INSTITUTION, PALM.

M.A.L.L.—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, is now open, and will continue open daily, from Ten in the Morning until Six in the Evening.

Admission 1*s.* Catalogue, 1*s.*  
WILLIAM BARNARD, Keeper.

### JUST OPEN.—DIORAMA, REGENT'S

PARK.—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bonzon.

Open daily, from Ten till Five.

### NOW OPEN.—THE SOUTH AFRICAN

MUSEUM, Egyptian Hall, Piccadilly. Containing an extensive and most interesting Collection of new or little-known Quadrupeds, Birds, Reptiles, &c. from the Interior of Southern Africa; together with numerous specimens of the Arts, Manufactures, &c. of the Natives; and about Four Hundred Drawings illustrative of the Character of the Country, of the Customs, Manners, Social Condition, and Religious Ceremonies of the Inhabitants; the whole collected by the late Expedition sent from the Cape of Good Hope.

Admission, 1*s.* Open from Ten till Six daily.

### A GENTLEMAN, about to make the

Tour of Europe, would take Charge of, and introduce into the first Society, the youthful Son of any Nobleman or Gentleman. Solid instruction, general information, taste, and accomplishment, may be acquired under circumstances not at all dissimilable.

Address, Alphons T. Cooke, Esq. 48 Warwick Street, Regent Street, who will give any required information.

### EDUCATION in GERMANY.—The

Principal of an English Establishment at Bonn, on the Rhine, for the limited number of Twelve Young Gentlemen, is now in London, and respectfully informs Parents and Guardians that he has Three Vacancies. The treatment is extremely liberal, and this Establishment offers all the advantages which a German Education confers, benefited by English superintendence and control.

His Address and Prospectus, with full particulars, may be had on application (if by letter, post-paid) at Mr. Hookman's Library, Old Bond Street; or to Mr. Scripps, News Agent, South Molton Street, London.

### HER MAJESTY, QUEEN VICTORIA.

J. Kitchell, 33 Old Bond Street, has the honour to announce the publication of a Portrait of Her Majesty, from a Drawing recently executed by special command of Her Royal Highness the Duchess of Kent, by B. J. Lane, Esq. A.R.A. and to inform that in the finest style by P. C. Lewis, Esq. Engraver to His Majesty, Proof, 7*s.* 6*d.*; Prints, 5*s.*; a few Impressions before the Writing, 10*s.* 6*d.*

"A gem; with the softness and delicacy of a miniature, it combines happy expression and decided resemblance: the whole is beautiful."—*Morning Post.*

"One of the most accurate and pleasing resemblances of her youthful Majesty, and is sure to be generally admired."—*Morning Chronicle.*

"A sweet and beautiful likeness of her Majesty, engraved with extreme delicacy."—*Athenaeum.*

Royal Library, 33 Old Bond Street.

### SALES BY AUCTION.

### VALUABLE LIBRARY of BOOKS.

BOOKCASES, ROSEWOOD CABINET, UNIQUE COLLECTION OF PORRITS, GEOLOGICAL and MINERAL SPECIMENS. SUPERIOR PHILOSOPHICAL INSTRUMENTS, MODELS of STEAM-ENGINE &c. and other interesting items.—MR. JURY begs respectfully to notify, that he has succeeded in disposing of the Residue of a Gentleman's of Eminence, deceased, to Sell by Auction, at Mr. Shuttleworth's Rooms, Fenchurch, on Wednesday, 26th July, and following Days, the Select and Valuable Library of Books, including Humboldt's New Spain, Cuvier's Works, Meritt's Astrologia Gallica, Bertroni, Chapman's Newton's Letters, Richardson's Miscellanea, Dictionario della Lingua Italiana, Shaftesbury's Characteristics, Mr. Arthur's Life of Nelson, Lewis's Topographical Dictionary, and numerous other Works of Literature, History, Philosophy, and scarce editions on Colonial and Foreign Law, in several languages; Choice Collections of Geological and Mineral Specimens; Fossils from the Calcare Groussier; Specimens of splendid Plants; Capital Philosophical Instruments, including a splendid Plate, Steam-Machine; Air Pump; Wedgite; Diagrams and Transparencies for Illustration; a handsome Rosewood Cabinet; two Oak Library Bookcases, fitted for Collections; and other Articles.

## REVIEW OF NEW BOOKS.

## SCOTLAND.

1. *The Highlanders of Scotland, their Origin, History, and Antiquities, with a Sketch of their Manners and Customs, &c.* By W. F. Skene, F.S.A. Scotland. 2 vols. 8vo. London, 1837. Murray.
2. *Excursions through the Highlands and Isles of Scotland, in 1835-6.* By the Rev. C. Lesingham Smith. 8vo. pp. 311. London, 1837. Simpkin and Marshall.
3. *Tytler's History of Scotland, Vol. VI.* 8vo. pp. 474. Edinburgh, 1837. Tait.
4. *The Fly-Fisher's Entomology; illustrated by coloured Representations of the Natural and Artificial Insect; and accompanied by a few Observations relative to Trout and Grayling Fishing.* By Alfred Ronalds. Pp. 115. London, 1837. Longman and Co.
5. *The Angler's Manual; or, Fly-Fisher's Oracle; with a brief Compendium of Bottom Fishing.* By John Turton, of Sheffield. Pp. 86. London, 1837. Groombridge; Sheffield, Ridge.
6. *Piscatorial Reminiscences and Gleanings.* By an old Angler and Bibliopolist. To which is added, a Catalogue of Books on Angling. London, 1837. Pickering.

Now is the season for the "Land of the Mountain and the Flood, Land of Green Heath;" the land for healthful sports, and the enjoyments of all those luxuries which Nature so bountifully spreads out before us. Happy are they in "populous city long y-pent," who can engage the magic power of steam, and, in a few hours, find themselves in the midst of all these charms, "the pomp of groves, the garniture of fields,"—before, around, and about them, the cooling stream, the bracing air, the pure blue arch of heaven. For us, we must look at them through books, and have, therefore, classed the foregoing six publications together.

From the first three works various pictures of Scotland may be viewed, or Scotland be seen under such various aspects as Time presents from the earliest record to the latest inspection. Mr. Skene is a sturdy, national antiquary; and his inquiry into the origin, primitive state, division, and location of the Highland clans, as well as into the darkest periods of general history, is one of great interest. In the former respect he has been preceded by Stewart of Garth, Logan, and others; and, in the latter, by many authors of England, Ireland, and his native land.

"In presenting this work (he says) to the public, it will be necessary to say a few words regarding the system of history developed in it. A glance at the table of contents will shew that that system is entirely new; that it is diametrically opposed to all the generally received opinions on the subject, and that it is in itself of a nature so startling, as to require a very rigid and attentive examination before it can be received. The author had, from a very early period, been convinced that the present system was erroneous, and that there was in it some fundamental error, which prevented the elucidation of the truth. Accordingly, after a long and attentive examination of the early authorities in Scottish history, together with a

thorough investigation of two new and most valuable sources—viz., the Icelandic Sagas in their original language and the Irish Annals—he came to the conclusion, that that fundamental error was the supposed descent of the Highlanders from the Dalriadic Scots, and that the Scottish conquest in the ninth century did not include the Highlands. Proceeding upon this basis, the system of history developed in the following pages naturally emerged; and it will be found the first attempt to trace the Highlanders, and to prove their descent, step by step, from the Caledonians,—an attempt which the incontrovertible Irish origin of the Dalriadic Scots has hitherto rendered altogether unsuccessful. The author is aware that to many this system may appear wild and visionary; but he feels confident that a perusal of the chain of reasoning contained in the first few chapters, will be sufficient to satisfy any unprejudiced inquirer that the true origin of the Highlanders is therein ascertained, and that their descent from the Caledonians rests upon historic authority of no ordinary strength. The same remarks which apply generally to the origin of the Highlanders, are true also with regard to the Highland clans; the descent of each of these has been traced and proved from the most authentic documents, while the absurdity of the Irish origins of the sixteenth and seventeenth centuries, as well as the Scandinavian dreams of later historians, have been shewn."

Mr. Skene contends that the Picts and Caledonians were the same people, and the Dalriadic Scots an Irish invasion and colonisation of the 6th century. That the invaders, as it were, split the country into two, forcing the northern population into the highlands and isles where they became the Gael; and in the sequel subduing, driving out, or incorporating themselves with that of the south or lowlands. He also traces the effects of the sea-king inroads and settlements, and finally gives us the genealogies, &c. of all the principal clans which, after ages of turbulence, warfare, and change, are still to be distinguished in the northern portion of our united island. Altogether, the work is one of great national interest, and reflects much honour, not only on the author's patient industry, but on his ability and discrimination. Among the earliest notices, the following is a striking example of these qualities:—

"The earliest authentic notice of the British Isles and of their inhabitants, which we possess, appears to be the voyage of Hamilcar, the Carthaginian, in the fifth century before the incarnation, as described by Festus Avienus; from that account it may be inferred, that at that period the larger island was inhabited by a people called Albiones, while the Gens Hibernorum possessed the smaller island, to which they gave their name. From this period we meet with little concerning these islands, except the occasional mention of their names, until the arms of Julius Caesar added Britain to the already overgrown empire of the Romans. When Caesar landed upon that island, its name had already changed from the more ancient appellation of Albion to that of Britannia: and although he calls the inhabitants indiscrimi-

minately Britanni, yet it appears from his account, that they consisted at that time of two races, strongly distinguished from each other by their manners, and the relative state of civilisation to which they had advanced. The one race inhabited the interior of the country, and all tradition of their origin seemed to have been lost; while the other race which inhabited the more maritime parts of the island, were acknowledged to have proceeded from Belgium. From this we may infer, that the inland people were principally the ancient Albiones: while the others were a new people, termed Britanni, who, by the conquest of the island, had imposed upon it their name. At the same period, too, it would seem that Ireland had received a new race of people, termed Scotti, as in the cosmography attributed to Æthicus, and said to have been drawn up by the orders of Julius Caesar, we find it mentioned that Ireland was inhabited by Gentibus Scotorum. Sidonius Apollinaris also mentions the Scots as having been among the enemies of Caesar. That these Scots are to be distinguished from the more ancient Hiberni, is clear from the lives of St. Patrick, the most ancient notices, perhaps, which we have of the state of that island. But, even independently of that, we should be led to the same result by analogy, the name of Scotia having gradually superseded that of Hibernia, in the same manner as the name of Britannia had previously superseded that of Albion. It would thus appear that, in the time of Caesar, each of the British Isles had received a new race of inhabitants, the Britanni and the Scotti, in addition to the old possessors, the Albiones and the Hiberni."

Having examined all the leading facts stated by Roman authors, Mr. Skene concludes—

"That the Picts are the descendants of the ancient Caledonians; that these Picts or Caledonians remained the only inhabitants of North Britain till the beginning of the sixth century; that a colony of Scots from Ireland effected a settlement in the island about that time, and that they had firmly established themselves there, and possessed considerable extent of territory in the time of St. Columba, or about sixty years later, and continued in the same state down to the time of Bede in the eighth century."

The investigation is pursued with equal diligence throughout; and after disposing of the general history to the effect we have intimated, the origin of the Highland clans is discussed in a striking manner. It is, however, impossible to detach any portions from this part of the design, and we must refer our readers to the work itself.

The *Ramble in Scotland* is a pleasant tourist's companion. Even in Edinburgh, so much visited and so often described, the writer finds means to impart novelty to his narrative. For example—

"In the last western house on the south side of St. Andrew's Square, entering from St. David Street, David Hume lived for many years, and there died. In a flat of the house immediately opposite to Hume's, on the north side of the square, and likewise in St. David Street, Lord Brougham first saw the light.

Lastly, on the east side of Castle Street, a little north of George Street, is the house occupied by Sir Walter Scott; its number, 39, has been considered curious, inasmuch as one of its digits expresses the number of the Græces, the other that of the Muses. Almost the whole of the new city has been built with stone from Craigh-leith quarry. This quarry is worthy of a visit, not only from its great extent, but also on account of the gigantic fossil tree which has been recently discovered embedded there. It has not been removed from the position, in which it was originally found; and, indeed, a great portion of its matrix still remains undisturbed. It stands inclined at a considerable angle from the vertical, and whether its roots are at the summit, or at the base, the learned still dispute. Mr. Nicol, by a most ingenious process of microscopic observation, has determined it to be an *araucaria*; a tribe of plants, whose *habitat* is now, I believe, wholly confined to Australia, or regions south of the Equator. How startling to meet with these unexpected records of primeval years—these singular and convincing proofs that our lands have changed their surface and their clime! And how wonderful, to find the organisation of an antediluvian stem, preserved in all its freshness and intricacy down to our times! The structure of its various cells and vessels, and the exquisitely delicate reticulations exhibited by thin sections of the fossil through the lens, are seen as distinctly as those of similar sections from a modern plant; and all this after the lapse of so many thousands of years! after the shock of so many stupendous convulsions! after the whole of the vegetable substance has been withdrawn, and the present stony matter been deposited in its stead! Through the interest of Mr. Ellis I was admitted to see Mr. Nicol's extensive and beautiful collection of fossil and recent vegetables, arranged for examination through the microscope. His method of preparing them is as follows:—He cuts from the specimen to be examined a slice as thin as possible; one side of this he grinds on plate glass, till the requisite smoothness is acquired; the polished side is then attached to a piece of clear glass by a transparent varnish, and when the adhesion has become firm, the other side, in its turn, is ground, till the section is reduced to a proper degree of thinness. The last operation demands some practice and manual dexterity. For, if on the one hand the process be not carried on far enough, the result does not exhibit a simple section of the cells, but a system of two or more sections one above the other, thus creating an appearance of undue complication; this circumstance has given rise to numerous errors, in assigning the genera of plants by a reference to their intimate structure. And if, on the other hand, the grinding is continued a single turn too long, the weblike texture of the specimen is torn and broken up, and all the labour bestowed on it is thrown away. Some of the facts, which Mr. Nicol has established by patiently and carefully examining a vast number of different plants, are extremely curious. In the pine tribe, and also in the *araucaria*, the microscopic section displays a series of parallel and equidistant fibres, perpendicular to which are disposed rows of circular vessels or annuli; in the former tribe these annuli are invariably placed exactly under each other; in the latter they always alternate with each other. By this simple test a piece of wood can at once be pronounced to belong to one or other of these genera. The yew may be recognised by the circumstance, that the spaces between the parallel fibres are occupied, not by rows of

annuli, but by a set of zigzag lines, each of which passes backwards and forwards from one to the other of the parallel fibres. The poplar may be detected very readily, by examining the section of the pith, which is always pentagonal. Of course a longitudinal section of any plant exhibits a very different appearance from the transverse section; but I have hitherto been speaking only of the latter. This in general appears the same, from whatever side of the stem the slice be taken, provided it be at the same distance from the pith: but Mr. Nicol has discovered one remarkable exception to this uniformity. It occurs in a taxodium, where it seems that, though the plan of the reticulations, if I may so speak, is symmetrical in the main stem, yet if transverse sections of a branch be taken, then those from the lower side of it exhibit a very different plan from that which sections of the upper side exhibit; the difference consisting in a much greater complication of plan."

We shall only add, that Mr. Smith saw much of the country, that his descriptions of its scenery are graphic, his incidents various and interesting, and his style distinguished by simplicity and neatness.

Of Mr. Tytler's Sixth Volume it is hardly right to speak in union with other publications; for it is certainly of sufficient importance to claim a distinct and separate review. But as it embraces only the period from the murder of Cardinal Beaton (1546) to the marriage of Mary with Darnley (1565); and we could wish to contemplate the whole reign of the unfortunate Mary at once, we are inclined to defer a critical and historical examination till the next volume appears. In the mean time, it is but justice to pay our tribute of applause to the judicious and valuable labours of Mr. Tytler, in thoroughly examining the records of these eventful years. The Scottish Reformation, the plots of the Guises, and, above all, the tortuous policy of Queen Elizabeth and her ministers, are exhibited in strong colours. The correspondence of many of the principal actors in these dark scenes has been thoroughly sifted; and thus new lights been thrown upon events hitherto obscure and misrepresented. We observe that Mr. Tytler thus speaks of a production which his own inquiries contradict in many particulars:—

"This volume was nearly finished printing when Mr. Van Ranmer presented to the world his work, entitled 'Contributions to Modern History,' from the British Museum and the State Paper Office, embracing illustrations of the reign of Mary Queen of Scots, and of the character and conduct of Elizabeth. It is to be regretted that this lively and ingenious writer should have fallen into the singular mistake of printing, as new materials, what has been long familiar to the critical readers of Scottish and English history. The letters, or rather the extracts from letters, which he has given as illustrating the first part of the reign of Mary, from 1561 to 1566, had (with a few slight exceptions) been published from the originals by Keith, in his elaborate work, entitled, 'The History of the Affairs of Church and State in Scotland.' (Edinburgh, 1734). This volume of Keith, was the great mine from which Robertson drew his stores, and it formed the chief basis of Hume for the Scottish portion of his history. Its letters have been repeatedly quoted by succeeding writers, and it is still of the greatest utility to every reader who is anxious to derive his knowledge from authentic sources. To repeat these letters was superfluous; to mutilate and misunder-

stand them, was unfortunate;—but the climax of error was to give them as new matter. The author mentions this to shew that English and Scottish historians are not so utterly neglectful of the manuscript riches of England; as has been supposed, and that the 'new lights,' which some of the periodical critics have hailed, as proceeding from Prussia, may, indeed, be new to that country, but have been burning for upwards of a century in England. Mr. V. Raumer, whose continental reputation is firmly established, will, it is hoped, receive these remarks as they are meant to be given—in the spirit of necessary, but not unfriendly criticism."

Both the *Fly-Fisher's Entomology*, and the *Angler's Manual*, contain excellent instructions for successful fishing, and we recommend them accordingly to the lovers of the angle, and of a pastime, which, whatever wits and philosophers have said to disparage, will afford a placid and charming recreation not only to all other classes of men, but even to wits and philosophers, so long as the world lasts.

The last-mentioned attractive and amusing miscellany is from the pen of a bookseller and publisher of considerable notoriety, not only in England but in foreign countries, but who has now retired from the bustle of commercial employment, and, in some measure, from the active enjoyment of his favourite pursuit, "to shoulder the rod, and shew how fish are caught." Of his success in this way we have a very favourable specimen in the volume before us, which treats of the general organisation of the finny tribes; their systematic classification, according to Cuvier; the best methods of fishing with rod and line; the most judicious choice of times and seasons, and the most favourable selection of stations for the purpose;—the result of a long experience in angling, from boyhood to declining age. Besides this useful information, we have an abundance of entertaining anecdotes of fish and fishing in all parts of the world; and the work is illustrated with some very pretty wood-cuts, of those fishes which are more peculiarly the angler's delight. A *Bibliotheca Piscatoria*, or Catalogue of Books on Angling, the best we have yet seen, will be found extremely useful to collectors. It is sufficient to say that the author is indebted to Sir Henry Ellis for this valuable addition to his very popular work. To all the "gentle brothers of the craft" we commend this entertaining and instructive volume.

*Narrative of an Expedition into the Interior of Africa, by the River Niger, in the Steam-Vessels Quorra and Alburkah, in 1832, 1833, and 1834.* By Macgregor Laird, and R.A. K. Oldfield, surviving Officers of the Expedition. In 2 vols. 8vo. London, 1837. Bentley.

AFTER long delay, we have at last the narrative of this interesting and, we lament to add, tragical expedition before us; and, as nothing of ours, especially after all we have formerly said on the subject, can be so welcome to the public as the leading features of the work itself, we shall, at least in this No., plunge at once into the midst of the voyage, and go as far as our limits permit. Away from England, then, and on the coast of Africa.

"On the 6th of October we came to an anchor off the Dutch fort of Axim. Having finished our last stick of fire-wood, Mr. Lander and Lieut. Allen went on board the *Alburkah*, she having still some left, the former being anxious to reach Cape Coast for the purpose of arranging matters concerning his men. In the morning of the 7th we went on shore, and were

welcomed by the governor of the fort, who was the only European resident. His garrison consisted of one corporal and five men, who, he told us, gave him infinitely more concern and trouble than all the rest of his subjects. We were not a little amused at the method adopted by this son of Mars in administering his authority, which extends from Cape Apollonia on the west to Dix Cove on the east. His plan was simply as follows:—On receiving a complaint from any one within his district, he immediately sends his stick to the village in which the offender resides. The messenger who is charged with it places it upright in the ground in the centre of the village, and remains close by it. The natives know well the meaning of this, and that the appearance of the governor's stick in this formal manner is nothing more or less than a demand of eight ackeys, or half an ounce of gold, from the offending person. The messenger remains by his charge for twenty-four hours if the offender be obdurate; at the expiration of which time the governor's hat is despatched after the stick, and is deliberately placed on it as it stands in the ground. This, however, makes the matter more serious, and the demand is increased to an ounce of gold in consequence. Should the hat and the stick be insufficient to move the offender to pay the fine, a third messenger appears with the governor's sword, and an additional ounce of gold is required; and it is a remarkable fact, that this last resource has never yet been known to fail; in fact, the stick alone is generally all-sufficient. In addition to this, there is a certain charge for putting a prisoner into irons, and another for taking him out again; another for his lodging in the castle while confined, and another to the constable for locking up. I had often heard of Dutch colonial tyranny, but could not have imagined it carried to such an extent; nor could I have imagined that the natives would have submitted to it."

We pass for the present the afflicting description of the deaths which ensued as they ascended the river, and diversify our notice with a piece of African sport of off Atah.

"One day, while we lay at anchor off the town, I witnessed one of the most ingenious ways of killing an alligator that could be imagined. One of these huge creatures was discovered basking on a bank in the river, a short distance ahead of our vessels. He was observed by two natives in a canoe, who immediately paddled to the opposite side of the bank, and having landed, crept cautiously towards him. As soon as they were near the animal, one of the natives stood up from his crouching position, holding a spear about six feet long, which with one blow he struck through the animal's tail into the sand. A most strenuous contest immediately ensued; the man with the spear holding it in the sand as firmly as his strength allowed him, and clinging to it as it became necessary to shift his position with the agility of a monkey; while his companion occasionally ran in as opportunity offered, and with much dexterity gave the animal a thrust with his long knife, retreating at the same moment from within reach of its capacious jaws as it whirled round upon the extraordinary pivot which his companion had so successfully placed in its tail. The battle lasted about half an hour, terminating in the slaughter of the alligator, and the triumph of his conquerors, who were not long in cutting him into pieces, and loading their canoes with his flesh, which they immediately carried to the shore and retailed to their countrymen. It is evident that the success of this plan depended on the nerve and dexterity of

the man who pinned the animal's tail to the ground; and his contortions and struggles to keep his position were highly ridiculous and entertaining."

Having got up to Fundah, we read—

"About ten in the morning, the king's chief eunuch came to see our packages of goods examined, in order that we might be satisfied that our conductors had taken nothing. On finding every thing right, I made a present to each of the escort and bearers far beyond their expectations. In the afternoon I was visited by the king, who was attended by a great number of eunuchs and a cavalcade of about a dozen horsemen. He was splendidly dressed in silk and velvet robes, and appeared to be a man of immense size. His countenance is by no means prepossessing, particularly his eyes, which are of a dirty red colour, having a sinister and foreboding expression. I presented him with a brass-mounted sword, an umbrella, five feet in diameter, highly ornamented, a brace of pistols, and several other things, and then informed him, through my interpreter, that I had come from a great distance to look at him in the face, and to hold a good palaver with him; that his messengers had informed me it was his desire to see the face of a white man, and, trusting to his good faith, I had come, though ill and unable to walk; that I was anxious to give him our goods for ivory, and had brought with me a great quantity for that purpose. Having finished my speech, he rose, and said, in the Housea language, that he was glad to see the face of a white man—it was what he had long wished for; that he had abundance of ivory, and that all that he had was mine: to which sentiments twelve gray-headed negroes, who appeared to form his privy council, bowed assent. I then complained of the reception which I had met with, the miserable hut in which I was lodged, and requested that I might be provided with another in a more private situation immediately. To all this he readily assented, and moved off amidst a horrible din of trumpets, drums, and a kind of fife-music. But I had yet to learn a lesson: it seems that every thing which the nether end of this royal personage touches is sacred, and has the broad arrow affixed upon it. As soon as the king rose from his seat, which most unfortunately happened to have been the tin-box that contained my clothes, covered with a Turkey rug, his attendants deliberately shouldered my unfortunate bag, and strode off after their master. This was rather too much, and before they had got out of the yard, they were happily stopped by two of my Kroomen."

The foregoing are from Mr. Laird's narrative, which occupies above 300 pages of the first volume, when Mr. Oldfield takes up the task; and we find some very interesting accounts of the River Tchadda, up which an ascent of about 105 miles was effected.

"On the 2d of August, before the sun was many fathoms high, as the Mallams term it, we were on our way to the Tchadda. The morning was beautifully clear and serene; the sun shone with uncommon splendour; and the small rocky islands in the midst of the stream near the confluence of the two great rivers, the Tchadda and Niger, gave an enlivening and cheerful character to the surrounding scenery. We were now about to enter a stream which was (comparatively speaking) totally unknown, and where no white man had penetrated. What difficulties we might encounter before our return we could not foresee; and we trusted to the protecting care of Providence for a successful result to our efforts. Our inten-

tion was, if practicable, to reach Lake Tchad from the Tchadda, which, if we succeeded in doing, we should add a grand and important discovery to the results of our voyage. The natives considered it quite practicable; and Mallam Catab inquired if we were going to the Great Sea, meaning the Lake Tchad."

Further on,—

"The prospect around was now extremely wild and dreary, although the country had been improving. No canoes or natives were visible, and the only living creatures we saw were a few birds and some baboons. The latter chattered, grinned, and leaped from bough to bough in evident terror and surprise. A suspicion that we should be very much troubled with mosquitoes rendered the thoughts of a night's rest in this place any thing but agreeable. We afterwards passed two small towns, but none of the natives were visible, though at night I could hear the sound of voices on the shore. \* \* \*

"There being as yet no sign of provisions, I volunteered to go ashore, with cowries, to endeavour to purchase some, accompanied by Mina, one of the Kroomen. As soon as I landed, to my infinite surprise, I beheld Jowdis, who by this time was supposed to be at Demah. He stated that he had proceeded some distance on his journey, when he was met by some Bornon soldiers, who opposed his progress, and, threatening to cut his head off if he proceeded, insisted on his return. This was extremely mortifying. We were one hundred and four miles from the Niger, destitute of provisions, and with but little prospect of obtaining a supply, as the natives refused to furnish us with any. When we entered the towns, they deserted them, and retreated to the fields or mountains. Under these circumstances, there being no prospect of establishing a traffic, Mr. Lander deemed it advisable to return, much to my great disappointment, as I was in hopes of reaching Becsle and Jacoba, places of great trade, eight or ten days' journey up the river, abounding in salt, called *frons* (a subcarbonate of soda). We learnt that the fugitive chief of Dagboh had five elephants' teeth in his possession; but, notwithstanding our protestations of friendship, we could not induce him to trade with us. They imagined we were Felatahs, and, consequently, objects of suspicion and terror, as that people had carried on their predatory excursions up the Tchadda, and in their progress had set fire to several towns. We had now nothing on board but Dower corn, and, having ground it as fine as possible, we had it made into bread, which, though somewhat coarse, was extremely sweet and palatable. At a small neighbouring village we could procure nothing but one fowl and some small yams, which cost us two hundred cowries each. \* \* \*

"A circumstance occurred to this poor woman which is strongly characteristic of the blind superstition of the natives in this part of Africa. This poor creature imagined that she possessed a *magbong* (charm) which rendered her invulnerable to all edge-tools and cutting instruments. So positive and convinced was she of the efficacy of her charm, that she voluntarily assented to hold her leg whilst some person should strike it with an axe. The king (or chief) of her town, on hearing this, determined to try the power of her charm, and desired a man to take an axe, and see whether this wonderful *magbong* would protect her from its effects; considering that if it did so, such a charm would be of great advantage in war. Her leg was laid on a block, and a powerful blow given below the knee, the result of which was as might have been expected. To the poor

woman's great horror, and the terror of all present, her leg flew to the other side of the room. But she survived it, and now crawled about on her knees."

Having returned to the Niger, the expedition proceeded up to Rabbah, its utmost limit, and about 450 miles from the sea.

"At Egga, for the first time, we met with Felatahs. I saw four of them there, wearing white turbans, like the Fuaricks. The turbans were passed round the head, concealing a small skull-cap: the two folds of the turban carefully covered the mouth and nose, leaving only the eyes visible, which, with their darkened eyelids from the application of antimony, gave them a strange appearance. They appeared to be a shrewd kind of people, asked several questions of us, and among the rest, the motives of our coming up the river, and if we intended to visit the King of Rabbah. On being shewn the large gun, they cast their eyes up, exclaiming, 'Allah, Allah!' Many of their people, as far as I could understand them, are a shade or two lighter than the generality of the natives.

"We now passed the extreme point of the island of Zagoshie, off Rabbah. A canoe belonging to the King of the 'Dark Water,' shortly after passed us, and we arrived in sight of Rabbah—a circumstance which gave us all great satisfaction. As we rapidly approached the town, it appeared to be situated on the slope of a rising ground; and the houses being built one above the other, impart to it the appearance of an amphitheatre. With the aid of a glass we could discern an amazing crowd of natives assembled on the banks; but, what was more in accordance with our wishes, we could distinguish horses, cows, bullocks, sheep, and goats. As we drew nearer, we found the city to be of immense extent, with villages all round the suburbs. We went inside a small island under the town, where we anchored at 6.10 P.M. in a kind of bay, in one fathom and a half water. The king was apprised of our intention to fire a salute, and the walls of Rabbah, for the first time, re-echoed with the sound of British cannon, and her people witnessed a novel sight in the arrival of a British steam-vessel constructed of iron. After our salute, our people broke out into three hearty cheers, which, perhaps, surprised still more the thousands of human beings that were assembled before the walls of Rabbah. As we had neared the city, a great number of Felatah horsemen were seen coming out to look at the vessel; one of whom was particularly conspicuous, from riding on a white horse. Having anchored our vessel late, we lay quiet till the next morning, when we prepared to visit the king. Horses having been sent to the water-side for us, Lieutenant Allen, Mr. Lander, and myself went ashore, accompanied by some Kroomen; and I enjoyed the satisfaction of being the first Christian who had ever landed at Rabbah. The horses were small, and we found considerable difficulty in mounting, from the concourse of natives being so great. We were preceded by Sullikeen Mansony (king of the Messengers), after whom followed a posse of constables armed with crooks and staves. The appearance of the crooks was strange enough; indeed, they reminded me of the representations of shepherd's crooks, and were, *sans cérémonie*, hooked round the neck of every intruder. Our conductors were likewise furnished with whips made of the skin of the hippopotamus: and these they used with very great severity on the backs of the natives, to keep order. As we passed on, we found the

streets narrow and excessively filthy; dung-hills were seen in the most public thoroughfares. We passed through the wood-market, and another in which grass was sold; also the shambles, the slave-market, and the cloth-market, all distinct from each other. To our left was the market for bullocks, where about one hundred fine beasts were exposed for sale. In various sheds were saddles, beads, sandals, tobies; and other articles were offered to the view of purchasers. Indigo was likewise exhibited for sale, and baskets of senna. The king's houses are between thirty and forty in number (each of which is surmounted by an ostrich's egg), and are situate about a mile and a half from the water-side, and inclosed by a very high wall, constructed of mud and red sand. After passing through several apartments, we were ushered into a very naked and comfortless room, in one corner of which stood the very identical white steed which we saw as we approached Rabbah the morning before. The outer apartment was the palaver-house, where the chiefs and princes assemble. As we passed through it, there were upwards of one hundred, seated cross-legged, *à la Turque*, together with a great number of Arabs. They appeared to be respectably dressed, and all of them wore a piece of white muslin around their heads, one end of which they brought round over the mouth, and left nothing but the eyes exposed, as mentioned by former travellers. We were much disappointed by the appearance of the king, and it was not until a considerable time had elapsed that we could discover which really was his majesty. At first we were told that the person before us was the 'king's mouth'; but at length we discovered his sable majesty in the person of Osiman, son of Mallam Dendo. He wore a very common tobe, with a piece of muslin over his mouth and nose, which he never attempted to move, but inserted his fingers under the turban, to allow free motion to speak. Close beside him were his sandals, and a silver pot, containing some Goora nuts, which he dealt out with a liberal hand. His manners were dignified and imposing, his conversation free and easy, and his remarks shrewd and sensible. He appeared to be well-informed, and his manners altogether bespoke the courtier. Opposite the house in which we were seated was another dwelling, two stories high, at the upper window of which were two fine Felatah girls, who laughed and shewed me some pieces of lead, beaten out into the size and shape of a dollar, which they wore as rings on their fingers. They, no doubt, wanted dollars; but unfortunately we had come utterly unprovided with any. During the audience, several of the king's women would come and peep at us; and if, casually or intentionally, we turned our heads and perceived them, they would scamper away laughing. The presents which we had brought with us, and which were numerous and valuable, were taken away and placed in another apartment; the king scarcely deigning to look at them, as it is not customary for princes to notice the presents given them, such a thing being considered derogatory. We understood that there are three or four others of equal power, to whom we must also make presents. The audience or palaver having terminated, we took our leave of the king, and were conducted to the abode of Mallam Moosa, an elderly and very good man. He requested us to be seated on a mat beside him, gave us Goora nuts, and talked and laughed with us freely. He was seated in the midst of thirty or forty others, amongst whom I saw several Arabs, two or three of whom, in particular, struck me as

being ferocious and ill-looking men, with beards reaching down to their middle. One of these sages had a beard of a fine jetty-black colour, resembling in shape a peacock's tail. After remaining with our friend, the Mallam, about half an hour, we were conducted to Sullikeen Yiki (the king of War.) A little rain falling at this time, we put on our water-proof cloaks, which furnished a new subject of curiosity among the natives, who stared with astonishment, as they completely enveloped our horses as well as ourselves. Mallam Moosa's house was situated in the market-place, through which we had to pass. Here the greatest confusion prevailed: the throng that followed us, joined to the numbers collected in the market-place, rendered passing almost impossible; stalls and their baskets were upset; cowries were flying about in all directions; and several poor creatures were knocked down and trampled upon. We were accompanied by a deaf-and-dumb boy, who carried a whip made of the hide of the hippopotamus, which he used most unmercifully, making, at the same time, a singular noise. The population of Rabbah must be immense. We noticed a number of very fine entire horses. Mr. Lander met with an Arab, named Ali, who appeared unusually communicative: he told him that the king and principal men had all made preparations for leaving the town; and had not our messengers convinced them of our friendly intentions, they would have carried their design into execution. We found Sullikeen Yiki seated on a leopard's skin, with about twenty others around him. In appearance he is a most ferocious-looking fellow, and is deeply pitted with the small-pox. His face is very broad, and ornamented with the most capacious mouth: he wore a sword over his left arm. There was something in this man's look which was any thing but prepossessing, and, after staying a short time with him, we took our departure."

Whilst here, in all the trouble of African fraud and intrigue, we are told,

"Al Hadge, who had been all night on shore, came on board, and informed us of the death of Mallam Dendo. He expired at the precise moment when we fired our morning-gun, eight o'clock. Pagans and Mahomedans, in the interior of Africa, place great confidence in a medical man (Sullikeen Maghony, king of Medicine), and believe him competent to perform any thing, as the following instance will shew: I was accused by the Felatahs of having caused his death, by blowing maghony (poison) through the key-hole of his door! I learned that the old man had been sick about five days. The Felatahs had threatened to behead Al Hadge, who, knowing us well, and how much we esteemed him, said, that if they did so, they would not have a house standing, for that our great guns would knock them all down at one time. A messenger was sent to the king to condole with him for his loss, and was desired to inform his majesty how deeply we sympathised in his afflictions. Osiman sent word that he felt our kindness, and was obliged to us, but that God had taken his father away. He asked our messenger, Mina, 'Why don't you stay with us, who are your countrymen, and not go with the Christian dogs and unbelievers? It is well known,' says he, 'that in their own country they eat black men, and dye red cloth with their blood. Besides, they know nothing, not even Allah (God); and after death, they are our slaves in Paradise!'

"On the following morning we released the Felatah whom we had seized. He confessed that it was the intention of the king and chiefs

to get us all on shore and poison us, and afterwards to seize the steamer.

"The city of Rabbah contains a population of nearly forty thousand, natives of Housa, Yarriba, Ibbodo, and the Nufie countries. Their religion is Pagan and Mahomedan. The only mosque which I saw at Rabbah (though I was informed there were three others) was built in a large square, surrounded by a high wall: it is partly covered over, and will contain about two thousand persons. The Felatahs of Rabbah subsist, by plundering the weak towns, and levying contributions on them. Rabbah is governed by a king, or chief, and several elder Mallams."

*New Dish.*—"The natives of Addacoodah collect the spawn of fishes; roast it, after forming it into balls, which are covered with plantain or banana leaf, about the size of an orange. It is very sweet eating. I have purchased upwards of one hundred of these balls a-day, sufficient for all hands for three days."

*Immense Elephant's Teeth.*—"He told us that he had a house full of ivory, and despatched some eunuchs for two large teeth. In a few minutes they came. He exultingly asked, 'Can you afford to buy them?' at the same moment two magnificent teeth were brought in, exceeding in size any thing of the sort I had ever seen. At the roots they were about two feet and a half in circumference, and gradually tapered to the point: it took two able-bodied slaves to carry one of them: they were each about eight feet long, and of a dark tinge. I endeavoured, in my own mind, to picture the enormous size of an animal capable of carrying such a weight attached to his head. I should suppose that each tooth could not have weighed less than from two hundred to two hundred and fifty pounds. We had one on board, weighing one hundred and forty pounds, which we purchased when off Addacoodah, and those which we then saw were nearly twice as large. The king asked me if we had goods sufficient to purchase them: to which I replied, we had, provided he did not ask more than their real value. I inquired what he would take for them, as I should like to come to an agreement before going on board; but he replied, they were the king of teeth (Sullikeen Gowaws)."

#### *Bulwer's Athens.*

[Second notice.]

IN a former Number we expressed our intention of recurring to Mr. Bulwer's volumes as soon as opportunity should permit; and we think there is no need of apology to our readers for again introducing to their notice a subject of so much attraction and interest. Our author himself justly remarks, that it is not so much to her arms and institutions, though her warriors and statesmen have been many, as to her men of letters, that Athens owes the greater part of her fame; and it has, accordingly, been his object, with a complete account of her political transactions, to combine an elaborate view of her literature. It is to this latter branch that, in the present Number, we shall confine our observations, premising that, if, in the analysis of poetic feelings and inspiration, "he best can paint them who can feel them most," few will be more adapted for the conduct of such comprehensive, yet minute investigations, than Mr. Bulwer. At the close of the first book, a chapter is dedicated to a brief survey of art, letters, and philosophy, prior to the legislation of Solon, before which period the literature of Greece was but scanty in comparison with its coming glories. Homer,

however—Homer, whose single name, unassisted by any epithet, may best express the majesty and simplicity of his nature—had already enriched the world with his matchless performances; and, as might be expected, many pages are devoted to this mighty master of the mind. We must confess we were disappointed in the manner in which Mr. Bulwer has discussed the Homeric poems. He has done little more than enter into the often agitated questions of their age, and argue with great length upon the unity and identity of their author—points which, in our apprehension, are by no means worthy of the labour and ingenuity bestowed upon them. The length and episodic character of a detailed criticism upon these master-pieces are given as reasons against its introduction; but we think that such a digression, however long it might be, would be fully warranted by the delightful nature of the subject, which, in the hands of a writer like Mr. Bulwer, could not fail of acquiring fresh novelty and interest. Proceeding from Homer, the lyric poets are lightly touched upon; but we find but little to detain us in this early period.

We now turn to the Grecian tragedy. This is a subject on which, from the deep attention bestowed upon it in all times by the learned, little or nothing new can be said; but, through his detailed criticisms of the plot, language, and sentiments of the most famous specimens of tragic composition extant, Mr. Bulwer has contrived to place their nature in a clearer light, and put the modern reader in possession of a vivid and correct idea of their merits and genius.

Without waiting to decide upon the rival claims as to the invention of this branch of the drama, let us proceed at once to Æschylus, in whose time tragedy, in our acceptance of the word, may be said to have commenced. Gifted with the illusions of scenery and dresses, it sprang, Minervalike, from his brain into full existence; and, though in its infancy, it appeared arrayed in a majesty and glory of intellect equal to the greatest splendour with which it has dazzled our more modern eyes. The period in which Æschylus flourished was one of the most brilliant of Athenian history. The freedom of his native land had just been in an imperishable manner maintained against the mighty hosts of Darius and Xerxes; and the poet himself had been one of the conquerors at Marathon and Salamis. These circumstances seem to have imbued him with a proud consciousness of strength and freedom, and animate his works with such a martial spirit, that his characters, in the words of Aristophanes, seem actually "to breathe spears and helmets." The nature of his plots is simple; but even that simplicity sometimes wants method and regularity. The chief attraction of Æschylus lies in the grandeur and elevation of his ideas. It never was his aim to awaken the softer feelings of his audience, but to arouse their surprise, terror, or indignation; hence the dim, mysterious, undefined outlines of his characters, who, though men, seem possessed of more than mortal attributes, while, as they struggle on through uncontrollable misfortunes, that fearful goddess, Destiny, with her followers, whose name may not be said, hovers over them with an un pitying glance. The iron leaves of the tremendous volume of Fate, where gods and men alike read their doom, are spread before us, and fill us with a thrilling sense of the misery and gloom which encompass our allotted path, while, at the same time, we feel ourselves encouraged to bear with for-

itude that which is unavoidable, and set Destiny itself at defiance, by the untameable spirit with which we meet its decrees. The following translation of the speech of the ocean nymphs to Prometheus, as he lies bound to a rock in the desert, is beautifully rendered by Mr. Bulwer—

"The wide earth echoes wailingly—  
Stately and antique were thy fallen race—  
The wide earth walleth thee!  
Lo! from the holy Asian dwelling-place,  
Fall, for a godhead's wrongs, the mortals' murmuring tears:  
They mourn within the Colchian land—  
The virgin and the warrior daughters;  
And far remote, the Scythian band,  
Around the broad Mæotian waters,  
And they who hold in Caucasus their tower,  
Arabia martial flower,  
Hoarse-clamouring 'midst sharp rows of barbed spears.  
One have I seen, with equal tortures riven—  
An equal god;—in adamant chain  
Ever and evermore  
The Titan Atlas, crush'd, sustains  
The mighty mass of mighty Heaven,  
And the whirling cataracts roar,  
With a chime to the Titan's groans,  
And the depth that receives them moans;  
And from vaults that the earth are under,  
Black Hades is heard in thunder:  
While from the founts of white-waved rivers flow  
Melodious sorrows, wailing with his wo."

The estimate which Mr. Bulwer gives of the character and powers of Æschylus is ably written. His Pythagorean tenets are merely alluded to, and we think it may not prove an ungrateful task to some of our readers, if we place before them those passages in which the poet's opinions coincide with those of the Samian philosopher. They were, we believe, first collected by an anonymous writer in the "Classical Journal."

It was a common notion among the ancients that the gods, if there were any, looked carelessly and indifferently upon the virtues and vices of mortals, and never troubled themselves by interfering either to reward or punish the insignificant inhabitants of the earth. They considered the "divum natura," in the words of Lucretius "semota à nostris rebus se junctaque longè." This destructive doctrine was opposed by Pythagoras, as shown by the commencement of the golden verses; from which, and the works of Jamblichus, we derive our chief knowledge of that philosopher's ideas. Æschylus also strongly reprobates this view of things in his "Agamemnon" (371). The veneration for an oath (Eumenides, 217); the power of necessity (Pr. v. 105); the advantages of pursuing the "juste milieu;" the immortality of the soul (Choeph. 321); the wisdom and sanctity of numbers (P. v. 468); the skill necessary in the imposition of names; or, as Cicero says, the doctrine "summæ sapientiæ fuisse omnibus rebus imposuisse nomen;" the science of physiognomy (Agam. 791-800); are topics which are equally insisted upon by the tragedian and the sage. Pythagoras also held, that when the body is parted from the soul in sleep, the latter is enabled to see coming events without any obstacle, and, consequently, that our dreams disclose futurity. "Cum est somno sevocatus animus à societate et contagione corporis, tum meminit præteritorum, præsentia cernit, futura providet." With this notion may be compared line 108 of the "Eumenides," where it is said, that "the soul sees clearer in sleep, but in the day the fate of mortals cannot be foreseen." To these coincidences may be added, the sacred nature of a suppliant (Eum. 233), and the power of incantations to dispel diseases (Agam. 16), which were both points of the Pythagorean doctrines.

There is one excellence of this poet which we do not remember to have seen noticed by Mr. Bulwer; we mean the abundance of those beautiful phrases, as *μαλ' ἄνθρωπος ὁμῶς βίβας*,

*deprævatos adque impiiavimus*, those "dijecti membra poete," which are in themselves poems, and which are found in *Æschylus* to a far greater extent than in any of his rivals. Let us now turn from the "father of tragedy" to *Sophocles*, the "Attic Bee," the poet of sweetness and grace, whose conceptions are moulded in the most perfect form of beauty, breathing a spirit of content and harmony. Wisely did the chorus of *Aristophanes*, while recounting the blessings of peace, place among them "the songs of *Sophocles*," with their soft melancholy, which often, however, rises into the sublime. Schlegel compares him "to a sacred grove of the dark goddess of fate, in which the laurel, the olive, and the vine, display their luxuriant vegetation, and the song of the nightingale is for ever heard." In an analysis of his tragedies, Mr. Bulwer displays the leading characteristics of this poet in a lively and masterly style. The accompanying lines are a translation of a description of the close of the stormy life led by the now worn out *Œdipus*.

"Then o'er them as they went, his hands he clasped,  
And 'O my children,' said he, 'from this day  
Ye have no more a father—all of me  
Withers away—the burthen and the toil  
Of mine old age fall on ye nevertheless.  
Sad travail have ye borne for me, and yet  
Let one thought soften grief when I am gone—  
The thought that none upon the desolate world  
Loved you as I did;—and in death I leave  
A happier life to you!"

Thus movingly,  
With clinging arms and passionate sob, the three  
Wept out aloud, until the sorrow grew  
Into a deadly hush—nor cry nor wail  
Starts the drear silence of the solitude.  
Then, suddenly, a bodiless voice is heard,—  
It call'd on him—it call'd; and over all  
Horror fell cold, and stirr'd the bristling hair!  
Again, the voice—again—'Ho! *Œdipus*,  
Why linger we so long? Come—further—come!"

We must here take our leave for the present of "gorgeous tragedy." This is a study, the pursuit of which may be rendered eminently useful in a variety of ways. By accustoming the minds of youth to the contemplation of vigour and originality of thought, nobleness of sentiment, and a fund of rich imagery and language, they become imbued with a more liberal and extended style of thinking, and a correct and polished mode of expression. They will see likewise the gloomy and dark condition of the heathen philosophy; they will perceive that its joyousness and festivity, which are so enlarged upon by some as its recommendation, were but means resorted to to drown passing thoughts, and silence that inward monitor, which, in every individual, of whatever age or clime, will never cease to obtrude itself. The misery arising from giving way to those passions which admit of no alternative, but either are controlled, or control, with resistless sway, their impotent possessor; the dreariness and melancholy springing from unsettled ideas of a future state, and the fixed belief in an invariable destiny, will be strikingly forced upon them; and no one, in our opinion, can rise from the perusal of the Greek tragedians without feeling that he is "a wiser and a sadder man."

Mr. Bulwer has carried, as yet, his view of the literature of Greece no further than the age of *Sophocles*: we trust, ere long, to be gratified by the completion of his undertaking, when we shall be enabled to judge of its merits in a more comprehensive way than is at present in our power. We hope to be able once more to resume our notice of this work, and examine the history of the political transactions and institutions of time-honoured Athens.

*A History of British Birds, Indigenous and Migratory, &c. &c. &c.* By William Macgillivray, A.M. F.R.S.E. Vol. I. 8vo. pp. 631. London, 1837. Scott and Co.

THIS work of Mr. Macgillivray is a valuable addition to British Ornithology. Of all portions of the science of Natural History, the knowledge of birds has hitherto been the least certain, the least definite. This has, in a great measure, arisen from the extraordinary reluctance naturalists seem to have had in acting towards birds as they did towards the other members of the creation. In viewing the whole animal world, vertebral and invertebral, they have, with the exception of the class of birds, in no instance founded their theoretic distinctions on mere external appearance. Struck with the outward form of birds so varied and so beautiful, they appear to have proceeded in the inspection of them no further than the plumage, the skin, the beak, the legs, or the claws. Thus did *Linnaeus* ground his system upon the shape of the feet and bill; *Vieillot* his upon the legs; others derived theirs from data still more absurd. Absurd, indeed; for what renders the study of the mammalia so clear in its definitions, so absorbing in its interest? What, more than that it affords so much scope for internal investigation? It is a great study, this search into the organic structure of God's creatures. Mr. Macgillivray is the first who has applied it to birds in its fullest extent, and thus dispensed to those animals the justice that had been so long denied them. His plan is this. He first divides the British birds into four sections, determined by their habits and modes of life, and simple in designation, viz. the aerial birds, the land birds, the wading birds, and the swimming birds. "These primary groups (he says)—which I consider merely as sectional, and as coming in the place of those familiar to every person—of land birds, and water birds, are composed of orders equivalent to each other, and characterized by peculiarities of form and structure." With him these orders are nineteen, and each of them contains several families, under which the genera are arranged. The volume before us, the first and the only one which has yet appeared, after an elaborate essay upon the structure of birds, brings us to the subject matter of the sections. The author, for certain reasons he mentions, commences with the second section, that of the *Aves ambulatrix* or land birds. The following passages may, in some measure, afford an idea of the execution of his plan, and a specimen of his style.

*The Passer Domesticus: the House Sparrow.*

—"The Male. It may be considered superfluous to describe a bird so familiar to every person as the sparrow; but it is necessary to preserve a uniformity of method, and, therefore, it is incumbent upon me to treat this 'vulgar fellow' with as much consideration as the most elegant and unexpected visitor. Every body knows that it is a small, stout, active, and occasionally noisy bird, not remarkable for beauty, and content, as becomes its humble station, with indifferent food, and poor accommodation. Its form and external parts correspond with the generic character in every point. The oesophagus is three inches long; the crop, one inch; the gizzard, three-fourths; the intestine, eight; its diameter, from nearly two-twelfths to one-twelfth; the coeca, two-twelfths, and placed at the distance of ten-twelfths from the anus; the rectum, ten-twelfths. The plumage is blended, rather compact above; the feathers ovate, rather acuminate, with a very slender plumule, consisting

of a few long filaments. The feathers about the base of the bill are terminated by short bristles, and there are five distinct, pretty large, almost simple bristles, at the base of the upper mandible. The wings are rather short, broad, and a little rounded; the first and third quills about equal, the third slightly longer, the other primaries slowly graduated; the third, fourth, and fifth very slightly cut out on the outer edge towards the tip; the secondary quills truncate-emarginate. The tail is shortish, nearly even, being very slightly emarginate. The bill is black, tinged with gray; the iris dark brown; the feet pale brown, the claws darker. The upper part of the head is light brownish-gray; the loreal or preocular space, a line above, another beneath the eye, the feathers at the base of the lower mandible, those of the chin and fore-neck, black, most of them tipped with gray. The black space before the eye is margined above by grayish-white, and the supraocular black line is terminated behind by a small white spot. A broad band of bright chestnut from the eye down the neck, obscurely meeting its fellow behind. The auricular coverts are whitish-gray, and from them extends a broad band on either side down the neck, gradually fading into yellowish-gray. Feathers of the lower part of the hind-neck, and of the fore part of the back, with the scapulars, brownish-red, their inner web brownish-black. Those of the hind part of the back, and the upper tail-coverts, light brownish-gray, of which colour, but paler, are all the under parts, the lower tail-coverts being dusky-gray in the centre. The quills are blackish-brown, externally margined with brownish-yellow, the inner more broadly margined with brownish-red; the large coverts are darker, but with broader brownish-red margins, and slightly tipped with whitish; the first row of smaller coverts brownish-black, their terminal half white; the rest brownish-red, their concealed part black; the tail is wood-brown; the outer webs blackish, the margins yellowish-gray. Length to end of tail  $6\frac{1}{2}$  inches; extent of wings  $9\frac{1}{2}$ ; wing, from flexure,  $3\frac{1}{2}$ ; tail,  $2\frac{1}{2}$ ; bill along the ridge  $\frac{1}{2}$ , along the edge of lower mandible,  $8\frac{1}{2}$ ; tarsus,  $\frac{1}{2}$ ; first toe,  $4\frac{1}{2}$  twelfths, its claw,  $1\frac{1}{2}$ ; second toe  $\frac{1}{2}$ , its claw,  $2\frac{1}{2}$  twelfths; third toe,  $\frac{1}{2}$ , its claw,  $3\frac{1}{2}$  twelfths; fourth toe,  $\frac{1}{2}$ , its claw,  $2\frac{1}{2}$  twelfths."

*The Habits of the Raven.*—"The raven sometimes nestles at no great distance from the eagle, in which case these birds do not molest each other; but in general, the former is a determined enemy to the latter, and may often be seen harassing it. 'What a brave soldier the raven is; he fights the eagle, who is four times his size!' I remember hearing an old Highlander say to me more than twenty years ago. But let us consider the matter. There goes the white-tailed eagle! Launched from the rock of *Liur* she advances along the cliffs on her way to the inland hills, where she expects to find a supply of food for her young. Now she is opposite the promontory of *Ui*, whence, croaking in fierce anger, rush two ravens. The eagle seems not to heed them; but they rapidly gain upon her, and, separating as they come up in her wake, one ascends, the other glides beneath, menacing her, and attempting to peck at her. While she regards the one below, that above plunges towards her; but perceiving that she is ready to meet him, he reascends a few feet, the other in the mean time threatening vengeance below. I never observed, however, that they actually came in contact with the object of their pursuit, which seemed to regard them as more disagreeable

than dangerous, and appeared to hurry on merely to avoid being pestered by them."

*The Carrion Crow.*—"The carrion crow is very easily tamed, and is strongly attached to the person who brings him up. I kept one for two years and a half. It flew round about the neighbourhood, and roosted every night on the trees of my shrubbery. At whatever distance he was, as soon as he heard my voice he immediately came to me. He was very fond of being caressed, but should any one except myself stroke him on the head or back, he was sure to make the blood spring from their fingers. He seemed to take a very great delight in pecking the heels of barefooted youths. The more terrified they were, the more did his joy seem to increase. Even the heels of my pointers, when he was in his merry mood, did not escape his art of ingeniously tormenting. His memory was astonishing. One Monday morning, after being satiated with food, he picked up a mole which was lying in the orchard, and hopped with it into the garden. I kept out of his sight, as he seldom concealed any thing when he thought you observed him. He covered it so nicely with earth that, after the most diligent search, I could not discover where he had put it. As his wings had been cut to prevent him from flying over the wall into the garden, he made many a fruitless attempt during the week to get in at the door. On Saturday evening, however, it having been left open, I saw him hop to the very spot where the mole had been so long hid, and, to my surprise, he came out with it in the twinkling of an eye."

In the study of ornithology, Mr. Macgillivray is, of course, a complete enthusiast. His descriptions of the various species, his adventures and wanderings for the improvement of his knowledge through the romantic hill and dale of his own beautiful Scotland, are given in a tone of high animation. A dry north country humour, too, pervades the work, and adds not a little to the amusement it affords. The numerous engravings have been executed with great care and accuracy. If Mr. Macgillivray concludes his task with the same spirit, energy, and ability, that he has shown in its commencement, he may fairly claim a place among the first ornithologists of any age or time.

#### *Letters of Charles Lamb.*

CONTINUING our review of this various and agreeable work, our next quotation is a fair sample of Mr. Lamb's playful letters; it is one written to his friend, Manning, who was meditating a journey to the East. He says—

"My dear Manning, the general scope of your letter afforded no indications of insanity, but some particular points raised a scruple. For God's sake don't think any more of 'Independent Tartary.' What are you to do among such Ethiopians? Is there no lineal descendant of Prester John? Is the chair empty? Is the sword unwayed?—depend upon it they'll never make you their king, as long as any branch of that great stock is remaining. I tremble for your Christianity. Read Sir John Mandeville's *Travels* to cure you, or come over to England. There is a Tartar man now exhibiting at Exeter Change. Come and talk with him, and hear what he says first. Indeed, he is no very favourable specimen of his countrymen! But, perhaps, the best thing you can do is to try to get the idea out of your head. For this purpose, repeat to yourself every night, after you have said your prayers, the words, Independent Tartary, Independent Tartary, two or three times, and associate with them the idea of oblivion ('tis Hartley's me-

thod with obstinate memories), or say, Independent, Independent, have I not already got an independence? That was a clever way of the old Puritans, pun-divinity. My dear friend, think what a sad pity it would be to bury such parts in heathen countries, among nasty, unconquerable, horse-belching, Tartar people! Some say they are cannibals; and then conceive a Tartar-fellow eating my friend, and adding the cool malignity of mustard and vinegar! I am afraid 'tis the reading of Chaucer has misled you; his foolish stories about Cambresan, and the ring, and the horse of brass. Believe me, there are no such things, 'tis all the poet's invention; but if there were such darling things as old Chaucer sings, I would up behind you on the horse of brass, and frisk off for Prester John's country. But these are all tales; a horse of brass never flew, and a king's daughter never talked with birds! The Tartars, really, are a cold, insipid, smouchey set. You'll be sadly moped (if you are not eaten) among them. Pray try and cure yourself. Take hellebore (the counsel is Horace's, 'twas none of my thought originally). Shave yourself oftener. Eat no saffron, for saffron-eaters contract a terrible Tartar-like-yellow. Pray to avoid the fiend. Eat nothing that gives the heart-burn. Shave the upper lip. Go about like an European. Read no books of voyages (they are nothing but lies), only now and then a romance, to keep the fancy under. Above all, don't go to any sights of wild beasts. That has been your ruin. Accustom yourself to write familiar letters, on common subjects, to your friends in England, such as are of a moderate understanding. And think about common things more. I supped last night with Rickman, and met a merry natural captain, who pleases himself vastly with once having made a pun at Otaheite in the O. language. 'Tis the same man who said Shakspeare he liked, because he was so much of the gentleman. Rickman is a man 'absolute in all numbers.' I think I may one day bring you acquainted, if you do not go to Tartary first; for you'll never come back. Have a care, my dear friend, of Anthropophagi! their stomachs are always craving. 'Tis terrible to be weighed out at fivepence a pound. To sit at table (the reverse of fishes in Holland), not as a guest, but as a meat. God bless you: do come to England. Air and exercise may do great things. Talk with some minister. Why not your father? God dispose all for the best. I have discharged my duty. Your sincere friend."

In 1806, Lamb, who was very unsuccessful in all his dramatic efforts, had his farce of "Mr. H." d-d at Drury Lane; and Mr. Talfourd relates that "When the curtain fell on the first act, the friends of the author began to fear. The second act dragged heavily on, as second acts of farces will do; a rout at Bath, peopled with ill-dressed and over-dressed actors and actresses, increased the disposition to yawn; and when the moment of disclosure came, and nothing worse than the name *Hogs-flesh* was heard, the audience resented the long play on their curiosity, and would hear no more. Lamb, with his sister, sat, as he anticipated, in the front of the pit, and having joined in encouraging the epilogue, the brilliancy of which injured the farce, he gave way with equal pliancy to the common feeling, and hissed and hooted as loudly as any of his neighbours. The next morning's playbill contained a veracious announcement, that 'the new farce of 'Mr. H.,' performed for the first time last night, was received by an overflowing audience with universal applause, and will be repeated

for the second time to-morrow;' but the stage lamps never that morrow saw! Elliston would have tried it again; but Lamb saw at once that the case was hopeless, and consoled his friends with a century of puns for the wreck of his dramatic hopes."

A year after, he writes, "So I go creeping on since I was lamed with that cursed fall from off the top of Drury Lane Theatre into the pit, something more than a year ago. However, I have been free of the house ever since, and the house was pretty free with me upon that occasion. Hang 'em, how they hissed! it was not a hiss neither, but a sort of a frantic yell, like a congregation of mad geese, with roaring sometimes like bears, mows and mops like apes, sometimes snakes, that hiss'd me into madness. 'Twas like St. Anthony's temptations. Mercy on us, that God should give his favourite children, men, mouths to speak with, to discourse rationally, to promise smoothly, to flatter agreeably, to encourage warmly, to counsel wisely, to sing with, to drink with, and to kiss with; and that they should turn them into mouths of adders, bears, wolves, hyenas, and whistle like tempests, and emit breath through them like distillations of aspic poison, to asperse and vilify the innocent labours of their fellow-creatures who are desirous to please them! Heaven be pleased to make the teeth rot out of them all, therefore! Make them a reproach, and all that pass by them to loll out their tongue at them! Blind mouths! as Milton somewhere calls them."

In others of his jocular epistles we read—  
"I continue Mr. Lamb. I have published a little book for children on titles of honour; and to give them some idea of the difference of rank and gradual rising, I have made a little scale, supposing myself to receive the following various accessions of dignity from the king, who is the fountain of honour. As at first,—  
1. Mr. C. Lamb; 2. C. Lamb, Esq.; 3. Sir C. Lamb, bart.; 4. Baron Lamb of Stamford; 5. Viscount Lamb; 6. Earl Lamb; 7. Marquess Lamb; 8. Duke Lamb. It would look like quibbling to carry it on further, and especially as it is not necessary for children to go beyond the ordinary titles of sub-regal dignity in our own country, otherwise I have sometimes in my dreams imagined myself still advancing, as 9th, King Lamb; 10th, Emperor Lamb; 11th, Pope Innocent, higher than which is nothing. Puns I have not made many (nor punch much), since the date of my last; one I cannot help relating. A constable in Salisbury Cathedral was telling me that eight people dined at the top of the spire of the cathedral, upon which, I remarked, that they must be very sharp set. But in general I cultivate the reasoning part of my mind more than the imaginative."

"Hazlitt has written a *grammar* for Godwin; Godwin sells it bound up with a treatise of his own language, but the *gray mare* is the better horse. I don't allude to Mrs. —, but to the word *grammar*, which comes near to *gray mare*, if you observe, in sound. That figure is called paranomasia in Greek. I am sometimes happy in it. An old woman begged of me for charity. 'Ah! sir,' said she, 'I have seen better days;' 'So have I, good woman,' I replied; but I meant literally, days not so rainy and overcast as that on which she begged: she meant more prosperous days. I must devote myself to imbecility; I must be gloriously useless while I stay here. How is Mrs. M.? will she pardon my inefficiency? The city of Salisbury is full of weeping and wailing. The bank has stopp'd payment; and every body in the town kept

money at it, or has got some of its notes. Some have lost all they had in the world. It is the next thing to seeing a city with the plague within its walls. The Wilton people are all undone; all the manufacturers there kept cash at the Salisbury bank; and I do suppose it to be the unhappiest county in England this, where I am making holiday. We purpose setting out for Oxford Tuesday fortnight, and coming thereby home. But no more night travelling. My head is sore (understand it of the inside) with that deduction from my natural rest which I suffered coming down. Neither Mary nor I can spare a morsel of our rest; it is incumbent on us to be misers of it. Travelling is not good for us, we travel so seldom. If the sun be hell, it is not for the fire, but for the sempiternal motion of that miserable body of light. How much more dignified leisure hath a muscle glued to his unpassable rocky limit, two inch square! He hears the tide roll over him, backwards and forwards, twice a-day (as the Salisbury long coach goes and returns in eight-and-forty hours), but knows better than to take an outside night-place a-top on't. He is the owl of the sea—Minerva's fish—the fish of wisdom."

This was written from Salisbury, whither he had gone on a visit, in 1810.

A squabble with the "Quarterly Review," in 1811, induces the learned serjeant to soften down and palliate (see vol. i. pp. 322—326) such matters as agree with his own political views, and severely censure the opposites. It is rather a stretch of liberality, to publish a tolerably stinging libel on the Prince Regent, published in a newspaper, and, as a complete set-off, assure us, that "at the time when he wrote it, Lamb used to stop any *passionate* attacks upon the Prince, with the *smiling* remark, 'I love my Regent.'" The abuse was given to the world; the salve confined to the little chamber. In a better tone are the following reflections, in a letter to Wordsworth, in 1822.

"Deaths overset one, and put one out long after the recent grief. Two or three have died within this last two twelvemonths, and so many parts of me have been numbed. One sees a picture, reads an anecdote, starts a casual fancy, and thinks to tell of it to this person in preference to every other: the person is gone whom it would have peculiarly suited. It won't do for another. Every departure destroys a class of sympathies. There's Captain Burney gone! What fun has whist now; what matters it what you lead, if you can no longer fancy him looking over you? One never hears any thing, but the image of the particular person occurs with whom alone almost you would care to share the intelligence—thus one distributes oneself about; and now for so many parts of me I have lost the market. Common natures do not suffice me. Good people, as they are called, won't serve. I want individuals. I am made up of queer points, and I want so many answering needles. The going away of friends does not make the remainder more precious. It takes so much from them as there was a common link. A, B, and C make a party. A dies. B not only loses A, but all A's part in C. C loses A's part in B; and so the alphabet sickens by subtraction of interchangeable. I express myself muddily, *capite dolente*. I have a dulling cold. My theory is to enjoy life, but my practice is against it. I grow ominously tired of official confinement. Thirty years have I served the Philistines, and my neck is not subdued to the yoke. You don't know how wearisome it is to breathe the air of four pent walls, without

relief, day after day, all the golden hours of the day between ten and four, without ease or interposition. *Tudet me harum quotidianarum formarum*, these pestilential clerk-faces always in one's dish. O for a few years between the grave and the desk! they are the same, save that at the latter you are the outside machine."

His reflections on the accidents of life, and on the loss of friends, are always pathetic, even when dashed with a certain mixture of humour. Thus:

"Dear Robinson,—I called upon you this morning, and found you were gone to visit a dying friend. I had been upon a like errand. Poor Norris has been lying dying for now almost a week—such is the penalty we pay for having enjoyed a strong constitution! Whether he knew me or not, I know not; or whether he saw me through his poor glazed eyes; but the group I saw about him I shall not forget. Upon the bed, or about it, were assembled his wife and two daughters, and poor deaf Richard, his son, looking doubly stupified. There they were, and seemed to have been sitting all the week. I could only reach out a hand to Mrs. Norris: speaking was impossible in that mute chamber. By this time I hope it is all over with him. In him I have a loss the world cannot make up. He was my friend and my father's friend all the life I can remember. I seem to have made foolish friendships ever since. Those are friendships which outlive a second generation. Old as I am waxing, in his eyes I was still the child he first knew me. To the last he called me Charley. I have none to call me Charley now. He was the last link that bound me to the Temple. You are but of yesterday. In him seem to have died the old plainness of manners, and singleness of heart. Letters he knew nothing of, nor did his reading extend beyond the 'Gentleman's Magazine.' Yet there was a pride of literature about him from being amongst books (he was librarian), and from some scraps of doubtful Latin which he had picked up in his office of entering students, that gave him very diverting airs of pedantry. Can I forget the erudite look with which, when he had been in vain trying to make out a black-letter text of Chaucer in the Temple Library, he laid it down, and told me, that 'in those old books, Charley, there is sometimes a deal of very indifferent spelling;' and seemed to console himself in the reflection! His jokes, for he had his jokes, are now ended; but they were old trusty perennials, staples that pleased after *decies repetita*, and were always as good as new. One song he had, which was reserved for the night of Christmas-day, which we always spent in the Temple. It was an old thing, and spoke of the flat bottoms of our foes, and the possibility of their coming over in darkness, and alluded to threats of an invasion many years blown over; and when he came to the part

'We'll still make 'em run, and we'll still make 'em sweat,  
In spite of the devil, and Brussels' Gazette!'

his eyes would sparkle as with the freshness of an impending event. And what is the 'Brussels' Gazette' now? I cry while I enumerate these trifles. 'How shall we tell them in a stranger's ear?'

And the following to Coleridge is to us striking, as well as curious:

"One of the bitterest pangs I ever felt of remorse was when a child—my kind old aunt had strained her pocket-strings to bestow a sixpenny whole plum-cake upon me. In my way home through the Borough, I met a venerable old man, not a mendicant,—but there-

abouts; a look-beggar, not a verbal petitioner; and in the coxcombry of taught-charity, I gave away the cake to him. I walked on a little in all the pride of an Evangelical peacock; when, on a sudden, my old aunt's kindness crossed me; the sum it was to her; the pleasure she had a right to expect that I—not the old impostor—should take in eating her cake; the cursed ingratitude by which, under the colour of a Christian virtue, I had frustrated her cherished purpose. I sobbed, wept, and took it to heart so grievously, that I think I never suffered the like—and I was right. It was a piece of unfeeling hypocrisy, and proved a lesson to me ever after."

"Nothing fills a child's mind like a large old mansion; better if un— or partially—occupied, peopled with the spirits of deceased members for the county, and justices of the quorum. Would I were buried in the peopled solitude of one, with my feelings at seven years old! Those marble busts of the emperors, they seemed as if they were to stand for ever, as they had stood from the living ages of Rome, in that old marble hall, and I to partake of their permanency. Eternity was, while I thought not of Time. But he thought of me, and they are toppled down, and corn covers the spot of the noble old dwelling and its princely gardens. I feel like a grasshopper that, chirping about the grounds, escapes his sithe only by his littleness. Even now he is whetting one of his smallest razors to clean whips me out, perhaps. Well!

"To make me more alone, our ill-tempered maid is gone, who, with all her airs, was yet a home-piece of furniture, a record of better days; and the young thing that has succeeded her is good and attentive, but she is nothing; and I have no one here to talk over old matters with. Soodling and quarrelling have something of familiarity, and a community of interest; they imply acquaintance; they are of one sentiment, which is of the family of dearness."

With this brief, but characteristic passage, we conclude. The publication is altogether a delightful one; full of various and interesting matter, not only exhibiting the estimable principal in colours true to nature, and yet allowing all his quips and cranks to shine and glisten through them, but touching on a multitude of topics and persons intimately connected with the literature of the last half century. Mr. Talfourd has done justice to his subject, and his subject was one rich in attractive properties.

#### Spencer's Circassia, &c.

[Second notice.]

Even whilst we were penning our preceding notice of this work, the accounts received from the quarter of which it principally treats, and published in all our newspapers, have added a new proof of its immediate and pressing importance. No doubt the political press will take it up in this light; and, therefore, we may be the more readily excused for pursuing the bent of our own inclination, and consulting the literary character of our journal, in saying very little with regard to the national questions it involves. These accounts state, that Russia is assembling an overwhelming force, evidently with the design of putting down, if possible, within the present season, the "insurrection in Circassia." But Captain Spencer maintains that Circassia is independent; and it is not easy to understand how an independent people can be guilty of insurrection! He tells us,

"The 'Portfolio' published a Circassian manifesto to this effect, for the genuineness of which Captain

"In describing my visit to the Russian possessions on the Black Sea; in referring to the actual state of Circassia, the desolating war carried on in that country, and other circumstances connected with the policy of the Russian government—I have been placed in the disagreeable position, either of sacrificing my regard to truth, or, out of courtesy to my Russian friends, of flinging over objects that passed beneath my observation the veil of misrepresentation. But, were I to delineate them otherwise than I have done, I should subject myself to the stigma of being branded by my compatriots as a Russian hireling—not to mention how deeply I should compromise my own character as an independent writer—a character so generously attributed to me by my critical contemporaries. Apart, however, from personal considerations, the claims of humanity would be sacrificed, which demand the exposure of the policy pursued by Russia towards the unfortunate inhabitants of the Western Caucasus—a policy alike detrimental to the interests of Great Britain, and dangerous to the repose of Europe. . . . That Russia (he continues) has infringed international law in the capture of the Vixen, I think I have sufficiently proved, by confirming the fact, that the inhabitants of the Western Caucasus are, and always have been, independent—a fact unhesitatingly admitted by Turkey and Persia, and by Russia herself before the Adrianople treaty. I shall conclude my remarks on this disagreeable topic, by expressing a hope that the government will use its influence in terminating the unequal contest now carried on by Russia against the independent tribes of Circassia; and will also not omit to secure the advantages which the Caucasian provinces, from their situation, the excellency of their ports, and the value and variety of their natural productions, offer to the trading interests of Great Britain. It is likewise to be desired, that, when viewed in connexion with our eastern empire, the importance of preserving friendly relations with a people, who, from the position of their country, may, at some future period, prove valuable allies, will be recognised. In short, there never was a more favourable moment for our government, by a bold-spirited line of policy, to render eminent service to the country, than is now offered, by acknowledging the independence of Circassia—a line of policy which would be justified by the strength and resources of the country whose destinies they direct. . . . The land of the Attéghéié, or Circassians,

Spencer vouches; and he also adds the following:— "Having, in a previous letter, proved that Russia could derive no right to that part of the Caucasus inhabited by the independent tribes, known under the name of Circassians, from the Ottoman Porte; and also shewn, while visiting the Russian fortresses on the coast, that the people are in actual possession of their country, it is unnecessary to discuss this subject at any considerable length. The real fact is, Turkey never was, at any period whatever, master of Circassia, beyond a few crumbling fortresses on the coast. How, then, could she transfer a title she never had? If we refer to the fourth article of the treaty of Adrianople, we shall find that the independent tribes of Circassia were not even mentioned. Again; from time immemorial, the Turks have been in the habit of purchasing slaves from the independent princes of Circassia; consequently, every man at all conversant with oriental laws and manners, must be aware that it is contrary, both to the religion of Mahomet and the laws of Turkey, to import slaves, except from a foreign power. In short, it is notorious throughout the whole of the eastern world, that the utmost efforts of the Turkish arms failed in the attempt to establish their supremacy over the mountaineers of the Caucasus. Anapa, Soudjouk-Kalé, and one or two others in Abasia, were ceded to Turkey by the Circassians, solely for the purposes of commerce; and, so far as that power possessed any right over these places, she made it over to Russia; but whether settlements under such circumstances, the purpose for which they were originally granted having ceased, ought not, in justice, to have reverted to the natives, I leave to the unprejudiced inquirer to determine."

marked as independent from the Kouban, which divides it from the territory of the Tchernomoraky Cossacks, to the Salamache, or Burzuklu river, on the frontiers of Mingrelia, corresponds with the boundaries laid down in the chart of General Khatov, published, by order of the Russian government, a few years previously to the Adrianople treaty—an important admission, when considered with reference to the question as to the right which Russia derives from Turkey to Circassia."

Such are our author's statements on this interesting subject; and we leave them without comment to the public consideration to which they are so well entitled. Previous to his visit to the interior of Circassia, as illustrated by the extracts in our last *Gazette*, Capt. Spencer made a tour (as we noticed) of the coasts of the Black Sea, under the auspices of the Governor-General Worrenzou, from whom he received every kind of hospitality and attention. Theodosia, Kertch, Anapa, Pitsounda (thought to be the site of the grand Pythus), Bombora, &c. &c. &c. Of the latter we read,

"After visiting the fortifications on the coast, and the ruins of a church and monastery built by the Genoese, we continued our route to the principal fortress, distant about three wersts. Like that at Pitsounda, our way led, for some time, through a dense forest; here we perceived the box, which in Europe is a dwarf shrub, a perfect giant of the forest; the juniper of such colossal dimensions as to measure fifteen feet in circumference; and the oak, with the largest leaves I had ever seen, adorning the valleys, and lining the sides of the lofty hills in such abundance, as to create the belief that Russia might here alone find a nursery sufficient to furnish her with wood for ship-building during centuries. The arbutus andrachne, the oleander and the tamarisk, the olive and the fig, the rhododendron and the pomegranate, were every where to be seen in all their variegated tints and rich luxuriance. Besides these, even the earth seemed covered with the richest plants; and the most beautiful blossoms shed around their aromatic fragrance. At every step I discovered some new production unknown to Europe, and every breeze wafted a thousand odours. Nor were the birds that filled the air with their delightful warblings, the insects and reptiles that luxuriated among the long grass and flowers, less interesting; and I was not more pleased with their many-coloured plumage and gaily painted wings, than astonished at their gigantic size, particularly the common lizard, which here measures eighteen inches; and were it not from its bright green changing from the dark hue of the emerald to that of the first leaf in spring, you might be inclined to suppose it a young crocodile. While following the windings of a murmuring rivulet, the Phaudra, the endless numbers of toads and serpents we encountered, crawling in every direction in this land of nature, drew from the more timid members of our party many a shriek. The latter, of a large species, are not considered venomous; and a native of the Archipelago, or Stamboul, would have been in raptures at the sight of his much-prized dainty, the land tortoise; for we were absolutely obliged to walk most cautiously, or we should have crushed them at every step. The natives of this part of Circassia never use them as food; but in the countries I have mentioned they are highly valued for their flavour and nutritious qualities, and are generally considered to be most efficacious in pulmonary disorders. We were much disappointed at not meeting with Michael Scharavashedze, chief of the Pso tribe,

inhabiting the neighbourhood of Bombora, who, I understood, was educated in St. Petersburg, and an officer in the Russian service; but, strange to say, although he has long given in his adhesion to the government, yet we were told the usual story, that not a single soldier can absent himself to any distance from the fort without danger of being shot or taken prisoner. In addition to this, we learned, among other things, that the hostility of the natives was increasing, and that the garrison had suffered considerably from an attack made by the Circassians some months previously, and which had been conducted with a fury and an address they had never before exhibited. We were also informed, that, since the strictness of the blockade prevents the people from obtaining a sufficient supply of powder, they have adopted the expedient of the lasso in capturing the soldiers of the garrison, who are thus led off to the mountains without being able to offer any effectual resistance. After visiting the fortress, we took a lounge through the little town of Bombora, or Lehna, adjoining, built by the Abasians, but displaying no feature distinct from those we find on the opposite coast of the Black Sea in Asia Minor. There were a few bazaars kept by Armenian traders, filled with coarse Russian manufactures, only remarkable for their gaudy colours, together with a few tinsel gew-gaws for the use of the peasants, and salt and tobacco. In one of the bazaars we saw a noble of the country, who had just come down from the mountains to effect some trifling barter: he was completely armed, and, as is usual with this people, accompanied by his squire. It would appear that they were not inspired with more confidence in Russian faith than was exhibited by their compatriots at Anapa; for, during the whole time they remained, the squire held a loaded pistol in his hand on the cock: I suppose with the intention of firing at any one that might threaten the safety of his lord. The noble, though a fine daring-looking fellow, seeing himself surrounded by a crowd of officers and fair ladies, was evidently annoyed at being the object of so much observation, and, conscious perhaps of his hostility to Russia, evinced the greatest anxiety to depart; consequently, when his little commercial arrangements were concluded, he vaulted into his saddle, flew out of the town and up the sides of the mountains like lightning, most probably not considering himself safe so long as he remained within reach of cannon. While lounging about the town, I observed several of the natives on horseback; and, though the spur is no novel appendage to the boot of a cavalier, yet I confess it appeared a singular addition to a sandal made from the bark of the linden, but more particularly when it was attached to the heel of one who wore neither sandal nor *papoose*, which was very frequently the case. The few women we saw were rather tastefully dressed, with long white veils, not altogether intended to conceal the features of the wearer from observation, as is the case with the followers of Islamism; hence we had an opportunity of deciding that they were in general pretty. The whole of the men were armed with a poniard, a gun, or a sabre; they kept aloof in groups, generally with their arms a-kimbo, and, to judge from the expression of their countenances, seemed to regard us rather with contempt than curiosity. Their personal appearance, like that of their countrymen in general, was in their favour; but in these I thought the aquiline nose of the Romans predominated. That the Genoese here had a settlement cannot be doubted. The

tester of bees; and no less important a personage than the mother of God. This is evidently a mixture of Paganism with the adoration paid to the Virgin Mary. In a country like Circassia, where honey forms so important a part of the husbandry of the people, and mingles so extensively with their food, we cannot wonder that they personified a deity of such powerful influence to guard the bee; and, from their traditions, it appears she performed the trust most faithfully; for, on one occasion, when an evil spirit most wilfully attempted to destroy the whole of these industrious insects, she preserved a couple by her miraculous power, and repopulated the woods and forests. This feast is celebrated for three days, about the middle of September, with feasting and rejoicing, like the others; the only difference being, that the dishes and drinks composing the banquet are made entirely from the produce of the bee. Besides these, there are several other saints, such as Yemikha, Skuskha, Nakhbatka, and Mesté, protectors of agriculture, woods, and forests, &c. who are each honoured with a festival. To which we may add the powerful king, Tliebaké, a mixture of Mars and Vulcan, protector of armours. Thunder and lightning, as it emanates immediately from the great Spirit, Thka, is regarded by the Circassians with the greatest veneration; and happy is the man who is so distinguished as to fall a victim to its violence: his body is consigned to the earth with great solemnity, and his family rejoice at the great honour conferred upon them. When they hear the *chebli* (thunder) rolling in the heavens, they believe it to be an angel of God, travelling in his fiery chariot through the air; and rush forth from their houses, *en masse*, to thank the celestial messenger who thus irrigates their fields, and refreshes and purifies the air, during the great heats of summer. The Circassians also reverence, with more than common devotion, three sisters, who preside over and encourage the happiness of domestic life, good fellowship, and harmony, with their neighbours. These divinities are also supposed to shield the warrior in battle with their protecting wings, and to guard the footsteps of the traveller; consequently, the natives never undertake an expedition, or even change their domicile, without making a propitiatory offering to the fair saints."

The funerals are very simple.

"The ceremonies that attend the death of a Circassian are simply confined to a few religious songs, and a funeral oration, pronounced by one of the elders over his body, which is enveloped in a white wrapper, and consigned to the earth much in the same way as we see practised in Krim-Tartary. During the space of a year his arms are guarded with the most religious care, and left precisely in the same state as when living; his friends and relatives visit his tomb at stated periods, when they strike their breasts and repeat a few prayers; but his women are obliged to rehearse every evening at sunset, for months, the same poignant display of grief as the Tartars. The anniversary of the death of a distinguished warrior, or chief, is celebrated for years with praying and feasting; to which we may add horse-racing, and various kinds of martial and athletic exercises."

In medicine, they are happily profoundly ignorant: we may, however, notice one piece of practice:—

"I was," says our author "also made acquainted with the Calmuck remedy for hydrophobia, which this people are said completely to cure. It appears, according to their statement,

that when a person has been so unfortunate as to have received the poison of a rabid animal into his frame, several white spots or ulcers form under the tongue, and occasion madness; but if these are cut, and the excised parts cauterised, the cure is complete: the operation should, however, be performed the moment they make their appearance. This, also, I give as I received it, without vouching for, or denying, its authenticity. At all events, it would be desirable for some of our medical men to ascertain whether the appearances I have described actually supervene during the presence of hydrophobia, or not."

We have only to end these interesting pages with their own last word, addressed to their intelligent writer—"Farewell."

#### MISCELLANEOUS.

*Country Stories.* By Miss Mitford. 12mo. pp. 326. London, 1837. Saunders and Otley. We are often perplexed, in consequence of one of the prevailing customs in publishing; and, not having memory much more retentive than a sieve, cannot be certain what portion of, or whether all the stories, in a volume like this, have appeared before. Here are twelve of Miss Mitford's productions, and some of them, at least, are familiar to us in the pages of periodical literature. How many, if any, are new we cannot tell; and, therefore, refrain from the risk of quotation. It may, however, be sufficient to say, that every one of them possesses the kindly natural feeling, the truth in reading the human heart, and the fine fidelity of rustic scenery, which have ever distinguished this lady's writings. They are finished landscapes, and animated with actual life. People, animals, flowers, country sports, scenery, are all presented in their real colours; and, whilst the simple incidents affect us, the best object of authorship is achieved by pointing the whole to social and moral improvement.

*Josephine, or Early Trials; Louisa Seymour, or Hasty Impressions; and Alicia Gray, or to be Useful is to be Happy.* By Catharine Grace Godwin. London, 1837. Parker.

THREE pretty little volumes; admirably calculated to impress upon the young those lessons which, unfortunately, so many of the old too often shew they have never acquired.

*The Emigrant's Introduction to an Acquaintance with the British Colonies, &c.* by S. S. HILL. Pp. 324. (London, Parbury and Co.)—There seems to be a continual succession of works of this class; and Mr. Hill has certainly commenced his lucubrations sufficiently early in the world's settlement, for he begins with the Flood. The volume, however, contains a fund of useful information.

*English Pleasure Carriages, their Origin, History, Varieties, &c.* by W. Bridges Adams. 8vo. pp. 315. (London, Knight and Co.)—A very complete description of every sort of carriage in use amongst us, with accounts of the latest inventions, engravings, and hints for improvements, all worthy of note, by builders and buyers.

*The Philosophy of the Eye, &c.* by John Walker. Pp. 300. (London, Knight and Co.)—Stimulated by the Bridgewater Treatises, Mr. Walker has extended observation to the eye and the phenomena of vision, with a similar view to the evidence of design. It is a clever volume.

*Sketches of Popular Tumults, illustrative of the Kells of Popular Ignorance.* Pp. 320. (London, Knight and Co.)—Beginning with the tumults in which the Jews were plundered and destroyed in the 19th and 13th centuries, and going through the riots of 1779-80, those of Birmingham in 1791, of Naples in 1799, and the insurrections of Lyons 1831 and 1834, the author ascribes them chiefly to popular ignorance, and gives good counsel, both to the people and to their rulers, on the subject.

*New South Wales: its Present State and Future Prospects. Being a Statement, with Documentary Evidence, submitted in Support of Petitions to His Majesty and Parliament.* 8vo. pp. 344. (London, D. Walker.)—In this volume, by Mr. James Macarthur, the writer supports the views of a numerous and highly respectable body of petitioners.

\* Apropos, we have received a letter, in which the writer attempts to shew that the iris, not the retina, is the seat of vision; which, in our eyes, is utterly untenable.

colonists of New South Wales, who desire certain modifications in the convict system, and greater encouragement to free settlers of good repute. The statements are of much weight, and, being borne by authentic documents, will, no doubt, obtain the legislative attention the rising value of the country entitles them to receive. Indeed, they are of general public interest.

*Seven Lectures on Meteorology,* by Luke Howard, Gent. F.R.S. &c. 12mo. pp. 182. (Ponteract, Lucas.)—A forty years' friend of the venerable Dr. Dalton has, in this small volume, given us the fruits of his experience, reading, and observation, on the principal facts connected with meteorology. The work is full of information, and well deserves the favour of readers of every class; for the subject is interesting to all.

*Christian Theology,* by John Calvin. *Selected and systematically arranged, with a Life of the Author,* by Samuel Dunn. 12mo. pp. 412. (London, Tegg and Son; Edinburgh, Johnstone.)—From a vast quantity of reading, Mr. Dunn has here made a very interesting selection to display the religious tenets, and the practical lessons in godliness, of this eminent reformer. The folks of former days having nearly passed into utter forgetfulness; such renaissances as the present, of their remarkable and useful features, are not only curious but instructive.

*New and Concise Physical Demonstrations, both of the Fact and Period of the Mosiac Deluge, and of its having been the only Event of the kind that has ever occurred upon the Earth,* by George Fairholme, Esq. 8vo. pp. 443. (London, Ridgway and Sons.)—We fear that, though there are some things "new" in this essay, we cannot compliment the author on the applicability of the second of his title-page epithets, namely, that his demonstrations [quære arguments] are "concise." On the contrary, he appears to us to come to many of his conclusions on very insufficient grounds; such, for example, as are founded on the discovery of human bones among diuvial deposits. But, indeed, we can only give our praise to the intention of the work, and to the temperate spirit in which it is written; for we do not think Mr. Fairholme has established his theory, and hardly any part of it, by sound reasoning.

*London as it is.* By John Hogg, Edinburgh. 12mo. pp. 398. (London, Macrae.)—A very useful volume, in which is collected a mass of statistical and other information respecting the metropolis, and the whole combined with much common sense, observation, and advice. The health, habits, and amusements of the natives are familiarly illustrated, and many beneficial improvements suggested.

#### ARTS AND SCIENCES.

##### ORNITHOLOGICAL SOCIETY.

A GENERAL meeting of this society was held on the 7th inst. Mr. Vigors, vice-president, in the chair. The report of the council was read, from which it appeared that twenty new members had been elected during the last month, including the Marchioness of Hastings, the Earl of Selkirk, Viscount Milton, Lords Prudhoe and Cranstoun, &c. Several corresponding members, also, had been elected: among them were Sir John Franklin, Mr. Reeves, and Mr. Beale, of Canton; Dr. Andrew Smith, of the Cape of Good Hope; Mr. Washington Irving, and Mr. Astor, the spirited projector of Astoria. Donations of much interest and value were announced. The report stated that several important additions had been made to the collection of aquatic birds in St. James's Park; and that a deputation, consisting of the Earl of Liverpool, the Bishop of Norwich, Mr. Ridley Colborne, and others, had waited upon the commissioners of woods and forests, and applied to that board for more efficient protection, and co-operation in the society's endeavours to provide a gratuitous exhibition for the public. The commissioners had promised to do all in their power to protect the birds from mischievous children, to exclude dogs from the enclosure, &c. &c. The report concluded by calling upon the members to exert themselves in adding to the numbers of the society, so as to enable the council to open an ornithological garden. Mr. Vigors then quitted the chair, and addressed a conversational lecture to the meeting. Upon a large table he had arranged some of the most remarkable specimens of each of the five orders of the class *Aves*. 1. The *Insectores*, or birds that habitually perch on trees. 2. *Raptores*, or birds that seize their food by violence. 3. *Nataiores*, or birds that swim. 4. *Grallatores*, or stilted birds; i. e. birds that wade. 5. *Rasores*, or birds that scratch the ground for

food. Taking these five orders as his text, Mr. Vigors gave a rapid, but very comprehensive and masterly, sketch of ornithology; presenting the most abstruse and important truths of the science in language so simple and familiar, and with illustrations so strikingly beautiful, that he was listened to with deep attention not only by the ladies, who formed a rather large proportion of his audience, but also by the numerous scientific ornithologists who were present. He exhibited the most remarkable types, and typical aberrations, of ornithological forms; and explained their perfect adaptations to their habits and modes of life. If the courses of lectures, which are to be given in these rooms in the autumn, should be equal to that on Friday, the ornithological society will indeed have rendered a distinguished service to science, and provided an interesting and improving entertainment for its members. The secretary moved, and Mr. W. S. Macleay seconded, a vote of thanks to the lecturer, and the meeting adjourned till November.

## BOTANICAL SOCIETY.

JULY 6th. J. E. Gray, Esq. president, in the chair.—Donations of books were announced, and Mr. Hopkins read the conclusion of his paper On vegetable fermentation. The author thought that the atmospheric air is of no further use than in furnishing nitrogen to aid the process. Heat is developed during the fermentation process. It may be accounted for, first, on the theory of the coproduction of alcohol, and, secondly, from latent heat being extricated when the oxygen enters into the state of acid, as being more dense than water. An interesting discussion ensued, after which the meeting adjourned.

LITERARY AND LEARNED.  
UNIVERSITY INTELLIGENCE.

CAMBRIDGE.—On the 24th ult. the following prizes were adjudged:—

*Members' Prizes for Bachelors of Arts.*—1. J. S. Howson; 2. H. Goulburn, Trinity College. Subject, "Quænam beneficia Academia, qualis nostra est constitutione ac forma, ad rempublicam afferat?"

*Members' Prizes for Under-graduates.*—1. C. J. Vaughan, Trinity College; 2. H. A. Woodham, Jesus College. Subject, "Utrumque tempus consulat, tum antiquius, ut cognoscas, quid optimum fuerit; tum recentius, ut notes, quid fuerit aptissimum."

27th.—The Norrisian Prize for the best Essay on a sacred subject was adjudged to J. Deck, B.A. of Christ's College. Subject, "The style and composition of the Writings of the New Testament no way inconsistent with the belief that the Writers of them were divinely inspired."

July 1.—The following degrees were conferred:—*Bachelor in the Civil Law.*—S. R. Mills, Queen's College.

3d.—The following degrees were conferred:—*Bachelor in Divinity.*—Rev. A. J. Sandlands, Trinity College.

*Bachelor in the Civil Law.*—P. St. John, Downing College. 4th (being Commencement Day), the following Doctors and Masters of Arts were created:

*Doctors in Divinity.*—The Venerable C. Musgrave, Trinity College; Rev. J. Weller, Fellow of Emmanuel College.

*Doctors in Physic.*—F. J. Farre, St. John's College; G. Pardoe, Caius College; R. Nairne, C. J. B. Aldis, Trinity College.

6th.—The following degrees were conferred:—*Bachelor in Divinity.*—Rev. T. Jackson, Queen's College, incumbent of Slaithwaite, near Huddersfield.

*Masters of Arts.*—F. W. Freeman, St. Peter's College; C. O. Skinner, Queen's College; C. T. Crichton, Corpus Christi College.

*Bachelors of Arts.*—W. S. Wilson, Queen's College; G. H. Dashwood, M.A. of Lincoln College, Oxford, was admitted ad eundem of this University.

W. Isaacson, Sidney College; J. C. Stapleton, Downing College.

LITERARY AND SCIENTIFIC MEETING  
FOR THE ENSUING WEEK.

Monday.—Marylebone Literary Institution (Dr. Brewer on the Science of Organisation, instead of Dr. A. T. Thomson's first of a Series of Lectures on Diet, which is postponed).

## FINE ARTS.

## INSTITUTE OF BRITISH ARCHITECTS.

ON Monday evening last, a special meeting of the members was held to receive the report of the council relative to providing new chambers for the purposes of this Society, rendered necessary by several circumstances. The council recommended that certain apartments in Lower Grosvenor Street be taken by the Institute, which was ultimately unanimously agreed to, and the meeting was dissolved. On the same evening an ordinary general meeting was held, Mr. Papworth, V.P. in the chair, when the Marquess of Salisbury was elected an honorary fellow, and several donations were announced. Mr. Inman described a beam, invented by John Martin, Esq., which consists merely of a thin plate of wrought iron, which has passed through the rollers, screwed tightly between two three-quarter deals; and made several experiments, on a small scale, to show what great strength was gained by the arrangement. In connexion with the subject, Mr. Inman read a paper on the strength of timber. A translation was then read, and afterwards pretty freely descanted on, of a virulent attack on modern English architecture, which appeared in "Le Siècle," of a few days past, wherein an endeavour was made by the writer to prove that the English have no natural taste for the fine arts; and that, like other products of warmer climates, they would perish, but for the artificial means taken to preserve them. Of the new National Gallery, the French writer remarked, that it could be easily placed within the walls which enclose the staircase of the Louvre; this, he went on to say, is not merely a failure in taste, but in foresight, "they have measured a new-born infant for a suit of clothes which he will require when a man, without remembering that the child will grow."

## NEW PUBLICATIONS.

*Marcus Curtius.* Designed and engraved by John Martin.

SUSPENDING his attention to sacred themes, Mr. Martin has here employed his pencil on a

classical subject; and has represented the noble self-devotion of the Roman youth in a most picturesque and striking manner. The animated and fearless bearing of the hero himself, as, mounted on a splendid and spirited charger, he plunges into the horrid gulf; the various emotions of the near spectators, male and female, some fixed in silent admiration, some enthusiastic in their applause, some dissolved in pity, some fainting with terror; the countless multitudes in the distance; the religious ceremonies and processions; the magnificent city, with its columns, monuments, and temples, towering one above another to the sky; the sky itself, filled with dark clouds, emitting the forked and brilliant flash; and the general effect of grandeur thrown over the whole scene, render the present at least equal to any of Mr. Martin's performances which have hitherto come under our observation.

*The Dresden Gallery.* Dresden, Hanfstaengl; London, Schloss.

WE have before us a number of the *Dresden Gallery*, containing compositions after Annibal Caracci, Titian, Netscher, and Wouwermann—four masters as different, both in their subjects and in their mode of execution, as could possibly be brought together—which are treated in lithography with so much skill and discrimination, as to convey a most faithful idea of the style, as well as of the general character of the originals.

*Ed. Eliason.* Drawn on Stone by W. Sharp, from the Original by Solomon A. Hart, A.R.A. Schloss.

FULL of that fine and decided marking of the features which distinguishes Mr. Hart's small heads.

## ORIGINAL POETRY.

## BATTLE SONG.

FILL high the cup to a soldier's life!  
Fill high, fill high!  
Who would not join in the coming strife?  
Fill high, fill high!  
Our's the glad sound of the trumpet's braying,  
Starting the wind's low sigh;  
And the steed of war impatient neighing,  
And the clash of armed men arraying,  
And fearless battle cry!  
Fill high the cup to the victory won!  
Fill high, fill high!  
For the car of war its course hath run.  
Fill high, fill high!  
The day is past; the moon in its waning  
Rides through the troubled sky.  
Light on the brow of death is reigning,  
And wounded men are heard complaining,  
"How hard it is to die."  
Fill high the cup to the dead around!  
Fill high, fill high!  
Calm is the sleep of the gun-shot wound.  
Fill high, fill high!  
Here's cure to the wounded; peace to the dying—  
In glory's field they lie:  
The laugh of scorn for the foemen flying;  
The shout of the wild pursuit replying.  
Fill high, fill high, fill high!

RICHARD JOHNS.

## MUSIC.

*Concerts.*—In our last we noticed the constellation of musical talent associated for the benefit of Miss Chambers (yesterday), and it seems as if M. De Bagnis, for Monday, had succeeded in arraying a yet more numerous band, to delight us with whatever the musical genius

now congregated in London can produce. We see announced for this occasion, Pasta, Grisi, Albertazzi, Giannoni, F. Wyndham, Feriotti, Assandri, Nunn, Ekerlin, Bruce, Woodham, San Felice, Blasis, Schröder Devrient, Rubini, Ivanoff, De Val, Begrez, Brizzi, Curioni, Lablache, Tamburini, Balfe, Ferrugini, Negri, T. Giubilei, Seguin, and De Begnis, as vocalists; besides instrumental performers of the first rank, and nearly all the prodigies about town.

## NEW PUBLICATIONS.

*Ode on the Accession of Queen Victoria.* The Words by B. E. Pote, Esq.; Music by E. Bach. Ewer and Co.

A HIGHLY poetical effusion; to which the composer has applied his best talents, and completed a piece not unworthy the inspiring occasion.

## DRAMA.

*Strand Theatre.*—*Sam Weller, or the Pickwickians*, was produced, with complete success, on Monday evening, and reflects great credit to the management of this neat little theatre for the manner in which it is "got up." Mr. Moncrief must have had a difficult task in selecting the best scenes, where all are so excellent, but has succeeded to admiration. Mr. W. J. Hammond was the *Sam Weller*; Mr. Hall, the *Weller Senior*; Mr. Richardson, the *Fat Boy*; Mr. J. Lee, the *Jingle*; and Mr. Younge, the *Pickwick*. All these were capital; and the general applause which greeted the fall of the curtain, was sufficient evidence of the satisfaction of a crowded audience.

## VARIETIES.

*Literary Fund.*—The Greenwich (White-bait) meeting of the Literary Fund, at Greenwich, to-day, is expected to be fully attended: it is not confined to members, but open to all corners. It might, we think, be made an improvement in this annual meeting, at which there is no business, if ladies were invited, and the social pleasures of the day enhanced by their partaking of the enjoyment.

*Colosseum.*—A new and very brilliant and entertaining series of evening amusements have been begun at the *Colosseum*, and are fully and fashionably attended. An opera, founded on the inimitable Punch and Judy, affords "lots of laughter" to the lovers of humour. There is also much pretty music to enhance the attractions of this pleasant resort.

*Surrey Zoological Gardens.*—On Monday there was a grand fête here, and the Gardens were crowded to excess. Nor was it to be wondered at; for, besides a balloon ascent, by Mr. Henry Green (a substitute for Mrs. Graham, who disappointed them), there was an entirely new and most superb exhibition, a representation of an eruption of Mount Vesuvius. It is impossible to describe the admirable effects produced, in this combination of scenery, light and shade, fire, and all the elements of the actual phenomenon. Suffice it to say, that the resemblance is very striking and impressive. With the exception of the discharge of rockets (which ought to be omitted, as artificial), the whole is so admirable, that the people of London may be content with the mountain, and never cross the sea to Naples.

*Buliah Spa.*—A splendid Flower-show was exhibited here on Wednesday; but the fineness of the grounds, and the delightful promenades (together with the excellence of more substantial entertainments) contributed yet stronger inducements to draw the citizen from smoke

and noise to enjoyment of pure air and natural beauties.

*Medallion Portrait of William IV.* (London, R. Jennings.)—A small head of our late king, engraved by Freebairn, in the manner, the superior merits of which, the *Literary Gazette* took some pains to bring before the public; most admirably sustains the character of the art, and the capabilities of the invention. Nothing can be more perfect than the likeness, nothing more accurate than the lines ruled by the machine. The effect is wonderfully fine; and a more beautiful memorial of the lamented sovereign could not be placed in the hands of subjects.

*Weather-Wisdom.*—The following, after our long drought, is encouraging; and we, therefore, hope, will be more truly predicted than our last from Lieut. Morrison's Almanac:—"The 15th, cold, stormy, and unsettled weather. The square of Venus and Saturn on the 17th, will bring rain again. The aspect of the sun to Mars on the 19th, brings increased warmth, and lightning."

*Newspaper Press Benevolent Association.*—We rejoice to find that, at a general meeting for the promotion of this desirable Institution, held at Freemasons' Hall, the further organisation of the rules, &c. was proceeded in under the most favourable auspices. In a very short period we trust to see it in full and efficient operation.

*Earthquakes in Syria.*—From returns made up under the authorities in Egypt, it is stated, that the late earthquakes in Syria destroyed 2395 houses, and killed or wounded 4106 persons.

## LITERARY NOVELTIES.

## In the Press.

The Life, Journals, and Correspondence of the late William Wilberforce, by his Sons.—The Life of Lord Howe, with Letters from George III., George IV., and the late King.—Notes on Nets, and other Matters, by the Hon. and Rev. Charles Bathurst, LL.D.

Edmonton. CHARLES HENRY ADAMS.

Latitude ..... 51° 37' 39" N.  
Longitude ..... 3 51, W. of Greenwich.

## TO CORRESPONDENTS.

"Frater" declined with thanks. The feelings are good, but the poetry not sufficiently correct or polished. T. P. W. declined, with acknowledgments. There is a want of consistency, or keeping, in the beauties scattered through the poem.

## ADVERTISEMENTS.

Connected with Literature and the Arts.

**BRITISH INSTITUTION, PALM MALL.**—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, now open, and will continue open daily, from Ten in the Morning until Six in the Evening.  
Admission 1s.; Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

## NOW OPEN.—DIORAMA, REGENT'S

PARK.—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.

Open daily, from Ten till Five.

## MARYLEBONE LITERARY and SCIENTIFIC INSTITUTION, Edward Street, Portman Square.

The Reading-Rooms supplied with English and Foreign Newspapers, Magazines, Reviews, &c. &c.; and a valuable Library for Circulation and Reference, are open daily, for the Use of the Members.

## MR. GARDNER, Hypnoticist, Discoverer

of a New System of producing sound and refreshing Sleep, without the Aid of Medicine, or any thing connected with.

Reference to, and Testimonials from, Ladies and Gentlemen, and the Medical Profession, all of whom are well known, may be had at 2 Cecil Street, Strand.

TO ARTISTS, TOURISTS, AND ADMIRERS OF THE FINE ARTS.

## PARLOUR'S PORTABLE SKETCHING-CASE, or DELINEATOR, is confidently recommended.

to the notice of all persons attached to the Science of Drawing, as being infinitely superior to the Camera Lucida, and all other instruments hitherto invented, for the purpose of Sketching. The Sketching-Case may be held in the hand, and a correct Drawing made of any object or landscape; or it may be attached to a table, in the same manner as the Camera Lucida. It is simple in its management, and does not exceed, in size, the common Sketching-Book. Manufactured for the Patentes, by Reeves and Sons, 130 Cheapside; may be had, also, of Smith and Warner, Marylebone Street, Piccadilly; Jones and Son, Opticians, Charing Cross; and at all other Opticians and Artists' Reposestos. Ladies and Gentlemen who have the Camera Lucida may have the Delineator added to their own stock.

## HINTS ON ETIQUETTE.—INJUNCTION.

—We beg to give notice that the Injunction granted to the Proprietors of "Hints on Etiquette," by his Honour the Vice-Chancellor, to restrain the Sale of the Work entitled "The Science of Etiquette," is still in force; and that the Proprietors have also recently established their Copyright in an action at law.

LONGMAN AND CO.

July 18, 1837.

## DRESDEN GALLERY.—The first five

Numbers of this splendid Work, drawn on stone by the first German Artists, are now ready for delivery at Messrs. P. and D. Colnaghi and Co.'s, Printers to the Queen, 14 Pall Mall East, price, per Number, India paper, 11s. 1s.; plain paper, 17s.

CIES OF ZACHARIAH.**  
By the Rev. DAVID KIMCHI.  
Translated from the Hebrew, with Notes and Observations on the  
"Passages relating to the Messiah."  
By the Rev. ALEXANDER MACAUL, A.M.  
Of Trinity College, Dublin.  
"To receive, therefore, the translation of any of the Rabbinical  
Writers at his hands, is a matter of interest to all who are  
desirous of knowing what they really say, because his translation  
may be relied on, and to be received as being long critical and  
controversial observations, renders the volume doubly precious  
and valuable."—*British Magazine*.  
James Duncan, 27 Paternoster Row.

In 1 thick vol. 8vo. price 18s. boards.  
**THE BOOK OF THE PATRIARCH JOB.**

ments and reflections avowed of honourable intention and rational  
piety."—*Monthly Review*.  
London: Whittaker and Co. Ave Maria Lane.

# SCOTTISH INSTITUTION FOR THE EDUCATION OF YOUNG LADIES, EDINBURGH, 15 GREAT STUART STREET, WEST.

The Institution will REOPEN on the 1st of October.

The object of this Institution is to afford to Young Ladies, at a moderate Expense, the means of acquiring, in addition to the Ordinary and Ornamental Branches of Education, a knowledge of those Sciences which have hitherto been almost entirely excluded from a Course of Female Education. Each Pupil is allowed to attend as many of the Classes as she or her Parents may judge proper, and also the Courses of Lectures which are given successively in the Institution, upon payment of SIX GUINEAS PER QUARTER; but when the Pupil enters at the Commencement, and continues to the Close of the Session, TWO GUINEAS ONLY are charged for the FOURTH QUARTER. In addition to this, 10s. 6d. per Quarter is charged for the Use of the Instruments to each Pupil who attends Music.

## FEES PAYABLE QUARTERLY, IN ADVANCE.

The Quarter-Days are—1st October, 15th December, 1st March, and 15th May. Holidays—The Four Sacramental Holidays in November and May, a Week at Christmas, Good Friday, and the Queen's Birthday. The Vacation includes the Months of August and September.

A Clergyman of the Established Church opens the Institution daily, with Devotional Exercises.

## Branches Taught in the Establishment.

I.  
Elocution and Composition, History and Geography.  
Mr. GRAHAM, 78 Queen Street.

II.  
Writing, Arithmetic, and Book-keeping.  
Mr. TROTTER, 10 North St. David Street.

III.  
Theory of Music and the Piano-Forte.  
Mr. EAGER, 48 Frederick Street, and Four Assistants.

IV.  
Singing.  
Mr. FINLAY DUN, 41 Heriot Row.

V.  
Drawing and Perspective.  
GEO. SIMSON, S.A. 56 George Street, and Two Assistants.

VI.  
Mathematics, Astronomy, and Mathematical Geography.  
GEO. LEES, A.M. 8 Regent Terrace.

VII.  
French Language and Literature.  
M. DURIÉZ, 47 George Street.

VIII.  
Italian Language and Literature.  
Signor RAMPINI, 2 Great Stuart Street.

IX.  
German Language and Literature.  
Dr. CANTOR, 52 Hanover Street.

X.  
Dancing and Calisthenics.  
Mrs. LOWE, 44 Hanover Street.

## LECTURES.

The following Courses of Lectures extend over a Period of Two Years.

I.  
Natural Philosophy—GEORGE LEES, A.M.

II.  
Chemistry—Dr. D. B. REID, F.R.S.E. 6 Roxburgh Place.

III.  
Natural History.  
WILLIAM MACGILLIVRAY, A.M. F.R.S.E. &c. 16 Minto Street, Newington.

IV.  
Geology and Mineralogy—Dr. MURRAY, F.R.C.S. &c. 31 Nicholson Street.

V.  
Ancient and Modern History—DR. GRAHAM.  
Lady-Superintendent—MISS MURRAY.

The fitness of Miss Murray for the situation of Lady Superintendent, is fully attested by her Grace the Duchess of Hamilton and Brandon, and by many Families of the highest respectability.

The Junior Pupils in English, Arithmetic, and Elementary French, are specially superintended by a highly accomplished Assistant Lady; and Rooms are set apart, in which the Pupils, under the care of Governesses, may carry on their Studies, prepare their Lessons, or improve themselves with instructive Reading in Moral, Literary, and Scientific Works, which are provided for them in the various Languages taught in the Establishment.

Miss Murray, who occupies one of the largest and most commodious houses in Moray Place, in the immediate vicinity of the Institution, receives a limited number of Boarders. Terms—Under thirteen years of age, 40 Guineas; above thirteen years of age, 45 Guineas per annum. Other particulars may be known by applying to herself, either personally, at the Institution, or by letter, post-paid.

Besides the accommodation for Boarders afforded by the Lady-Superintendent, a List of respectable Private Families who receive Young Ladies as Boarders, is kept by the Secretary, at the Institution. The Terms of Board are 35 Guineas and upwards per annum.

Parents at a distance from Edinburgh, who may intend sending their Daughters to the Institution, are requested to give notice of the same to the Secretary, by the Middle of September.

The Second Report of the Institution, price 3d. will speedily be published, and may be had of the principal Book-sellers in the Kingdom.

All Letters (post-paid) to be addressed to the Secretary, at the Institution, 15 Great Stuart Street, West.

8 New Burlington Street, July 14.  
MR. BENTLEY will immediately publish the following NEW WORKS:—

I.

### REVIEW OF NEW BOOKS.

*Mythological Inquiry into the Recondite Theology of the Heathens.* By Isaac Preston Cory, Esq. Fellow of Caius College, Cambridge. 12mo. pp. 266. London, 1837. Pickering.

Is the long and hourly increasing interest excited throughout Europe by the doubtful obscurity of Egyptian relics, and the silence, or rather total absence, of all records of its earlier history, Mr. Cory has long been recognised as one of the least ostentatious and most useful of those who have turned their attention to this difficult question. Whilst travellers and antiquaries have devoted themselves to examining the existing monuments of the splendour of the Pharaohs, and a whole host of decipherers of every country and station have busied themselves no less ardently in exploring or surmising the silent tones of that language whose echoes have ceased for ages to vibrate on the ear; the writer before us had, even in early life, the sagacity to perceive that another path might also be taken towards the same object; and that, by collecting into one focus the lights of primeval annals, obscurely scattered and almost lost in the chaos of volumes and scholiasts, their concentrated rays might be thrown with effect on the interior gloom of that shrouded history, which seemed, like its own pyramids, mighty and objectless, defying the labours of man to penetrate or define, all but at one narrowest inlet. In his collection of Historical Fragments, Mr. Cory placed before the readers' view all that earliest contemporary writers had left upon the earliest questions which interest mankind; and, in so doing, he was careful to distinguish history from conjecture, and conjecture from theory. The preface to that volume contains the author's conjectural understanding of various passages, always concisely stated, so as to prevent confusing his reader. The body of the work contains the historical portion, which the reader came thus prepared to comprehend; and it was left to his own choice whether, subsequently, he would proceed with his able and candid guide to examine the sources of that mystical system where light was made subservient to darkness; confounding the clear and sacred impressions which the Creator had left in his intercourse with man, with the phantasies of erring imagination.

The same calm and acute spirit has prompted the volume before us. With all the knowledge we had been obtaining from modern sources, there did not exist any where, to the best of our knowledge, a general view of the different systems of religious belief and their original relation and connexion. That Mr. Cory's present work, therefore, contains, in its first portion, nothing new on these subjects, except the judgment that exhibits them most strongly, is an advantage, not a defect. A basis was wanting, and is now supplied, in a popular form and spirit. The essay is short; the facts are all given; the sentences are clear, and their connexion obvious; while the arrangement followed in so wide a survey assists the inquirer, and satisfies the mind that it has really

learned something by perusal—a rare praise in the annals of bibliography.

To sum up our panegyric we must observe, that the separation of the chronology from the mythological or religious portion deserves additional praise, as including also the separation of fact from hypothesis. This course of proceeding speaks well for the system of mental discipline pursued at our universities, since, however inconvenient to the *peripatetics* of modern education, there should be in every country some institutions at least capable of detecting the difference between right and wrong.

We must give some specimens of the work, and commence with the Mythological Inquiry: pointing as freely to doubtful issues as we have heretofore praised its merits:—

“Of the theological speculations, as well as of the literature of Greece, there were three perfectly distinct eras; but the light which, at these three eras, was spread over Greece, was not confined to that country.”

“The first authenticated era of Greek civilisation and celebrity commences with the colony of Danaus from Egypt; and the theology of that age was derived from Orpheus, the disciple of Mæneus. With the exception of the poems of Homer and Hesiod, little has survived to attest its literary greatness; yet there have been handed down to us some few theological and historical fragments of the deepest interest to the antiquary. The second, the classic age of Greece, after an interval of several centuries, is ushered in with the philosophical speculations of Thales and Pythagoras; and the writings of Herodotus take up the history of the world, where it was left by his contemporary Nehemiah, the last of the inspired historians.”

“With the promulgation of Christianity, commences another era; and whether we regard the Greeks, as a nation, embracing the doctrines of the Gospel, or opposing it by the systems of the later Platonists, it is an era in their literature, as well as in their theology, completely new. The light which broke forth with the promulgation of the Gospel was preceded in some degree by the publication of the Septuagint; and the attention of many a learned antiquary was turned to explore the history of their countries, and to develop the theological signification of the strange legends, which were still held sacred over so large a portion of the earth.”

The connecting links, Mr. Cory conceives, have been supplied by two recent discoveries; the hieroglyphics of Egypt, and the system of the Indian Brahmins. We must, however, take leave to differ on this point, since these two links want obviously a third, or possibly more, for connexion with each other, if, indeed, they be connected.

A general view of the Triad principle of Deity is followed by a lucid exposition of that of the Brahmins (pp. 14 to 22), wherein the ignorance of these interlopers is sufficiently shewn. The Greek (Mr. Cory's particular forte) follows (pp. 22 to 32), and the Egyptian succeeds; the cosmogony of Sanchoniatho being included herein as “an Egyptian record from the books of Thoth.” We must confess we do not like this; for, in our opinion, the place and the

language signify little, if the record is so purely Phœnician as antiquity confesses it. The comparison of Greek, Indian, and Egyptian systems, gives room for the Syrian (pp. 58 to 61) and the Chaldean (61 to 64), of which so little is known. The Persian is limited, to a fault; and on this, and the Syrian, we conceive Mr. Cory need not have confined himself to the triflings of antiquity alone: but the error is easy of remedy in the next edition. As of Arabia, and its vaunted originality, nothing can be said, Mr. Cory has omitted the very mention of this branch; and the Chinese, German, Scandinavian, Lapponic, Druid, and Peruvian mythology, fill up the remainder. On the last of these we shall simply point out that Pachacamac, the soul of the world (but Acosta, in his etymologies, is not always to be relied on implicitly), is the exact sense of the Egyptian, or Syrian Bahumid. The idol also at Chucuisaca, called Tanga tanga, which Mr. Cory quotes from Herrera, “they said was three in one;” while it thus connects the Triad principle of the two worlds, connects also the Quinary principle, to which we alluded long since; as, in more than one Tatar dialect, it signifies Five, or the Union of Five Elements; the Angaha, or Essence, of ancient Persia; and the Tonga, or one all-perfect land, of portions of Tataria, and of the Friendly Islands also.

We must be permitted a moment's further digression to remark upon the coincidence of the South-Sea-Islands' sacred terms and those of Egypt and Judah. We do not insist that the ten tribes are to be found in America: we repudiate the idea altogether; and the arguments that tend to prove this, prove too much; but there must have been some singular connexion. This, the preservation and name of the ark, and its sacred purpose, common to Egypt and Israel, and the well-known *taboo*—Hebrew, *toebah*—to take but two instances, sufficiently prove. When will Egyptian antiquity reveal to us its power, or inability, to solve this singular problem, as well as those already waiting the discovery?

To return to Mr. Cory: it is no easy matter to do justice to the clear and simple exposition of the arguments deducible from his survey. The work, of course, is in every hand, and we need not, therefore, make the attempt; but pass on, remarking by the way, that, as we have formerly shewn, the phrase “the Spirit of God moved,” is not to be understood of locomotion, but taken in the sense of *aided* “upon the face of the waters.”

And now we come to the general result, derived by the author from his previous conclusions; namely, that the coincidence, on so many points, of a Triad principle, is an evidence that the Greek doctrine of the Trinity was known to the patriarchs. From this we must differ. Mr. Cory asks,

“How comes it that a doctrine so singular, and so utterly at variance with all the conceptions of uninstructed reason, as that of a Trinity in Unity, should have been, from the beginning, the fundamental religious tenet of every nation upon earth?”

There is no evidence, we would answer, that

• *Literary Gazette*, August 13, 1836.

it was known universally. Arabia (we take the volume before us) offers none; the north of Asia offers none, much as has been preserved of its former state. The proofs in Peru, we have hinted at as questionable: in Mexico, none exist—so far as we see: but, setting aside all else, how is it that the Jews, the sole records of the Deity's real system, retain no such evidence? No Warburton surely can arise to start a paradox on this as a Theocracy. If the patriarchs held the doctrine, whence the silence observed? and here Mr. Cory, so acute and logical every where else, must leave the non-appearing with the non-existing class. We agree that the Christian did not derive the doctrine from the heathen: but, whatever theories may exist as to the sources of the latter, there is no necessary connexion between the two: and all who have viewed the question in the same light as our author, appear, we must be excused for saying, to have overlooked the fact, that man was not more fit for comprehending, or even receiving, that great mystery, than for the proper understanding the phenomena of creation. The Mosaic institutions, too, were expressly to separate the Hebrews from all other people. The Trinity of Godhead would have been confounded with the Triads of Egypt and Persia. As the poetry of Germany unites the cultivated minds of the different states, so the religion of the Jews would thus have united them with the heathen, and on the highest point. As it was, they forsook their Visible Protector sufficiently often. But, if we come to the "fulness of time" for this revelation, when philosophy and religion had amply prepared men's minds for it, and when it was, in fact, but a part of the Messiah's coming, we shall see that the same argument satisfactorily applies to religions as to astronomical and physical phenomena; namely, that they were developed as required; and not unnecessarily left as a stumbling-block and source of folly to the Jew or the Greek.

We must object *in toto* to the system that alters the radical letters, because they resemble each other, without very good additional evidence. The very facility is the danger. Plutarch might, as Mr. Cory shews, affirm the identity of ChaRoPS with SeRaPiS (p. 97), and *seraph* might thus become *cherub*. But, if he, with all profane antiquity to support him, asserts this, we ask, whence their assertion, and what is their own authority? The answer is, The weight of Egyptian testimony. But, if the Jews preserved a distinction, it was because they were aware of the difference. The religion was theirs, and not Greek nor Egyptian. The value of the latter, therefore, opposed to Hebrew testimony is, we submit, of no weight whatever; especially as Plutarch, &c. lived so long after the memorials of Jewish rites and forms had had ample time for corruption amongst nations so different from theirs, and so ignorant of their creed. If we take, therefore, the Egyptian accounts (admitting these correctly stated), we shall have to make bold work of it in shape of alterations. But of this hereafter; for we must first conclude with Mr. Cory's mythological essay.

This eminent scholar has shewn no small felicity in pointing out the similarity between the histories of Zoroaster and Daniel; nor less judgment in throwing the remarks into a note where a weaker and visionary mind would have intruded them into the text, to build a fresh theory upon it. It is no small claim that the author has on our confidence, that he never abuses it; that no bias of his own ever induces him to mislead his reader, who, safe in the

hands of his sound and accurate guide, can explore the reservoirs of antiquity without fearing that the waters may be tainted in their channel. Every fact is stated, every authority previously weighed, and the results are placed before him in their clearest form. The vast page of classic antiquity has been read and sifted throughout; its testimony is collated, and we have no omissions to dread from ignorance or idleness. This is, surely, no moderate praise; but we trust yet to see the superstructure raised by the hands that have so carefully founded the basis. Mr. Cory is one of the few writers whose knowledge of Greece gives him the right to speak of Egypt. But with the second portion of his volume, the "Chronology," we must include a view of some recent works, in another Number.

*The Spas of Germany.* By the Author of "St. Petersburg." 2 vols. 8vo. London, 1837. Colburn.

HAVING made an extensive tour of the principal Spas of Germany during last autumn, Dr. Granville has, in these volumes, given us a full description of them, of their medical properties, of the company assembled to try their efficacy, of the modes of travelling to and from them, of the cookery, of the charges, of the country, of the people, and, in short, of all the elements of a continental excursion through foreign lands, with notice more particularly directed to such resorts of health or pleasure. Thus, whilst endeavouring to furnish a useful guide for the invalid, the author has also done his best to render the work generally amusing; and sketches of manners, anecdotes of persons, characters, and incidents, tend to vary his pages in a light and agreeable fashion. That his subject is, as stated, "absolutely new," must be met in a restricted sense, though there is a good deal of novelty in his treatment of it. He separates the mineral springs into geographical groups; and, from personal inspection, makes us fully acquainted with thirty-six, or about a tithe,\* of the most celebrated in Baden, Wurtemberg, Bohemia, Bavaria, and Nassau. His outline may be gathered from the following:

"It is a geographical fact, but whether worth recording or not I leave to better physical geographers than I am to determine, that the three great groups of the Bohemian, Bavarian, and Nassau Spas are placed, as nearly as possible, on the same parallel, namely, about the 50th degree of latitude; with an intervening space of five degrees (from the 8° to the 13°) of longitude between the first and third group; the Bavarian group occupying the middle. If two parallel lines be drawn through the central part of Germany, between the two above-mentioned meridians, and of the length of three hundred and twenty English miles, east and west, the one line resting on the fiftieth parallel, and the other fifteen miles above it, the readers will find, at once, all the several spas I have included in the three last groups of my geographical arrangement, embracing the principal and most frequented mineral springs in Germany. They will also immediately remark, that each group is placed either among, or upon, or at the foot of, celebrated ranges of mountains, such as the Bohemian, and the Franconian, the Thuringian, and that of the Taunus. Lastly, they will find that, in point of elevation above the level of the sea, the spas at the extreme east of the line are the highest (being from 790 to 1200 feet high); next,

those of the centre (from 600 to 900 feet); lastly, those of the western extremity of the line (from 300 to 800 feet); the maximum difference being nearly 900 feet of altitude. A communication between the Bohemian and the Bavarian spas exists at the foot and to the south of the great mountain-range, which divides Saxony from Bavaria, through high roads and cross roads, many of which are only passable with a carriage during a short period of the year. The same remark, though not to the full extent, applies to the line of road which places the Bavarian and the Nassau spas in direct communication with each other."

The author sets these German spas far above any which are to be found in England; and seems to consider Wildbad, in Wurtemberg, as about the best, and Ems the worst and dearest of them. We will not trouble our readers with even a list of the names of the rest; but content ourselves with one or two examples of the least professional portions of the work. Here, for instance, is a bath, of which we never heard before:—

"In female patients, and such of the other sex as possess irritable nerves, or who cannot endure the action of exciting baths, or active medicines, the effects of the Liebenzell springs deserve more attention than they seem to have hitherto received. Dr. Plieninger, the gentleman whom I met at Wildbad, and who is a celebrated accoucheur in Stuttgart, assured me, that he found the Liebenzell-bad most strikingly beneficial in female complaints, and that the reputation they had enjoyed for many years, of removing the causes of sterility, was by no means undeserved. This is not improbable, in my opinion; for, when I look at the state of health of the individual patients who require that assistance, and who visit Liebenzell, or Kissengen (another mineral water par-taking of the same virtue, situated in Bavaria), I cannot but conclude, that the bath, by setting the health right first, causes the other morbid condition of the system, on which sterility depends, to cease, as a natural consequence. There is an old German ballad commemorative of the latter power of these wells, written in a vein of humorous irony, which, if it carry no weight as a medical authority, shews, at all events, how prevalent the credence in that power must at all times have been. An affectionate, right-minded, and simple-hearted couple, had sighed in vain, after a union of many years, for an heir and representative of their name. The husband, in particular, waxed angry at the disappointment—

'For if we childless die, you know  
(addressing his dame.)  
Our lands will to my cousin go,  
Whom (Lord forgive me!) I detest  
More than by words can be expressed.'

But, quoth he, in continuation, I remember one of my grandams saying, as how, in a case like yours, to Liebenzell she made a tour, where straight a cure was brought about—

'So to those baths let's take a trip,  
And both of us can have a dip;  
We shall have children by the dozen,  
Which will just vex that rogue my cousin.  
They went: propitious was the hour,  
And great the crystal water's power,' &c. &c.

The good couple returned, much pleased with their excursion, and the success which attended it."

Munich occupies about a hundred pages; at the close of which we read some remarks which well deserve the attention of our rulers—

"Nymphenburg again reminded me of the enormous and striking difference which exists between the provisions made in foreign countries, by their respective sovereigns, for the

\* The skeleton maps merely refer to above three hundred; but the properties of the thirty-six are well explained in a tabular form at the end of the work.

recreation, out of doors, of the industrious classes, and those made at home. There, a region of pure and legitimate pleasure and enjoyment, which, in England, would be guarded with a jealous eye, and encircled with a triple brass wall of exclusion, is thrown open freely and unreservedly, on every day in the week, Sunday not excepted, to all classes of people; and heartily do they enjoy the privilege. Its size—its lakes and canals—the fountains—the cascades—the monuments—the various buildings—the *serres*—the receptacles of living animals—the prairies—in all which the Bavarian park is superior to Versailles)—are an irresistible temptation to the industrious classes to extend their holiday walks thus far, and to prefer such enjoyments to that of besotting themselves with gin—had they even so alluring and fatal a poison at hand, with all the encouragement of low duty upon it from successive chancellors of the exchequer. And, surely, to a government that wishes well to the people, so easy a mode of winning them from a disorganising, denaturalising, and denationalising vice, ought to be adopted, cherished, and worked out with all the energies of sincere patriotism. An empty word, alas!

From Munich, the route to Salzburg, Gasteln, and Hallein, is very interesting. At the latter place, the author visited the salt mines; and we copy some of his remarks thereon, though we certainly differ from him on the first point, which is thus stated:

"As it was discovered, that where the wood was most exposed to the action of the salt-earth, it became harder and harder, and was scarcely ever after liable to decay, all those piles which, when fixed, are not necessarily in contact with the salt parts of the mountain, are previously soaked in brine. Now, here is a hint for a rival company to Kyan's monopoly, which I am convinced offers no greater security against the decay of wood than strong brine would. It will be found on trial that the bichloride of sodium in this respect is as efficacious as the bichloride of mercury employed by Kyan.

The doctor seems to have been a good deal frightened in his descent:—

"Litner (his guide, he tells us) here looked round, for the first time, since we had entered these singular regions; and pulling from my girdle the glove, bid me put it on my right hand, and follow his example. He grinned, at the same time, a smile of encouragement, probably because he saw on my pale face the momentary feeling of my heart. Litner next stretched himself upon the inclined plane, keeping his head somewhat erect, and touching with his body both wooden cylinders, across which his legs were thrown slanting. He held his light with the left, while within the palm of the right hand he grasped the tight rope, keeping the thumb free and aloof from it. There was a momentary pause on my part. Litner had not explained to me the object of this *montagne russe*, as I took it to be; nor where it would lead to; nor how deep it was. The mind of man can, by resolution, encounter the greatest danger without dismay, if it be but seen; against a threatening evil that is known, we can put on the armour of courage, and brave the worst; but to face an evil we know not of, is a task from which the stoutest often recoil. A thousand accidents might happen—giddiness might follow the rapid downward descent for which I was bidden to prepare—my hand might not stand the quick friction of the rope, or cramp might supervene to prevent its proper grasp. Still, others had gone

down before me; and the stern being, then lying at my feet, had done so a thousand times. The situation was one of my own seeking, and there was no receding without shame. I stooped, therefore, on the brink of the dark abyss, behind my guide, seated myself on the cylinders, and placed my feet against Litner's broad shoulders, while, with my hand, passed under the rope, I strove to gain some security by holding it tight. The moment Litner felt the weight of my person inclining against him, he suffered himself to slide downwards, followed by me; and down, down we glided at a giddy pace, my breathing held in suspense, so that the dead silence of the dark cavern into which we were thus plunging, resounded only with the wind-like hissing of the rope, as it passed rapidly over the rough glove on our hands, and with the distant murmuring and splashing of unseen and falling water. In one minute and a half, we were again on our feet at the end of this shaft, called *Freudenberge Rolle*, three hundred and fifty feet deep. We had now reached the fourth story of the mine, called the *Unter-steinberg*, where a passage, six hundred and fifty feet in length, leads to a second shaft, very appropriately called '*Jacob's Ladder*,' one hundred and eighty-nine feet deep, and placed at forty-six degrees of inclination. On the right and left of this passage the miners were seen, busy at their toilsome task, in parties of four, working with the regularity of soldiers. It is in the passage at the termination of this steep descent, that we find the most productive salt works. The name it bears is that of *Johann Jacobs*, and in length it measures one thousand two hundred fathoms. Its walls are strongly supported; but between the wooden piles, the stratification of the rock is easily distinguished, exhibiting veins of the flesh-coloured salt in slaty marl. Two other shafts at an angle of forty-three degrees, the *Königs Rolle*, and the *Konhauser Rolle*, are descended in the like manner, in order to view the *Rupert's Berg*, or the lowest stage but one of the mine. Here the visitor is shewn a spacious place like a room, cut out of the rock, called the '*Commissioner's Chamber*,' containing the Austrian arms, and the monument of *St. Rupert*. In a niche scooped out of the rock, specimens of the different strata which occur in the mine are exhibited, together with some Roman antiquities found here in 1825, the date of which has been determined by the royal warden of the Salines, who is a great antiquary, to be one hundred and eighty years before Christ. Hitherto fear had given way to admiration, and fatigue to the pleasure of witnessing these stupendous works of nature and man. But the greatest surprise was yet to come, and great it was indeed, when upon the throwing open of a door which seemed to bar the avenue we were then pursuing, I suddenly emerged from comparative darkness and a narrow pass, into a wide expanse, lighted up all round by hundreds of tapers. These, being reflected from the surface of a dark and still lake of liquid brine, which spreads widely below them, and from the low and extended ceiling above, which was sparkling with the deliquescent moisture of the salt rock, seemed at first to be of ten times their real number. The sudden appearance, too, of several of the miners in their bizarre costume, whispering in low murmurs to each other; some on the brink of this dismal lake, looking on; while others were pushing a flat bark on its liquid surface to the spot on which I stood, inviting me at the same time, and by mute signs only, to embark on it, added to my

first surprise the more intense feeling of interest. At the first glance, one might have fancied himself in a very large square at night surrounded by an illuminated town; and the veins of salt rock, which were of red, green, yellow, white, and blue tints, mixed with crystals of selenite, sparkled and shone like precious stones. Notwithstanding this adventurous splendour around the dark lake, the whole scene forcibly brought to mind many passages of the '*Inferno*,' *nella divina commedia*.

'L'acqua era bigia molto più, che perra.'

'Ed ecco verso noi venir per nave,  
Un vecchio, bianco per antico pelo,'

who seemed to view me askant, and say:

'Non isperate mai veder lo Cielo:  
I veggio per menarvi a l'altra riva  
Nelle tenebre eterne in caldo e'n gelo.'

The only way out of this dreary abode, however, was by crossing the lake."

All dangers escaped, however, they, at length, safely revisited the glimpses of the sun.

Having said so much of the mines of Salzburg, we ought to quote the author's opinion upon the chief philosophical question, which his tour may be said to illustrate. He says:—

"The question of thermality, in mineral springs, is involved in mystery. That the heat developed in those springs is of volcanic origin, there is every probability. To say that such cannot be the case, because in the instance of some of the mineral springs, as at Gasteln, for example, there are no vestiges of volcanic crust in the neighbouring formations, is only to say that the foyer of a volcano may exist in the bowels of the earth, without being suspected from outward signs. If it exist, however, and the heat of the thermal mineral waters be borrowed thence, might we not suppose that heat, so produced, is different from common heat, in its physiological effects on the human constitution, although our thermometers may rise or fall alike, when exposed to either? I attach no importance to such a conjecture, or its originality; but I think the present the best opportunity of recording it, once for all, as I shall have, in the course of the present work, to speak of other warm springs, and I wish not to return to the consideration of the abstract subject of their thermality. Look at electricity and magnetism: what happens with them? does not either of those principles, fluids, or whatever they may be, measure, at times, an equal degree of quantity, with a very different state of intensity? and do they not, consequently, produce very distinct phenomena in each case? Then, why not view heat in the like manner?"

We will not offer any remarks on this theory, but quote one of the highest authorities on the subject. Dr. Daubeny says—

"Most thermal springs are of volcanic origin; and many cold petrifying springs, he contended, derive the carbonic acid to which they owe that property from the same source, as is shewn by their position in what are called valleys of elevation. Where volcanoes cannot be traced in their vicinity, there are almost invariably the appearances of former earthquakes. Of volcanoes themselves, the lecturer stated that no fewer than 163 existed in an active form in different parts of the world; twelve in Europe, thirty-two in Asia, six in Africa, sixty-one in America, and fifty-two in Polynesia. Extinct volcanoes are even more numerous. Volcanoes usually do not lie isolated, but extend along particular lines of country, as is exemplified in the Grecian Archipelago, in Mexico, and in the Indian Ocean. They are, in the great

majority of cases, near the sea; and when distant, they seem to be connected with others which lie contiguous to some great mass of water. Reviewing the various phenomena he had explained, the learned professor held it to be nowise improbable that a slow volcanic action may be going on for an indefinite period of time, without producing either eruptions or earthquakes, especially if a vent be established whereby the imprisoned gas may make its escape. It is even possible to explain the regular and long-continued evolution of gas from the earth, without imagining the volcanic operations to be proceeding at present; for if we suppose a large mass of rock underneath Bath to have been intensely heated at some distant period, and to contain in its centre a cavity filled with nitrogen gas, the outer portions cooling first would, by their contraction, expel from the cavity a portion of its included gas; and this would go on until the walls themselves of the cavity, and, consequently, the gas itself, began to cool.

These are grave subjects for discussion, and we leave them to the Doctor. The following are more entertaining:—

"A new hypothesis to explain the effect of Gastein on diseases, has been started lately by Dr. Hoffrichler, and has met with no favour from his countrymen; but I confess I do not think it so laughable as they have considered it. That physician says—Gastein, a poverty-stricken Nalad, effects cures which would be impossible for her, did she not act in connexion with the air. She has built her temple nearly three thousand feet above the surface of the sea. Must not the air of this place press the body of a patient, who has lived in a place, for instance, only 435 feet above the sea—3060 pounds lighter than before? Is this nothing? Or is it an indifferent circumstance? It must occasion important changes in the organism of that body. If the patient also bathes, at a depth of two feet, the pressure is 3100 pounds; and if at the depth of three feet, then it will be 3150 pounds, lighter than before. If this change of pressure be repeated for weeks together, once or twice a day, is it wonderful that the most obstinate obstructions of the belly should be removed, that the pores of the skin should be opened, and that the intestines should be stimulated to new life? These effects are improperly ascribed to the tasteless waters of Gastein alone."

At Carlsbad, "The manner of remunerating the medical attendants is not regulated by the number of visits or by bills, but is left to the inclination, feeling, and means of the patient. The amount is either forwarded or given at the conclusion of the cure, just as the patient is about to leave Carlsbad. The invalids do not expect to be visited daily, but only as necessity requires. Each physician is certain to see all his patients at the wells, and there the inquiries and consultations often take place, which suffice for the occasion. In this manner only those physicians who have a large number of patients to attend to (like Heidler at Marienbad, for example, who sees 300 patients every morning), can accomplish that object. I could not help expressing to the latter, as well as to De Carro, at Carlsbad, the pleasure it gave me to witness the simple, quiet, and *cane-à-cane* manner in which this daily intercourse between patient and physician took place at their respective Spas. How different from the stiff, starched, and aristocratic style of the medical visits in the neighbourhood of Grosvenor and Belgrave Squares! The mode of remuneration just alluded to cuts both ways, to use a common ex-

pression, as the following anecdote will prove. The Lord Chief Justice J——, from the 'sister island,' was among the *kurgäste* of Carlsbad of 1833, and attended by my friend, De Carro, whom he addressed, at the end of the season, in English, with all the gravity of a judge, thus: 'Doctor! as to my feelings of gratitude for your successful aid, they are written in my heart, and I need not repeat them. Of what concerns pecuniary matters, I am, I confess, in the deepest ignorance; but if, in the sum which I beg you, herewith, to accept (putting fifty ducats into De Carro's hand), I have committed any mistake, I pray you not to hesitate a moment to enable me to rectify it.' 'My lord!' said as gravely the doctor, 'your lordship's ignorance is to me more precious than the full knowledge which many of the visitors at these springs possess, and I am thankful for it.' Upon which the gravity of the judge relaxed, and off went my lord in an *état de rive*."

We may just notice that there are frequent examples of foreign idiom in the style; and we opine a few instances of personal remark, hardly worth the writer's while, such as his ludicrous portrait of poor John Frost, and his promenade with the Guiccioli at Baden.

A dreadful family misfortune, however, which befel Dr. Granville, during his absence, the accidental death of his eldest son, is touchingly mentioned. It was a heavy blow to an affectionate father's heart, and would turn us from the precision of criticism, were we otherwise so disposed, or had occasion to be dissatisfied with the work. We have not; and therefore recommend it, with its numerous embellishments, to the attention of our tens of thousands of tourists, who, about this season of the year, rush from England, as if it were overspread with plague and pestilence.

*The Token and Atlantic Souvenir.* Edited by S. G. Goodrich. 12mo. pp. 348. Boston, 1837. Bowen.

THIS is the tenth volume of a miscellany which has done the lighter American literature infinite credit. Nice taste and nice feeling have been its characteristics from the first; and there have been many productions far above the average order of annuals. "The Tiara," "The Man of Adamant," and "The Old Farm-House," whether for the truth they develop, or the spirit with which they are told, deserve very high praise. "Full Thirty," and "All is not Gold that Glitters," are, also, exceedingly well-told stories; and our English readers may be glad to become familiar with the names of Mrs. Sigourney, and Misses Leslie and Sedgewick. We give part of a very amusing dialogue between a young man returning to a farm house, where he had passed part of his childhood, and an old negro, a former attendant.

"Lindsay turned to the spot 'where once the garden smiled,' and found it a wilderness of tall and tangled weeds, interspersed with three or four degenerate hollyhocks, and a few other flowers that had sowed themselves, and dwindled into insignificance. And in the division appropriated to culinary purposes, were some straggling vegetables, that had returned to a state worse than indigenous—with half-a-dozen rambling bushes that had long since ceased to bear fruit. Lindsay had gazed on the gigantic remains of the Roman Coliseum, on 'the castled crag of Drachenfels,' and on the ivy-mantled arches of Tintern, but they awakened no sensation that could compare with the melancholy feeling that oppressed

him as he explored the humble ruins of this simple farm-house, where every association came home to his heart, reminding him not of what he had read, but of what he had seen, and known, and felt, and enjoyed. As he stood with folded arms contemplating the images of desolation before him, his attention was diverted by the sound of footsteps, and, on looking round, he perceived an old negro coming down the road, with a basket in one hand, and in the other a jug, corked with a corn-cob. The negro pulled off his battered wool-hat, and, making a bow and a scrape, said, 'Savvan, masser'—and Lindsay, on returning his bow, recognised the unusual breadth of nose and width of mouth that had distinguished a free black, well known in the neighbourhood by the name of Pharaoh, and in whom the lapse of time had made no other alteration than that of bleaching his wool, which was now quite white. 'Why, Pharaoh, my old fellow!' exclaimed Lindsay, 'is this really yourself?' 'Can't say, masser,' replied Pharaoh. 'All people's much the same—best not be too personal—but I b'lieve I'm he.' 'Have you no recollection of Edward Lindsay,' inquired our hero. 'Lawful heart, masser!' exclaimed the negro; 'I do b'lieve you're little Neddy, what used to come from town, and stay at old Abraham Hilliard's of summers, and what still kept visitin' there, by times, till you goed over sea.' 'I am that identical Neddy,' replied Lindsay, holding out his hand to the old negro, who evinced his delight by a series of loud laughs. 'Yes, yes,' pursued Pharaoh, 'now I look sharper at you, masser, I see plain you're 'xactly he. You've jist a same nose, and a same eyes, and a same mouth, what you had when you tumbled down the well, and fall'd out of the chestnut-tree, and when you was peck'd hard by the big turkey-cock, and bit by the old ram.' 'Truly,' said Lindsay, 'you seem to have forgotten none of my juvenile disasters.' 'To be sure not,' replied Pharaoh, 'I 'member every one of them, and a heap more, only I don't want to be personal.' 'And now,' said Lindsay, 'as we have so successfully identified each other, let me know, at once, what has happened to my good friends, the Hilliards, who, I thought, were fixed here for life. Why do I see their house a heap of ruins? Have the family been reduced to poverty?' 'Lawful heart, no,' exclaimed the negro; 'masser Neddy been away so long in foreign parts, he forget how, when people here in 'Merica give up their old houses, it's a'most always acause they've got new ones. Now, old Abraham Hilliard he get richer and richer every minute—though I guess he was pretty rich when you know'd him, only he never let on. And so he build him fine stone house beyont his piece of oak-woods, and there he live this blessed day. And we goes there quite another road. And so he gave this old frame to old Pharaoh; and so I had the whole house carted off, all that was good of it, and put it up on the road-side, just beyont here, in place of my old tumble-down cabin, what I used to live in; that I've altered into a pig-pen. So now me and Binkey am quite comfabbul.' 'Shew me the way,' said Lindsay, 'to the new residence of Mr. Hilliard. I have come from Philadelphia on purpose to visit the family.' 'Bless your heart, masser, for that,' said the old negro, as he held the stirrup for Lindsay to mount; and, walking by his side, he proceeded, with the usual garrulity of the African race, to relate many particulars of the Hilliards and their transit. 'Of course, masser Neddy,' said Pharaoh, 'you 'member old Abraham's

two boys, Isaac and Jacob, what you used to play with. You know Isaac mostly whipped you when you fought with him. Well, when they grew up, they thought they'd help'd their father long enough; and as they wanted right bad to go west, the old man gave 'em money to buy back land. So each took him horse—Isaac took Mike, and Jacob took Morgan, and they started west, and went to a place away back—away back—seven hundred thousand miles beyond Pitchburg. And they're like to get mighty rich; and word's come as Jacob's neighbors is going to set him up for congress; and I shouldn't be the least 'prized if he's presidump. You 'member, masser Neddy, Jacob was always the tongueiest of the two boys.' 'And where are Mr. Hilliard's daughters?' asked Lindsay. 'Oh, as to the two oldest,' replied Pharaoh, 'Kitty married Billy Pleasants, as keeps the store over at Candyville; and Betsy made a great match with a man what has a terrible big farm over on Siskahanna. And old Abraham, after he got into him new house, sent him two youngest to the new school up at Wonderville, where they teaches the gals all sorts of wit and learning.' 'And how are your own wife and children, Pharaoh,' inquired Lindsay; 'I remember them very well.' 'Bless your heart for that, masser,' replied the negro; 'why Rose is hired at Abraham Hilliard's—you know they brungt her up. And Cato lives out in Philadelphia—I wonders masser did not see him. And as for old Binkey, she holds her own pretty well. You know, masser, Binkey was always a great hand at quiltings, and weddings, and buryings, and such-like frolics, and used to be sent for high and low to help cook at them times. But now she's a-getting old,—being most a thousand,—and so she stays at home, and makes rusk, and gingerbread, and molasses beer. This is molasses I have in the jammy-john; I've jist come from the store. So she sells cakes and beer; that's the reason we lives on the road-side, and I works about. We used to have a sign that Sammy Spokes the wheelwright painted for us, for he was then the only man in these parts that had paints. There was two ginger-cakes on it, and one rusk, and a coal-black bottle, with the beer spouting up high, and falling into a tumbler, without ever spilling a drop. We were desperate pleased with the sign, for folks said it looked so nateral, and Sammy Spokes made us a present of it, and would not take it out in cakes and beer as we wanted him, and that shewed him to be very much of a gemplan.' 'As no doubt he is,' remarked Lindsay; 'I find, since my return to America, that gentlemen are 'as plenty as blackberries.' 'You say very true, masser,' rejoined the negro; 'we are all gemplans now-a-days, and has plenty of blackberries. Well, as I was saying, we liked the sign a heap. But after Nelly Hilliard as was—we calls her Miss Ellen now—quit Wonderville school, where she learnt every thing on the face of the yearth, she thought she would persecute painting at home, for she had a turn that way, and wanted to keep her hand in. So she set to, and painted a new sign, and took it all out of her own head; and gave it to old Binkey, and explained it to us. There's a thing on it that Miss Ellen calls a urn, or a vase; that stands for beer: and then there's a sugar cane growing out of it; that stands for molasses: and then there's a thick string of green leaves with roots twisted amongst 'em; that answers for ginger: for she told us that ginger grows like any other widgable, and has stalks and leaves, but the root is what we uses. Yet, somehow, folks doesn't seem to understand

this sign as well as the old one. A great many thinks the vase be an old sugar-dish, with a bit of a corn-stalk sticking out of it, and some pasley and hoss-reddish plastered on the outside, and say they should never guess cakes and beer by it.' 'I should suppose not,' said Lindsay. 'But, Masser Neddy,' pursued the old negro, 'all this time we have been calling Abraham Hilliard, Abraham, instead of saying aquire. Only think of old Abraham; he been made a aquire this good while, and marries people. After he move into him new house, he begun to get high, and took to putting on a clean shirt, and shaving every day, which Rose says was a pretty tough job with him at first; but he parsewered. And he's apt to have fresh meat whenever it's to be got, and he won't eat stale pies; and so they have to do small bakings every day, instead of big ones twice a-week. And sometimes he even go so far as to have geese took out of the flock, and killed and roasted, instead of saving 'em all for feathers. And he says, that now he's clear of the world, he will live as he likes, and have every thing he wants, and be quite comfabull. And he made his old woman leave off wearing short gowns, and put on long gowns all the time, and quit calling him daddy, which Rose says went very hard with her for a while. The girls being young, were broke of it easy enough, and now they says pappy.' 'Pahaw!' ejaculated Lindsay, whose regret at the general change which seemed to have come over the Hilliard family, now amounted nearly to vexation. 'Now, Masser Neddy,' continued Pharaoh, 'we've got to the new house—there it stands, right afore you. An't you 'prised at it? I always am, whenever I sees it. So please a jump off, and I'll take your hoss to the stable, and put him up, and tell the people at the barn that Masser Neddy's come; and you can go into the house and speak for you 'mself.' Lindsay, at parting, put a dollar into the hand of the old negro. 'What for this, Masser Neddy?' asked Pharaoh, trying to look very disinterested. 'Do whatever you please with it,' answered Lindsay. 'Well, masser,' replied the negro, 'I never likes to hurt a gemplan's feelings by 'fusing him. So I'll keep it, just to 'blige you. But I 'spect, to be sure, Masser Neddy'll step in some day at neger-man's cabin, and see old Binkey, and take part of him dollar out in cakes and beer. I'll let masser know when Binkey has a fresh baking.' Pharaoh then led off the horse, and Lindsay stood for a few moments to take a survey of the new residence of his old friends. It was a broad, substantial, two-story stone house. There was a front garden, where large snow-ball trees

'Threw up their silver globes, light as the foamy surf';

and where the conical clusters of the lilac, and the little May roses, were bursting into fragrance and beauty, and uniting their odours with those of the tall white lily, and the lowly, but delicious pink. Behind the house ascended a woodland hill, whose trees, at this season, exhibited every shade of green, in tints as various as the diversified browns of autumn. Lindsay found the front door unfastened, and, opening it without ceremony, he entered a wide hall, furnished with a long settee, a large table, a hat stand, a hanging lamp, a map of the United States, and one of the world. There was a large parlour on each side of the hall; and Lindsay looked into both, the doors being open. One was carpeted, and seemed to be fitted up for winter; the other had a matted floor, and was evidently the summer sitting-room. The furniture in both, though by no

means showy, was excellent of its kind, and extremely neat; and, in its form and arrangement, convenience seemed to be the chief consideration. Lindsay thought he had never seen more pleasant-looking rooms. In the carpeted parlour, on the hearth of a Franklin stove, sat a blue china jar, filled with magnolia flowers, whose spicy perfume was tempered by the outer air that came through the Venetian shutters, which were lowered to exclude the sun-beams. One recess was occupied by a mahogany bookcase; and there was a sideboard in the other. The chimney-piece of the summer parlour was concealed by a drapery of ingeniously cut paper; and the various and beautiful flowers that adorned the mantelpiece, had evidently been cultivated with care. Shelves of books hung in the recesses; and in both rooms were sofas and rocking chairs. 'Is it possible,' thought Lindsay, 'that this can be the habitation of Abraham Hilliard?'

There is some graceful poetry; and the frontispiece—a waterfall, with its attendant rainbows—is a very sweet and clear engraving.

*Don Quixote de la Mancha.* Translated from the Spanish of Miguel de Cervantes Saavedra. By Charles Jarvis, Esq. Part I. pp. 48. London, 1837. Dubochet and Co.

THIS commences a fine edition of *Don Quixote*. A work so long celebrated in all modern languages, deserved to be brought out in a superior style here. The admired embellishments of the Paris editions (eight hundred in number) are transferred to the English version of the noble romance of Cervantes, and, on this occasion, the Willoughby press has well sustained the high claims put forth to our applause in "Gil Blas," which we lately noticed in terms of just panegyric. The cuts are carefully worked off; and the text, for accuracy and beauty, cannot be surpassed.

But one of the greatest recommendations of this splendid work we hold to be the copious history of Cervantes, which it is proposed to supply, and of which a part is given in the present number. The events of his life, it is well said, were so varied in their character, and so striking, that it would be difficult to account for their being passed over by former editors, were the difficulty of collecting facts relating to an author who lived three centuries ago not borne in mind. In the present case, that is, in the case of the French edition, from which the memoir is taken, though by no means literally, we are told, that

"A happy coincidence gave M. Viardot opportunities of prosecuting such an inquiry which were denied to his predecessors. Not only had he facilities for studying Spanish manners, in all the several grades which society can furnish, but, favoured by the highest political, as well as the highest literary authorities in the country, he was enabled to make an extended and successful search for documents, facts, and traditions; and the result is a most gratifying picture, in detail, of the author of *Don Quixote*."

In the commentary which follows, supplied by the English editor, we cordially join.

"He has rendered a worthy service to letters and to humanity, for the character of Cervantes well deserves to be known. Like our own Raleigh, it was his fate to shine in strangely dissimilar situations. His was a life of awful vicissitude. But a noble and generous spirit made him great in all—whether we look at him on the day of battle, in the gloom of a Moorish dungeon, or contending with the consuming

cares of ordinary life—we must admire the warrior, the captive, and the man."

And that he does barely justice to his subject, the following deeply interesting extract, connected with the series of bold attempts made by Cervantes to escape from slavery in Algiers, will amply prove:—

"Three miles from Algiers, on the eastern side of the town, there was a garden and summer-house belonging to Kaïd Hassan, a renegade Greek. One of his slaves, named Juan, a Spaniard, native of Navarre, had secretly dug in this garden, which he was employed to cultivate, a sort of cave, or subterranean apartment. Thither, in obedience to directions given by Cervantes, from the end of February 1577, the captive Christians successively repaired, as opportunity offered, and made it their residence. Their number, when Rodrigo left for Spain, already amounted to fourteen or fifteen. Cervantes then, without quitting his master, governed this little subterranean republic, providing for the wants and the safety of its members. This fact, which proves the great resources of his mind, might be somewhat doubted if it were not proved by a multitude of testimonies and documents. He had, for his principal assistants in this enterprise, Juan, the Navarrese above mentioned, who kept the wicket, and would not suffer any one to approach Hassan's garden; and, afterwards, another slave, called El Dorador (the Gilder), who, when very young, had forsaken his religion, and who had recently again become a Christian. The latter was charged with the task of carrying food to the cavern, which no one was allowed to leave but in the darkness of night. When Cervantes thought the arrival of the frigate might be expected, which his brother had undertaken to get sent, he made his escape from the house of Dali-Mami, and, on the 20th of September, after taking leave of his friend, the Doctor Antonio de Sosa, who was too ill to accompany or follow him, he proceeded to take up his abode in the subterranean retreat. His calculation was correct. In the interval which had passed, a ship was fitted out from Valencia or Majorca, under the command of an officer named Viana, who had but lately been ransomed; a man, active, brave, and well acquainted with the coast of Barbary. The frigate arrived within sight of Algiers on the 28th of September; and, after keeping the high sea all day, she approached at night the spot agreed upon, near the garden, to communicate with the captives, whence they might be embarked in a few moments. Unfortunately some fishermen, who had not yet left their vessel, perceived, notwithstanding the gloom of night, the Christian frigate. They gave the alarm, collected a force to act against it, and Viana was obliged to retire to the open sea. He subsequently attempted to approach the shore a second time, but his attempt had a disastrous issue. The Moors were on their guard; they surprised the frigate where it was intended to effect a landing, made prisoners of all on board, and thus defeated the projected escape. Up to that period, Cervantes and his companions had patiently endured, in the hope of regaining their liberty, all the privations, annoyances, and even the sickness, which had been created among them by a long residence in their humid and gloomy cave. But that hope now failed them. The morning after the capture of the frigate, the Gilder, the renegade, who had been reconciled to the church, and in whom Cervantes had reposed the utmost confidence, abjured it again, and hastened to make known to the Dey of Algiers, Hassan-Aga, the

retreat of the captives whom Viana had purposed to carry off. The dey, delighted with such intelligence, which enabled him, according to the custom of that country, to appropriate all those Christians, as lost slaves, to himself, sent the commandant of his guards, with thirty Turkish soldiers, to arrest the fugitives, and the gardener who concealed them. The soldiers, conducted by the treacherous informer, made their appearance unexpectedly, sword in hand, in the cavern. While they were securing the astonished Christians, Cervantes raised his voice, and, with a noble firmness, declared that 'none of his companions were at all to blame; that he alone had induced them to fly, had concealed them; and that, as he alone was the author of the plot, he alone ought to suffer for it.' Astonished at conduct so generous, which went to draw down on the head of Cervantes all the wrath of Hassan-Aga, the Turks sent a messenger to their master, to make him acquainted with what had occurred. The dey ordered that the captives should be conducted to a building reserved for his slaves, and that their chief should be immediately brought before him: Cervantes, loaded with chains, was conducted from the cavern, on foot, to the palace of Hassan, amidst the angry hootings of the excited populace. The dey interrogated him many times, and employed alternately the most flattering promises and the most terrible threats, to induce him to betray his accomplices. Cervantes, deaf to all he could urge, inaccessible to fear, persisted in accusing himself alone. The dey, tired of attempting to shake his resolution, and, doubtless, in some degree touched by his magnanimity, contented himself with ordering him to be chained in his slave-house, or prison. Kaïd Hassan, from the garden in which the fugitives had been taken, ran to the dey to demand that severe punishment should be awarded to all the captives; and, beginning with his slave Juan, the gardener, he hanged him with his own hands. The same fate would undoubtedly have been shared by Cervantes and his companions, had not the avarice of the dey abated in some measure his natural cruelty. But the greater part of the prisoners were claimed by their former masters, and Cervantes himself was again placed in the power of Dali-Mami. Whether he had given the dey some offence, or whether the latter thought this particular captive would be likely to be ransomed at a high price, is not known; but he (the dey) purchased him shortly afterwards, paying for him five hundred crowns. Hassan-Aga, who was of Venetian origin, and whose real name was Andreta, was one of the most ferocious wretches who had given Barbary an infamous celebrity by their monstrous crimes. What P. Haedo recounts of the atrocities committed during his government, surpasses all belief, and makes the reader shudder with horror. He was not less terrible to his Christian slaves, of whom the number amounted to nearly two thousand, than he was to his Mussulman subjects. On this subject Cervantes says, in his 'Captive Captain,' 'Nothing caused us so much torment as the witnessing of the stupid cruelties which my master perpetrated on the Christians. Every day he ordered one to be hanged. One he impaled; he cut the ears off another, and that for nothing at all, or for offences so trifling, that the Turks themselves acknowledged that he committed crime merely for the pleasure of being criminal, and because his natural instinct led him to act the part of butcher to the human race.'"

*The Chronicles of Rabbi Joseph Ben Joshua Ben Meir, the Sphardi. Translated from the Hebrew. By C. H. F. Bialloblotzky. Vol. II. London, 1836. Printed for the Oriental Translation Fund. Valpy.*

In this second volume, the learned Rabbi brings down his Chronicles to the year 1553. It is very curious and interesting from the strangely sounding scriptural phraseology in which we read accounts of well-known modern events. We select his detail of the capture of Francis I. at the battle of Pavia:—

"And when the Marquess Pescara, the chief of the emperor's host, saw the people that were naked, he went to the Duke of Bourbon, saying, 'The children are come to the birth, but there is no strength to bring forth. And now speak, I pray thee, kindly to the people which follow thee. And I shall do so also, and we will war against these Frenchmen, and our fame will spread over all the earth; for the day which we desired, we have found and have seen;' and they did so, and they put the battle in array there, and the marquess passed over before them, and he warred against those nations, and they fell slain to the ground before him. And also the Marquess del Vasto filled his hand, and they were counted by him as vain and as nothing, and they slew among them a great slaughter. And when the Swiss saw that the evil was determined against them, they turned their backs, and fled before them. And the Italians and Germans were left to their destruction, and fell slain to the ground. Then did the horse-hoofs stamp, when the horsemen also put the battle in array, and the earth shook at their voice. And the chief captains of the imperial hosts placed five hundred footmen bearing guns, in the midst of the cavalry with subtlety. And it came to pass, as they were fighting, that they suddenly fired their guns on the cavalry of the French, and many of them fell; and the rest fled for their lives, for they feared lest the evil should overtake them; and the viceroy of the emperor and the Duke of Bourbon also filled their hands at that time. And the king also, as well as his nobles, fought on that day, and all his mighty men fell before his face slain to the ground: and the king ran with his sword drawn in his hand, and slew the chief of the Germans, and he fell slain to the ground; also the Marquess Pescara was wounded in his face, his belly, and his thigh; for all this his anger was not turned away, and he spake kindly to his men, and they again put the battle in array and the French were smitten before them, and fled; and they slew the horse of King Francis, who fell to the ground, and they took him, and he was delivered into the hand of the viceroy of the emperor at that time. And also the king of Navarre, and many nobles and honourable men who were with them, were taken in that battle. And many were slain by the edge of the sword; and they were like dung upon the face of the field, and like the corn after the reaper, which none gathereth. And it came to pass, as they were fighting, that the Duke of Alençon saw their distress, and went out from the camp and four hundred horsemen with him. So they fled, and went on their journey to France. And the hosts of the emperor came into the camp of the king upon the slain, and took great spoil, and came to the city with gladness. And the city of Pavia rejoiced and was glad.

The assault and sacking of Rome is thus related:—

"And it came to pass on the first day of Pentecost, in the year two hundred and eighty-

seven of the small number, which is the sixth day of the month of May in the year one thousand five hundred and twenty-seven, that Bourbon approached the city, clothed in a scaly coat of mail, to view the walls; and the artillery-men shot, and wounded him in his side, and he fell to the ground. And he commanded his servants, saying, 'Take me away out of the road, and throw a garment over me, lest the courage of those who come to me be softened, so that they stop.' And his servants did to him according as he had commanded them; and he died. And when he was taken out of the road, all the people of the host passed and approached the city, and warred against it with a mighty hand; and it was dark, cloudy, and misty, at that time; and they who were in the midst of it warred, and filled their hand, and the earth shook at the noise of the canuons. And the commandments of the emperor's hosts shouted aloud and spake kindly to the men of war; and they warred round about the city, and the groanings of the sons of death were heard from afar, and much people died at that time. And they blew with trumpets and tabrets; and the earth was rent at their noise. And they cast down the walls; and the Germans came into the city. And many princes and honourable men of the land fell at that time; and the Spaniards came, and shouted out with a loud voice, 'Sword! sword!' And the Romans fled before them, and fell in the streets, and they trampled upon them with horses so that they died. And they raised the draw-bridges of the fortress at that time, and much people died there. And men exercised in war gathered themselves in Ponte Sisto to watch, lest the Spaniards should pass. And there were about two hundred men riding on horses. And they slew many of the Spaniards, and many fell slain to the ground, and the city became desolate; and Monte Giordano, and part of Monte Fiore they set on fire, and the city of Rome was in consternation. And there fled the two cardinals, Rienzo Orsino and Horazio, into the fortress; and Clement set Rienzo at the head of the people, and they set a watch round about. And Rome was given up to be plundered; and the houses were pillaged, and the women were lain with, and the city went into captivity, and most of the priests were cut off from the city. And the nuns they ravished, and squeezed the breasts of their virginity, and plundered their whole property. And they gave up the chief castle which belonged to the pope; and all the high places of the saints they gave up to be spoiled, and they brought out of them vessels of silver and vessels of gold, and graven images, and molten images in abundance. And the bones of the saints they threw into the mire of the streets. And they mocked the cardinals and the priests, and put on their clothes and walked in the streets of the town to blaspheme and to revile: for their way was as the uncleanness of an impure woman in the eyes of these German Lutherans; and Rome became very poor. And also the Jews who were there, were given up to be spoiled, and of them also some fell in that slaughter; and their cry went up towards heaven. And when Clement saw that he had no deliverer, he desired to speak to the viceroy of the emperor, and he came into the city. And every man swore not to hurt his neighbour in those days. And the Spaniards would not let the viceroy go, and Cattinara spake with him, and demanded of him five hundred thousand scudi, and all the priests and all the soldiers which were with him there. And Clement said, 'I will speak in their ears, and return;' so he went away from him. And

he spake in the ears of those men, and they said, 'We will die this time, and in the hand of these proud ones we will not fall.'"

The massacre of Modon:—

"In that year came, 1530, a Turk, a man of Belial, and spake to the heart of the grand-master of Rhodes, and to his brother, saying, 'Arise, let us go unto Modon, and let us make a breach for us therein, for the land is very good. And ye are quiet; be not idle to go, and I will give the tower into your hand; and as ye come ye will come to a quiet and secure people, and these, God has given unto you; why do ye tarry.' And it came to pass, one day, that they hearkened unto the voice of that man, and sent thither a ship bearing wine; and in the lowest part of the ship about eighty men. And the ship came securely into the haven of Modon, and six galleys which they had came after her; no man knew of their coming. And there went upon the first vessel some of the Turks, of the watchers of the city, and they asked at random, for they prophesied and then ceased, 'Are there here any Nazarene dogs?' And they said, 'No; we are true men; the ship bears wine, as much as she can carry; behold, and see.' And they gave them to eat and to drink, as much as their soul desired, until their hearts were merry with wine; and they became drunken with them at that time. The wine was yet in their throat; and the man who spake to them, slew the post-captain of the Turks, who was on the citadel. And he gave the signal, and the men who were in the ship went out swifter than the leopards, and stronger than the lions. And they slew the watchers of the gate with the edge of the sword, and they came into the city of Modon upon that quiet and secure people, according as he had told them. And they slew all whom they met in the markets and in the streets with the edge of the sword; and their wives and their children, and all their property they plundered, and there was none to deliver from their hands, for they were terrified before them. And when the thick smoke ascended from the houses which they burned with fire, the galleys came, even those which were at a distance of ten miles, as an eagle flieth. And they came against the city with two hundred men, and filled also their hands with their swords devouring flesh, and their arrows were drunken with blood; and they stretched their hand unto the spoil. And many of the inhabitants of the city fled at their voices, and were put to flight by the sword, and stayed not; for they knew not whence this great evil came unto them. And many gathered themselves into the palace which was in the midst of the city, whose doors were of brass; and they fortified themselves there, and their lives were unto them a spoil. And it came to pass, at eventide, that two thousand Turks, riding on horses, gathered themselves, and came also into the city with anger, and with wrath, and with a great noise; and the earth was rent at their voice. And the uncircumcised fled before them, and they gathered themselves unto the ships with the spoil and the plunder; there were not missed of them more than twenty-five men. And the captives, whom the ships could not carry, they slew with the edge of the sword. And they returned unto Malta, which the emperor gave them to dwell in [25] after their expulsion from Rhodes, to abide there. And the wrath of Solyman was greatly kindled against them, and against those who joined them. And of the children of Israel, there was not taken even one, for, when they heard their voice, they fled unto the mountain; and their lives were unto them a prey. Only their riches

and all their property the men of Modon plundered, for they were oppressors unto them."

Catharine of Arragon and Anna Boleyn:—

"And Henry, the king of England, divorced his consort, Catharine of Arragon, and took Anna Boleyn to himself to wife. And it came to pass, when they were at Greenwich, in the month of May, joyful and with glad hearts, that a spirit of jealousy came upon him, and he hated her. And he went away from her unto London, his metropolis, and commanded, and they put her brother and his friend into prison; and he sent to Greenwich also, saying, 'Put the queen Anna in prison;' and they did so. And all the people trembled much. And it came to pass, after some days, that they brought her to London, and put her in the Tower, and set a watch over her. And it came to pass, one day, that they smote off their heads from them, so that all three died in one day; then was the king's wrath pacified."

As far as we can judge, the translation is ably executed, though the scriptural style sounds strangely.

#### *Niger Expedition.*

[Second notice: conclusion.]

THE interesting extracts furnished by these volumes to our last *Gazette* will have enabled readers to appreciate them. Mr. Oldfield made a last attempt, and ascended the river again on that disastrous occasion when Lander was murdered on his way up to him; and, indeed, this whole effort was one of misfortunes and disappointments. The knavish character of the native rulers of Eboe, Iddah, &c. &c. was more and more clearly manifested; and after it had been sharpened by the plunder of Lander, the disposition to acts of violence was hardly to be restrained. It was by miracle that Oldfield finally eluded the designs of these plots; and how sadly his narrative ends! "On the 18th, I reached London, but in a very infirm state of health, having suffered much in my constitution from exposure to climate and all kinds of privation, and the only European left alive of the crew of the Alburkah who left Fernando Po in November." It is truly melancholy to peruse the fatal details which preceded this appalling notice. In the Alburkah, the captain, mate, carpenters, boatswain, engineers, &c., in all fifteen, perished; and Mr. Oldfield, the steward, a seaman, and a man of colour, only survived. In the Quorra, the captain, Lander, Dr. Briggs, the clerk, mates, &c. &c., in all twenty-four (besides eight or ten Kroomen), left their bones in Africa; whilst Capt. Allen, Mr. Laird, Mr. Hector the purser, and two others, escaped alive. Mr. Laird's account of the early losses is extremely affecting.

"On the 18th, Mr. Andrew Clark, a fine young gentleman about eighteen years of age, died. He had joined the expedition as a volunteer, against my wishes, but with the full approbation of his friends, with whom I was intimately acquainted. Poor fellow! he expired with the utmost calmness, drinking a cup of coffee; and his amiable and obliging disposition having endeared him to the crew, his death threw an additional gloom of despondency over these ill-fated men. In the afternoon, James Dunbar, one of the firemen, died. On the 19th, my chief mate, Mr. Goldie, and my sailmaker, John Brien, followed; and on the morning of the 20th, our supercargo, Mr. Jordan, expired. I thought at the time that Dr. Briggs had died also; as, while he was endeavouring to revive Mr. Jordan, he swooned, and remained insensible for a long time. In the evening of the 20th Mr. Swinton also died;

he was a most respectable man, and filled the situation of carpenter; he was a native of Grangemouth, and having been a resident many years in the Indian Archipelago, thought that no climate could affect him. A few hours after his death, Mr. Millar, our chief engineer, a young man of high promise and respectable connexions in the south of Scotland, followed him. On the 21st November we lost William Ramm, the steward; William Parry, an apprentice; and Gardner, a seaman. On the 22d these were followed by William Ellison, the second mate, and a fine lad about sixteen years old, whom Captain Harries had picked up, and adopted in Dublin: his name was George —, and, I believe, he was respectably connected, and entitled to some property when of age. The 23d of November was a day of respite; but, on the 24th, Hugh Cosnahan, a seaman, died, and for another interval the mortality ceased; the Quorra having lost thirteen, and the Alburkah two men. Two or three days having passed without a death taking place, allowed us to hope that some of us might survive the voyage; but at first, from the mortality occurring so rapidly, few of us expected to be spared to tell the melancholy tale.

"Dr. Briggs became very ill with an attack of dysentery, and removed his cot into the cabin, thinking it cooler than on deck. Mr. Hector being pretty well, was able, in some measure, to attend him. The fever had left me so exceedingly weak, in mind as well as body, that, after Mr. Lander's departure, I lay on deck in a state of almost total unconsciousness; but I was painfully roused from my stupor by the death of my dear friend and companion Dr. Briggs. On the 27th he was brought up from the cabin, and I was shocked to see the ravages which a few days' suffering had made on him. He had never been much reduced by his repeated attacks of fever; but now, so altered was he, that I scarcely knew him. While shaking hands with me, he assured me, with a weak but cheerful voice, that he felt better, and, forgetting his own sufferings, anxiously inquired after mine. We lay side by side for some hours, and he pressed me much to go down into the cabin, as he considered passing the evenings on deck very unhealthy; but I was incapable of moving myself, and, afraid of being carried, my bones being very prominent, and excessively painful when touched. At sunset he was carried down, being then in severe pain, and I bade him farewell, little thinking it was for the last time. On the 28th the pain suddenly left him; on which he told Hector and Sarsfield, who were attending him, that mortification had commenced, desiring them, at the same time, not to tell me of it till all was over. Soon after he expired without a struggle, tranquilly yielding his spirit to Him who gave it. I cannot describe the feeling of anguish and desolation that came over me when I was told of my bereavement. At first, I could scarcely believe the fact that my beloved friend was really gone, and gradually sunk into a state of apathy and indifference to all around, in which I continued for several weeks. Thus died, in his twenty-eighth year, Dr. Thomas Briggs."

An American trading expedition was attended by like mortality, and its objects were all unattained.

We shall not dwell long on minor matters, but conclude with only one or two curious notices. At Iddah, where King Attah played a very false part, we are told by Mr. O.—

"After seeing Cookooga, I joined the queen,

and partook of some Goora nuts and palm-wine; after which I took my departure. On my passing through the yard, I witnessed a curious and novel procession, composed of about a hundred and fifty young girls, several of them the king's daughters, the remainder being the queen's maids. They were dressed in a piece of white cotton fastened below the breasts, with holes cut in different parts of a diamond form, and resembling paper cut for a fire-grate: they were still singing their country songs. Those of seven and eight years were quite naked, and only about twenty of the king's daughters wore clothes: it is customary for them to go in a state of nudity until they arrive at a marriageable age, which is about ten years and a half. The eldest appeared to be about nine or ten years of age. They carried two wooden figures of a male and female, one black and the other white; the white image being intended to represent the *dobo* or devil, and dressed in a most grotesque manner. They were singing a country song, and walked in lines of four or five abreast. A little further on, beneath large tamarind and cotton trees, were the king's musicians. As I approached, they made way for my horse. I was highly delighted with the antics and performances of the king's fool. The band consisted of eight drummers, with drums made of tanned goat-skin, and four fifes formed of cane, with a few holes bored in it. They played very wild, but by no means unpleasing airs, while the jester, a short broad-faced, large-mouthed, good-humoured-looking black, habited in a most capacious robe, and bearing a staff as an emblem of authority, was performing all kinds of ludicrous antics; he spread out his white robe, and, standing on one leg, with the other elevated almost as high as his head, twirled round like a top, at the same time emitting a sound resembling the whistle of a monkey. Every thing bore an appearance of merriment and good humour: and my own people, not even excepting Jowdie my drummer, joined in the dance.

"On the morning of the 31st January, several of the natives were perceived gazing attentively at something in the bush, as if there was something there of which they were afraid. I sent ashore to see what was the matter, and was told that they were witnessing a battle between two snakes. I immediately went ashore, taking with me a double-barrelled fowling-piece; and, on landing, saw two immense snakes of a darkish colour. They were, however, not fighting, and appeared to be secreting themselves; so, catching a glimpse of one, I fired at him, and completely divided him in two. I then looked for the other, and discovered the monster, with its bright eyes and projected fork: I fired at him, and severed the head from the body, which measured six feet ten inches in length. Although I had the bush cleared away, I could neither find the other half of the first, nor the head of the second. The colour of the largest was finer than anything I had ever seen; it was of rich grassy green: about two feet from the tail it was speckled with dark velvet spots. The assembled natives gave a most hideous yell when they saw the two monsters killed; and an intelligent man, pointing to the sun, said that a person would die in six hours after being bitten by either of them."

Before the rains enabled the Alburkah to cut and run from Iddah, and have water enough to pass in safety the Eboe assassins of Lander, lower down, Mr. Oldfield states the extraordinary fact—

"From absolute measurement with a line, I found that the difference in the level of the water in the course of the year was nearly sixty feet."

A concluding chapter contains valuable mercantile data to guide any future attempts, and also a plan for settlements on the river. Were slavery crushed, much might be done both for commerce and civilisation; but till then, we fear that little can be achieved for either. We have now only to add, that a vocabulary of many Houssa words and phrases is given, which will at all times be useful.

#### MISCELLANEOUS.

*A Guide to Shrewsbury, &c.* Pp. 168. (Shrewsbury, Davies.)—An excellent Guide to this interesting old town, its antiquities, curiosities, surrounding scenery, botany, and, in short, all that an inquiring tourist could wish to inspect in a visit to Shrewsbury.

*The Present State of the Controversy between Protestant and Roman Catholic Churches*, by Hunter Gordon, Esq. Pp. 117. (London, Whittaker and Co.)—Mr. Gordon contends that the real or apparent growth of the Romish Church arises from the principles of its Protestant rival having been pushed to a dangerous extreme; at least as much, if not more, than from the allurements of the former.

*The Mirror*, Vol. XXIX. (London, Limbird.)—In these Numbers, from January to June, our contemporary well sustains his reputation for judicious selection, popular original papers, and well-chosen and well-executed embellishments.

#### ARTS AND SCIENCES.

##### NEW PHILOSOPHY OF MOTION.\*

The grand discovery of Kepler, that the squares of the periodic times of any two planets are to one another as the cubes of their distances from the sun, is the foundation of all mathematical astronomy, and can never be disturbed. He deduced from this the three great laws of the motion of the planets in elliptical orbits; of the proportionality between the areas described and their times of description; and of the relations between the squares of the periodic times and the cubes of the distances. But he knew nothing of the cause or causes of these laws, and perceived no universal principle in nature which could produce them. Sir Isaac Newton devotes the first two books of his "Principia" to the illustration and application of the laws and conditions of motions and forces; and, in the third book, frames from these principles a popular theory of the physical constitution of the globe. But he was as ignorant as Kepler of the causes of the forces which produced the motions of which he treats; and has merely given us names, descriptive, as he supposed, of the phenomena of motions as he found them to exist. To describe the causes of the planetary motions, he uses the terms "centrifugal" and "centripetal" forces; the first being descriptive of the motion of a body flying off from the centre of gravity, and the second being descriptive of the motion of the same body towards that centre. The force which causes the formation of these motions is called the "projectile" force, from the ideal analogy of a body thrown off or projected from another, as a tangent runs off from a circle; and the force which causes the latter of these motions is called the force of "gravitation," which was supposed so to destroy the former of these motions, as to keep the body in a curved course round a centre which it could never touch on account of its projectile force, and yet to which it was ever tending by its gravitating

\* As the following touches on matters which, at the present time, occupy much of the attention of every philosophical school in Europe, we have no scruple in copying it from an American journal. Without discussing any portion of it, we may suggest that it is likely to furnish subjects for consideration, even in its most questionable positions, and suggestions not unworthy of notice.—*Ed. L. G.*

force. The great difficulty of this theory ever has been the mysterious continuance of the centrifugal, or the original projectile force, notwithstanding the permanent influence of the gravitating force, which is admitted to be universal and immutable. It was, probably, this mystery, which ought not to exist in a perfect system of mathematical philosophy, that so long prevented the otherwise beautifully demonstrated Newtonian theory from taking the place of the Cartesian theory of vortices, which appealed to the imagination, rather than the reason of mankind, and explained all the planetary motions as peripetuous as we see bodies revolving in the currents of a whirlpool, or the gyrations of a pail of water. And it is this mystery, too, which has caused Sir Richard Phillips and other *ad-vant* philosophers to revive the Cartesian system in a modified form, upon the gratuitous assumption of an "elastic medium," which, being set in motion by the sun, regulates the motions of the planets according to their surfaces, densities, and distances. But all the opponents of the Newtonian theory seem to have forgotten that, whilst he demonstrated the motions of these bodies by mathematical reasoning, they only argued about them. The mystery, and indeed error, in which he leaves the causes of motion, did not prevent his arriving at correct conclusions respecting the effect of the causes, be they what they may. Thus, independently of any question concerning centrifugal and centripetal forces, he demonstrated that a conic section was the only curve in which a body could move when acted upon by a force varying inversely as the square of the distance, which Kepler had proved to be the law of planetary motions. Newton, moreover, established the conditions, dependent upon the velocity and primitive position of the body, which were requisite to make it describe a circular, an elliptical, a parabolic, or a hyperbolic orbit; and, although he did not know whether the moving force resided in the centres of the planets or belonged to each individual particle of which they were composed, he yet demonstrated that if a spherical body acts upon another body with a force varying as the distance of the body from the centre of the sphere, the same result would follow as though each of its particles acted upon the distant body according to the same law. All the grand results of the Newtonian theory are right, and no other theory can be right which does not harmonise, in all its leading principles, with one which is confirmed by the concentrating radii of many distinct sources of demonstration. But the Newtonian theory embraces but a very small portion of the philosophy of motion. Allowing for the obscurity which invests his legerdemain doctrine of the projectile force, his system explains the great motions of the universe, and of falling bodies upon the earth, with perfect clearness; yet these motions are few compared to those which produce the existence, growth, and form, of vegetable, animal, and mineral bodies, and which are displayed in the winds, clouds, and other meteorological phenomena of the earth. In short, Newton did not know that there was but one cause of universal motion, and, therefore, did not know where that cause was to be found. In this respect, then, a greater than Newton is here. Dr. Sherwood has discovered and demonstrated that there is but one cause of all motion, wherever it exists, and that this cause is the electric fluid, in its positive and negative actions. The phenomena of all motion, whether in the planets or in the minutest atoms of matter, are luminously explained and

demonstrated, *seriatim*, in the new theory, that all matter, of whatever bulk or minuteness, and in whatever modification, possesses a positive and negative electricity. The grand law of this new system is, that when the positive and negative forces or fluids of electricity are equal, the body is inert, and incapable of motion; and that, when they are unequal, motion commences upon the following simple and easily remembered principles:—1. The positive fluid repels the positive, and attracts the negative. 2. The negative fluid repels the negative and attracts the positive. And these are at once the causes of universal motion, and the only laws by which it is governed. It is contended and demonstrated, that these simple rules, which are well known to be true with regard to the magnet, are true with regard to every other body, and particles of bodies. The practical application of this discovery to the arts and sciences, must lead to results too magnificent in their extent, and too important to mankind, to be conceived by any but the strongest and most comprehensive minds. Such minds, if acquainted with the electrical sciences, will immediately perceive a boundless field of knowledge before them; but it is only by applying this discovery systematically to some one branch of knowledge, by way of experiment, that any adequate idea can be formed of the depth and enrapturing beauty of the certainty which will stamp every step of its application. When we say that it will enable us to decide as positively upon the motions which produce all the forms, hues, and qualities of matter, as Newton has upon those which regulate the distant worlds of the sky; and that we shall be enabled, by calculation, to predict the results of all chemical, atmospheric, medical—say, and mental changes of motion, with as much certainty as astronomers predict the returns of planets and comets, we do but rely upon one universal and immutable law of nature, hitherto but partially known to mankind. The useful and philanthropic application of this discovery has, as yet, been confined to the cure of chronic diseases, by diverting the morbid action of the electric fluids from the parts affected, and restoring a healthful and natural balance of the positive and negative forces. But the seemingly miraculous effects of this discovery upon these diseases, warrant the expectation that it will ultimately be applied to others with equal success; and that it will soon extend to chemistry, the mechanic arts, and, indeed, to every branch of science, we cannot doubt. The laws of motion, we beg to repeat, are, that the positive repels the positive and attracts the negative; and that the negative repels the negative and attracts the positive. To demonstrate these laws, Dr. Sherwood has magnetised, that is, has given magnetic polarity to a united steel ring, an operation declared in all works upon magnetism to be impossible, and which has often been tried in vain. The ring is of flat untempered steel, a quarter of an inch thick, an inch and a half wide, and eleven inches inside diameter. The opposite points of the diameter being negatively and positively magnetised by means of the currents of the galvanic battery, to give the north and south poles, a pocket compass is placed on the point where the line of the equator crosses the line of the axis between the two poles. The north point of the needle being positive, and the north [south?] negative; and the north pole of the ring being negative, repels the negative and attracts the positive end; and the south pole of the ring being positive, repels the positive and attracts the negative end of the

needle, and thus demonstrates the above laws of motion. The position of the needle, thus pointing due north and south, is a demonstration that the currents of the electric fluid are in the line of its direction. By increasing or diminishing the positive force of the south pole of the ring, the needle departs from a due north and south direction, and exhibits that phenomenon of the marine compass called the variation of the needle; and thus demonstrates that an equal balance of the negative and positive force is necessary to the correct direction of the needle. By moving the compass from the line of the axis to the outside of the ring, beginning at the line of the equator, and moving it round the circle (either north or south, but, say north), the phenomenon of the dipping needle is displayed, and the error of all geographers and navigators, in supposing that there is a magnetic pole (as marked upon globes) distinct from the true north pole, is demonstrated. The positive end of the needle begins to dip as it approaches the negative or north pole, until it comes to the 90th degree, which is the true pole, when it becomes perpendicular. And if Captain Ross, or any other person, had reached that degree, he would have found the needle become perpendicular, and thus have discovered the true magnetic pole. By this experiment we also discover an infallible rule for ascertaining the exact latitude and longitude of any place, by calculating together the variation and dip of the needle at that place. This problem, so immensely important to navigators, has never been accurately applied, because the true magnetic pole has never before been discovered, but a false one substituted in its stead. The correctness of the solution of this problem may be proved by reversing the process, and giving the latitude and longitude to find the dip and variation. By moving the compass midway upon the flat surface of the ring, we avoid the dip of the needle; for the currents from the negative and positive edges of the ring acting equally upon the positive and negative poles of the needle, keep it parallel with the line of its direction, and thus shews that the dip of the needle on the outer edge is occasioned by the greater attraction between the positive pole of the needle and the negative pole of the earth, than between the negative pole of the needle and the positive pole of the earth, when in the northern hemisphere. These two experiments shew, that the dip of the needle and the variation of the needle arise from the same cause, and bear a ratio to each other that may easily be calculated. We have not time, to-day, to explain the beautiful and instructive phenomena of a ring with four and eight poles, nor those of a solid ball of magnetised steel, which Dr. Sherwood has also made; but we have made ourselves acquainted with all the principles upon which they depend, and will illustrate them at an early opportunity. We can assure our readers, that, if these subjects are not the most amusing that we could provide for them, we know of none more important or interesting than those which we shall occasionally select from this great philosophical discovery to blend with lighter matter.

#### ROYAL GEOGRAPHICAL SOCIETY.

At a special meeting of the council of this Society, convened for the purpose of deciding upon an address to the throne, it was announced that her Majesty had most graciously signified her intention of becoming patroness of the Society, and had commanded that the annual royal premium, given "for the promotion of geographical science and discovery," should be continued as before. The following address

was agreed upon, and was presented to her Majesty at the levee, on Wednesday last, by Mr. Hamilton, president of the Society.

*To the Queen's most Excellent Majesty.*

The humble address of the President, Vice-Presidents, and Council of the Royal Geographical Society of London.

**MOST GRACIOUS SOVEREIGN,**—We your Majesty's dutiful and loyal subjects, the president and council of the Royal Geographical Society, beg leave to approach your throne, and most respectfully to offer, in the name of the Society, our sincere condolence on the occasion of the death of his late Majesty. In common with all classes of your Majesty's subjects, we have to deplore the loss of a beloved sovereign, but the Royal Geographical Society have especial cause to revere the memory of William the Fourth, as their first gracious and munificent patron. Yet, whilst we are expressing our deep sense of gratitude to our late sovereign, we feel that the cheering duty awaits us of respectfully offering our congratulations on the happy accession of your Majesty to the throne of a great empire; and we beg permission to offer our heartfelt thanks for your Majesty's gracious condescension and munificence in granting to us the honour of your royal patronage, and in bestowing upon the Society a royal premium for the encouragement of geographical science and discovery. England has achieved some of her proudest triumphs in geographical discovery under the sovereignty of a Queen; the annals of our country record the names of Drake, the celebrated circumnavigator, and of Raleigh, the adventurous discoverer—both distinguished during the reign of Queen Elizabeth; and we confidently anticipate that the reign of your Majesty will be equally famed for its glory and prosperity, and for the promotion of geographical knowledge. That your Majesty's reign may be rendered illustrious as the era of important discoveries, which may diffuse the blessings of civilisation throughout the globe, as well as endeared to the affections of a free and grateful people, is the earnest wish and ardent prayer of your Majesty's loyal subjects the president, vice-presidents, and council, of the Royal Geographical Society.

**INSTITUTION OF CIVIL ENGINEERS.**

THE following subjects have been announced by the Council for original communications, and for premiums, during the ensuing session:

1. The nature and properties of steam considered with reference to its application as a moving power for machinery; 2. The warming and ventilating public buildings and apartments, with an account of the methods which have been employed most successfully for ensuring a healthy state of the atmosphere; 3. An account and drawings of the original construction and present state of the Plymouth Breakwater; 4. The ratio, from actual experiment, of the velocity, load, and power of locomotive engines on railways, 1st, Upon levels, 2d, Upon inclined planes; 5. Drawings, description, and account of the principles of Huddart's rope machinery at Limehouse (which works are open to the inspection of any candidate); 6. The sewerage of Westminster; 7. Drawings and description of the shield at the Thames tunnel, with an accurate account of the method by which it is advanced and worked.

In pointing out the above subjects, the Council have stated that it is not intended to confine the premiums of the Institution to memoirs and drawings on them alone, but that all communications of value should be rewarded.

**LITERARY AND LEARNED.**

**ROYAL ASIATIC SOCIETY.**

On Saturday, professor Wilson in the chair, various donations to the library were laid upon the table, and members were elected. The secretary read a letter, addressed to the president, by Sir John C. Hobhouse, communicating

the information that Her Majesty had been pleased to signify her consent to become patroness of the Royal Asiatic Society of Great Britain and Ireland. An extract from a letter, addressed to Sir Charles Forbes, by thirteen Parais of Bombay, was read. The writers expressed their high sense of the honour conferred on them by their election into the society, and their desire to promote its utility as far as might lie in their power. The chairman read some portions of a memoir of the late learned director of the society, Henry Thomas Colebrooke, Esq., written by his son, E. Colebrooke, Esq.; and which, it is probable, will appear in the next publication of the Society's Journal. The following is an abstract of such portions of the memoir as were read to the meeting. Mr. Colebrooke was born in 1765; and was the son of Sir George Colebrooke, an East India Director. He was distinguished very early for a fondness for reading, and was desirous of entering the church. Although he never attended schools, but received all his education from a private tutor, whose superintendence ceased when his pupil had attained the age of fifteen, it is stated that, at that early age, he was as far advanced, both in his classical and mathematical studies, as many youths are on leaving the universities; he was also well acquainted with French and German. From the age of twelve to sixteen he resided in France; and, in 1782, he was appointed to a writership in India. On his arrival there, he lived a very sedentary life, for nearly a twelvemonth, when he was placed in the Board of Accounts, in which he was engaged as long as he remained at Calcutta. Several letters were read, which were written during this period; from some of which it appears that he was, at that time, no admirer of Oriental studies. One of his letters is singular, as coming from one who was destined to become afterwards so zealous and accomplished an Orientalist. He there alludes to the difficulties he experienced in his studies from want of leisure and assistance. He says that, with two exceptions, no one in India is learned. Wilkins, he writes, is Sanscrit mad; but he adds, that "he has more materials, and more general knowledge respecting the Hindus, than any other foreigner ever acquired since the days of Pythagoras." He seems to have been, at first, discontented with his situation in India; regrets his coming to it; and often speaks of embracing a new profession; of turning farmer; of doing any thing, in fact, rather than remain as he was, when he had no prospect of ever earning enough to live upon. But a subsequent letter, written when prospects were brighter, describes his former feelings as exaggerated, and states the only real objection to India to be its great distance from home. After three years' residence in Calcutta, he was appointed to a situation in the revenue department at Tirhoot. While engaged here, he acquired a fondness for field sports, which never left him until he was incapacitated by old age from taking a part in them. Here his studies were continued; though we have little account of his progress. In one of his letters he speaks of the excellence of the Hindu astronomy; and says that it affords internal evidence of remote antiquity. In another, he alludes to his study of Arabic; says it is more difficult than Greek; and not likely to recompense the student for his trouble. In 1789, he was removed to Purneah, where his abilities soon brought him into notice. The arrangement, afterwards known by the name of the permanent settlement, was then

preparing. Superior talents were required; and Mr. Colebrooke was named one of a deputation to investigate the resources of that part of the country. In the course of this duty, he collected the information which led to his first essay in authorship, "Remarks on the Husbandry and Commerce of Bengal." In this treatise he advocated a free trade between Great Britain and India; an example of freedom which his friends feared would seriously commit him with his honourable masters. "You may think yourself fortunate," said one of them, "if you remain in the service." After eleven years' residence in India, Mr. Colebrooke began the study of the Sanscrit language, in which he afterwards became so eminent. His motive was the intelligence of the mathematical and algebraical treatises in that tongue, which he subsequently translated and published. His success in this study was complete. The translation of the great Digest of Hindu Law, which had been compiled under the direction of Sir W. Jones, and which the death of that accomplished scholar prevented him from publishing, was confided to Mr. Colebrooke, and finished within two years, during which his application was so intense, that his friends feared for his life. While engaged in this work, he was appointed to a judicial situation at Mirzapore; an appointment with which he expresses himself highly gratified; the place being retired, pleasant, healthy, and, above all, being in the neighbourhood of the celebrated Hindu college of Benares. Here he continued the digest; and, in a letter dated 3d January, 1797, he notices the termination of this great work, and expresses his hopes and fears for the success of his "literary bantling." After the reading of this letter, the meeting broke up, and the chairman announced that the sittings were adjourned till December.

**LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.**

*Monday.*—British Architects, 8 p.m.; Marylebone Literary, &c., 8½ p.m., and Monday following.

*Tuesday.*—Zoological, 8½ p.m.

**FINE ARTS.  
NEW PUBLICATIONS.**

*Paul preaching at Athens.* Designed and drawn by Raffaele; engraved by John Burnet.

THE discovery of a new mode of engraving is no trifling event in the history of the fine arts; and when to perfect novelty of style, extraordinary facility of execution is added,\* the announcement of such a discovery must necessarily excite great and general interest. To Mr. Burnet, of whose graphic productions we have often had the gratification to speak with high praise, the merit of this valuable invention is due. Although he calls it merely "etching," it must be manifest to the most superficial observer, that it does not belong to any description of etching with which the world has been hitherto acquainted. The process is evidently a mechanical one; but then it is as evident that it would be unavailing except in the hands of an able artist. It appears to be especially applicable to works in the superior classes of the art; for, to the representation of the qualities which distinguish and dignify those classes, namely, composition, character, drawing, and effect, it seems perfectly equal; while in the representation of all the humbler qualities com-

\* We understand that the production of a plate does not require more time than that of a drawing on paper. The same may be said of lithography; but then lithography is capable of yielding only a comparatively small number of impressions.

prehended in the term "high finishing," it cannot pretend (at least at present) to rival the various modes of engraving heretofore in use.

In his prospectus, Mr. Barnet himself says of the plate under our notice, that it is one of "a series of engravings on steel, on a large scale, from the best works of the great masters, in a broad style of execution, which will convey their leading principles and features, and at a price as low as to put them within reach of the husbandman and the mechanic."

"And that," we hear a critic exclaim, "is precisely our objection to the invention: it will tend to make the fine arts cheap and common."

"And that," we answer, "is, in our opinion, precisely the recommendation of the invention: it will tend to make the fine arts cheap and common." The days are happily passed when it was considered desirable to confine knowledge and intellectual gratification to the upper classes of society. Why should the people, emphatically so called, be prevented from receiving any humanising impression that may diminish their indulgence in sensual and brutal enjoyments? Would it not be well if you could induce "a husbandman or a mechanic" to lay out in a print, from one of the cartoons, the money which he would otherwise worse than squander in gin and tobacco? Why should the eye of the poor man remain uneducated and ungratified? Why, as regards him, should "wisdom at one entrance," be "quite shut out?" As to any worldly injury to be apprehended by our existing engravers, it appears to us that the extensive circulation of works of art, which this invention promises, will be most beneficial; as it must disseminate an understanding and love of art, and, in its results, increase the demand for that species of engraving which requires long and laborious efforts.

*Snap-Apple Night; or, All Hallow Eve.*

Painted by D. M'Clise, A.R.A.; engraved by J. Scott. Hodgson and Graves.

Who does not recollect the laughing crowd that perpetually surrounded this most amusing picture at Somerset House, a few years ago? It was noticed, in the *Literary Gazette*, at the time; but the following description, by our many-gifted friend Lover, is so graphic, that, although rather exceeding the limits which we prescribe to ourselves on such subjects, we cannot refrain from inserting it:—

"*Snap-Apple Night; or, All Hallow Eve, in Ireland.*"—And, pray, what is 'Snap-Apple Night?' "I see you have never been in Ireland, by the question, and I pity you." "That's a very Irish way of answering my question, therefore I must be English enough to ask you again. What is Snap-Apple Night?" "The eve of the twenty-ninth of September—and—" "Ay! what the Scotch call Hallowe'en." "There now, the moment I begin to answer you you interrupt me with your Scotch knowledge. Now, if you interrupt me again, I won't say another word about the matter; so let me have all the talk to myself, or you may die in ignorance. The twenty-ninth of September is remarkable in many ways; it is celebrated for the payment of rents (which is not pleasant, but to those who get them); for the murder of geese, and the killing of care; and if you want to see how that is done in Ireland, look before you at this picture of M'Clise's, and you'll know all about it. Let us begin at the beginning, as the old stories say; but this is an Irish story, and has neither beginning nor end; for you don't know where to commence, and, after going over it, you find you're not done; but, as

it is 'Snap-Apple Night,' look at the game, which gives the evening its name, going forward. There—observe those whirling cross-bars of lath, with flaming candles at two opposite ends of the merry-go-round, and tempting apples at the other; and see the open mouth of the adventurous peasant who is going to make a bite at the fruit,—and what a mouth!—the sweet child at his foot seems to look with wonder at its capacity. Look at the fellow behind him grinning with pain, having made an unsuccessful bite, and caught the candle instead of the apple; and see that hand thrust from behind a backward group, giving the machine a malicious twist to increase its speed, while the laughing girl, who enjoys the trick, lays her hand on the encircling wrist of an admirer, who seems to think less of catching apples than pretty waists. But turn to the fire-place—there are the mysteries peculiar to the night going forward. See that young fellow, who has scarcely blunted a razor yet, looking with all his eyes at the charming face of the girl who holds two neighbouring nuts on a fire-shovel—interesting instrument in the magic art; he points to the nuts which they are going to burn, emblems of their own hearts;—if they burn steadily together 'tis all right, and what a touching expression of sentiment is on the lovely face of that girl! she seems to have a reverential reliance on the mystery she is about to celebrate, and no priestess of old could await the answer of the oracle with more faith than she seems to place in a nut-shell. And more love-making is going on beside the fire—'faith it's a warm corner. Here's a party who have been playing at forfeits, and a merry girl is now releasing the pledges given in the course of the game. She holds up a shoe, and says, 'what is to be done to the owner of this superfine thing?' and you see it is the person whose head is on her knee is the owner of the shoe; and observe the cunning peep he is endeavouring to steal, as he half suspects whose gaze it is,—while she looks to see he's not looking; now it's a toss up whether he's looking at his own shoe or her eyes. 'Tis dangerous work playing forfeits. What a pretty modest creature is that who is pouring molten lead through the loop of a key into a bowl of water, to augur from the forms it may assume, what may be the occupation of the future husband of the tempting lass in the foreground! I imagine it is the sly fellow behind her intends to be 'that same,' and whatever his future occupation may be, his present one is very agreeable however: let go the girl, you young rascal, and though she has a very pretty shoulder, you ought not to kiss it behind her, and before other people. And there you are, my old lady, telling fortunes on cards; and whose fortunes are you telling? no one need ask, for the two young people who are whispering at your back seem to have told their own fortune without the aid of cards, although they wish to go through the ordeal of a packed jury. And who is that standing behind them—he seems 'far more genteel' than the rest of the company. Why 'tis Crofton Croker, or, as he is familiarly called amongst his friends, 'The honourable member for Fairy-land.' There you are, Crofty, my boy! with your note book in your hand, and may-be you won't pick up a trifle in such good company. And behold that capacious tub of water, and the boy 'bobbing for apples' which float upon its surface; this I look upon to be the most useful of the games for young people, as it serves to wash their faces. But what a deal of noise they are making in the other corner! no wonder; there's a

fiddler, and a fifer, and a piper. Stop my ears, for God's sake. Though I'm glad to see there's a young vagabond going to give me great relief by sticking a pin into the piper's bag, and so making a safety valve for any one who has the misfortune of having ears in such a place. That's right, you young urchin!—I mean the other urchin—tickle his ear well—stick it into him;—see how the fiddler grins and grimaces as the imp pokes the straw into his ear, but he dare not stop for the life of him, because that plump and springy colleen is dancing with as thorough a Pat as ever footed it over a clay floor, a door in a tent, or the green sod; and look at the 'bit o' timber' he is flourishing over his head—in throth it wouldn't be safe for any piper or fiddler in Ireland to 'put back the tune' and baulk Paddy of his dance, for he is dancing with all his might, and may-be he is'n't happy—and no wondher, for the man wouldn't deserve a leg to stand on, that couldn't 'keep it up' before the bit of game forinst him. She seems inclined to dance him down, and, indeed, she's full of vivacity; but Paddy's fresh yet, and snaps his fingers. Is there a king on this earth so happy as Paddy before that girl? not one—though there may be some of them better dressed. By the by, Pat, you are rather scarce in buttons, and you're a rash man to dance so bowld, and the cordheroys so tinder. Who the deuce are so quiet here in the corner? Oh! some old people who are enjoying themselves over 'the dhrop o' dhrink.' See the woman feeding a child with whiskey; how horrid!—though her neighbour with the twitch of his thumb to his gossip, and the rich twinkle of fun in his eye, seems to relish the joke—but stop—we have seen that face before;—it is Sir Walter Scott—yes—the Wizard of the North has come to see fun in the West, and no wonder we did not know him at once, for he is here in masquerade. Well done, M'Clise! it was a stroke of genius to place him in disguise; for none knew so well how to assume any character he pleased."

We have only room to add, that Mr. Scott has been very happy in translating into his own art the humour of this rich and multitudinous composition.

*The Covenanter.* H. P. Parker, pinxit; W. O. Geller, sculptit. Ackermann and Co.

TALK of Harlequin's wooden sword! What are its powers of transformation compared with those of the pencil? Here is our old friend, the smuggler, the "looker-out," converted into the psalm-singing, though stern, member of "a persecuted kirk," so finely described in "Old Mortality." We acknowledge that the expression is very characteristic: still we think that Mr. Parker, whose works are always distinguished by vigour and ability, does not do justice to his own talents, in thus copying his previous conceptions, and adapting them to new subjects.

*Fest-Kalender*, von Fr. G. Pöckl, G. Görres, und ihren Freunden. (*Festivall-Calendar*, by Fr. G. Pöckl, G. Görres, and their Friends.) 4to. Parts I. and II. Numbers 1 to 10. München. London, Schloss.

THIS beautiful and cheap collection of the choicest German ballads has attracted our notice by the extreme beauty and simplicity of its embellishments. We are, perhaps, wrong in saying its embellishments, for the book is all embellishment, being entirely printed in lithography. It consists of a series of popular German ballads, each occupying a place in a quarto page, surrounded and interwoven with

illustrative tracery and drawings, the latter being spirited imitations of the fine wood-cutting of the old German masters. Each number contains eight leaves, and is published in London at the singularly moderate price of sixpence.

### MUSIC.

**Great Concert-Room, Her Majesty's Theatre.**—Signor De Begnis, so deserving of public favour, has this year been most unlucky in his time. His concert, on Monday, was not so well attended as it should have been, owing, probably, to the prorogation of parliament on that day. The programme was certainly the most attractive of the season; and, although its promises were not quite fulfilled, the music substituted was so delightful that one could scarcely regret the change. Lablache and Rubini did not sing, as announced; but even they, superb as they ever are, were scarcely missed amidst the phalanx of talent assembled.

### DRAMA.

**Her Majesty's Theatre.**—On Tuesday, the new opera of *Idegonda*, by Marliani, postponed from Saturday, was produced, the Queen being present on the occasion. It is a very poor composition; but, being written for Grisi, Rubini, Tamburini, and Lablache, these accomplished artists did every thing for the music which could possibly be done. Out of their sphere we presume it will never be heard.

**Drury Lane.**—On Wednesday, a musical night was given, in aid of the fund for erecting a monument to the great composer, Beethoven, at Bonn. The selection was excellent, and the performances, in many respects, quite equal to the occasion. The theatre had closed for the season on the preceding night, with a lugubrious address on generalities.

**Covent Garden Theatre.**—We rejoice to learn that our national drama is likely, at least and at last, to have one fair trial more. Mr. Macready has become the lessee of Covent Garden Theatre; and is vigorously employed in embodying a corps fit to represent the noblest conceptions of the poet. We trust, indeed we cannot doubt, that the public will justify this effort, and shew that taste and good sense (not to speak of good manners and morality) have not yet abandoned the patronage of the British stage.

**Haymarket Theatre.**—*A Tale of a Tub.* This little comedy may be truly called a pleasing absurdity. To be amused with it, we must deal gently with the plot, and grant that Madame Du Barry, the proud, the omnipotent Madame Du Barry, would enter into a public wrangle in the streets of Paris with one of her relations, a poor girl who mends stockings, and works in a kind of tub, from which the drama takes its name. We must further grant that that voluptuous, yet keen and subservient courtier, Lauzun, would placethis same stocking-mending maiden in a grand hotel, in the midst of affluence, and leave her fame unsullied, for the mere purpose of insulting Du Barry. Add all this to a little sentimentality respecting a cousin killed in a duel, and to the old anecdote of one lady making a foot-cloth of a piece of stuff whose texture another lady boasts exists in her robe alone, and we have the play complete. The acting of Mrs. Hamby (the stocking mender), who was the main support of the affair, was excellent in appearance, manner, and naïveté. Mrs. Nisbett looked every inch a *Madame Du Barry*. The dialogue sparkled here and there with some flashes of wit: it

abounded, too, with more scraps of morality than, perhaps, were ever uttered in the vicious court of the fifteenth Louis; but in this Mrs. Gore has shewn her taste, turning evil into good. On the whole, we were inclined to heartily join with those who lauded this trifle.

### VARIETIES.

**The Queen.**—We, last week, noticed a fine medallion portrait of our late lamented sovereign, and have now the satisfaction of seeing before us, in the same style, from the same source, and by the same publisher, an equally capital likeness of our youthful Queen. It is not only a triumph of machinery in this branch of art, but a charming composition, in which beauty and simplicity are exquisitely combined by the taste of Mr. Wyon, and the countenance of her Majesty (whose head, by the way, is admirable for the purposes of sculpture) is given in profile, in the most pleasing and interesting manner.

**Weather-Wisdom.**—Between the old St. Swithin influence, and Mr. Morrison's "square of Venus and Saturn on the 17th," we have certainly had the promised and welcome rain. The warmth has also been great: of the lightning we have seen nothing. Now for the next: "Tolerably fair, warm weather prevails till 24th. The 25th and 26th denote hail and thunder. The conjunction of Venus and Jupiter on the 27th brings fair and hot summer weather. 28th, changeable.

**New Parachute.**—A Mr. Cocking, having perfected a new description of parachute, one of large dimensions, which descends, not as an umbrella, outspread, but as an inverted cone, with the apex towards the earth, is announced to make an experiment with it from Mr. Green's balloon on Monday. The principles and calculations seem to promise that there is no danger to be apprehended; but, still, it is a nervous attempt.

**Mr. Buckingham** has issued an address to the public, in which he takes leave of us for several years, and announces his intention to make a voyage of prodigious extent, throughout North and South America, the Eastern seas and settlements, China, Syria, Turkey, &c. &c. His object is to diffuse civilisation, and improve every country, by impressing the doctrines of *Temperance, Education, Mercy, and Peace*. He promises to publish a narrative of his progress two or three times a year, as occasion may require, and opportunity admit.

**The New Exchange Hotel**, now building at New Orleans, is estimated to cost 550,000 dollars, and its furniture, 120,000.

**Transatlantic Weather.**—A New York paper, of June 12th, says, that it was warm enough in the west to roast a salamander!

**American Expedition to the Southern Ocean.**—The latest American journal (the "New Era," of 12th June) states, that the Rev. W. Colton, of the navy, has been appointed historiographer to this expedition (noticed in our report of the Geographical Society of London); but adds, "it has been so long in starting, that we fear it will end in smoke."

**Literary Honours in France.**—The king has conferred on Victor Hugo the rank of commander in the Legion of Honour, and on Alexandre Dumas the cross of the third class.

Longitude .... 3 51, W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the Meteorological Society, June 1837.

Thermometer—Highest.....	79.00 .. the 24th.
Lowest .....	36.50 .. 27th.
Mean .....	56.00416
Barometer—Highest.....	30.48 .. 23d.
Lowest .....	29.80 .. 9th.
Mean .....	29.75398

Number of days of rain, 10.

Quantity of rain, in inches and decimals, 1.4875.

Winds.—6 East—5 South—5 South-West—7 West—3 North-West—4 North.

**General Observations.**—The month was warmer than in 1836, although the maximum was not so high as in the three last years, and the minimum was three degrees lower than in June last year. The quantity of rain was less than in any corresponding month since 1836. The barometer was higher than the average of the month, and the mean has been exceeded only twice, in the same month, in the last fourteen years; from the 19th to the end of the month was particularly fine, and no rain fell. Thunder was heard about 4 P.M. on the 25th.

### TO CORRESPONDENTS.

#### ORIGIN OF ASTROROLOGY.

To the Editor of the Literary Gazette.

SIR,—In the early part of the year, while on a visit to the north of England, I had the pleasure of meeting a gentleman, whose name I had previously seen honourable mention of in your columns, Mr. Morrison, secretary to one of the northern institutions, if I mistake not, the Literary Society of Perth. He was then engaged on a work, of which I could only obtain a glimpse (almost by stealth), and that merely of a detached portion; but what I saw roused my curiosity in no small degree. He at that time avoided my somewhat unmanly importunities, by alleging that the work was still so crude and unfinished, as not to be fit for reading, even to a friend. The history he gave me of it was this. Some years before he had read, at a meeting of the Society of which he was secretary, a paper on the Origin of Idolatry and Astrology. Several of the gentlemen who had been present, waited on him afterwards, and urged him to follow out the subject. Business engagements had prevented him till last winter, when health requiring retirement, he had devoted a considerable portion of each day to it. The rough draft had been completed about a month before, and he was then engaged in pruning it, and in endeavouring to render it plain and intelligible to any one who could read his Bible in his mother tongue. What struck me in regard to the moral of it that I saw, was the simple and conclusive nature of the main argument; but, above all, the testimony which seemed naturally to arise out of it, to the great truths on which the doctrines of our Church are founded. I have seldom, indeed, met with any thing which, without purporting to have that object, carried such conviction to my mind of their immutability. I have felt disappointed at seeing no notice of the work yet, and trouble you with these few lines, in the hope that the title I have put to them may attract his notice and spur on his lagging resolution, and, I fear, procrastinating pen.—I am, Sir, &c.

Leamington, 17th July, 1837.

JOHN TULLOCH, Actuary.

## SUCH of the Country Subscribers to the

"Literary Gazette," who are supplied direct from the Office, and who have not received the Print illustrative of the new mode of Metallic Engraving described in No. 1047 of the "Literary Gazette," and given with that Number, Feb. 11 last, are respectfully informed, that the Prints are reserved for them, and will be delivered to their Order in Town, or forwarded into the Country, on the Publisher, W. A. Scripps, receiving the necessary Instructions for their Convenience.

Address, W. A. Scripps, at the Literary Gazette Office, No. 7 Wellington Street, Waterloo Bridge; or at his general Newspaper Office, No. 12 South Molton Street, Bond Street, where orders are received, and all business, connected with Newspapers, domestic and foreign, is punctually attended to.

N.B. The "Literary Gazette," No. 1047 (with the Print) is still on Sale, and may be had as above, price 6d.

## SIR DAVID WILKIE'S NEW WORK,

now ready, engraved from a Painting in the Royal Collection, by S. Cousins, A.R.A.

"The subject is one with which every reader of 'Southern's History of the Peninsular War' must be familiar. During the gallant defence which the inhabitants of Saragossa made against the army of Napoleon, a young maid, named Angelina, distinguished herself by acts of noble daring, which have rendered her name immortal."—*Manchester Chronicle*, March 15, 1837.

"All is plain, noble, impressive."—*Times*, April 23, 1837.

"If the present war in Spain was just conducted with a tithe of the heroism and spirit which Wilkie has infused into his 'Siege of Saragossa,' we would guarantee its termination in a month."—*Glasgow Constitutionalist*, April 15, 1837.

P. G. Moon, 30 Threadneedle Street.

## SKETCHES IN SPAIN.

Nearly ready, No. II.  
By GEORGE VIVIAN, Esq.

Containing Views of Valencia, Bilbao, Valladolid, &c.  
Paul and Dominic Colnaghi and Co. Printers to the Royal Family, 14 Pall Mall East.

## SALES BY AUCTION.

SOUTHGATES' ROOMS.

Books in Quires and Boards,

Remainders, Copper-plates, &amp;c.

Late Master of Arts in the University of Paris.  
London: Longman, Orme, and Co.

On the First of July was published,

PART I.

OF A SECOND SERIES OF

COLOURED ILLUSTRATIONS

OF

BRITISH BIRDS.

By H. L. MEYER.

To be published in Parts, every Two Months, and to come out simultaneously with the History of British Birds, by William Yarrell, Esq. F.L.S. &c.

Each Part will contain 10 coloured Plates of Birds, systematically arranged, with the Egg of each species, as far as practicable. Printed in imperial quarto, price 1l. 14s. each Part.

The motive of the author in recommending the publication of the work at the time and in the manner specified, is, that it may appear before the Public periodically with Mr. Yarrell's History of British Birds, which History, by the kind permission of that highly talented author, it is designed to illustrate in colours—the representation of the Birds and other embellishments in Mr. Yarrell's work being uncoloured.

London: Published for the Author, by Longman, Orme, Brown, Green, and Longmans, Paternoster Row; Hatchard and Son, Piccadilly; John Van Voort, 1 Paternoster Row.

With Two Engravings, price 6s.

 By HENRY GALLY KNIGHT, Esq. M.P.  
 John Murray, Albemarle Street.

THE CORONATION SERVICE.  
**THE FORM AND ORDER OF THE SERVICE PERFORMED, AND CEREMONIES OBSERVED, IN THE CORONATION OF THE SOVEREIGNS OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND.**  
 Price 4d. each, in stiff glazed covers and gilt edges; or 5s. 6d. per hundred, for distribution as a Tract.  
 Sold by T. Seaward, for the Frey, Lock and Homily Society, No. 1, Exeter Hall, London.  
 The usual Allowance to Members of the Society, and the Trade.

8vo. price 2s.  
**THE CRY OF THE POOR; a Poem.**  
 "This little poem deserves to be read by all persons who sympathize in the interests and sufferings of the poor. It exposes the horrors of the factory system, the abuses of machinery, the abominations of the late interpolations in the old system of poor laws, and the selfishness of political quacks, in forcible and poetical language, and contains many passages at once indicative of the philanthropist and the poet."  
 "The more degrading and demoralizing poor law and factory systems are portrayed with greater accuracy than is always found in poetic compositions. . . . Mingled sentiments of pity and of pain are excited in the bosom of every reader possessed with the ordinary feelings of humanity."  
 H. Hughes, St. Martin-le-Grand.

STERLING NEW WORKS, SUITABLE FOR GUIDES.

**MURRAY'S "SUMMER in the PYRENEES."**

THE LIBRARY OF ROMANCE, ILLUSTRATED.  
 In fcap. 8vo. price 6s. neatly bound,  
**THE GHOST-HUNTER and his FAMILY.**

By JOHN BANIM,  
 Author of "Tales by the O'Hara Family."  
 This Work forms the first volume of a New Series of the Library of Romance, to be embellished with beautifully coloured Illustrations, engraved on Steel, after Designs by the first Artists. The volumes will appear on the first Day of every Month, each complete in itself, and equal in size to three volumes of the modern Novels.  
 "The Library of Romance is, unquestionably, one of the cheapest, the best, and most tastefully got up works in our language. It is, indeed, a standard work, and will be sought after and read with avidity, when its contemporary works of fiction are utterly forgotten."—Observer.  
 Smith, Elder, and Co. Cornhill.

LE BRETHON'S FRENCH GRAMMAR.  
 In 8vo. price 18s. bound in cloth, a new edition, thoroughly revised and corrected.  
**A GUIDE to the FRENCH LANGUAGE,**  
 especially devised for Persons who wish to study the Elements of that Language without the Assistance of a Teacher.  
 By J. P. LE BRETHON.

Also, in 8vo. a new edition, price 8s. canvass and lettered,  
**A Key to the Exercises in the above Work,**  
 by means of which any person of a mature understanding may acquire the Elements of the French Language Practically, as surely as if a professed teacher were sitting by his side; and, with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children with the assistance of this book, how they must proceed.  
 London: Printed for Baldwin and Cradock.

In Twelves, price 6s. cloth, a second edition of  
**THE STUDENT'S GUIDE; designed, by**  
 specific Directions, to aid in forming and strengthening the Intellectual and Moral Character and Habits of Students in every Profession.

By the Rev. JOHN TODD,  
 Author of "Lectures to Children."  
 Revised by the Rev. THOMAS DALRY, M.A.  
 Vicar of St. Bride's, Fleet Street, and Professor of English Literature and History in King's College, London.  
 L. and G. Seeley, 100 Fleet Street, London.

SPYERS' PRAXIS.  
 12mo. price 2s. bound,

## HISTORICAL AND GEOGRAPHICAL WORKS, FOR SCHOOLS AND PRIVATE INSTRUCTION.

In 12mo. with Portraits of the Emperors, from Rubens, engraved on Steel by W. Sadler, and several illustrative Woodcuts from Montfaucon, and Three Maps, price 3s. 6d. bound and lettered, **PINNOCK'S IMPROVED EDITION OF DR. GOLDSMITH'S HISTORY OF ROME.**

The 19th edition, augmented and revised by W. C. Taylor, M.A.

## II.

In 12mo. with several new Engravings, price 6s. **Pinnock's Improved Edition of Dr. Goldsmith's History of England.**

The 23d edition, continued to the present time, and thoroughly revised by W. C. Taylor, M.A.

## III.

In 12mo. with numerous Engravings, price 5s. 6d. **Pinnock's Improved Edition of Dr. Goldsmith's History of Greece.**

The 9th edition, corrected and enlarged, by W. C. Taylor, M.A.

## IV.

In 1 vol. 12mo. price 6s. 6d. cloth, **The History of the Overthrow of the Roman Empire,**

And the Formation of the principal European States. From the original Sources, Oriental and European, and comprising the latest Elucidations of the Continental and English Antiquarians and Scholars.

By W. C. Taylor, LL.D. M.R.A.S. and F.R.S.  
\* \* \* This work connects Ancient and Modern History, and forms, with the Histories of Greece and Rome, a complete Course of Ancient History, and an Introduction to those of England and the other European States.

## V.

In 12mo. with a Map, price 4s. 6d. **The Historical Miscellany.**

By W. C. Taylor, M.A.

"This is an instructive volume, intended as a Supplement to Pinnock's Histories. The first half of the volume is occupied with the principal and classical periods, in which the author has particularly directed his attention to those branches of history on which school-books are frequently deficient. Among these may be instanced, the history of the Persians and Carthaginians, the rivals of Greece and Rome, in the modern division, especial attention is paid to the French system and the Crusades, and afterwards to the English empire in India."—*Gentleman's Magazine*.

## VI.

In 12mo. with a Map, price 4s. 6d. **Manual of Universal History and Chronology.**

By H. H. Wilson, M.A. Professor of Sanscrit, Oxford.

## VII.

In 12mo. price 6s. **History of France and Normandy.**  
On the Plan of Pinnock's Histories.

By W. C. Taylor.

"We congratulate Taylor on his success. No child who has learned his letters can misunderstand the text of his history, and yet in vain do we look for a single sentence that can be called tame or vulgar."—*Monthly Review*.

## VIII.

In 12mo. a new edition, with Sixty Views and Twelve Maps, price 6s. 6d. **Roberts's Elements of Modern Geography and General History.**

On an entirely original Plan.

This work differs from others on the same subject, by the greater variety and copiousness of its historical details. It combines a view of the present condition of nations, with the causes that have produced this arrangement, and thus not only diversifies and illustrates the mere geographical information, but firmly implants it on the memory by the powerful influence of association.

## IX.

In 12mo. the 2d edition, price 4s. 6d. **A Companion to the Globes.**

Containing the various Problems that may be performed, according to Examples.

By T. Linsington.

## Also,

**A Complete Key to the Volume, price 2s.**

## X.

In 12mo. a new edition, revised and improved, with Nine Maps, price 6s. **Epitome of Classical Geography.**

With Historical Notices of the most ancient Nations, &c.  
By W. C. Taylor, M.A.  
Printed for Whitaker and Co. Ave Maria Lane.

Who have now ready, their

**New Catalogue of School-Books.**

Mr. Holden's Exposition of the New Testament.  
In 1 large vol. 12mo. price 12s. in boards, the 2d edition, revised and improved,

**THE CHRISTIAN EXPOSITOR; or, a Practical Guide to the Study of the New Testament.** Intended for the Use of general Readers.

By the Rev. GEORGE HOLDEN, M.A.

Though many Expositions of the Bible of great and deserved celebrity exist in our language, a Commentary sufficiently short to be read by those who have not leisure to consult learned works, yet sufficiently comprehensive to serve as a guide to the study of the Sacred Scriptures, appears to be still wanting. To supply this deficiency is the object of the present work, in which it has been the aim and study of the author to embrace, in a condensed form, such information as will enable the general reader to ascertain the real meaning of the inspired writers.

Printed for J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author, **The Christian Expositor of the Old Testament.** Price 12s. 6d.

In 2 vols. 12mo. price 14s. boards, the 2d edition of **A COURSE OF SERMONS for the YEAR.**

By the Rev. CHARLES GIBBLESTONE, M.A.  
Vicar of Hadley, Staffs.

London: Printed for J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, and sold by J. H. Parker, Oxford; and H. C. Langbridge, Birmingham.

Also, by the same Author,

## REV. G. S. FABER'S WORKS.

In 1 large vol. 8vo. price 10s. in boards, the 2d edition, enlarged (entirely rewritten), of

**THE DIFFICULTIES OF ROMANISM** in respect to EVIDENCE: or the Peculiarities of the Latin Church evinced to be untenable on the Principles of legitimate Historical Testimony.

By GEORGE STANLEY FABER, B.D.  
Master of Sherburn Hospital, and Prebendary of Salisbury.  
Printed for J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Also, by the same Author,

1. **A Supplement to the above Work; being an Answer to the Bishop of Strasburg.** 8vo. 6s.

2. **The Sacred Calendar of Prophecy,** 3 vols. 8vo. 11. 10s.

3. **The Apostolicity of Trinitarianism,** in 2 vols. 8vo. 12. 6s.

4. **The Difficulties of Infidelity,** 2d edition, 12mo. 5s.

5. **A Practical Treatise on the Ordinary Operations of the Holy Spirit.** 5th edition, 12mo. 4s.

## The Holy Bible Chronologically Arranged.

Handsome printed in Four large vols. 8vo. price 31. 10s. in boards, a new edition, with Marginal References, of

**THE OLD AND NEW TESTAMENT,** arranged in Historical and Chronological Order, in such manner that the Books, Chapters, &c. &c. may be read as one connected History, in the very Words of the authorised Translation. With copious Notes and Indexes.

By the Rev. GEORGE TOWNSEND, M.A.  
Prebendary of Durham, and Vicar of Northallerton.  
Printed for J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

\* \* \* The Old and New Testament may be purchased separately.

In 8vo. price 6s. in boards, the Nineteenth edition of **FAMILY WORSHIP; a Course of Morning and Evening Prayers for every Day in the Month.** To which is prefixed, a Discourse on Family Prayer.

By the late Rev. J. G. S. FABER, M.A.  
One of the Librarians of the British Museum, and Assistant Minister of Welbeck Chapel.  
Printed for J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Also, by the same Author,

**Parochial Instruction; or, Sermons delivered from the Pulpit, at different times, in the Course of Thirty Years.** 2d edition, 8vo. 10s. 6d.

In 12mo. price 4s. 6d. in boards, the 4th edition of **THE HAPPINESS of the BLESSED,** considered as to the Particulars of their State; their Recognition of each other in that State; and its Difference of Degrees. To which are added, Musings on the Church and her Services.

By RICHARD MANT, D.D.  
Lord Bishop of Down and Connor.  
Printed for J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

## INFANT SCHOOLS.

In 12mo. price 4s. 6d. boards, the 2d edition of **A COURSE OF LESSONS,** together with the Tunes to which they are usually sung in Infant Schools; and also a copious Collection of Hymns and Moral Songs, suitable for Infant Instruction, either in Schools or in Private Families.

#### REVIEW OF NEW BOOKS.

*Lectures on European Civilisation.* By M. Guizot. Late Minister of Public Instruction. Translated by Priscilla Maria Beckwith. 12mo. pp. 469. London, 1837. Macrone.\*

A VOLUME of less than five hundred pages, devoted to a subject occupying twice that number of years, must of necessity give a bird's-eye view of its many prominent features. But it may be confessed that much, in such matters, depends upon the character and nature of the bird. If "the fowl of Minerva," we may expect wisdom; if the soaring thunder-grasper of Jove, comprehensiveness of vision; even if the lark, a pleasing and musical descant upon the affairs of the earth, above which it rises to take its elevated glance and pour its melodious notes. Whereas the bat, or the wren, or the carrion-crow, could only perform or produce a few darkling circles, a few twig-limited peeps, or a melange neither instructive nor delightful. M. Guizot fortunately combines many of the qualities of the first trio in our comparison, and displays sagacity, ability, and intelligence, throughout every portion of this very interesting series of fourteen lectures.

Treating, and luminously treating, of a great number of the most important facts, speculations, events, and combinations of all, both in repose and in action, which have occurred in the European world, and advanced its population, in various modes and degrees, to the existing state of governments and civilisation; it would require a volume as large as that before us to enter upon an analysis of its contents, and discuss the positions advanced by its enlightened author. This, therefore, we cannot do, and must be satisfied with adverting to the leading points, and selecting a section for more particular illustration. We may promise, however, that, though we do not concur in all M. Guizot's opinions, nor think that he has completely established some of his theories; there is neither an argument nor a hypothesis in his whole work which does not afford grounds for much reflection, which does not reveal striking objects for the mind to contemplate, and which does not open out considerations to guide and improve our understanding of that vast chain and complication of circumstances that have changed the face of nature, and the destinies of the human race, under the form and pressure of thirty generations.

To trace the development of society and of man, is the noble pursuit of our author. From the fall of the Roman Empire he exhibits the original preponderating power of towns, the growth of the sacerdotal authority, the rude independence introduced by barbarian rulers and their forces, and the implanting of fendality upon the decline of barbarism, which, in the tenth century, became universal and pervaded Europe. Then the country acquired that strength which had been previously confined to cities; and a mighty alteration took place in the social system. The fourth lecture, on this subject, is one of extreme interest. The next two are addressed to the progress of the church

in temporal usurpations (embracing also a notice of the effects of the Crusades), and M. Guizot goes on to explain the obvious rise of the middle classes (*communes*) in the twelfth century, and their gradual ascension till they participated in the power hitherto held by aristocracy and religion, the nobility and the church.

Royalty is then ably portrayed, and contrasted with republican establishments. The reformation and the revival of literature are placed under review; the latter rather slightly, the former more circumstantially; and these topics bring us to the seventeenth and eighteenth centuries, when the elements of all that we now see were agitated, and the present condition of Europe resulted from the collisions, intellectual and political, which were generated by the advance in knowledge, and the corresponding advance in the spirit of liberty, and directed against absolute power in pope or king, in legions of priests, or armies of mercenaries.

Upon such foundations, recognising the most just and solid principles, were governments erected, and wise constitutions framed, for the benefit of ruler and of subject; not for the advantage of any individual or peculiar class, but for the good of all. Religious and civil society were alike reformed and purified; the grand questions of national policy became generally understood; and, at last, to the moderate, prudent, and well-meaning portions of mankind, it was made evident that gradual improvements, suggested by time, and limited to the needful repair of the social edifice, were all that the now enlightened condition of the people could ever demand. Thus we come to M. Guizot's conclusions, that reforms, and not revolutions, can alone be necessary, or contribute to the welfare of mankind.

The thirteenth lecture, besides a brief *resumé* of some of the principal matters preceding, comes more particularly home to the business and bosoms of our own country, and we accordingly turn for our illustrations of the writer to that chapter.

"You have seen (he observes), that during the course of the thirteenth century, all the elements, all the facts of ancient European society, had terminated in two essential facts—freedom of inquiry, and centralisation of power. The first prevailed in religious, the second in civil society. The emancipation of the human mind, and the triumph of pure monarchy, occurred at the same period. It would have been strange if these two facts, after a certain time, had not come into collision, for they were of most opposite natures: one was the defeat of absolute power in spiritual affairs; the other, its establishment in temporal concerns; the former, prepared the fall of the ancient ecclesiastical monarchy, the latter, accomplished the ruin of the ancient feudal and communal liberty. You have already seen that the cause of the simultaneous appearance of these two facts was, because religious society had made a more speedy progress than civil, and its revolutions in consequence occurred at an earlier period. Religious society had already reached the epoch of the emancipation of individual reason, when civil society had only advanced so far as the concentration of all particular powers, into one

general power. The coincidence of the two facts, instead of arising from their similitude, did not prevent their contradiction. They both were marks of progress in the course of civilisation, but of different stages of that progress; their moral date was different, though they coincided in actual time. It was inevitable that they must come into collision, that many conflicts must arise between them before they could become reconciled. It was in England that the first shock took place. The conflicts between freedom of inquiry, the fruit of the reformation; and the destruction of political liberty, the fruit of the success of pure monarchy; the attempt to abolish absolute power in temporal affairs, which had already been done in spiritual: this is the true signification of the revolution in England, this is the part it has performed in the history of our civilisation. Why was England the scene of this conflict? Why did the revolutions in the political world approach, in that country, nearer in time to the revolutions in the moral world, than they did on the Continent? Monarchy, in England, was subjected to the same fate as it was on the Continent. It attained, under the reign of the Tudors, a degree of concentration and energy it had never previously exhibited. I do not mean to assert that the practical despotism of the Tudors was more oppressive, and caused more suffering in England than that of their predecessors had done. Tyrannical, unjust, and vexatious proceedings were, I believe, as frequent during the time of the Plantagenets—perhaps, even more so. I also believe that, at the period when the Tudors reigned in England, the system of pure monarchy was more rude, more arbitrary on the Continent, than it was in that country. The new fact which became apparent during the reign of those princes, was the systematic form that absolute power assumed. Monarchy claimed a primitive and independent sovereignty; it held a new language. The theoretic claims of Henry VIII., Elizabeth, James I., and Charles I., were very different from those of Edward I. or Edward II., although the power of the two latter kings was neither less arbitrary nor less extensive. It was the principle, the rational system of monarchy, which was changed in England in the sixteenth century, rather than its practical power. Royalty declared itself absolute, superior to all laws, even to those it professed a desire to respect. On the other hand, the religious revolution was not effected in England by the same means which had accomplished it on the Continent—in England, it was the work of the sovereigns themselves. The seeds of a popular reform had, however, been deposited there; some attempts had been made to render them productive; and had they been left to themselves, they would probably have become developed in the course of time. But Henry VIII. put himself at the head of the movement—the supreme power became revolutionary. The result of this was, that the reformation in England, at least during the earlier part of its career, was much less perfect than the reformation in continental states, so far as regarded the suppression of abuses, of ecclesiastical tyranny, and the enfranchisement of the human

\* For review of M. Guizot's "General History of Civilisation," &c. see *Literary Gazette*, No. 1056, April 15.

intellect. As might have been expected, the interests of its authors were principally considered. The king, and the bishops who were there continued, divided between them the riches and the power of which they had deprived the preceding government, the papacy. The effect of this was presently felt. Although the reformation was said to be completed, almost all the causes which had rendered it necessary, and made it desired, still subsisted. It reappeared under a popular form, it preferred as many complaints against the bishops, as it had formerly done against the court of Rome—it accused them of being only so many popes. Whenever the general fate of the religious revolution was compromised, whenever it became necessary to oppose the ancient church, every section of the reformed party united together to repulse the common enemy; but, when the danger was past, the internal conflict recommenced. The popular reformers attacked the system of reformation, which was upheld by the royal and aristocratic factions; denounced its abuses, complained of its tyrannical character, called on it to fulfil its promises, and to abstain from re-establishing what it had already destroyed. About the same epoch, a movement towards liberty was made in civil society; a desire was experienced for political freedom, which had hitherto been unfelt, or, at least, had remained powerless. During the course of the sixteenth century, the commercial prosperity of England increased with extreme rapidity; and, at that time, many of the ancient territorial possessions and baronial properties changed hands. Sufficient attention has not been paid to the fact of the progressive division of landed property in England, during the course of the sixteenth century; the consequences of the ruin of the feudal aristocracy and of many other causes, which it would occupy too much time to enumerate here. Every document proves the prodigious augmentation of the number of landed proprietors. The lands, in a great measure, passed into the hands of the gentry, or lesser nobility, and the middle classes. The higher nobility, the house of lords, was, at the commencement of the seventeenth century, much less rich than the house of commons. Commercial wealth was very greatly increased at the same time that this great change took place in territorial property. While these two facts were in progress, a third intervened—a new movement of the human mind. During the reign of Elizabeth, a very great development of literary and philosophical activity occurred in England. It was a period of bold and extended ideas. The puritans unhesitatingly admitted all the consequences of narrow, but powerful doctrines; other minds of a less moral character, and unfettered either by systems or fixed principles, sought with eagerness all those ideas which promised some gratification to their curiosity, some food for their ardent imaginations. Wherever the movement of intelligence is a real pleasure, liberty will very soon be found to be requisite; and when liberty is obtained, it will quickly pass from the public mind into the constitution of the state."

This is a striking passage, and, as we have said of the rest of the work, suggests much for grave reflection. Henry VIII. putting himself at the head of the movement, is a strange anomaly in king-craft; and the only instance, in our memory, of an absolute monarch having adopted such a course. Others have been forced into similar measures by uncontrollable circumstances; but Henry was, of his own free will and motion, a revolutionary despot!! The

long reign of Elizabeth interposed between this extraordinary proceeding, and the reaction and consequences which it produced. He had destroyed religious absolutism; and in due turn civil absolutism came to be overthrown. The revolution dethroned and murdered a Stuart king; and M. Guizot gives us a masterly description of that event, the parties who acted prominently in it, and the issue. We select a portion of it.

"In the year 1653 (he says), after twelve years of conflict, all these parties had appeared and failed; the public thought so, and even the leaders of the different parties were obliged to admit it. The constitutional reformers, who very soon disappeared, saw the ancient constitution and the ancient laws insulted, trampled under foot, and innovations penetrating on every side. The political revolutionists beheld the parliamentary forms perishing through the novel use to which they proposed to apply them; they saw the house of commons, after twelve years of domination, reduced by the successive expulsion of royalists, and presbyterians, to a very limited number of members; despised, hated by the people, and utterly incapable of governing. The republicans appeared to have succeeded better; they had, apparently, remained in possession of the field—the house of commons was composed of only fifty or sixty members, all republicans. They might, with truth affirm, they were masters of the country; but the country absolutely refused to submit to their domination; they had no power, and they possessed no influence, either over the army or the people. No social tie, no security remained; justice was not administered, or, rather, that which was administered was not justice—its name was usurped by passion, chance, or party. And not only had security ceased to exist in the mutual relations between individuals, but the country was in an unsettled state; the great roads were not safe for travellers, they were infested by robbers, and brigands. Anarchy appeared on every side, in material, as well as in moral life; and neither the house of commons, nor the republican council of state, had any power to repress it. The three grand parties of the revolution had, therefore, been successively called on to take the lead, to direct the movement, and to govern the country, in accordance with their principles and their desires. They had all been unable to do so; they had all completely failed; they could do nothing further. It was, then, says Bossuet, that 'a man arose, who left nothing for fortune to do, which his own prudence and foresight could effect;' an expression full of error, and which is contradicted by all history. No man ever trusted more to fortune than Cromwell; no man ever risked more; advanced more rashly without an object or a plan, resolved, however, to go as far as fate would permit. A boundless ambition, an admirable talent in drawing all possible advantages from the events of each day, from the incidental circumstances that constantly occurred; the art of profiting by fortune, without pretending to direct it—this is the character of Cromwell. He did what no other man, placed in analogous circumstances, has ever done. He accommodated himself to all the different phases of the revolution. He was a leader, both at its commencement and at its close. He was, at first, the promoter of insurrection, the abettor of anarchy, the most furious revolutionist in England; he afterwards became the leader of the anti-revolutionary reaction, and encouraged the re-establishment of order and social reorganisation; he filled, alone, all the parts which, during the course of most

revolutions, are divided amongst many great actors. We cannot say that Cromwell was a Mirabeau—he wanted eloquence; and though very active, did not obtain any renown during the first years of the long parliament; but he was, successively, Danton and Buonaparte. He had done more than any other man to overthrow authority; he raised it up again, because no one but himself knew how to take possession of, and manage it. It was necessary that the country should be governed by some person; all others failed, he succeeded: this was his title. Once master of the government, this man, who had shewn so bold, and so insatiable an ambition, who had always pushed fortune before him, and seemed determined never to stop, displayed a fund of good sense, prudence, and knowledge of resources, which controlled his most violent passions. Undoubtedly, he had an extreme love for absolute power, and a very strong desire to gain the crown for himself, and to transmit it to his family. He renounced his designs in the latter particular, having had the sagacity to perceive the danger of it; and with respect to absolute power, although he exercised it in fact, he still comprehended that it was opposed to the character of the times in which he lived; that the object of the revolution, in which he had taken so leading a part, was to overthrow despotism, and that the unceasing desire of England was to be governed by a parliament, and according to parliamentary forms. Therefore, although a despot, both in disposition and in fact, he desired to have a parliament, and to govern by parliamentary forms. He addressed himself to every party in succession; he endeavoured to form a parliament from amongst the religious enthusiasts, the republicans, the presbyterians, and the officers of the army. He tried every means to assemble a parliament which could and would follow in his track. He tried in vain—no matter of what party the parliament was composed; so soon as it had assembled in Westminster, it sought to deprive him of the power he exercised, and to rule in its turn. I do not mean to assert that his interests and his personal passions were not his first care; but it is not the less certain, that if he had abandoned the supreme power, he would very soon have been obliged to resume it. Whoever had undertaken the government, whether he were a puritan or a royalist, a republican or a soldier, could not have held it—no one but Cromwell, at that juncture, could have governed with any degree of justice or order. The proof had already been made. It would have been impossible to allow the parliament, that is to say, the parties holding seats in parliament, to assume a power they could not hold. Such was, then, the situation of Cromwell; he governed by a system which he well knew was contrary to that of his country; he exercised a power which was felt to be necessary, but was not recognised by any one. No party regarded his government as definitive. The royalists, the presbyterians, the republicans, even the army, that party which appeared most devoted to Cromwell, all were convinced that his power was only transitory. He never really ruled over the popular mind; he was never any thing more than a last resort, a political necessity. The protector, the absolute ruler of England, was all his life obliged to have recourse to coercive measures, in order to retain power; no party was able to govern so well as him, yet all opposed him—he was constantly attacked by all parties at once. At his death, the republicans alone were able to seize on the supreme power—they did so, and succeeded no

better than they had done before. It was not from any want of confidence, at least in the fanatics of the party. A tract, written by Milton, full of talent and nerve, published at that crisis, is entitled 'A ready and easy Way to establish a free Commonwealth.' You see how great was the blindness of these men. They soon shewed themselves as incapable of governing as they had previously done. Monk undertook the direction of that event, which all England expected. The restoration was accomplished."

We pass to a brief extract or two, merely to shew M. Guizot's manner and ways of thinking:—

"Whoever attentively considers the English turn of mind, will be struck by a fact of a two-fold nature: on one side, good sense and practical ability; on the other, the absence of general ideas, and elevation of mind on purely theoretical questions. Whether we turn to works on history, or jurisprudence, or on any other subject, we rarely find that the great, the fundamental cause of things, has been investigated. Philosophy, properly speaking, and especially political science and pure metaphysics, have succeeded much better on the Continent than in England; at least they have been exhibited more boldly, and with greater power. It cannot be doubted, that the different character of the development of civilisation in the two countries, chiefly contributed to produce this result."

Again, speaking of Louis XIV.—

"The government of Louis XIV. was grand, brilliant, and powerful; but it had no firm foundation. Free institutions are a guarantee, not only for the prudence of a government, but also for its permanency. No system is capable of duration, unless it is supported by institutions. Wherever absolute power has become permanent, it has been founded on recognised institutions; sometimes by the division of society into castes, separated from each other by a strongly defined line; sometimes by a system of religious institutions. Under the reign of Louis XIV. institutions for the support of power, and for the preservation of liberty, were alike wanting. There was nothing in France, at that epoch, to secure the country against the illegitimate acts of the government, or the government itself against the inevitable effects of time. Thus we see that the government accelerated its own decay. It was not Louis XIV. alone who grew old, and became weak and powerless at the close of his reign; absolute power itself became decrepit. The system of pure monarchy, in 1712, was as much worn out as the monarch himself; and the evil was so much the greater, because Louis XIV. had abolished political habits, as well as institutions. No political habits can be formed without independence. He, alone, who feels he is strong by himself, is always capable either of aiding power or opposing it. Energy of character disappears when the condition becomes dependent; free and undaunted minds are produced by the security of rights."

With this we conclude; and have only to notice, with regret, that a multitude of misprints, or errors in the translation, render the author obscure where we are very desirous of ascertaining his precise sense. Thus, at page 453, we find the names of the celebrated diplomatists, *M. de Torcy, d'Avaux, and de Bonrepaus* rendered "*de Tovey, d'Avant, and Bourepans*;" and in the next page it is stated, that "these countries of an absolute monarch passed a more accurate judgment," &c., which "*countries*" is a misprint or mistranslation of

the word *courtisans, courtiers*. But, instead of instances, we will give one sentence, to shew how indifferently, to say the least, the work of the translator has been revised and corrected. "Il a bien fallu un jour en venir au fait; il a bien fallu que le mouvement intellectuel passât dans les événements extérieurs; et comme ils avaient été totalement séparés, la rencontre a été plus difficile, et le choc beaucoup plus violent." Thus rendered: "At length facts became associated with ideas; the intellectual movement passed into external events; and, as speculation had been totally separated from practice, their remains was so much the more difficult, and the shock of their meeting so much the more violent." What can be made of works like this! Not sense!

*The Bivouac; or, Stories of the Peninsular War.* By W. H. Maxwell, Esq., author of "Stories of Waterloo," &c. 3 vols. 12mo. London, 1837. Bentley.

WE have run cursorily over this publication, which is indeed one which greatly recommends itself for cursory reading. For, though the narrative is continuous and connected, the work consists of a number of interesting episodes, most, if not all, of them well upholding the previous popularity of the writer. Mr. Maxwell has seen much, and sketches what he selects for description with a vivid pencil. To illustrate this, however, we can only pitch upon a single picture, and endeavour through that to convey to our readers an idea of the spirit and talent of the whole.

"O'Connor strained eye and ear in the direction, but the low and hurried communication was drowned by the rushing of the river, and it was impossible to conjecture who the stranger was, or what might be his errand. A few minutes ended this uncertainty. Suddenly the unknown sprang within the sentry's guard—a blow was struck—a loud exclamation, and a deep groan succeeded, and then one figure only was visible in the starlight. That was the stranger's! and at a rapid pace he crossed the bridge, and confronted the English sentinel. 'Stand—or I'll fire!' 'Hold—for God's sake!' replied a voice in tolerable English. 'I am a Spaniard, and a friend.' But the sentinel was resolute. 'Friend or foe,' he cried, 'keep your distance.' 'By Heaven!' rejoined the Spaniard, 'I must and will cross over.' 'One movement of hand or foot,' returned the sentry coolly, 'and you are a dead man.' 'Am I not a faithful ally? What fear ye?' 'I fear nothing,' replied the English soldier. 'Have I not this moment rid you of an enemy?' said the stranger. 'Then have you done a cowardly and murderous action,' was the sentry's answer. 'I must pass—give way, or I'll force it.' 'My finger is on the trigger,' returned the soldier. 'Another step—another whisper—and I'll send a bullet through your heart.' Both paused; and for half a minute neither spoke. They stood almost within arm's length; the soldier with the rifle at his shoulder, the Spaniard with a knife grasped firmly in a hand, still reeking with the blood of the slaughtered Frenchman. A noise was heard; the measured steps of an advancing party approached, and in a few moments the relief appeared upon the bridge, and by O'Connor's orders secured the formidable stranger. The Spaniard offered no resistance. Two sentinels were left at the deserted post, and the relief, with their commandant and the prisoner, returned to the outlying picket. Once only the stranger spoke, and it was in reply to a command given to the guard to look to his safe custody. 'Think ye,' he said, 'that I am

likely to return to the French outpost, and inform the detachment that I stabbed their comrade to the heart?' and a loud laugh, as in derision, accompanied the observation. The dark mantillo in which the Spaniard was enveloped, had hitherto concealed his person, and in the waning starlight, nothing save a tall figure and swarthy features could be discovered; but when, stopping before the fire around which the picket were collected, the blaze revealed his face, one glance assured O'Connor that his prisoner was no ordinary man. The stranger was scarcely thirty, and were it not for his stern and vindictive expression, his face would have been singularly handsome. The dark and brilliant eye sparkled from beneath a brow which appeared to darken at the slightest contradiction; the nose was finely formed; the teeth white and regular, while coal-black hair, curling in rich profusion to his shoulders, and a high and noble forehead, completed the outlines of a countenance, that none could deny was handsome, but few would wish to look upon a second time. A trifling incident marked the character of the stranger. The officer of the picket presented a canteen to his commandant, and then politely offered it to the prisoner. He bowed, and put forward his hand; but the subaltern started—for in the blaze he observed that it was discoloured to the wrist. 'Are you hurt?' he said, 'there is blood upon your hand.' The Spaniard's lip curled in contempt. 'Ay, likely enough,' he coolly answered. 'Many a time the heart's blood of an enemy has dyed these fingers deeper; but it would be uncivil to stain a friendly flask;' and, stepping aside, he rinsed his hands in a little rivulet that trickled down a rock beside the watch-fire; then, taking the canteen, he drank and returned it with a bow. 'Are you the commandant at this fort?' he inquired, as he turned to O'Connor. 'I am,' was the reply. 'Your name, sir?' The soldier gave it. 'Indeed!' exclaimed the Spaniard, 'are you he who led the assault at Badajoz?' The soldier bowed, as he replied in the affirmative. 'Enough: I would speak with you aside;' and, followed by O'Connor, he walked some distance from the watch-fire. 'You have seen me before,' said the Spaniard, sharply. 'It is very possible,' was the soldier's reply. 'Under which of the Spanish commanders have you served?' 'Under none,' replied the stranger. 'Are you not a soldier, then? Just now you hinted that more than one Frenchman had fallen by your hand.' 'Yes: some have perished by my hand, and many a hundred by my order,' returned the prisoner. 'Indeed! May I inquire who it is that I am addressing?' 'Willingly. Heard ye ever the name of Vicente Moreno mentioned?' asked the Spaniard. 'Moreno! him whom the French hanged at Granada, in the presence of his wife and children?' 'And,' continued the stranger interrupting him, 'whose last words to her he loved so tenderly, were spoken from the scaffold, telling her to return to her home, and teach her children to follow the example of their father; and, if they could not save their country, like him to die for it.' 'Yes, I recollect the occurrence well,' replied O'Connor. 'It was the cruel murder of a brave man, and awful was the retaliation it occasioned.' 'Ay,' said the Spaniard, 'the martyr of liberty was well and speedily avenged. Before the second moon rose above the grave of the slaughtered soldier, seventy French captains were shot like mangy hounds, by my order, in the market-place at Marbella. 'Ha!' exclaimed O'Connor, as he looked keenly at the Spaniard, 'am I then speaking to—' 'Moreno, the Guerrilla,

the younger brother of him they murdered in the square of Granada, stands beside you.' O'Connor started! 'And was the assassin of the French sentinel, the far-famed chieftain of the mountain bands of Ronda? He whose exploits wore rather the semblance of romance than the colour of reality; whose career had been so successful and so sanguinary, that it was computed, from the hour he devoted himself to avenge his brother's death, that more than two thousand French had been slain by the bands he commanded!' While O'Connor recollected the ruthless character of the dreaded chief, all marvel at the scene upon the bridge ceased; for to stab an enemy who was in his way, would not be a consideration of a pin's fee to one who, in cold blood, had shot his prisoners by the dozen. 'Doubtless you are both hungry and fatigued,' said the soldier, resuming his conversation with the Guerilla; 'our bivouac is hard by, and, such as it is, there we have food and shelter. Will you accept what I can offer?' 'Most willingly,' replied Moreno, 'both will be welcome. For thirty hours I have tasted no food, and have been hiding in the rocks all day, and travelling hard since sunset.' 'You have, then, been engaged in some important enterprise?' said the soldier. 'I have been occupied as I have ever been since I devoted myself to avenge my murdered brother, and my enslaved country.' 'In what, may I inquire?' said O'Connor. 'Doing a deed of desperate vengeance,' replied the Spaniard, in a deep voice that thrilled to the heart. 'Vengeance is what I think of when awake—vengeance is what I dream of sleeping.' 'Have you been harassing the enemy?' 'I have,' returned the Guerilla, 'been doing a deed that will carry terror to every Frenchman, and make the usurper tremble, when the name of Juan Moreno is pronounced. But I am weary, give me some food, and when I rest for a few hours, if you will walk with me up the heights, I will relate my last adventure.' 'Come,' said the soldier; and leading the way, he introduced the weary Spaniard to the hut, struck a light, and placed before him the best cheer a scanty larder could produce. The Guerilla ate like one who had been for many hours fasting, finished a flask of wine, and then, apologising for keeping his host from his repose, stretched himself beside the soldier's bearskin, and, as if in the full consciousness of security, dropped into a sound sleep, which remained unbroken until the *reville* disturbed the bivouac at day-break. One circumstance struck O'Connor as being remarkable. Wearing as the Guerilla was, before he lay down on his cloak he took a crucifix from his bosom, and repeated his prayers devoutly. A hand, red with recent murder, punctiliously let fall a bead at every *ave*; and when his orisons were ended, he replaced the emblem of salvation, which he appeared to venerate so much, within the same breast where the knife that had just despatched two unsuspecting victims, was deposited."

Altogether, the *Bivouac* is a production excellently calculated to while away the autumnal hours; and, whether for its stirring or touching scenes, it will be perused with constant interest.

*Incidents of Travel in Egypt, Arabia Petrea, and the Holy Land.* By an American. With a Map and Engravings. 2 vols. 12mo. New York, 1837. Harper and Brothers; London, Rich.

THE Nile having become nearly as familiar to us as the Rhine, we shall not be seduced by the novelty of its being described by an Ame-

rican traveller, into another voyage from Cairo to the Cataracts. Suffice it to say of this portion of the work before us, that the narrative is easy and unassuming, and unfolds no circumstances with which the general reader was previously unacquainted. There is, perhaps, more novelty in the style than in the matter; for, getting into a passion with the Arabs who pestered him at the Great Pyramid, our author says—

"At the mouth of the well I again selected my two guides, and again told the others not to follow; and, sending the two before me, followed down the well, being myself quickly followed by two others. I shouted to them to go back, but they paid no regard to me; so, coming out again, I could not help giving the fellow next me a blow with a club, which sent him skipping among his companions. I then flourished my stick among them, and after a deal of expostulation and threatening gesticulation, I attempted the descent once more. A second time they followed me, and I came out perfectly furious. My friend was outside shooting, the pyramids being nothing new to him, and unfortunately I had been obliged to leave Paul at Cairo, and had no one with me but a little Nubian boy. Him I could not prevail upon to descend the well; he was frightened, and begged me not to go down; and when he saw them follow the second time, and me come out and lay about me with a club, he began to cry, and before I could lay hold of him, ran away. I could do nothing without him, and was obliged to follow."

"Next to the pyramids, probably as old, and hardly inferior in interest, is the celebrated Sphinx. Notwithstanding the great labours of Cavaglia, it is now so covered with sand, that it is difficult to realise the bulk of this gigantic monument. Its head, neck, shoulders, and breast, are still uncovered; its face, though worn and broken, is mild, amiable, and intelligent, seeming, among the tombs around it, like a divinity guarding the dead."

The subjoined notice is worthy of extract, to shew how nearly future travellers had lost one of the grandest objects of Egyptian attraction.—

"Mr. Linant has been twenty years in Egypt, and is now a bey in the pacha's service, and that very afternoon, after a long interview, had received orders from the great reformer to make a survey of the pyramids, for the purpose of deciding which of those gigantic monuments, after having been respected by all preceding tyrants for 3000 years, should now be demolished for the illustrious object of yielding material for a petty fortress, or scarcely more useful and important bridge."

Fortunately for the monuments of the Pharaohs, Mr. Linant reported that it would be cheaper to get stone from the quarries; though by a strange perversion of curiosity, like that of a child with a toy, the author remarks—

"After all, it is, perhaps, to be regretted that he had not gone on, as the mystery that overhangs the pyramids will probably never be removed until one of them is pulled down, and every stone removed, under the direction of some friend of science and the arts."

The Nile excursion being completed, the author resolved on a journey to Mount Sinai; and was thence led to a still more extensive and dangerous peregrination. About this expedition there is much said; and in the conclusion we are rather left at a loss to decide, whether Mr. S. is most convinced of the exact truth of the Bible prophecies, or fancies that he has proven one of them untenable in a literal acceptance. The denunciation against Edom is,

that "none shall pass through it, for ever and ever" (see Keith on the Prophecies, *passim*, who contends that Seetzen perished immediately after crossing the country, and Burckhardt, in 1812, did not pass through, but only, as it were, skirted Idumea or Edom); but our author, whilst he speaks in earnest language of the wonderful fulfilment of the Old Testament in every scene he witnessed, seems to consider himself to be "the first, the only one" who has traversed the accursed land from end to end. His statement and argument on this subject are amusing; and as the passage also very fairly winds up his travel from Mount Hor to Hebron, we will quote it:—

"I cannot (he says) leave this interesting region without again expressing my regret at being able to add so little to the stock of useful knowledge. I can only testify to the existence of the ruins of cities which have been known only in the books of historians; and I can bear witness to the desolation that reigns in Edom. I can do more, not with the spirit of scoffing at prophecy, but of one who, in the strong evidence of the fulfilment of predictions uttered by the voice of inspiration, has seen and felt the evidences of the sure foundation of the Christian faith; and having regard to what I have already said in reference to the interpretation of the prophecy, 'None shall pass through it, for ever and ever,' I can say that I have passed through the land of Idumea. My route was not open to the objection made to that of Burckhardt, the traveller who came nearest to passing through the land; for he entered from Damascus, on the east side of the Dead Sea, and struck the borders of Edom at such a point that, literally, he cannot be said to have passed through it. If the reader will look at the map accompanying these pages, he will see Burckhardt's route; and he will also see that mine is not open to the critical objections made to his; and that, beyond all peradventure, I did pass directly through the land of Idumea lengthwise, and crossing its northern and southern border: and, unless the two Englishmen and Italian before referred to,\* passed on this same route, I am the only person, except the wandering Arabs, who ever did pass through the doomed and forbidden Edom, beholding, with his own eyes, the fearful fulfilment of the terrible denunciations of an offended God. And, though I did pass through and yet was not cut off, God forbid that I should count the prophecy a lie; no, even though I had been a confirmed sceptic, I have seen enough, in wandering with the Bible in my hand in that unpeopled desert, to tear up the very foundations of unbelief, and scatter its fragments to the winds. In my judgment, the words of the prophet are abundantly fulfilled in the destruction and desolation of the ancient Edom, and the complete and eternal breaking up of a great public highway: and it is neither necessary nor useful to extend the denunciation against a passing traveller."

But no matter how our worthy traveller reconciles this knotty affair to his conscience, it is only our business to trace such particulars of his transit as are most interesting; regretting with him that his opportunities afforded him "so little to add to the stock of useful knowledge," respecting a region about which, notwithstanding the revelations of Laborde, Legh, Banks, Mangles, Irby, and others already mentioned, besides *incidentalists* not noticed, we know so little, and desire to know so much. Travelling with and among Arabs, however, is

\* We cannot tell who they are, nor why they are not repeatedly named instead of being referred to.—Ed. L. G.

no sinecure; and a tourist who had a note to take out, and took it out to record his observations, would probably never publish them in America or England. These hospitable children of the Desert would speedily provide him with a home and resting-place for ever. And, indeed, our author draws a picture of their manners, at the best of times, and under the most propitious circumstances, which intolerably clashes with the romance of our Araby-incited imaginations.

"One by one (confesseth our honest American) I had seen the many illusions of my waking dreams fade away; the gorgeous pictures of oriental scenes melt into nothing; but I had still clung to the primitive simplicity and purity of the children of the desert, their temperance and abstinence, their contented poverty, and contempt for luxuries, as approaching the true nobility of man's nature, and sustaining the poetry of the 'land of the East.' But my last dream was broken; and I never saw among the wanderers of the desert any traits of character, or any habits of life, which did not make me prize and value more the privileges of civilisation. I had been more than a month alone with the Bedouins; and, to say nothing of their manners, excluding women from all companionship; dipping their fingers up to the knuckles in the same dish; eating sheep's insides; and sleeping under tents crawling with vermin, engendered by their filthy habits: their temperance and frugality are from necessity, not from choice; for in their nature they are gluttonous, and will eat at any time, till they are gorged, of whatever they can get, and then lie down and sleep like brutes. I have sometimes amused myself with trying the variety of their appetites, and I never knew them refuse any thing that could be eaten. Their stomach was literally their god, and the only chance of doing any thing with them was by first making to it a grateful offering; instead of scorning luxuries, they would eat sugar as boys do sugarcandy; and I am very sure, if they could have got pound-cake, they would never have eaten their own coarse bread. One might expect to find these children of Nature free from the reproach of civilised life, the love of gold. But, fellow-citizens, and fellow-worshippers of mammon, hold up your heads! this reproach must not be confined to you. It would have been a pleasing thing to me to find among the Arabs of the desert a slight similarity of taste and pursuits with the denizens of my native city; and in the early developments of a thirst for acquisition, I would have hailed the embryo spirit which might one day lead to stock and exchange boards, and laying out city lots around the base of Mount Sinai or the excavated city of Petra. But the savage was already far beyond the civilised man in his appetite for gold; and, though brought up in a school of hungry and thirsty disciples, and knowing many in my native city who regard it as the one thing needful, I blush for myself, for my city, and for them, when I say that I never saw one among them who could be compared with the Bedouin. I never saw any thing like the expression of face with which a Bedouin looks upon silver or gold. When he asks for bucksheesh, and receives the glittering metal, his eyes sparkle with wild delight, his fingers clutch it with eager rapacity, and he skulks away like the miser, to count it over alone, and hide it from all other eyes."

But we have pointed to the results of his experience before we have told of our author's whereabouts; and as we dislike putting the cart before the horse, again we start from Cairo to

Suez, cross the Red Sea in a boat, where Moses (it is conjectured) miraculously divided the waters and drowned the Egyptian host, and in ten days reach the memorable Mount Sinai. But we pause on the Mosaic miracle, as vouches on the spot.

"It was (Mr. S. tells us) about twenty miles across; the distance which that immense multitude, with their necessary baggage, could have passed in the space of time (a night) mentioned in the Bible. Besides my own judgment and conclusions, I had authority on the spot, in my Bedouin Touseh, who talked of it with as much certainty as if he had seen it himself; and, by the waning light of the moon, pointed out the metes and bounds according to the tradition received from his fathers. 'And even yet,' said he, 'on a still evening like this, or sometimes when the sea is raging, the ghosts of the departed Egyptians are seen walking upon the waters; and once, when, after a long day's journey, I lay down with my camels on this very spot, I saw the ghost of Pharaoh himself, with the crown upon his head, flying with his chariot and horses over the face of the deep; and even to this day the Arab, diving for coral, brings up fragments of swords, broken helmets, or chariot-wheels, swallowed up with the host of Egypt.'"

Having seen what was to be seen on Mount Sinai, our traveller, inspired by the place and occasion, relinquished his first idea of proceeding to Gaza, and turned off the route for Petra. His visit to this remarkable place is interesting for its Arab accompaniments, as well as for the sketch, brief and hasty as a few hours' inspection must necessarily make it, of the doomed city itself, the desolate remains of one of the earliest dwellings of congregated man upon the earth, now a mass of rocky ruins and sepulchres. His shrewd Arabs caused him to enter by a *portal*, hitherto (as far as we remember) unnoticed; but the whole description is so good, that, at the risk of repetition, we copy it for those not much read in these *Petra-factions*.

"This ancient and extraordinary city is situated within a natural amphitheatre of two or three miles in circumference, encompassed on all sides by rugged mountains, five or six hundred feet in height. The whole of this area is now a waste of ruins, dwelling-houses, palaces, temples, and triumphal arches, all prostrate together in undistinguishable confusion. The sides of the mountains are cut smooth, in a perpendicular direction, and filled with long and continued ranges of dwelling-houses, temples, and tombs, excavated with vast labour out of the solid rock; and, while their summits present Nature in her wildest and most savage form, their bases are adorned with all the beauty of architecture and art, with columns, and porticos, and pediments, and ranges of corridors, enduring as the mountains out of which they are hewn, and fresh as if the work of a generation scarcely yet gone by. Nothing can be finer than the immense rocky rampart which encloses the city. Strong, firm, and immovable as Nature itself, it seems to deride the walls of cities, and the puny fortifications of skillful engineers. The only access is by clambering over this wall of stone, practicable only in one place, or by an entrance the most extraordinary that Nature, in her wildest freaks, has ever framed. The loftiest portals ever raised by the hands of man, the proudest monuments of architectural skill and daring, sink into insignificance by the comparison. It is, perhaps, the most wonderful object in the world, except the ruins of the city to which it

forms the entrance. Unfortunately, I did not enter by this door, but by clambering over the mountains at the other end; and when I stood upon the summit of the mountain, though I looked down upon the vast area filled with ruined buildings and heaps of rubbish, and saw the mountain sides cut away so as to form a level surface, and presenting long ranges of doors in successive tiers or stories, the dwelling and burial-places of a people long since passed away; and though immediately before me was the excavated front of a large and beautiful temple, I was disappointed. I had read the unpublished description of Captains Irby and Mangles. Several times the sheik had told me, in the most positive manner, that there was no other entrance; and I was moved to indignation at the marvellous and exaggerated, not to say false, representations, as I thought, of the only persons who had given any account of this wonderful entrance. I was disappointed, too, in another matter. Burckhardt had been accosted, immediately upon his entry, by a large party of Bedouins, and been suffered to remain but a very short time. Messrs. Legh, Banks, Irby, and Mangles, had been opposed by hundreds, who swore 'that they should never enter their territory nor drink of their waters,' and 'that they would shoot them like dogs, if they attempted it.' And I expected some immediate opposition from at least the thirty or forty, fewer than whom, the sheik had told me, were never to be found in Wady Moussa. I expected a scene of some kind; but at the entrance of the city there was not a creature to dispute our passage; its portals were wide open, and we passed along the stream down into the area, and still no man came to oppose us. We moved to the extreme end of the area; and, when in the act of dismounting at the foot of the rock on which stood the temple that had constantly faced us, we saw one solitary Arab straggling along without any apparent object, a mere wanderer among the ruins; and it is a not uninteresting fact, that this poor Bedouin was the only living being we saw in the desolate city of Petra. After gazing at us for a few moments from a distance, he came towards us, and in a few moments was sitting down to pipes and coffee with my companions. I again asked the sheik for the other entrance, and he again told me there was none; but I could not believe him, and set out to look for it myself; and, although in my search I had already seen enough abundantly to repay me for all my difficulties in getting there, I could not be content without finding this desired avenue."

The solitary Arab in solitary Petra might sit for another Marius at Carthage; and, with regard to the avenue so much desired, our author did discover it, but was deterred from pursuing it outwards to the country, by an alarm that there was a band of hostile Arabs at the further issue of the pass. Having seen all he could within a few hours, he was compelled to depart, and, as usual, his escort magnified the perils of his position to the utmost. In spite of their remonstrances, however, he ascended Mount Hor, and gives a vivid description of the labour, as well as of the view from the summit. Every thing around, as far as human eye could reach, spoke of the prophetic vengeance which had been realised, and converted the once populous and flourishing inheritance of Esau into a desert wilderness, the haunt of wolves and owls.

"If (says our author) I had never stood on the top of Mount Sinai, I should say that nothing could exceed the desolation of the view

from the summit of Mount Hor, its most striking objects being the dreary and rugged mountains of Seir, bare and naked of trees and verdure, and heaving their lofty summits to the skies, as if in a vain and fruitless effort to excel the mighty pile, on the top of which the high-priest of Israel was buried. Before me was a land of barrenness and ruin—a land accursed by God, and against which the prophets had set their faces; the land of which it is thus written in the book of life:—‘Moreover, the word of the Lord came unto me, saying, Son of man, set thy face against Mount Seir, and prophesy against it, and say unto it, Thus saith the Lord God, Behold, oh Mount Seir, I am against thee, and I will stretch out mine hand against thee, and I will make thee most desolate. I will lay thy cities waste, and thou shalt be desolate; and thou shalt know that I am the Lord. Because thou hast had a perpetual hatred, and hast shed the blood of the children of Israel by the force of the sword in the time of their calamity, in the time that their iniquity had an end: Therefore, as I live, saith the Lord God, I will prepare thee unto blood, and blood shall pursue thee: sith thou hast not hated blood, even blood shall pursue thee. Thus will I make Mount Seir most desolate, and cut off from it him that passeth out and him that returneth. And I will fill his mountains with his slain men: in thy hills, and in thy valleys, and in all thy rivers, shall they fall that are slain with the sword. I will make thee perpetual desolations, and thy cities shall not return: and ye shall know that I am the Lord.’”

Our author continues. “On the very ‘top of the mount,’ revered alike by Mussulmans and Christians, is the tomb of Aaron. The building is about thirty feet square, containing a single chamber; in front of the door is a tombstone, in form like the oblong slabs in our churchyards, but larger and higher; the top rather larger than the bottom, and covered with a ragged pall of faded red cotton in shreds and patches. At its head stood a high round stone, on which the Mussulman offers his sacrifices. The stone was blackened with smoke; stains of blood and fragments of burnt brush were still about it; all was ready but the victim; and when I saw the reality of the preparations, I was very well satisfied to have avoided the necessity of conforming to the Mussulman custom. A few ostrich eggs, the usual ornaments of a mosque, were suspended from the ceiling, and the rest of the chamber was perfectly bare. After going out, and from the very top of the tomb surveying again and again the desolate and dreary scene that presented itself on every side, always terminating with the distant view of the Dead Sea, I returned within; and examining, once more, the tomb and the altar, walked carefully around the chamber.”

An incident, rather absurdly exaggerated, follows; but as, in the old house in Gray’s poem, the long passage which tells it leads to nothing, we shall leave it and Mount Hor together.

On his route to Hebron, the author saw many Roman ruins, but had not sufficient leisure or opportunity to examine them; so that, except for the general statement, this portion of the earth must yet remain *terra incognita*. At Hebron he got rid of his Bedoween friends, after much quarrelling, as usual, and went on to Bethlehem, Jerusalem, Jericho, Jordan, the Dead Sea, and other spots of great interest. As they have all, however, been more than once described in our pages, with more minute details, from preceding travellers, we shall not

seek here for further “Incidents,” but finish with an Asphaltic extract.

“Since early in the morning, I had had the sea constantly before my eyes. While riding along the northern shore, the general aspect was very much the same; but, as soon as I turned the head, and began to move along its side, the mountains every moment assumed a different aspect, although everywhere wild, rugged, and barren. At three o’clock we were approaching a place where the mountain rises precipitously from the lake, leaving no room for a passage at its foot; my eyes were fixed upon the lake, my thoughts upon its mysterious properties. The ancients believed that living bodies, and even heavy metals, would not sink in it; and Pliny and Strabo have written of its extraordinary buoyancy. Before I left Jerusalem, I had resolved not to bathe in it, on account of my health; and I had sustained my resolution during the whole of my day’s ride along its shore; but, on the point of turning up among the mountains, I could resist no longer. My clothes seemed to come off of their own accord; and, before Paul had time to ask me what I was going to do, I was floating on its waters. Paul and the Arabs followed; and, after splashing about for a while, we lay like a parcel of corks upon its surface. From my own experience, I can almost corroborate the most extravagant accounts of the ancients. I know, in reference to my own specific gravity, that in the Atlantic or Mediterranean I cannot float without some little movement of the hands; and even then my body is almost totally submerged; but here, when I threw myself upon my back, my body was half out of water. It was an exertion even for my lank Arabs to keep themselves under. When I struck out in swimming, it was exceedingly awkward; for my legs were constantly rising to the surface, and even above the water. I could have lain there and read with perfect ease. In fact, I could have slept, and it would have been a much easier bed than the bushes at Jericho. It was ludicrous to see one of the horses. As soon as his body touched the water, he was afloat, and turned over on his side; he struggled, with all his force, to preserve his equilibrium; but the moment he stopped moving he turned over on his side again, and almost on his back, kicking his feet out of water, and snorting with terror. The worst of my bath was, after it was over, my skin was covered with a thick glutinous substance, which it required another ablution to get rid of; and after I had wiped myself dry, my body burnt and smarted as if I had been turned round before a roasting fire. My face and ears were incrustated with salt; my hairs stood out, ‘each particular hair on end;’ and my eyes were irritated and inflamed, so that I felt the effects of it for several days. In spite of all this, however, revived and refreshed by my bath, I mounted my horse a new man. Modern science has solved all the mystery about this water. It has been satisfactorily analysed, and its specific gravity ascertained to be 1.211, a degree of density unknown in any other, the specific gravity of fresh water being 1.000; and it has been found to hold in solution the following proportions of salt to 100 grains of water:—

	Grains.
Muriate of lime .....	3.920
Muriate of magnesia .....	10.246
Muriate of soda .....	10.360
Sulphate of lime .....	0.054
	24.580.”

We have now finished our task. We have seen books more full of valuable matter, espe-

cially when relating to places such as our author visited; but, with all its faults of style\* and manner, and two or three failures, when aiming at grand or pathetic effect, there is such a measure of good humour and good feeling in these volumes, that we can cordially recommend them to our readers.

*The Basque Provinces; their Political State, Scenery, and Inhabitants. With Adventures among the Carlists and Christinos.* By E. Bell Stephens, Esq. 2 vols. 12mo. London, 1837. Whittaker and Co.

As the correspondent of the “Morning Post” newspaper, Mr. Stephens has enjoyed very favourable opportunities for witnessing the important struggle in Spain since September last, and also for ascertaining the condition and feeling, and seeing the manners, &c. of the Basque Provinces, the seat of this unfortunate war. A decided Carlist in his opinions, he cites many instances of generosity and humanity on the part of Carlo Quinto and his adherents; while, on the other hand, he describes the Christinos and their mercenary allies as cruel and barbarous. These particulars we leave to the readers of the work; and, as we have of late repeatedly referred to publications on this quarter, though not so recent as Mr. Stephens’s, we shall say nothing of the sieges of Bilbao or any other warlike operations, but select two or three passages respecting the country and its inhabitants, which will suffice to shew the style in which the author has executed his task. The following is a fair specimen:—

“During the four months which I spent in Navarre, Alava, Biscay, and Guipuscoa, I never met with the slightest insult or injury, though quite unarmed, frequently travelling alone, and not particularly on my guard either by night or day against being robbed and eaten, although I heard some very nervous tales of wolves and bears as ferocious as Mina and Rodil, and of a band of forty robbers who had made hundreds stand and deliver in the mountains of Guipuscoa, caring neither for Carlos or Christina; with a full, true, and particular account of how the people had hunted and taken them all just before I arrived; and how they had mercifully beaten the forty thieves to death with sticks; and how the fair and false captain of the brigands was discovered to be a lady; and how she pleaded that she was no better than she should be; and how she was thereby saved from summary execution and committed to prison to abide her time,—whence I suppose the story will not bring her forth for nine years to come; all for the edification of travellers! Speaking merely from my own experience, I can say that an Englishman may travel very safely and pleasantly through the Basque Provinces and Navarre, provided he keep his eyes and ears open, and his mouth shut, and does not impudently set himself up to contradict the popular opinion that Englishmen are all drunkards, who will sell their shirts, shoes, or jackets for a bottle of wine; and that English women will sell their children for a real (2½d.) a piece, or the equivalent thereof, in *aguardiente*. The higher classes of Carlists who have travelled and seen other samples of *Ingleses* than those let loose upon the coast at Bilbao, St. Sebastian, and Passages, take a somewhat different view of our national character, and, ascending to the best informed, Don Carlos declares that nothing would please him more than to see English

\* Vol. II. page 29, we are told of a school of fish. Is it a misprint, or an Americanism?—Ed. L. G.

gentlemen freely travelling through the country, and judging for themselves if the people wished to be ruled by Maria Christina and Mendizabel, and if there be the slightest chance of either or both (with Lord Palmerston to aid) compelling them to do what they do not like. However, I should not recommend any of our speculative tradesmen, political economists, theoretic legislators, or abstract geniuses of any class, to venture on a Basque peregrination. A traveller must habitually have an eye to the practical to get on at all comfortably there. I crossed the frontier with an eye to the picturesque and an ear to Fuentarabian echoes, reflecting on the consequences of the change in the Spanish law of succession, Lord Palmerston's non-intervention hoax, and such like *mal à propos* matters; but, long before I re-crossed the Bidasoa, I had learned to become alive to the present instead of the absent—to look to my dinner and my saddle-bags, my mule and her shoes, and to stand by to pledge her (Saxon style) while she fed. As to drinking, that was her own affair; and not being a Legionaire *baggage*, she never made a beast of herself. The traveller will find the views from the tops of the mountains truly magnificent. He will also very probably discover that he has gained a splendid appetite by the ascent, without any likelihood of gratifying it in such ethereal regions, unless he discovers something to the purpose in his own knapsack. He will also find very speedily that there is but one dinner hour in every *posada*, which, like a law of the Medes and Persians, is, when once passed, irrevocable. The greatest variation of latitude in this meridian (for it cannot properly be called dinner) is from twelve till one o'clock, whatever be the longitude of the place, so that picturesque and magnificent had better always be reserved for a *dessert*. As to dangers, there are really none, if, as I said before, the tourist will only keep his ears and eyes open.

"The conduct (he observes elsewhere) of the peasantry, whether engaged in field, in camp, or in factory, like those just mentioned, was, throughout my tour, an object of especial interest to me. On their proceedings, in fact, the issue of this eventful struggle depends. Whilst they are well affected, active, industrious, and confident, the king cannot lose his cause, even if every fortress were in the hands of Queen Christina and her Algerine and Westminster allies. If they sink into apathy, or even indifference, it is gone. This is the simple view of the case, which all my experience tended to confirm, which rendered each sun-burnt muleteer and *pageano* that I met on the road-side, a very respectable and influential personage in my eyes, and awakened my earnest attention to the aggregate of their sayings and doings, habits, customs, and even amusements. Warlike as they are, I was surprised to find so few martial sports amongst them. They have no boxing matches, single-stick combats, fencing, or target-shooting; but they are not the less in love with warfare and earnest in its exercise. Thus, when the cannonades at the lines of St. Sebastian and Passages are heard through Guipuzcoa, protecting sallies of the garrisons, the *voluntarios* cannot remain quietly working in a field, but snatch up their muskets, and scamper over the hills for miles, 'just to have a few shots at the Christinos,' which they discharge with right good will, and sleep all the sounder for on their return. There is, however, a species of martial gymnastic exercise prevailing throughout the Basque provinces, very striking to English

eyes, and so influential in its results in the development of combative and other valuable national propensities, that I shall give my readers a description thereof, just as it occurred under my own eyes in the Plaza of the little village of Yurretta, within half a mile of Durango."

We regret that we cannot find room for the vivid description of this characteristic village fête; but the quotation with which we conclude, seems to us to be still more likely to interest the public. It is a kind of winding-up, in which the author tells the traveller (if any body should happen to like such a tour for amusement) how he can best make his way in the Basque provinces.

"In the first place (he says), then, my dear fellow-countrymen, don't think of seeing the country with a telescope from the walls of Bilbao or San Sebastian. The hills around stand sadly in the way, and the Columbar hunting-parties indulged in by the garrison, which might have afforded opportunities for a wider scope of vision, are now few and far between. Besides, these excursions have invariably had unlucky terminations. 'Tis very pleasant,' says the East Indian adage, 'to hunt the tiger; but it is quite another affair when the tiger turns to hunt you!' It is, indeed, peculiarly mortifying to go for wool, and to return shorn; so, try another plan. Throw aside your nightgown and slippers; abandon all your lingering hopes of travellers' comforts with a good grace; make your will; insure your life; find your way in the dark over the Pyrenees to Vera or Zugaramurdi; and then, having got at once into the midst of danger and hardship, you will soon learn to appreciate a thousand enjoyments, that before passed unnoticed or despised. You will find your sense of natural piety quickened and elevated, and your tongue often uttering unconscious graces 'for a good dinner,' or 'a good bed,' as the case may be, although the former should happen to be only bread and oil-pottage, and the latter a mattress: *apropos* of dietetics, always take your breakfast, dinner, and supper, when you can get them, and your sleep, if possible, in advance! I am supposing that you are travelling with the Carlist forces, otherwise you will lose all the pleasure of beholding battles and sieges, the excitement of marching and counter-marching, of surprising and being surprised. Travelling alone, you will only see the towns, rivers, woods, and mountains asleep, as it were, and you might as well be looking at a book of landscapes at home; but if you follow the course of the war on any part of the frontier, you will find all these alive and alert; you will see the yards manned, as it were; every stick, stone, and stream arranging themselves in sympathetic unison, and assuming their boldest defensive attitude, as if inspired by the unconquerable spirit of the people who have defended them ere history began. But I was talking about your dinner and your bed. Fight your way at once into the midst of the oil and garlic, devour them in token of victory over your own fastidiousness, and you will sit at your ease ever after. Get rid, also, of your childish predilection for white salt; the brown is quite as wholesome. It is only tinged by a little clay dug out of the mine with it, or locked up in its crystallisation from the well-waters of Salinas del Oro. A little practice soon enables you to distinguish it from the pepper. The only danger of your indulging in Spanish cookery is, that you will soon become an epicure, and on your return to France astonish the *garçons*, as an English friend of

mine did at Bayonne, by calling for salad-oil 'a little older' than that which stood in the crier. Then as to a bed—I can promise you that you will not be likely to complain on your return to England, of 'a rose-leaf doubled under your great toe' troubling your repose. However, if you are constitutionally fastidious (or thin-skinned, as the saying is) on this point, you cannot do better than get yourself varnished or enamelled for the season, as Madame V—— does; and then you may bid defiance to any thing less irritating than a musket-ball. The late Sir Charles Giesecke adopted another excellent plan on his mineralogical excursions in Greenland. He provided a large white tanned bearskin, thick and strong, sewed into a bag, with a flap which covered his head. He crept in at the mouth every night, rolled himself round in a blanket, shut the flap-door; and thus lay secure against the attacks of dogs, wolves, rats, mice, &c., the skin being tough enough to withstand an extemporaneous siege, till he awoke to beat the drum with his knuckles, or shake his sides and growl at his disturbers. However, the less comforts you carry, the more good your journey will do you; so don't trouble yourself about the bearskin. Indeed, the less you bring in the way of baggage, the less you have to lose; as you certainly will, one time or other, all that you can't carry on your own back. Don't depend on your good horse for aid in time of need. He has not been used to a maize diet; and you will be obliged to send him back to France to save his life, paying a Napoleon transit-duty by the way. Don't expect to replace him in the provinces. Every horse at all able to carry a man-at-arms, has been purchased for the army, or received in lieu of service or contributions from the owners; so that only ponies remain, one of which, at a pinch, may serve you, if, like the sailors in a storm, you lighten the vessel by throwing the cargo to the sharks. If, indeed, you can get a good mule, and will feed it yourself (by stripping a house of its thatch, if nothing else can be had), you may sit at ease in this respect. Take no care of your bridle or your neck. Carry saddle-bags, and put provision for to-day and tomorrow therein, otherwise you may both frequently dine on recollections of the previous meal. The actual necessities which you must bring with you, are a razor, a piece of soap, a comb, a tooth-brush, a square inch of looking-glass (you will find white towels and napkins in the poorest huts, but they wash them with the ley of wood ashes); a pair of spurs (hinged, to enable you to walk down the precipitous roads without turning your face and toes thereunto); a knife, fork, and soup spoon, clasp in one haft (a 'scarce edition' in the provinces). I allow you a separate small spoon for eggs, as the customary hard-boiling plan, which requires none, might not agree with your health. In your knapsack a second shirt, &c. and high shoes, not boots. You can't attempt to change wet boots in camp without the liability of being taken prisoner. A young friend of mine, who was routed out of bed at Olaveaga, on Christmas morning, by the Christinos galloping under his window, was obliged to abandon both the operation and the boots, and afterwards to march for three leagues through the snow, over the sharp rocky mountains, in his bare feet; all for want of shoes instead of boots. Next, a pocket-map, telescope, note-book, and pencil. Lastly, two articles which you may find difficult to procure when you want them, and which are very light and portable: English lint and an empty phial.

N.B. The latter will hold the lint, and don't forget the cork. The lint will be very useful whenever you are wounded. I assure you that many arms and legs are dressed without any in the hospitals; and you will find none to spare in the provinces for amateurs. The phial is to be taken to the *botica* for medicine, as soon as the *chacoli* (the wine of Biscay) disagrees with you. I at last learned to use it at dinner, as others did; as wine with water, as vinegar with fish. You need not take the trouble of bringing out medicine; you can always purchase it—excellent, I assure you (the less the better): but the *boticario* is a man of dignity, and feels it beneath him to peddle in pill-boxes and phials; so, if you don't bring wherewith to hold his prescription, you may carry it home in the hollow of your hand, or in your mouth, if you are not afraid of the consequences. Pray don't forget the cork. Never enter a *posada* except as a matter of necessity. Their patrons are a caste of rogues and robbers in Spain as well as every where else; so the only safe plan to pursue, when the rascal presents his bill at you, and desires you to stand and deliver, is, without looking at it, to seize him by the throat, and drag him before the *alcalde*, confident that he will find something enormously overcharged in it. If the fellow be insolent, the *alcalde*, if he happen to be in a good humour, may order him a dozen *palos* on the back to teach him manners, and to keep his accounts on a better system. In justice to the Basque womankind, I must say that I always found the *posadas*, wherein they held away, less exorbitant than those ruled by the other sex. Dispense with the attendance of an *asistente*, unless you are very much occupied, very helpless, or very ignorant of Spanish and Basque. There are times when you will wish him hanged: for instance, finding, *par hazard*, agreeable society, where you flatter yourself you would be heartily welcome alone, and he is one too many; or, just when you have made yourself at home, of a stormy night, in some hospitable house on the mountains, amongst a kind and simple family, where every thing promises comfort and sociality, you find gloomy silence on a sudden take place of song and laughter. Your hopeful *asistente* has alluded to you as '*Senor Ingles*,' and you can hear them telling him in a whisper, how the patron's son, and his own brother, and the patron's kinsman, were all slaughtered by the *Ingleses* at San Sebastian, and Arlaban, and Hernani; and how their three houses were plundered and wantonly set fire to: until you are on the point of going to take your night's lodging on the bare hill side, for very shame at finding yourself classed in idea amongst a legion of cut-throats—*peseteros, hombres comprados, ladrones, robadores, borachos, falsos, &c.* In such a predicament don't attempt any explanation; the case won't bear it. An independent primitive people, with a constitution at least as good, and free, and ancient as your own; as distinct in laws and language, character, form, pursuits, and national feeling, from Spain, as Spain is from England, are invaded by a horde of modern Norsemen, who, adding hypocrisy to systematic barbarity, capture or destroy all within their reach in the name of liberty and reform. The less said on the subject the better. Call yourself *Irlandes* or *Escocés*, Welshman, Manxman, or Yorkshirer, as the case may be (I can't tell you the Spanish for the latter); but while the recent affairs of Bilbao, Irun, and Hernani, are rankling in their minds, do not go a pleasuring amongst them, bearing the name of murderer on your forehead."

We need hardly speak of the talent of the writer, after the examples we have given. Carlist or Christino must allow him to be a smart and pleasant draughtsman; and those more directly concerned in the struggle will, also, find a good deal about the newspaper intercepted, and forged letters, &c. &c.; and other matters which have been much discussed in the political press.

## TEN POEMS.—Batch the Eighth.

1. *The Castle of Chillon, and other Poems.* By T. L. Merritt. Pp. 160. (London, Whitaker and Co.; and Darton and Harvey: Maldstone, Brown.)—The long and leading poem of this volume is not devoid of merit; but its incidents are of a painful kind, and more fitting for the murderous pages of a romance than to be woven into rhythm, owing to some of the details, which are dry, and wearisome, and never could be turned into poetry. The verses entitled "Well-flowering," are more to our mind: there is something purely poetical between the association of the sorrows of the maiden and her lost lily; but even they are only indifferently wrought out in connexion with so beautiful (though also borrowed) a subject. We like not aught connected with bloodshed to mingle with such perfectly rural pictures, such relics of the poetry of bygone years, as the strewing of wells and fountains with flowers. It is a great mistake to suppose that poetry can only be shewn to advantage by being interwoven with the horrible; that music is akin to murder, or that song belongeth but to the sabre. We are sick of "Othos," after Byron's "Glaucous," and "Corsairs." We would as soon read Warren's odes to blacking, after having revelled in the melting music of Moore's Melodies. That Mr. Merritt's work possesses great merit, it would be unfair to deny; but, that it is in anywise equal to the materials which he has had the good luck to alight on for its fabrication, we cannot acknowledge. Nothing can be weaker than the words marked in Italics in the following stanza—

## To Anna.

"I swear by yonder sparkling star  
That gemmeth the deep blue sky,  
I love you, Anna! yes, you are  
The pole-star of my destiny."

Again, in the same song, we have the following—

"I'd ask the angel dwelling there,  
(i. e. in the clouds.)

## The sunniest one for thee;

We'd leave this world of wrong and care,  
To live there so blissfully!"

What this stanza means, we are at a loss to guess. And again—

"Thy smile is heaven, thy lip is love,  
Thine eye—where'd'st a prettier star?"

There is a wide difference between simplicity and silliness, especially when the ideas dwindle down, as in this case, to childish conceits. Mr. Merritt can do better things than this; had we not been convinced by reading his work, that a roughish rubbing down would prove of benefit to him on some future day, we would not have wasted so much space on his book. He has the thoughts of a poet; and care, and study, and close reading, form the school in which to fashion them.

2. *The Temptation, a Poem.* By W. Low Gore. (London, Thomas.)—"Lead us not into temptation," hath long been our prayer; nor would we wish to swerve from it after the perusal of this little work, for we should gain but little. It is of that class of poetry which is the same to-day, yesterday, and for ever, and leaves no hope of amendment. It is readable, and smooth, and pretty; but lacketh soul.

3. *Love and Steam.* Pp. 35. (London, Sama.)—A jumping, thumping poem, imitating Byron's "Don Juan," and not without a few random strokes of rough humour. There is also a stanza, here and there, which breathes a loftier spirit, and shews that the author has felt the emotions of poetry. It is, upon the whole, a very respectable production, too trifling to be treated seriously, and too clever to call forth our censure.

4. *Lines commemorative of the Foundation of Sidmouth Harbour, upon the Site of Chit Rock, &c.* (London, Sama.)—A very beautiful little production, and containing some really good stanzas in praise of our young and gracious queen. It is "a deed without a name;" but the author need not be ashamed of his production—it contains some sweet poetry.

5. *A Selection from the Poems of His Majesty, Louis the First, King of Bavaria.* Imitated in English Verse. By George Everitt. Pp. 150. (London, Smith, Elder, and Co.)—It does not so often fall to our lot to review the works of a king, as it does to our political contemporaries who are ever on the look out for some new production—post, crown, hot-pressed, or foolscap. It is long since Frederic the Great wrote poetry, which Voltaire corrected, and which the latter satirically called, "washing the king's dirty linen." But Frederic never produced any thing equal to the volume before us: there are thoughts and feelings in the work which would do credit to the heart of a bard of the greatest genius, yet in the humblest station, to say nothing of the king. Mr. Everitt has very ably executed his task; and although we must not look to these as literal translations, they will still convey a tolerable accurate and pleasing resemblance of the original

ideas and expressions. We copy the following pithy and characteristic poem as a specimen:—

## "The Fate of a King.

Surrounded by the court's restraint,  
Life's pleasures are but weak and faint,  
An idol mere of stone:  
Enthron'd within a palace walls,  
Naught on a king but sadness falls,  
He ever is alone.

That which the poorest can obtain,  
He on his throne can never gain,  
Unbought, sincere applause:  
He slow and carefully must walk,  
As on a stage must act and talk,  
By artificial laws.

Each thing is measur'd, and is weigh'd,  
E'en for forget he oft is made,  
That he a man is born:  
Reserv'd and cold he e'er must be,  
Each joy and friendship he must flee,  
Exalted, and forlorn.

Wherever may his glances rest,  
Slander will sure the thing infern,  
Howe'er so pure—its form  
'Twill change, as Envy's will inclines;  
So heav'n itself no longer shines,  
When darken'd by the storm."

6. *The Retrospect of a Retired Mariner.* In Nine Cantos. Written by Himself. 18mo. pp. 202. (Stockton, Robinson; London, Groombridge.)—Poor poetry seems to have been discarded by every periodical excepting our own. Of a truth, some of the rhymes are bad enough; but, as we propose to give a picture of the current literature of the day, we must notice them until we have better. If genius sleeps, it will awake anon: if it be dead, we cannot recall it to life: we but record what it speaketh. The *Retrospect* is a work which no one can misunderstand: there is none of the lofty imaginings of a Milton about it; it is all fair sailing; you are never at a loss to comprehend the author's meaning. For instance, he falls into a dock with a jug of ale in his hand, and when he reaches the bottom, finds that he has lost the jug in the descent. But, reader, read what we have copied, and judge for yourselves.

## —"Ere I left, 'twas my intent

To treat my shipmates all;  
So I on shore to fetch it went,  
Which caus'd me bitter dole.  
Returning with the promis'd treat,  
A stranger for my guide,  
Whom I engaged in the street,  
And we were side by side,  
When down I dropp'd three fathoms deep,  
Into the graving dock,  
But, luckily, fell on my feet  
With a tremendous shock;  
A jug of ale was in my hand,  
When from the bank I started,  
When at the bottom I did land,  
The pitcher had departed;  
I sank knee deep into the clay,  
And was a while confin'd,  
But when I found my way away,  
My shoes were left behind;  
To trust a stranger was not right,  
Though he did often say,  
He knew the road as well by night

As others did by day:  
It was, in truth, a stormy night,  
And dark as dark could be,  
So he returned with a light,  
To seek my dead body!  
My shipmates also thought with him,  
That, if I was alive,  
I must have broken every limb,  
And could not long survive;  
But, ere they reach'd the Water-Gate,  
They heard me cry for aid,  
And I heard them ejaculate,  
'Thank God he is not dead!'  
They found me, guided by voice,  
As I my way did poke,  
Which made their friendly hearts rejoice;  
To find that I could walk,  
Without much help I got on board,  
Although I'd sprain'd my hip,  
Yet in a week so far restor'd,  
That I might leave the ship;  
But, fearing should I walk so far,  
'Twould cause my hip to swell,  
So I engag'd a hackney-car  
To take me to the Bell."

Is not this as plain as the nose on your face? How graphic the line, "My shoes were left behind," and the rhyme to "be," "to seek my dead body," but the half of the latter word is a plagiarism. Who has not heard of saying "Bo! to a goose?" And yet the work is both amusing and interesting; but the author could not write it in prose, for the reason which himself assigns:—

"My friends oft urged me to compose  
My simple narrative in prose;  
But when I had the task begun,  
I found prose writing was no fun;  
Besides, I knew, too, at the time,  
I was a better hand at rhyme;

"Blue Bell Inn."

Perhaps, for either I'm unequal,  
But this you'll find out in the sequel."

Assuredly this is an original work; and, to the lovers of dates, and names, and places, will be a treat; for we have the names of master, mate, ship, trade, whither bound, from whence: in short, a regular log-book in rhyme. We conclude with the following moral:—

"For he one day could not be found,  
So we concluded he was drown'd;  
But how it happen'd none can tell,  
We only do suppose,  
That overboard by chance he fell,  
But, how, God only knows!  
For he a cheerful man had been,  
And yet a sober fellow,  
But when the last time he was seen,  
They thought him somewhat mellow.  
From Northumberland he came,  
And John Turner was his name."

7. *St. Agnes' Fountain, with other Poems.* By T. W. Kelly, author of "Myrtle Leaves." Pp. 108. (London, Dalton.)—A few of these poems have already appeared in the *Annals*; and of the original ones, in the present volume, we can only add, that they in every way confirm the opinion which we expressed of the author's talents, on the appearance of his former publication. The poem to "Robinson Crusoe" is very pleasing, and awakened anew those emotions which have thrilled through our bosoms in boyhood, while perusing the original work. The volume is far superior to the general mass of trash with which our tables are loaded, and which is sent us as poetry.

8. *Francis Abbot, the Recluse of Niagara, &c.* by James Bird. Pp. 192. (London, Baldwin and Cradock.)—Mr. Bird has written several poems, which became rather popular for this unpoetical age. His "Metropolitan Sketches" are always amusing; and this second series, if aught, excels his first. The principal poem of this volume contains some delightful descriptive passages; nor is his vivid delineation of character less interesting. The secret loves of the hero and Lucy Graham are brought to bear finely upon the canvass, and stand out in a bold and startling light; too vivid, perhaps, to be natural, but not too much so for the gloomy distance they are doomed to traverse. But we extract the following, as being short, and better suited for the compass of our columns:—

"Billingsgate Market.

Gate of all gates, sweet Billingsgate, I sing!  
That soft retreat of the reluctant fishes,  
Which carts, and smacks, and boats, and steamers bring  
To trim the dainty Cockney's smoking dishes,  
Tickle the tastes of citizen and king,  
And consummate their gastronomic wishes!  
Mart of the scaly, shelly, finny tribes,  
I sing of thee, in spite of scoffs and gibes!  
Ye little sprats, that swim the salt, salt sea;  
Ye shrimps and prawns, that at the bottom creep;  
Ye salmon, sporting in the river Dee,  
Ye turbot, wallowing in the briny deep!  
Ye luscious fish of high and low degree,  
Rouse! rouse ye all from your aquatic sleep!  
Haste from our shores! in rocky hollows lie;  
Hide, hide from man, or ye must boil or fry!  
Strange is the appetite of man! to seek  
His food in water, on the earth, in air!  
Flies a poor bird above the loftiest peak,  
It cannot e'en escape his artful snare;  
Swims a poor finner in the loneliest creek,  
Dangerous, deep—he quickly finds it there!  
Fish, flesh, and fowl, green herb, root, fruit, and grain,  
Man eager seeks, devours, and seeks again!  
I wander from thee, Billingsgate! thou scene  
Of many a strange and 'delicate' affair,  
Where sweet-mouthed lasses, elegant of mien,  
Throw the true English dull reserve away,  
And, open-hearted, free from silent spleen,  
Give, unabashed, the dulcet words they say:  
To prove these words are choice ones, hear, and mind them!  
You'll wonder where the chattering jades can find them!  
Ye nymphs, who tread the purlieus of this mart,  
Ye dames, who bear the fish in tray or basket,  
Grant me one favour! from mine inmost heart,  
There, from its deep and fervent pulse I ask it,  
Let 'evil speaking' from your tongues depart!  
Keep your sweet words, like jewels, in a casket!!  
Oh! woman's tongue (I humbly ask her pardon)  
Is the wild scarlet runner of life's garden!"

9. *Sabbatical Verses*, by Joseph John Gurney. Pp. 58. (London, Arch.)—Contains religious feeling and Christian piety, which would have read well in prose; as free from poetry, however, as an apple-dumpling, which we held a good thing in its place, but not poetical.

10. *The City of the East, &c.* by the Author of "India," a Poem. Pp. 80. (London, Priestley.)—This poem contains several bold and masterly strokes of painting; but the colours are put on too thick and heavily; they want softening more into each other, to become really beautiful. We prefer the songs and shorter poems; some of them are gems, and might pass for the Bard of Zara's.

*Narrative of Capt. James Fawcner's Travels on the Coast of Benin, West Africa.* Edited by a Friend of the Captain. 12mo. pp. 128. London, 1837. Published for the Proprietor, by A. Schloss.

MR. SCHLOSS'S indefatigable exertions in any patriotic or benevolent cause deserve our notice. A foreign publisher, in the moiling mart of our vast metropolis, we have witnessed upon many occasions the genuine Teutonic kindness of his disposition; and, from noticing this readiness to befriend those who stood in need, or promote to the best of his power every useful design, we have not only felt disposed to second his exertions, but to serve himself when he brought forward any of his own undertakings, such as his exquisite "Bijou Almanac," and several valuable productions, both in art and literature, from the German—his country. We are led to make this profession here, because we were induced by his representations, some time ago, to announce the present publication as one of general interest, inasmuch as it was edited to rescue from the depth of misfortune a meritorious individual, who, after all his African sufferings, was more cruelly wrecked at home through the calamity of a fire, which destroyed his all.

The volume has been published by subscription, in aid of this beneficent purpose; and sincerely do we trust that it will fulfil its object.

Our last two Numbers have been occupied with African details from the ill-fated Niger Expedition; and in this will be found some interesting original particulars from the same quarter. But still we must spare a few lines to introduce Capt. Fawcner's simple narrative to the world, and, it may be, recommend him to the good feelings of some of our habitual readers. Twelve years have elapsed since the vessel he commanded was cast ashore on the coast, near a place called Mongyee, some fifteen or twenty miles west of the Bar of Benin, and under the control of the king of that title. So soon as the natives discovered they were defenceless, they, with savage cunning, and fraud, and violence, plundered the ship, its captain, and its crew, with the most ruthless atrocity. The latter were conveyed through part of the country, escaped murder, and were finally released, as related in this journal, from which a few brief extracts are all that we need select. Of the natives, we are told,—

"Their principal occupation is weaving mats, fish-pots, &c., in which they excel. The boys are very early initiated into the arts of war and the use of arms; they use the bow and arrow with surprising dexterity, and seldom fail hitting their mark even at a great distance; nor are they less celebrated in the use of the gun, which they hold in a peculiar manner. For fear of accident, they never bring the piece to the shoulder, but place the left hand against the end of the stock, thus supporting it by the hands only. On one occasion, I was a witness to the superiority of this plan over the ordinary method. A man discharged his piece, and it burst, and shivered the barrel in pieces, whilst he did not sustain the slightest injury: had he fired as we are accustomed to do, his arm would have been shattered, and his life endangered."

They get their guns from Birmingham, and other European manufactories; no wonder that they are cautious in their use, and owe the countrymen of their makers a grudge. At one place the fate of those with, and including, Capt. Fawcner came to a touching ordeal, from their guard conducting them towards Benin.

"The rain (says the unfortunate captive) had now subsided, and we wished to get all the fresh air we could by turning back the mats; but no sooner had we attempted to remove them, than the men began to use us very roughly, each charging his gun afresh, and making a most hideous noise. Our eyes were now opened to our situation, and we plainly saw we had been indulging in false security during the whole of our pleasant journey from Yarcella—

'So quick trod sorrow on the heels of joy.'

It was now evidently their intention to kill us, and make slaves of the blacks, neither of which they could have done with such ease at Mongyee or Yarcella, fearing, as they did, that the strangers from Benin, who were at both these places during the time we were there, might hear of it, and that it would eventually come to the ears of the governor of that capital. But now nothing prevented them from immediately accomplishing their wishes. We were in a lonely situation, and surrounded only by those who were interested in our death, and they might have for ever kept it a secret, perhaps, by sinking us forthwith in the river. They stopped the canoe, and the 'fetish man' produced some cowrys (or 'negroes' teeth, as they are sometimes called), a small shell imported from the West Indies. The flat side is white, and the convex red. These shells were to decide our fate in the following manner: they were to be thrown up into the air by this man, and on the turn of them our lives depended. Having grasped a quantity in his hand, he threw them up like a careless boy playing at pitch and toss, to ascertain whether it was the will of heaven that they should immediately shoot us in the canoe. Our feelings, at this moment, cannot be described. In an instant the unexpected storm had burst upon us in all its unrelenting fury; with tears in our eyes we begged the Almighty to soften the hearts of the savages, and avert the impending destruction. Regardless of our distress, they proceeded in the dreadful ordeal. The shells fell rattling down, and in an instant every eye save our own, was bent towards them. We dreaded the consequence, and simply looked for the first expression which would arise on their countenances. The fetish man who had thrown them up raised his head, and, blessed be God, disappointment and vexation were most strongly marked on his countenance. His face was, indeed, the index of the mind; almost every cowl had turned on the convex side, and shewed its flat surface of white. Hope sprung up in our breasts; we thought we were safe, at least for the present; but what was our distress when we found he had the cruelty and bad faith to hand the shells to the officer next him in command, requesting him 'to try his luck.' He willingly took them, and sitting at the bow of the canoe, did as he was requested. Again they fell and turned up for life. Their rage and disappointment was now unbounded: they stood still and looked at each other with countenances full of astonishment and vexation; not even satisfied with this, their second appeal to heaven, they determined on a third time, and actually handed the yet lucky shells to a man at the stern of the boat. He threw them, but to no purpose; the major part again shewed the white side uppermost, and baffled them in their third attempt. If ever the power of Divine Providence was more apparent in one thing than another, it was in this; the hand of the Almighty had evidently been 'stretched out to save' here, and surely we might have said, 'In our distress we cried

unto the Lord, and he delivered us out of our troubles.' Our thankfulness and joy were beyond expression; a feeling of deep and fervent gratitude pervaded our bosoms, which language cannot describe; in a word, it was

'The motion of a hidden fire  
That trembled in the breast.'

Seeing as how a good many stars, garters, ribands, &c. &c. are likely to be bestowed upon ambitious individuals in the graciousness of our own new reign, it may not be amiss to observe how an African, similarly honoured, bears his new dignities. Capt. F. relates:

"Not long after my interview with the messengers, I was standing in the principal street. I noticed one of them coming towards me, performing the most extraordinary gesticulations. At first I thought him mad; for he danced and capered through the street, followed by a great many persons who seemed to partake in the same feeling of joy or madness. He exhibited first one leg, then the other; alternately extended his hands; and then pointed to a string of coral which encircled his ankles and wrists. The fact was, the king had made a 'gentleman' of him, having bestowed an honour similar to our knighthood, and placed the insignia of his order, the coral, round his legs and arms. He was anxious that every body should see it, and displayed all the vanity and pride of a child when he is first breeched."

So it was in Lilliput; so it is in human nature; and in what does it end? At Benin, Capt. F. buried his friend and mate; and he tells us:

"The spot selected was an interesting one; and I felt a degree of consolation, not unmixed with pride, that the ashes of my departed friend should repose near those of so remarkable a man. The grave of the traveller is roofed over with a neat shed of bamboos, and a rude, but neat paling surrounds it, in order that no wild beasts may approach the sacred mound. A board is erected at the head, which has an inscription to this effect, that 'All travellers are requested to keep up the grave of so great a man as Belzoni.' Close beside the grave, a wide-spreading tree flings its branches over the sacred dust, and at the trunk a rude bamboo seat. Under its shadow I have sat for hours, musing on the fate of the deceased traveller, and reading his memorial. He, too, fell a martyr to the dysentery, whilst on his way to Timbuctoo. Yes! this was the simple tomb of the man who, with unwearied diligence and toil, had entered and explored the tombs of Egyptian kings, the mighty depositaries of a race of Pharaohs; beheld the hewn chamber and its sculptured sarcophagus in pristine beauty; and sent many a trophy of the wonderful achievements of ancient Egypt to a land where, in her national Museum, they now stand, proud monuments of the skill, not only of the Egyptian, but of him who ventured health, property, and life, in the one darling object of his chosen labour. All that now remained to him was the little mound by my side, and the simple, unostentatious monument bearing his name; presenting, indeed, a wide contrast to the huge piles of Memphis and Thebes."

But enough of such themes. We conclude with one quotation more, characteristic of the country:—

"Day after day now passed without bringing us any hopes or tidings respecting our departure. True, on one occasion we were much gratified to hear of the arrival of vessels in the river; and expecting that one might be the Harriet, belonging to our own employer,

sent in search of us, we immediately proceeded to inquire. But we were deceived, and found the vessels arrived were Portuguese schooners engaged in the slave trade. Another obstacle prevented our leaving, even had the king been inclined to send us away. It was the hostility of the 'Lagos' people to Europeans, in consequence of three of the king's wives having been killed by a party of British sailors in one of our boats, who were sent there to prevent the slave trade. The chiefs were therefore so incensed, that they vowed to kill the first white they could lay their hands on. We were, consequently, not very anxious, under such circumstances, to proceed to Badagry, by the way of Lagos, as had been determined on by the king of Benin. It was about this time that I witnessed a strange ceremony, peculiar to this people, called the time of the 'grand devils.' Eight men were dressed in a most curious manner, having a dress made of bamboo about their bodies, and a cap on the head, of various colours, and ornamented with red feathers, taken from the parrots' tail; round the legs were twisted strings of shells, which made a clattering noise as they walked, and the face and hands of each individual were covered with a net. These strange beings go about the town, by day and by night, for the term of one month, uttering the most discordant and frightful noises; no one durst venture out at night for fear of being killed or seriously maltreated by these fellows, who are then especially engaged in driving the evil spirits from the town. They go round to all the chiefs' houses, and, in addition to the noise they make, perform some extraordinary feats in tumbling and gymnastics, for which they receive a few cowries. About the same time I saw a man who had given himself as a sacrifice to the fetish. A procession was formed, in all the splendour peculiar to these occasions, and the man was conducted amid a vast concourse of people to the river. Here, according to the usual custom, they affix weights to the devotee's body, make him drunk, and sink him in the tide. As some sort of compensation, however, to the poor fellow, he was allowed, for some time previous to his being offered up, the privilege of going into the market whenever he felt inclined, and helping himself to whatever he fancied. I often saw him enter the market; but directly the women espied him coming, they invariably caught up their baskets and ran away. The natives have a curious way of finding out a thief by a kind of 'fiery ordeal.' It is as follows: a fire being lighted in front of the fetish house, they place an earthen pot on it, filled with some combustibles, which blaze like wild fire; and at the bottom of this a small cowry is placed. All the inhabitants are convened around this fire, and the master of each family, surrounded by his household, all of whom place their hands on his back, at once proceed to take the shell out of the burning pot. If he manages to get it out without burning his fingers, he is at once declared innocent; but, on the contrary, if he fail, he and all his family are immediately pronounced guilty, and each individual member is obliged to go through the ordeal. Whoever, in attempting to take out the shell, therefore, burns his fingers, is immediately declared to be the thief, and punished accordingly. Another mode, equally singular, is occasionally resorted to. The persons suspected are made to kneel down on the ground, and each one puts out his tongue. The fetish man immediately covers it with a certain mixture, and places over the surface a small leaf.

He then takes a feather, and endeavours to push the quill part through the tongue; if he succeed, and can draw the whole of the feather clean through, the party operated upon is at once declared innocent; but should he fail in the first attempt to push the feather through, the poor creature at once suffers the extreme penalty of the law. This is a shocking and most revolting spectacle for an Englishman to witness, which I never could look on but with feelings of horror and disgust; although the natives assured me it was not much pain, and the wound soon healed. They put great faith in this last-mentioned trial, and often cause the thief to walk about the town, as an example, whilst the wound is unhealed."

We have now only to express our hope that these examples may attract the attention we crave to the case of Captain Fawcener.

*An Elementary English Grammar, upon an entirely new principle; especially adapted, by its simplicity and its numerous Exercises, for the Junior Classes in Schools, for Private Tuition, or for Self-Instruction.* By W. H. Pinnock. Pp. 152. London, 1837. Easingham Wilson.

GRAMMARS probably constitute the most numerous class of books in existence. Almost every teacher of every language endeavours to increase his celebrity by the publication of a grammar, differing, in some respects, from the grammars already extant. This is as true of English grammar as of the grammar of other tongues. Hitherto, however, the difference of one English grammar from another has been, generally speaking, formal; the principles of every grammar have been essentially the same; and grammatical writers have, one after another, embarrassed themselves, and perplexed their readers, by a servile adherence to many rules deduced from the learned, and other languages, which have no bearing whatever upon the English language. Mr. Pinnock has here produced a remarkably ingenious little book, the object of which is to emancipate English grammar from foreign and classical thralldom, and to simplify it by insisting only on its native and proper principles.

In the first place, Mr. Pinnock places the parts of speech in the order of their dependence upon each other, and in that order, also, he treats of them: in the second place, he abandons cases as to nouns, admitting, however, a possessive form, and that in a peculiar way: in the third place, he gets rid of the difficulty of conjugation in verbs, proving that there is but one alteration throughout all their modes and tenses. These principles, or operating causes, enable him to sweep away a multitude of syntactical rules, and to reduce the number to about eighteen, quite new, and as simple as they are novel. He has followed no predecessor in his style of elucidation, but has explained every subject in his own way, and in his own words, endeavouring to make the teacher and the pupil work together. All scientific words are postponed until the last chapter; nothing but what is actually necessary has been inserted; and, to complete the usefulness of the volume, it contains exercises, lessons to each chapter, and questions for examination.

This book does not belong to the description of works from which much can be quoted; but the following passage, in which Mr. Pinnock states one of his leading principles with respect to the conjugation of verbs, will serve to shew the clearness and simplicity of his manner.

"The only alterations made in a verb, are

to form the *past tense*, by adding *d* or *ed* to it; and by adding *s* or *es* to its *present tense*, when a noun or pronoun is before it, of the *third person, singular number*. All the other tenses of a verb are formed by putting certain words before it. The *s* or *es* added to the verb in the *present tense*, for an agent of the third person singular, is done in the same way that nouns form their plural, by adding *s* or *es*; when the verb ends in *y*, with a consonant before it, it takes the *es* in the same manner that nouns do to form the plural number; that is, by changing the *y* into *i*; as in 'a fly' (a noun), the plural is 'flies,' in 'to try' (a verb), when the agent is of the third person singular, it is 'he tries.'"

We are sincerely of the belief which the author expresses in his preface, viz. "that this little book will prove highly valuable to the junior classes of schools, and to the young generally, who are wisely and laboriously aiming at mental improvement." There are a few slight typographical errors: for instance, the fourth line in page 11 ought to have preceded the exercises in page 10; in the eleventh line of page 58, "we," ought to be "he;" in the seventeenth line of page 91, "having had," ought to be, "having loved," &c. But these are trifles, which we mention principally to shew that we have read the work with attention, and which can easily be obviated in a second edition.

## MISCELLANEOUS.

*The History of England.* By Th. Keightley. Vol. I. Pp. 584. London, 1837. Longman and Co.; Dublin, Milliken.

THE excellent manner in which Mr. Keightley executed his *Historie of Greece and Rome*, and other publications of much intrinsic worth, prepared us for an able epitome of English History from his hand; and it is but justice to this, the first moiety of his undertaking, to say that it has fully answered our expectations. Taking the Tudor period as one of transition, Mr. K. divides our history into two portions; 1st, the middle-age, papal and feudal: 2d, the modern, protestant and constitutional. This volume refers to the first period; and in it the author, whilst he avails himself generally of good and undisputed authorities, does not fail to sift and inquire for himself, where he thinks it needful for the elucidation of truth. In principle he is strongly Protestant, and severely handles Dr. Languard's work, and the church it was written to defend and uphold. An appendix gives some interesting biographical and other information.

*A Complete Latin-English Dictionary, for the Use of Colleges and Schools: chiefly from the German.* By the Rev. J. E. Riddle, M.A. 8vo. pp. 771, double columns. London, 1837. Longman and Co.; Murray.

Of this publication we shall briefly say, that we do not think we could use terms too high to express our entire approbation and admiration of it. It is a vast improvement in its class, and does infinite credit to the industry and learning of Mr. Riddle. Wherever we have looked, we have found all we wanted; and what more can be said in praise of a dictionary, or any other book of reference?

*The Child's Hand-Book. Rudiments of Reading and Thinking.* Part I. By the Rev. W. Fletcher, F.R.A.S. London, 1837. Roake and Varty.

THE first of an intended series of little treatises, having for their useful object the gradual communication to the youthful mind, not of words alone, but of ideas. We entirely concur

with Mr. Fletcher in preferring the latter to the former: but we beg to suggest to him (the more especially as we observe that his next treatise will be "Rudiments of Grammar") the expediency of strict grammatical correctness, in works addressed to children. Mr. Fletcher will probably be surprised to learn that there are numerous blemishes, in that respect, in the little book under our notice.

## ORIGINAL CORRESPONDENCE.

## AFRICA, AND AFRICAN EXPEDITIONS.

THE people of England, generally speaking, feel little, if any, interest in the political condition or social affairs of the natives of the kingdom of Bonny, on the western coast of Africa, though a lucrative and tolerably extensive traffic is carried on between the two countries; but a remarkable circumstance which preceded the demise of the late ruler of Bonny is worth recording, and may not be uninteresting to the British public. His name was Manilla Poppel; and a more ferocious savage never existed. When he was attacked by the disorder which soon terminated in his dissolution, he sent for one of his chiefs, or leading men, known to the English traders by the name of Jack Tillie, and taxed him with having secretly administered poison to his sovereign, under the fatal influence of which he was then suffering. The trembling wretch was allowed no time to utter a word in exculpation or denial of his guilt, his head being instantly severed from the trunk in presence of the accuser—himself surviving his victim but a brief period. Thus was the country relieved, almost on the same day, of a pair of the most heartless ruffians that ever disgraced humanity. Their butcheries in cold blood, and other crimes, of a complexion equally hideous, which they had long perpetrated with impunity, were they made known, would harrow the feelings of the coldest heart, and make even a savage shudder. It is generally believed that the said Jack Tillie was the identical person who shot Richard Lander in his last expedition to the Niger. At all events, it is an established fact, that the skirmish in which this lamented traveller lost his life, was planned and carried into operation by Jack Tillie, sanctioned, of course, and encouraged, by his execrable master; and it is not, perhaps, an unpleasant reflection, that retributive justice has overtaken both these wily savages even in this life. The opinion relative to the parties who were instrumental in the death of Richard Lander, entertained by his brother, and inserted in the *Literary Gazette* shortly after the sad occurrence was made known in this country, is now completely corroborated. The scheme, concocted at Bonny, was communicated to King Boy, and this sullen and atrocious scoundrel, notwithstanding the favours that had been heaped upon him by the unsuspecting Englishman, and the confidence reposed in his good faith, perfidiously assisted in the attack, and shared the plunder. It may not, in this place, be superfluous to observe, that the woman, a British subject, captured on that melancholy occasion, has since been ransomed and restored to her friends at Cape Coast Castle, by its humane and generous governor, Mr. George Maclean, whose handsome conduct in this, as in several other instances, requires only to be known to be generally and justly appreciated.—*From a Liverpool Correspondent.\**

\* Another letter from Liverpool assails us, or, rather, the Geographical Society, whose proceedings we reported, for being too complimentary to Mr. Laird, calling him "a Liverpool merchant," and adds:—  
"At the same meeting, a letter was read from Becroft and Oldfield, describing a voyage up the Old Calabar, in

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD.—The Rev. Dr. Shuttleworth, accompanied by Mr. Meach and Mr. Grant, the two Posers, arrived at Winchester College on Tuesday, and were received, *ad portus*, by Mr. Rich, the senior scholar, who addressed them in a Latin speech. On Wednesday, the compositions and speeches for her Majesty's medals were recited in the school, before a large audience.

*Gold Medal.*—Latin Essay, "An Philosophia satis aptam præstat Poeseos materiam," H. L. Prior.

English Verse,—"St. Cross," J. C. Algar.

*Silver Medal.*—Latin Speech, "Galgaci Oratio ad Milites," J. Marsh.

English Speech—"Lord Bristol's Speech on the Parliamentary War," Hon. W. H. Lyttleton.

## BIOGRAPHY.

## CAPTAIN MUDGE.

WITH regret we learn that Captain William Mudge, of the Royal Navy, who has for five or six years conducted the nautical survey of Ireland, now in progress, with so much credit to himself and advantage to the public, died last week. He has, we believe, completed a most minute examination of the coast line, from Dublin northward to the southern point of the county of Donegal, besides making several surveys in other parts of Ireland, with a view to particular objects.

Captain Mudge was an officer of the highest attainments and scientific skill, and commenced his career as a surveyor under Captain Owen, in the arduous service of the survey of the eastern coast of Africa. During the progress of his operations in Ireland, Captain Mudge contributed to the "Transactions of the Society of Antiquaries" an account of an extremely interesting discovery of a structure of remote antiquity, formed of wood, shaped with stone instruments; and which structure was discovered buried several feet in a bog, on the coast of the county of Donegal. Several communications from him, also, appeared in the *Nautical Magazine*, of which we particularly remember an account of the melancholy loss of the *Saldanha*, in Lough Swilley.

## SKETCHES.

## FATAL BALLOON ACCIDENT.

THE newspapers of the week have made known to the public the fatal termination of Mr. Cocking's parachute experiment. He was violently precipitated to the earth, and lifted up a disfigured corpse.

It cannot fail to have been observed by every intelligent reader, that whenever any fatal accident takes place, it is almost invariably made to appear, by the accounts published of the circumstances, that more than common care had been taken to guard against contingencies, and that if any body could be blamed, it must be the unfortunate sufferer. Thus, if a steam-boat is blown up, the engineer was peculiarly attentive to the safety-valves; if a boat, or lighter, is run down, the aggressive vessel was sure to be sailing particularly slow at the time, the captain to be anxiously watchful, and only the boat or lighter-men (who happen to be drowned) steering like idiots, reckless of consequences; if a building scaffold falls, and kills a few labourers and bricklayers, it is demonstrated to have been constructed with unusual skill and solidity;

the steamer *Quorra*, attended by one hundred canoes, with fifty men in each (only 5000 Kronen, at least five times as many as were ever employed on the coast by the English at one time) to the village of Old Eriack, which they state to be situated in lat. 6° 40' north, and long. 48° 10' west of Greenwich! and one hundred miles from the mouth of the river, in the Bight of Benin (it should be Biafra). How much the members of the Geographical Society must have been enlightened by this communication! Were they indebted to the liberality of a Liverpool merchant for this elegant epistle also?\*

and so on, throughout the whole chapter of human misfortunes. These reflections are induced by the statements which have appeared respecting the fate of this poor Mr. Cocking. Nearly the most complimentary way in which he is represented is as "an obstinate ass," one who would receive no advice from the proprietors of Vauxhall Gardens, or the balloon, but persisted in his purpose, to go up and be killed, for the entertainment of the multitude, who would pay their half-crown each for admission to the spectacle! Now, it is not our intention, especially when, perhaps, the verdict of a jury has not been pronounced on the subject, to utter a single syllable of censure upon any individual; but we must make free to express our opinion that, in every respect, this ascent from such a spot was a gross and monstrous impropriety. Its mode of advertisement was disgraceful; its execution, dangerous; and its object, mercenary. It was announced in the show-bills as a part of the idle amusements of the company—Mr. Cocking's extraordinary parachute descent, "and other entertainments;" it was obviously a dreadful increase of the peril that the attempt should be made in the centre of tens of thousands of houses, forbidding the descent to be made when a favourable occasion offered, and forcing the aeronauts to extend their flight, in order to clear the buildings, till darkness approached and left no alternative but the desperate feat, or a return to be scoffed at by the disappointed crowd:—and instead of a wisely considered and cautiously conducted philosophical experiment, tried in the open country where safety might be found, it was a rash, foolish, and ignorant exhibition, regardless of human life, and no further weighed than as a means to put money in the pockets of the speculators, whoever they were.

Common balloon ascents had ceased to be sufficiently attractive, and some novelty was required to whet the satiated public appetite. Unfortunately this enthusiast was discovered, and accommodated with the means of self-destruction. Mr. F. Gye remonstrated with him, but he would be slain; he was shewn that the rim of his machine was not strong enough, but he was determined on death; it was even broken in parts, but he would have it that it was stronger where patched than any where else. Then, for there is puffing in every thing, Mr. and Mrs. Graham are described as racing down in the direction of the balloon, to assist the misguided victim, to assist him in his fall. And, as if to finish this most disgusting tragedy, a disgrace to England for allowing its perpetration, the landlord of the inn to which the mutilated remains were carried, made another show of them; and thus, for *sixpence* additional a-head, the visitors to Vauxhall might have seen the deplorable conclusion of that mad act which was stimulated by their scandalous half-crowns. No man brought to face such an assembly, for such a purpose, could retreat from it, no matter how great or just his alarms. The dread of being deemed and called a coward must outweigh all other considerations of common sense and prudence, and all apprehensions of danger. The moment Mr. Cocking entered the gardens of Vauxhall on Monday afternoon, he was a doomed man. Nor was the risk confined to him: it is impossible to read Mr. Green's account of the upward motion of the balloon, after it was liberated from the heavy parachute, without feeling that his escape and that of his companion was absolutely miraculous. They rose, probably, to the unexampled height of five miles; for, when the

barometer was examined, they were 23384 feet, or nearly 44 miles, above the earth, and then they had been for some time descending from their highest pitch. The rush of gas was terrific, and the rarity of the surrounding atmosphere fatal to life; but they were luckily provided with a supply of the lower atmospheric air, taken up in bags, and were enabled to breathe and live through this appalling trial. To Mr. Green's presence of mind we consider their salvation to be mainly owing; but his very precautions are a damning proof of the mortal consequences he apprehended. He would not, for "thousands of pounds," have disavowed the cord which fastened the parachute to the car; and, lest such a deed might be imputed to him, he caused a chain (which he could not cut) to be substituted in the upper part. He, also, persuaded Mr. Spencer, an adventurous attorney, to go up with him as a witness to what was done. In all, he took especial pains to separate himself from the speculation; and was, truly, in this, as in preceding affairs, a hired, and, probably, reluctant instrument of exhibition, in the pay of the balloon-mongers.

We had intended to offer some remarks on the miscalculations and ignorance which led to this melancholy result—the miserable want of information on the simplest philosophical, or pneumatic principles; but the moral considerations have occupied us to such a length, that we must defer any further comment.

The event we deem a national reproach; and, when such occurs, it makes us the more and more regret the want of a superior Institution to which similar experiments might be submitted. It would grace our young queen's reign, and greatly serve the interests of science, were her majesty to form and endow an Establishment of this useful and eminent character.

#### ORIGINAL POETRY.

##### SONNETS.

How wondrous is the day—the joint domain  
Of smiling nature and of jocund man!  
How solemn 'tis with wond'ring eyes to scan  
The night, its queen, and all her lofty train!  
How fearful 'tis to hear the midnight rain,  
And listen to the thunder's deep'ning roar!  
How soft and sweet is twilight, that in twain  
Divideth time, but sweet'neth it the more!  
Such is our life—childhood's our cheerful morn,  
Manhood our sultry fruitful noon; old age  
The eve that woos us to fond memory's page:  
Death is our closing rest—wilt man twin-born  
As day with night; and while to some star-lit,  
To others 'tis too dark to look on it.

How wond'rous are the scenes in heaven and earth!

How various are the climes the sun illumines!  
In each how many cities, plains, and toms!  
How countless are the orbs that twinkle forth  
When night tells sober stories round the hearth!  
But these are not more various than plain man.  
I can reap as much wisdom, far more mirth,  
From rich and poor, from hind and artisan;  
And feelings deep are fill'd by those dear friends,  
That people sacred memory's dim-lit night.  
I'd rather lose all nature, tho' so bright,  
Than aught to which my sympathy extends:  
The human heart is dearest still to me;  
The sweetest sounds are human minstrelsy.

ALPHA.

#### DRAMA.

*Lyceum*.—The English Opera opened on Monday with *Catherine Grey*, the *Waterman*, and *Master's Rival*. In the first, Miss Romer and

Miss Rainsforth sustained the principal parts with great success: the rest of the characters were, as before, by the Drury Lane company, moved down the street. A Mr. Compton, from the northern theatres, essayed *Robin*, in the *Waterman*, and *Paul Schack*, in the last piece. His *Robin* was dry and poor: his *Paul* dry, but better; and he seems to promise a fair degree of humour, if encouraged, in this line of low comedy.

On Thursday, a new farce, called *A Quarter before Nine*, from the humorous pen of Mr. Peake, was produced, with complete success. It afforded Mr. Compton a wider field for the display of his abilities; and, in the assumed characters of a Poacher, a Scotch Lawyer, and Old Woman, he shewed that he not only had not studied Mathews in vain, but that he possessed very considerable original talent and versatility. M<sup>r</sup>. Ian, with little to do as a brother poacher, distinguished himself, as he has often done, by the manner in which he executed a slight part. At the close, the unanimous plaudits of the audience rewarded the author's skill and the performers' exertions.

*Queen's Theatre*.—This minor theatre also opened on Monday, and it will now be necessary to distinguish it from *Her Majesty's* House in the Haymarket. As yet we have had no opportunity to witness the performances.

#### VARIETIES.

*Weather - Wisdom*.—Since our last, the weather has been constantly very hot. With regard to hail and thunder, neither have occurred as "denoted;" but, in justice to such predictions, we should notice, that the week before, though London was free from storms, they were severely felt in the north of England and Scotland, from the 12th to the 16th. Yesterday we had a slight shower, but the weather was not "changeable." The ensuing seven days are pronounced to be "still fair and warm towards the end; yet the aspect of Mercury to Saturn denotes cooler air on 31st. The sun coming to the square of Saturn, and the other aspects, denote cool cloudy air, and thunder showers, especially on the 3d."

*Newspaper Press Benevolent Association*.—On Saturday last, the directors, trustees, and auditors, of this excellent Institution, were elected, by ballot, at the Freemasons' Tavern.

*Sleeplessness; Thirst; Vision*.—In a recent No. (1068, page 428), we noticed the extraordinary claims of Mr. Gardner, styling himself a Hypnologist, to having discovered easy means for abating the pains of thirst, and a simple and ready method for inducing sleep in the perturbed and restless. That he has also made singularly useful and agreeable improvements in optics, we can now add and vouch for, from the employment of glasses constructed under his direction. But our present purpose is to afford some reply to the many inquiries we have received in consequence of our preceding paragraph; and we only regret that we cannot speak more definitely. That abstraction which lulls the individual to sleep, we have certainly found to result from Mr. Gardner's notes; but we have yet been able to give the matter only a trial so far as to pronounce it valuable in many instances; to what degree of physical or mental disturbance it may be equal, we have still to ascertain. Thus that sleep may be obtained in certain cases by this process, we have no hesitation in stating; nor are we less free to declare, that the extreme uneasiness of thirst is alleviated by Mr. Gardner's suggestion. To the extent to which either can be carried, it is impossible to speak, as

different constitutions must affect the results, and no individual experience can dictate to the rest of the world. We shall, therefore, only repeat, that we entertain a very high opinion of Mr. Gardner's powers.

**Royal Academy.**—The receipts, at the Exhibition, this season, are stated to amount to 7000*l*. Every lover of the fine arts will rejoice to see that the honour of knighthood has been conferred on our eminent sculptor, now Sir Richard Westmacott.

**Bridge over the Nile.**—A bridge, which it is stated will take six years to finish, is about to be begun over the Nile, about five leagues below Cairo. The stones are to be brought from the mountains of Mokatam, about two leagues from the river; so that, we suppose, the Pyramids have had another escape. (See *Review of Travels in Egypt*, page 476, col. 2.)

**H. B. Caricatures.**—Another batch of these amusing prints are, even in the midst of electioneering, doing their work in entertaining the dull hours of the metropolis. No. 488. The ministry, rowing for life, in a boat steered by Lord J. Russell, and singing "the Raddies are near, and our light past." O'Connell is w-begone over one side of the vessel. 489. J. Hume in a knacker's cart, carrying home M. Leader as a dead horse. 490. Lord J. Russell, as a little boy, trying to throw salt on certain birds' tails. This is very droll, and the mapple, cocksparrow, and jackdaw, quite worthy of the human figure. The Rads they represent are not to be caught. 491, is (never mind the gramgram!) "We the people of England." These tailors, Hume, Roebuck, and Wakley, with the first writing their proclamation on a slip.

Two other Caricatures (also published by Macles) would not be unworthy of H. B. General Evans, as a cat-o'-nine-tails, and with a hand at the end of the stick, thence designated "a back-scratcher;" and the same as Count I Rn, bolting from Spain, are clever performances, and the first very original.

### LITERARY NOVELTIES.

Mr. Pritchard's work on the Mythology of Egypt, has just been translated and published, with remarks, in German by Hayman, and with a Preface by A. W. Schlegel. A translation of these, we are told, will shortly appear in English.

### LIST OF NEW BOOKS.

**The History of England**, by T. Keightley, in 2 vols. Vol. 12mo. 7*s*.—**Letters on the Gospel**, by D. Russell, D.D. 2mo. 7*s*. 6*d*.—**Sketches from Life**, Lyrics from the Pentateuch, and other Poems, by T. Ragg, 12mo. 5*s*.—**Alfred Societies**; or, a Plan for Small Sick Clubs, by Mr. F. L. Smith, M.R.C.S. 8vo. sewed, 1*s*.—**Exposition of the Counsel of God for the Redemption of the World**, by the Rev. R. Stevens, D.D. 8vo. 7*s*.—**Regimental Covert** as it is at present acted upon in the British Army by S. Connell, 2 vols. 8vo. 1*l*.—**The History of Essex** considered, 8vo. 6*s*.—**Rev. G. Barrington's Arrangement of the Genealogies of the Old Testament**, 2 vols. 4*to*. 3*s*.—**Plays and Poems**, by Mrs. W. Burn, 2 vols. cap. 1*l*. 1*s*.—**Baptismal Regeneration**, by the Rev. T. Biddulph, fcap. 2*s*. 6*d*.—**The Table of the Lord**, the Author of "The 2*nd* Edition," fcap. 6*s*.—**The Act for Amendment of the Law of Wills**, by R. Lush, 12mo. 1*s*.—**Petite Anthologie Poetique**, fcap. 3*s*.—**Klauser Klatschk's German Ballads**, 12mo. 8*s*.—**Truths and Fictions of the Middle Ages**: The Merchant and the Friar, &c. by Sir F. Palgrave, fcap. 1*s*.—**The Book of the Fathers** containing Lives of the Fathers of the Christian Church, &c. 2*s*. 6*d*.—**The Parish and the Union**; or the Poor and the Poor Laws under the Old System and the New, &c. 3*s*. 6*d*.—**Abstract of Evidence taken before the Committee of the Poor Law Amendment Act**, by W. Denison, 8*s*. 1*s*. 6*d*.—**Beausobre's New Version of the Gospel of S. Matthew**, 12mo. new edition, 7*s*.—**Correspondence an Memorial of Mrs. Pregrave**, 12mo. 3*s*.—**Greek Sentences and Extracts from Xenophon**, 12mo. 3*s*.—**Sunday**, a poem, royal 12mo. 2*s*. 6*d*.—**The Bivouac**; or, Stories of the Peninsular War, by W. H. Maxwell, 3 vols. post 8*vo*. 1*l*. 1*s*. 6*d*.—**Five Arabian Tales in German**, by A. L. Rhum, 12mo. 4*s*.—**Berlinchamps's German Grammar**, 1*no*. 4*s*.—**London as it is**, by S. Hogg, M.D. 12mo. 8*s*.—**History of New South Wales**, by the Rev. Dr. Lang, 2*nd* edition 2 vols. post 8*vo*. 1*l*. 1*s*.—**The Young Astronomer**, by the Rev. W. Fletcher, 12mo. 4*s*.—**Linnean Society Transactions**, Vol. XVII. Part 4, 4*to*. 1*l*. 4*s*.

### ADVERTISEMENTS,

Connected with Literature and the Arts.

### BRITISH INSTITUTION, PALE

MALL.—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, is now open, and will continue open daily, from Ten in the Morning until Six in the Evening.  
Admission 1*s*. Catalogue, 1*s*.  
WILLIAM BARNARD, Keeper.

### NOW OPEN.—DIORAMA, REGENT'S

PARK.—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.  
Open daily, from Ten till Five.

### ANIMAL MAGNETISM.—

Practical Tuition of the most approved Method of eliciting its wonderful Phenomena. Treatment of all nervous Complaints with no other Remedy than Magnetism.  
Baron Dupotet de Sannerville, M.D. Professor of Magnetic Medicine at the Athenee Royal de Paris, Member of several learned Societies, &c. will invent, at the purpose of Sketching Street, Portman Square, from 12 to 3, all patients desirous of undergoing the magnetic treatment. He will dispense gratuitous attendance to every indigent applicant recommended to him by a Physician, or any other honourable party.  
On Monday, Wednesday, and Friday Evenings, at 8 o'clock precisely, Baron Dupotet will deliver a Series of Lectures, illustrated by experiments. Twelve Lectures will enable a Pupil to perform magnetical experiments with success. Terms: Three Guineas for the whole course; or 7*s*. per sitting.  
In the press.  
Seven Lectures on Magnetism, forming an Epitome of the Science. 1 vol. 8vo. 8*s*.  
Subscribers are requested to apply to Baron Dupotet.

### TO ARTISTS, TOURISTS, AND ADMIRERS OF THE FINE ARTS

**PARLOUR'S PORTABLE SKETCHING-CASE, OR DELINEATOR**, is confidently recommended to the notice of all persons attached to the Science of Drawing, as being infinitely superior to the Camera Lucida, and all other Instruments hitherto invented, at the purpose of Sketching. The Sketching-Case may be held in the hand, and a correct Drawing made of any object or landscape; or it may be attached to a table, in the same manner as the Camera Lucida. It is simple in its management, and does not exceed, in size, the common Sketching-Book. Manufactured for the Patentee, by Reeves and Sons, 150 Cheapside; may be had, also, of Smith and Warner, Marylebone Street, Piccadilly; Jones and Son, Opticians, Charing Cross; and at all other Opticians and Artists' Repositories. Ladies and Gentlemen who have the Camera Lucida may have the Delineator affixed to their own stem.

### THE BOOK TRADE.—A very desirable

opportunity now occurs for any Young Man wishing to enter into the Retail and Publishing Book Trade, in consequence of the Proprietor of an Establishment, in one of the best situations in Piccadilly, retiring.  
For full particulars, apply to Mr. Leigh Sotheby, No. 3 Wellington Street, Strand.

### OLD ESTABLISHED COUNTRY

NEWSPAPER for SALE.—"The Colchester and Chelmsford Gazette" to be immediately disposed of, with or without the Type, Presses, &c. An annuity, properly secured, would be accepted. Average Advertisements for the last three years, 41*s* per week.  
Apply to Messrs. Capland, Solicitors, Chelmsford, Essex.  
An excellent Job Printing Business may be taken in connexion.

### THE MINERVA LIFE ASSURANCE

COMPANY, King William Street, Mansion House, London.

Capital, one Million.

Archibald Hastie, Esq. M.P. | Francis Mills, Esq.  
Thomas Hallifax, Jun. Esq. | Claude Edward Scott, Esq.

Francis Mills, Esq. Chairman. | Wm. Venable, Esq. Ald. Dep. Chairman.  
H. C. Bowles, Esq. | James G. Gordon, Esq.  
Thomas Brook, Esq. | John Stewart, Esq.  
Wm. Chippendale, Esq. | Thomas Harvey, Esq.  
Wm. M. Christy, Esq. | William Hunter, Esq.  
Edward Sept. Codd, Esq. | Isaac Lawrence, Esq.  
Henry T. Danvers, Esq. | William Lyall, Esq.

Auditors.  
John L. Bennett, Esq. | H. R. Mortimer, Esq. | William Scott, Esq.

The distinguishing features are—  
Moderate Rates of Premiums, with Participation of the Profits every five years to the extent of four-fifths, or 80 per cent.  
The Profits may be added as a Reversionary Bonus, or its value applied to the reduction of future Premiums, at the option of the policy holders.  
Premiums by Ascending and Descending Scales.  
Liberty granted to reside abroad; and to pass and repass the seas between Brest and Hamburg without obtaining permission of the Directors.  
Personal appearance before the Directors is dispensed with, the certificates of the respective medical advisers being deemed sufficient.

Age 25 35 45 55 60  
£8 5 4 £17 0 £24 11 11 £5 4 8 £6 7 2  
Every facility is afforded consistent with the security of the Company.

JOHN TULLOCH, Actuary.

### THE USEFUL and the USELESS.—The

Public will do well to discriminate between the genuine Patent Ever-pointed Pencil and Cumberland Lead Points, as Manufactured, for the last Fifteen Years, by G. Riddle, and the defective imitations continually offered for sale, at apparently low prices. For a patent pencil to be in any degree useful, the material itself must be good, and the workmanship of the very best description; the point, as well as the leads for the same, must be finished with mathematical precision, or the invention is useless. To ensure a genuine Patent Ever-pointed Pencil and Leads, the Public will please observe the mark "Patent, G. Riddle, Maker, London."

Sold by all respectable Jewellers, Stationers, Cutlers, &c. throughout the Kingdom.

### ILLUSTRATIONS to BYRON'S

WORKS.—The Proprietors of "the Byron Gallery" having been repeatedly requested to re-issue that splendid Series of Plates, accompanied by appropriate historical and descriptive letter-press, now announce a New Series accordingly; the first Number, price 2*s*. 6*d*. was published on the first of May.

Series of the Original Series, for binding up with the various editions of Byron's Works, may still be procured.  
"Adequately to describe the delicate beauty of these splendid Plates, does not appear to lie within the power of language. There is not an admirer of the works of the departed noble poet, who can feel satisfied that he has a perfect copy of them, unless the 'Byron Gallery' be attached to it. There is no instance in which excellence in poetry and the arts is so admirably combined."—*Imperial Magazine*.  
Smith, Elder, and Co. Cornhill.

### SALES BY AUCTION.

SOUTHGATE'S ROOMS.

Pinnock's Second and Third Ciphering-Books, calculated to qualify the Student for the more advanced Rules. 4to. price 3s. each.

A Key to the Three Ciphering-Books, in which are given Six Answers to each Sum. 12mo. price 3s. 6d. By these Ciphering-Books much time and trouble will be saved, the sums being all set, and the rules inserted. The teacher will derive much assistance from the Key, which has a series of answers to every question, and which a great variety may be introduced in the exercise of the scholars without any difficulty. For ladies' schools, and for the use of parents who instruct their own children, this set of books is particularly recommended.

# III.

Price Nispetence.

Pinnock's Arithmetical Tables of Money, Weights, and Measures, with Questions for Examination, Notes, &c. &c.

# IV.

In 8vo. a new edition, price 2s. bound.

James Fraser, 315 Regent Street, London.

In 1 vol. 18mo. bound in cloth, price 10s.

# OUTLINES of LAW; or, Readings from

Blackstone, and other Text Writers, Altered according to the Present Law. Comprising Injuries to Persons and Property, and their Remedies in the Courts of Law, Equity, and Bankruptcy, Designed for the Use of Young Practitioners, Articled Clerks, and other Law Students.

By ROBERT MAUGHAM,

Secretary to the Incorporated Law Society.

"Mr. Maugham's Outlines of Law" is a kind of Blackstone in little, and intended to supply his place for the young student since the late alterations in the law, or to serve as an introduction to his more elaborate, but, in many things, now exploded work. The reputation of the author is a sufficient guarantee for the correctness of the matter; and both the arrangement and the style are clear and intelligible. Spectator, 27th May.

Richards and Co. 104 Fleet Street.

# FUN AND FROLIC OF THE IRISH PEASANTRY.

# TRAITS and STORIES OF THE IRISH PEASANTRY.

By WILLIAM CARLETON.

Illustrated with numerous characteristic Plates by W. H. Brooke, Esq. and Wood Engravings. 4th edition, in 5 vols. fcap. 8vo. handsomely printed, price 1l. 5s. cloth extra.

\* The Work contains Twenty-one Stories, and the Volumes, each including at least Four Tales, may be purchased separately. "Admirable, truly, intensely Irish—never were the outrageous humilities of that strange wild, barbarous, but so characteristically described; nor, amidst all the fun, frolic and folly, is there any dearth of poverty, pathos, and passion. The author is a Jew."—Blackwood's Magazine.

# II.

Legends and Stories of Ireland. By Samuel Lover, Esq. M.H.A. The 4th edition, illustrated with Wood Engravings, from Drawings by the Author, fcap. 8vo. price 6s. cloth extra.

# III.

Legends and Stories of Ireland. By the same. Second Series. A new edition, corrected, and illustrated with fine Wood Engravings, in fcap. 8vo. price 7s. 6d. cloth extra. London: Baldwin and Cradock, Paternoster Row.

In Imperial 8vo. price 3s. and large folio, with Proof Plates a India Paper (an unusually splendid edition), price 7s. 6d. Part of

SAUNDERS'S PORTRAITS AND MEMOIRS OF THE MOST EMINENT LIVING POLITICAL REFORMERS. The Portraits engraved on Steel in the first style of art, by Holl. M.D. Engravings, &c. &c. either from Paintings, Drawings, or Busts already existing, of undoubted excellence, or from Paintings made expressly for the work, by B. E. Duppa, Esq. and the Memoirs founded on its obtained from the highest Authorities.

Part I. contains—

The Right Hon. Lord John Russell, M.P.

Charles Butler, Esq. M.P.

John Arthur Roebuck, Esq. M.P.

London: Published by John Saunders, Jan. 7 Dyer's Buildings, Holborn Mart.

# NEW EDITION OF ROWBOTHAM'S GERMAN AND ENGLISH GRAMMAR.

In 18mo. the 3d edition, revised and improved throughout, and finely printed by Mansard, price 7s. neatly bound and letters.

# A PRACTICAL GERMAN GRAMMAR,

with Exercises under each Rule; being a new and easy Method of acquiring a thorough knowledge of the German language. For the Use of Schools and Private Students.

By JOHN ROWBOTHAM, F.R.S. London: Printed for Baldwin and Cradock, Paternoster Row.

# A Practical Grammar of the French Language,

illustrated by copious Examples and Exercises selected from the most approved French Writers; designed for the Use of Schools and Private Students. In 12mo. price 3s. bound.

# BUTTERFLIES and MOTHS.

Price 6s. in cloth.

# THE NATURAL HISTORY OF BRITISH BUTTERFLIES.

Illustrated by upwards of 1300 specimens, accurately and beautifully coloured.

# The Natural History of British Moths,

with very numerous coloured Figures. The above volumes form a complete Manual of British Butterflies and Moths; containing between two and three hundred figures, and having the English as well as the scientific names given.

Price 6s. With upwards of 70 coloured Specimens. The Volumes may also be had, in silk and morocco binding, price 7s. 6d. and 8s. 6d. respectively.

S. Highley, 38 Fleet Street, London; W. H. Lizars, Edinburgh; and all Booksellers.

# GRAGLIA'S ITALIAN POCKET DICTIONARY, FOR SCHOOLS and TRAVELLERS.

In 18mo. the seventeenth edition, improved, and reduced in price to 6s. neatly bound.

# A NEW POCKET DICTIONARY of the ITALIAN and ENGLISH LANGUAGE.

In Two Parts. I. Italian and English. II. English and Italian. By G. GRAGLIA.

To which is prefixed a Compendious Italian Grammar. \* Without increasing the price or the bulk of this edition, many hundred useful words have been added; the accent and close pronunciation of the R and U have been distinctly marked, as well as the sound of the Z and Zz, where like the F the D. It is hoped that these improvements will tend greatly to the convenience of the student.

London: Printed for J. G. and F. Rivington; Long and Co.; T. Cadell; J. Richardson; Hatchard and Son; Baldwin and Cradock; Harvey and Darton; and G. B. Shepherd; Dublin: G. Hamilton, Adams, and Co.; Whittaker and Co.; J. Loebe; G. Cowie and Co.; J. Nisbet; Simpkin, Marshall, and Co.; Black and Co.; Smith, Elder, and Co.; Houghton and Son; Richter and Co.; E. Lumley; J. Roddick; J. Wacey; King and Co. Edinburgh; and G. and J. Robinson, Liverpool.

## APPROVED SCHOOL-BOOKS.

**THE HONOURS OF THE TABLE; with Hints on Carving.** Illustrated by numerous Engravings. By TRUSSARD REDIVIVUS, Esq. Introduction—Conduct to be observed at Table—Rules for Waiting at Table—Art of Carving—Rules for Marketing. London: Whittaker and Co. Glasgow: John Symington and Co.

**BOSWORTH FIELD; or, the Fate of a Plantagenet.** In 3 vols. post 8vo. price 31s. 6d., the 2d edition of the Author of "Arthur of Brittany," &c. "A very well-written historical tale, very far superior to the generality of trash published as fashionable novels."—*Naval and Military Gazette*. Smith, Elder, and Co. Cornhill.

**IMPRESSIONS AT HOME AND ABROAD; or, a Year of Real Life.** In 2 vols. post 8vo. price 21s. boards. By J. R. O'FLANAGAN, Esq. Of the King's Inns, Dublin; and Gray's Inn, London. "These two volumes contain many interesting anecdotes, many eloquent descriptions. There are also numerous episodes in the shape of stories, hair-breadth escapes, and disastrous love-tales, which tend to render the work interesting as well as amusing."—*Morning Advertiser*. Smith, Elder, and Co. Cornhill.

**ELEMENTS OF GEOLOGY and PHYSICAL GEOGRAPHY.** Illustrative of the Past and Present Condition of the Globe. By WILLIAM RHIND, M.R.C.S. Published by Smith, Elder, and Co. Cornhill, London; Fraser and Co. Edinburgh; and W. Curry, Jun. & Co. Dublin.

**PETER NICHOLSON'S ALGEBRA FOR SCHOOLS.** In 12mo. the third edition, very greatly improved and stereotyped, price 5s. bound and lettered.

**A PRACTICAL SYSTEM OF ALGEBRA,** designed for the Use of Schools and for private Tuition. By PETER NICHOLSON and J. ROWBOTHAM. Third Edition.

"\* In this edition, the authors have not only introduced some important original matter, particularly on Properties, Imaginary Quantities, the Higher Equations, Binomial Theorem, Series, &c. but have also endeavoured to illustrate many parts of the Work by such alterations as will make it still more acceptable to the public."

"Mr. Nicholson, by a combination of the methods of Haldred and Horner, has greatly simplified them both, and reduced them to the form of practical rules, which are not much more complicated than those which are commonly given for the extraction of the cube, and higher roots of numbers."—*Rev. George Peacock, Tutor of Trinity College*. London: Baldwin and Cradock, Paternoster Row.

Where may be had, price 8s. bound, **A Key to Nicholson and Rowbotham's Algebra;** containing the Solutions of more than Nine Hundred Problems; by use of which, and the Algebra, a person may acquire a knowledge of this valuable Science without the Assistance of a Master.

The August Number of **COLBURN'S NEW MONTHLY MAGAZINE and HUMORIST.** Edited by THEODORE HOOK, Esq. Contains Articles by the following (among others) distinguished Writers:—

The Editor: Haynes Bayley, Esq.  
Capt. Marryat: Laman Blanchard, Esq.  
John Foster, Esq. the Author of "Glances at Life."  
"Paul Pry": Benson Hill, Esq.  
Douglas Jerrold, Esq. Captain Byng Hall, &c.  
Alfred Crowquill.  
Henry Colburn, Publisher, 13 Great Marlborough Street.

In 1 vol. 8vo. price 9s. 6d.  
**THE BOOK OF THE FATHERS;** containing the Lives of celebrated Fathers of the Christian Church, and the Spirit of their Writings. Translated and adapted to the Use of the General Reader. London: John W. Parker, Publisher.

In 1 vol. small 8vo. price 8s.  
**TRUTHS and FICTIONS OF THE MIDDLE AGES: THE MERCHANT and the FRIAR.** By Sir FRANCIS PALGRAVE, K.H. Keeper of the Records of the Treasury of Her Majesty's Exchequer. London: John W. Parker, Publisher.

Complete in 5 vols at 6s. 6d. each, or in 30 Parts, at 1s. each, **ORIGINAL FAMILY SERMONS;** containing upwards of One Hundred and Sixty Discourses by contemporary Divines of the Established Church. Printed from the MSS. of the respective Authors, and with a General Index. Published under the Direction of the Committee of General Literature and Education of the Society for Promoting Christian Knowledge. This Work having been again reprinted, the complete Series, or separate Volumes to make up sets, may now be had of any of the Booksellers in Town or Country. London: John W. Parker, West Strand.

**THIRD EDITION OF RIDDLE'S NAVIGATION.** In 8vo. the 3d edition, with numerous Additions and Improvements, price 12s. bound.  
**A TREATISE ON NAVIGATION and NAUTICAL ASTRONOMY,** adapted to Practice and to the Purposes of Elementary Instruction; with an extensive Series of Examples for Exercises, and all the Tables requisite in Nautical Computations.

By EDWARD RIDDLE, F.R.A.S. Master of the Mathematical School, Royal Hospital, Greenwich. \*\* Grateful for the patronage which this work has received, as evinced by the sale of two very large editions, the author has endeavoured to make the present edition still more worthy of public support; and he has adapted it to the "Nautical Almanack," in the entirely altered and greatly improved form, in which, by order of the Lords Commissioners of the Admiralty, it has appeared since the year 1834. London: Printed for Baldwin and Cradock, Paternoster Row.

**ELLISS' LATIN EXERCISES, AND KEY.** The 15th edition, price 3s. 6d. bound.  
**A COLLECTION of ENGLISH EXERCISES;** Translated from the Writings of Cicero, for School-boys to retranslate into Latin, and adapted to the principal Rules in the Eton Syntax, with occasional References to other Grammars.

By WILLIAM ELLIS, M.A. Fifteenth edition. In this edition the Translation has been carefully compared with the Original and corrected, and to which are prefixed, Rules for the Use of the Subjunctive Mood. **A Key to the Second and Third Parts of Ellis's Exercises.** New edition, 12mo. price 3s. bound. \*\* The value of the Key to Ellis's Exercises, as giving the original and original purpose, to guide the teacher in correcting the tasks of his pupils.

To the student, also, who wishes to acquire a command of Ciceronian Latin, more or less by private application, the assistance it offers has been found very effective and highly profitable. A still greater benefit may be derived from its pages, if it be considered at once as a complete and copious Syntax Ciceroniana. Taken in that light, and in aid of the very poor and imperfect rules of Syntax which Grammars contain, it should be made the object of constant reference and study; wherever a prose Latin style is cultivated, on a consistent model, as preparatory to the Universities. In one school, of some distinction, the experiment, we know, has been tried with decided success. London: Baldwin and Cradock; Longman and Co.; J. Richardson; J. G. and F. Rivington; Whittaker and Co.; Hamilton, Adams, and Co.; Simpkin, Marshall, and Co.; E. Williams; Barton and Dary; Shergood and Co.; Currie and Co.; J. Souter; and J. Wacey; and Messrs. Robinson, Liverpool.

In 1 vol. 12mo. (with a Map of the British Possessions in North America), price 10s. 6d.  
**THE EMIGRANT'S INTRODUCTION** to an ACQUAINTANCE with the BRITISH AMERICAN COLONIES, and the present Condition and Prospects of the Colonists, dedicated to the Magistrates and Landlords of the over populous Districts of the United Kingdom, and designed to fix the determination of all persons who may contemplate emigrating, and to assist the judgment of those at a loss to know what advice they may, with the greatest safety, give to un-instructed persons under their particular influence. By S. S. HILL, Esq.

Also, in oblong 4to. price 10s. 6d.  
**Views in Calcutta; comprising—1. Kidderpore Suspension Bridge—2. The Martineau—3. Government House—4. Burra Bazaar—5. Bahleah Ghaut—6. Roop Chund Roy Street.** Drawn from nature, and on stone, by Captain R. Jump, Honourable Company's Service. Parbury and Co. 8 Leadenhall Street.

Of whom may be had (gratis), **A Catalogue of Books in Oriental Literature,** at very reduced prices.

THE NEW COMIC PERIODICAL WORK, EDITED BY "BOZ," AND ILLUSTRATED BY GEORGE CRUIKSHANK. The August Number (embellished with Two Humorous Illustrations by George Cruikshank) of **BENTLEY'S MISCELLANY,** will contain, among other interesting Articles—

### EGYPT AND ARABIA.

THE public attention has, of late, more than ever turned towards Egypt, in consequence of the character and proceedings of Mohammed Ali, the chief of that country; and in consequence, also, of its having become the channel through which a steam communication is carried on between Great Britain and India. The committee of correspondence of the Royal Asiatic Society have, therefore, endeavoured to obtain the most detailed and the most authentic information respecting that country, the Red Sea, and all the different districts which are situated in the neighbourhood of its shores. None of the corresponding members of the Society have been more active and more zealous in obtaining for it the information it required than Captain James Mackenzie, of the 8th Bengal Light Cavalry, who, after devoting himself for some time, while in India, notwithstanding his military avocations, to inquiries relative to the course of the Sulej, and the geography of that part of the Himalaya mountains through which it flows (a paper on which subject he sent to the Asiatic Society in 1831), has recently, having obtained furlough, availed himself of the opportunity of coming from India through Egypt, for the express purpose of being enabled to inquire, upon the spot, into the present moral and political state of Arabia and Egypt, and into the practicability and probable advantages of establishing permanently a steam communication between England and India by that route.

Captain Mackenzie has stated the result of his observations in a letter to the Right Hon. Sir Alexander Johnston, the chairman of the committee of correspondence of the Royal Asiatic Society, and we think it so full of valuable information that we have, with his permission, great satisfaction in publishing it.

It is entitled "*a Rough Sketch of the present State of Egypt and Arabia*," and is as follows:

*My dear Sir Alexander*,—You requested me to give my opinion on the present state of Arabia and Egypt, founded on my journey through those countries during the course of last year: I have now much pleasure in complying with your wish, as far as my humble abilities will permit. I shall first speak of Arabia.

Mohammed Ali, the pasha of Egypt, has conquered, and his troops are in actual possession of, the whole line of the Arabian coast, from Akaba, on the north, to Mocha, near the Straits of Bab el Mandeb, at the southern extremity of the Red Sea. With exception of Mecca, and the fertile district of Taif, to the east of Judda, his dominion does not extend into the interior above a mile or two from the sea-shore, but his troops garrison the chief towns and ports on the eastern edge of the Red Sea. His highness, from possessing these places, commands the whole commerce of Yemen and the Hedjaz, the two principal provinces on the western side of Arabia. The internal trade he generally monopolises, buying from the growers at his own price, and selling to the dealers, or foreign merchants, at a considerable advance. On articles imported from India, he levies a duty of ten per

cent, which he will take either in kind or money. Thus, the ship which carried us from Calcutta to Judda was freighted with rice: for every hundred bags landed by the owner at the custom-house, the governor took ten, leaving our Nakhoda ninety to dispose of to the dealers without let or molestation. I never saw a more liberal or a better managed custom-house than the pasha's at Judda; and it is the same at Mocha: there is no bribery necessary, and no annoying search after smuggled articles, or vexatious detention of the goods. I speak, however, with reference to transactions carried on under the British flag, and I have no doubt the civility and attention which Englishmen receive from the authorities in the Red Sea, are partly to be ascribed to the presence, in that sea, of two British ships of war (of the Indian navy), whose guns inspire respect, and give the Turks and Arabs a favourable idea of our power. The chief articles for exportation (as I have mentioned in my journal) are coffee and senna; but the supply of the former is much diminished, owing to the injudicious monopoly of the berry by the pasha. The growers on the coffee mountains will not raise, in any abundance, an article for which they cannot obtain a fair remunerating price; for the pasha steps in between them and the foreign merchant, and takes to himself the profit which ought justly to be the grower's. The coffee and senna are not grown in Mohammed Ali's territory, but in the dominions of the Imam of Senna, a young and weak prince, who possesses a fine country which, I fear, will one day pass into the grasping Pasha's hands. His not yet having taken possession of the fertile provinces of Senna is to be ascribed to his repeated defeats by the Asseer tribe of Bedouins; a powerful body inhabiting the country between Mecca and Senna, who nobly maintain the independence of their native land. In the campaign of 1835, the Egyptian army, under the command of the younger Ibrahim (the pasha's nephew), was defeated by these sons of the desert, to the great annoyance and vexation of Mohammed Ali, who, having conquered the legions of the sultan, and added Syria to his sovereignty, could ill brook the humiliation of an overthrow by a horde of undisciplined barbarians. Accordingly, in 1836, he made extensive preparations for another campaign against the Asseers, and formed *corps d'armée* at Goufoda, Judda, and Mecca, which advanced immediately after the ceremonies of the Haj, or pilgrimage, had been concluded. One of these corps I saw at Judda: it was composed of 3000 infantry, a small body of cavalry, with six light field-pieces. The infantry are well clothed in the Nizam dress, a modification of the Turkish costume, introduced by the great Ibrahim after the war in the Morea. Their muskets are made at Cairo, after a French model, and are lighter and more handy than ours. Their cartridge-boxes, powder, and ball, were all in excellent order. I frequently saw the troops manœuvre in a large plain to the south of Judda; they worked principally as light infantry, the better to cope with their irregular and undisciplined foes, the Asseers. The division was commanded by a bey, who

held the rank of major-general. The chief of the état-major is a Monsieur Mari, a Corsican, who was formerly sergeant-major in his Britannic majesty's Corsican rangers, then commanded by Sir Hudson Lowe. Besides having the superintendence of the drill, he acts, when on service, as quarter-master-general, lays down the plan of the encampment, and directs the line of march. He made a rough sketch of the seat of war in the Asseer country, which he shewed to me. It was rudely done, without instruments, but gave a good idea of the barren and inhospitable tract which had proved so fatal to the pasha's arms. He said hunger, thirst, and intolerable heat, had defeated the army. When suffering under the most severe privations to which human nature is liable, the Asseers came down from their almost inaccessible fastnesses, and drove the Egyptian troops before them. Monsieur Mari holds the honorary rank of lieutenant-colonel, but being a Christian, is not permitted to exercise any authority over the men. Besides M. Mari, there are several European *Instructeurs*, mostly French and Italian. These gentlemen have no commissions, and little more authority than is possessed by a drill-sergeant in a British regiment. Several of them are well-informed, gentlemanly men, with whom we passed many pleasant evenings. The physicians and surgeons in his highness's army are likewise Europeans; they are chiefly French, but there are some Germans amongst them. A Monsieur Fischer, a German physician, bears a high character for knowledge and talent. At the house of the English agent at Judda, Malloom Yusuff, and at the table of Captain Hawkins, of the Clive sloop of war, we met most of his highness's European *employés*, and were much pleased with their lively and agreeable manners. I believe there are no Englishmen in the pasha's army; they are not sufficiently bending to please the Egyptian authorities, and despise the paltry allowances which are received with gratitude by the more easily satisfied Italian and French adventurers. From my experience abroad, I should say that the English do not adapt themselves to the manners and customs of a foreign country, and indulge the humours and prejudices of the people, so readily and good-humouredly as the French and Italians. Hence the preference decidedly shewn, in Egypt particularly, to natives of the above countries.

The pasha's army in Arabia may amount at present (for it is now on the war establishment) to about 2000 cavalry, 20,000 infantry, with proportion of sappers, artillery, &c. The head-quarters are at Mecca, where Koorshid Pasha (another nephew of Mohammed Ali), the governor-general and commander-in-chief of the Hadjaz, was residing when I was at Judda; but his excellency pays frequent visits to Taif and Judda. Ibrahim Pasha the younger, is governor and commander of Yemen, with his head-quarters at Hodeida. His *corps d'armée* amounts to about 5000 or 6000. Mocha is garrisoned by 1200 men, and the ramparts of the town are defended by some old pieces of cannon. The town of Goufoda, on the coast, was the head-quarters of a division of about 3000 to 4000 infantry, in consequence

of its proximity to the Asseer country. Loheia, Yambo, Medina, and other towns on the west coast of Arabia, have each a small garrison to protect them from the predatory attacks of the Bedouins. All the towns of Arabia, under the Pasha's control, have a civil governor independent of the military commandant. The one acts as a check upon the other, and thus abuse of power is prevented.

When Mohammed Ali has conquered the Asseers, or, which is more likely to happen, has quelled their turbulent spirit by bribes and promises, it is his intention to march a detachment from Mocha to Aden outside the Straits of Bab el Mandeb to take possession of that ancient sea-port, which possesses two excellent harbours, and commands the passage into the Red Sea. Aden is, at present, governed by a marauding sheikh who can make little or no resistance to the troops of the Pasha. It is part of the principality of Senna, but the Imam's authority is hardly recognised. Having become master of Aden, the pasha will, undoubtedly, endeavour to extend his dominion over Hadramat, a province reaching to the southern shore of Arabia, and at present parcelled out among petty princes and sheikhs who are too weak to oppose his progress. Marching along the coast of Hadramat, his highness's soldiers will enter Oman, and eventually occupy Muscat and the country on the south-west side of the Persian Gulf, thus rendering himself master of the whole peninsula of Arabia, after which the conquest of Bagdad is easy. Mohammed Ali has heard of the power and grandeur of the ancient caliphate, and he longs to found an empire which shall rival, if not surpass, it in splendour. The Imam of Muscat looks with considerable jealousy and apprehension on his highness's proceedings at Mocha, and contemplated march upon Aden (the high road to Muscat); and it is supposed that his recent present of a line-of-battle ship to the King of England, was with the view of conciliating the friendship of this powerful government in case of an invasion of his territory by Mohammed Ali's forces. I should imagine that the British government will never permit his highness to extend his conquests so far as Muscat, as well on the score of justice to the Imam, as on the ground of policy with reference to its proximity to the coast of India. I doubt the propriety of our permitting the Pasha to take Aden. His government is, unquestionably, better than that of the lawless sheikhs; but if, on the principle of humanity, it is better to establish a good and regular government, which shall secure order and protection to life and property, in the place of a tyrannical, unjust government, where neither life nor property are secure,—then it is a question, whether we, so intimately connected with that part of the world, in consequence of its being the best and nearest route to India, and so much superior in knowledge, power, and civilisation, should not ourselves take and keep possession of Aden, whose noble harbours would be of the greatest benefit to us in the prosecution of our Indian steam navigation plans. Besides giving us a power and consequence in Arabia, Abyssinia, and the northern coast of Africa, which we do not at present possess, it would be the means of extending our knowledge and religion over countries, and amongst people, at present immersed in the profoundest ignorance. One thing is certain: either Mohammed Ali, or some other powerful state, will take possession of Aden, and all the other principal sea-ports in that quarter;\* for it is utterly impossible that

things can long remain in their present barbarous state. It seems to be a law of nature, that the civilised nations shall conquer and possess those countries in a state of barbarism, and by such means, however unjustifiable it may appear at first, extend the blessings of knowledge, industry, and commerce, among people hitherto sunk in the most gloomy state of darkness. Mohammed Ali has done some good in Arabia; for, under his government, every man's life and property are secure from aggression, always excepting the aggression which his highness may himself with impunity commit. I do not think the Turco-Egyptian sway will last long; for the Turks are not popular in Arabia, and the Arabs the Pasha has conquered sigh for their ancient freebooting independence. His son and successor, Ibrahim, being a man of vigorous mind and good talent, may continue to keep together the scattered portions of his father's extensive dominions; but, unless his successor be an equally able man, the whole fabric will crumble to pieces—the government not being founded on the affections of the people.

Egypt is much easier governed than Arabia. In the former country, the people being chiefly confined to the narrow valley of the Nile, live in villages adjoining each other, and are, therefore, superintended with greater facility than scattered tribes roaming over a vast extent of territory. Agriculture is the chief employment of the fellahs of Egypt—a peaceful pursuit, which renders its votaries industrious and contented with their lot. It is so long, too, since the Egyptians have possessed a native government, that they do not feel so keenly as other nations would the galling chains of a foreign conqueror. For Egypt, therefore, Mohammed Ali entertains no apprehension. When I was in that country I seldom, if ever, met a soldier; and, indeed, the only considerable garrisons were at Siout, Cairn, and Alexandria—the three principal towns. Egypt had been drained to supply the armies in Syria and Arabia with reinforcements, troops being more necessary, in those distant possessions, than in a country which was immediately under the pasha's own watchful eye. When sailing down the Nile, we were struck by the number of old men, women, and children, employed in irrigating the soil, and working in the fields; and the absence of a young or middle aged peasantry, the chief labourers in other countries. On repeated inquiry we learned, that the young and robust had been forcibly taken away from their homes and agricultural pursuits, to serve in his highness's army and navy; and, to supply their places, the aged men, the women, and children, were obliged to labour. The people cursed the foreign conquests of their master, which, they said, were ruining Egypt, withdrawing from the culture of the soil her best and finest peasantry, who seldom returned to their native villages, and throwing considerable portions of land out of cultivation, from want of a sufficient number of hands to till it. The robust villagers, we occasionally saw, were generally maimed; some wanting the thumb of the right hand, or four side teeth, which they had chopped off or extracted, that they might not be pressed into the Pasha's military service.\* Many had lost one eye, some both eyes, from

agency or factory on the southern coast of Arabia, which they visited in two ships of war, (the Peacock and the Shepherdesse). It is probable they will renew the attempt.  
\* They cut off their right thumb that they may not be able to cock the musket, and pull out their side teeth, that they may be rendered incapable of biting off the head of the cartridge prior to priming and loading. The pasha punishes severely those guilty of maiming themselves, but it has not put a stop to the practice.

attacks of ophthalmia—a disease greatly aggravated by the want of cleanliness among the people.

There is a feeling in Egypt in favour of the French. The commonality regard that nation as the most powerful in Europe. They say, the English fleet is the best in the world, and the strongest; but that no army can compete with the French. When we arrived at Lûsor (Thebes), we naturally sought admittance into the only vacant house in the village, which was one built on the roof of the ancient temple by the French, when preparing to carry away the obelisk; but, to our surprise, admittance was denied, on the plea that we were not Frenchmen. The naib of the town, a Turk, was very indignant at this treatment; but had no power to interfere, as the exclusion order came from the French consul-general. A day or two afterwards, a French gentleman arrived in a boat from Cairo. The guardian of the French mansion hastened to the pier, on seeing the tri-coloured flag, and conducted the *voyageur* to the *palais*. The natives of Lûsor, on seeing this, said, "Behold the power of the *Fransées*: there are a poor *Inglez* lady and gentleman, living in a small tent, while the French traveller is enjoying himself in a palace." These were the expressions of the ignorant vulgar; but the feeling is almost general from the Cataracts to Rosetta. It is heightened by the number of Frenchmen in the pasha's army, who are in continual contact with the people, and have many opportunities of extolling the power and resources of *la grande nation*, and of depreciating the English, should national jealousy prompt them to do so.

The fellahs of Egypt are poor, but industrious, docile, and generally well behaved. The pasha takes nearly the whole of their produce, whether in cotton, indigo, sugar-cane, or grain, leaving them a bare subsistence. Such is their poverty, that they appear frequently in rags, having no money to purchase new clothes. If a bullock should die, they cannot replace it; and must, therefore, abandon a part of the field they have been in the habit of cultivating. The rapacity of the government and the drain for the army have thrown much land out of cultivation; as a necessary consequence, the desert is encroaching every year, and, instead of fine green fields of corn, the traveller sees, with sorrow, unproductive wastes within reach of the inundation of the Nile, which, with care and labour, ought to be a garden of abundance. The people are thus exorbitantly taxed to enable their vice-regal master to extend his foreign conquests; but the possession of Syria and Arabia are but a poor set-off against the misery and wretchedness which these conquests have caused to the inhabitants of Egypt, the fairest gem in the Pasha's diadem. This mistaken policy does not proceed from cruelty of disposition, or indifference to the welfare of his subjects, on the part of his highness, but from a desire to accumulate large sums for present exigencies, without reference to the calamities which must necessarily follow such a pernicious system. The pasha thinks that, if he keeps every thing in his own hands—if he is his own merchant—his own manufacturer—if he is the farmer of his own country, and allows his servants and work-people merely sufficient to live on—that he must, as a necessary consequence, appropriate the profits of trade, manufactures, and agriculture to himself, which, in other countries, are the reward of private skill, enterprise, and industry; and that, therefore, he must become much richer than other sovereigns not adopting similar measures. His

\* The *Americaine*, in 1835, attempted to found an

highness, however, notwithstanding his well-organised system, has not become rich; and, if he continues the same line of policy, will become poorer every year, although he possesses one of the richest and easiest cultivated countries in the globe.

Mohammed Ali's efforts in favour of education have been most praiseworthy, and justly entitle him to the epithet of benefactor. It was to be expected that, in a military despotism, the studies of the art of war, and medicine, and surgery, would hold a prominent place in any system of education to be established in the country. The most distinguished schools in the vicinity of Cairo are, accordingly, devoted to teaching the above sciences; and at these seminaries may be seen hundreds of the youths of Egypt, Copts, Arabs, Turks, and Greeks—Christian and Mohammedan—mingling together on terms of perfect equality, reading the same books, copying the same drawings, and enjoying the same pastimes. I attended an examination of the scholars in the military academy at Bülak, under the superintendence of an Armenian gentleman, who spoke to some of the students in French, to a few in English, and to the great majority in Arabic and Turkish. The superintendent told me he had been educated in England; but that the Pasha preferred promoting to places of trust those Egyptian youths who had studied in France, as they had turned out better than the young men educated in England. Many of the latter got into habits of intemperance, which unfitted them for public employment. The knowledge acquired in France, too, he seemed to think was more useful, in a country like Egypt, than the art of ship-building, the theory and practice of navigation, and an acquaintance with the properties of the steam-engine—the branches chiefly taught the young Egyptians in England. In the first place, the Pasha already possesses a much larger navy than he has any occasion for; in the second, there is no mercantile navy whatever in Egypt (excluding small coasting boats), and not likely to be any for a long series of years; and, in the third place, there is only one, or, at most, two, steam-engines at work throughout the whole country. Besides these seminaries at the capital, the Pasha has established district schools in all the principal towns, where reading, writing, and arithmetic, are taught gratuitously to the children, whose parents are compelled, on pain of his highness's displeasure, to send them at a certain age. The best scholars are selected from these district schools to be educated for the public service, either at the military academy or medical college at Cairo. This educational system has only recently been established; so it is not known whether it works well or not. I am inclined to think there is a great want, both of good teachers and good books, in the district schools, for, without translations of European elementary treatises, such as are published by the Calcutta School-book Society, and other bodies in the East, and masters capable of communicating some of the branches of European knowledge, I do not think any great advance in civilisation can be anticipated.

In my opinion, the Pasha is entitled to much credit for having introduced manufactories into Egypt. Many are of opinion that Egypt is a purely agricultural, and never can be a manufacturing country; and that the viceroy's object should be to foster agriculture only, export the raw produce to France and England, and take in exchange silks, &c. from the former, and woollen and cotton cloths, hardware, and

military stores, &c. from the latter, all of which articles he can purchase cheaper abroad than he can manufacture at home. But, independent of the pride which a government naturally feels of having all its resources within itself—of being independent of foreign countries for the supply of its most essential wants—the Pasha naturally thought that the introduction of the arts would tend greatly to enlighten his people: nor have his expectations been altogether disappointed. The people in the factories are extremely intelligent, the beautiful processes by which the raw material is wrought into articles of use and beauty having taught them habits of observation and reflection, which cannot fail to enlarge the mind. There are cotton manufactories in most of the large towns of Upper and Lower Egypt, where a coarse fabric is manufactured. At Bülak are several woollen and cotton factories; the former makes blankets for the use of the army, the latter the materials for the clothing of the soldiery. This last is a strong cotton cloth, which is frequently dyed scarlet, blue, or yellow, to suit the different uniforms of corps; but it is often left white, which is the uniform of a considerable portion of the troops I saw both in Arabia and Egypt. There is a sugar manufactory at Malloul, under the direction of an Italian gentleman called Antonini. That part of the country is rich, being intersected by numerous canals which retain the waters of the Nile long after the inundation has subsided; consequently, the cane grows in great abundance in the district, and from its juice is manufactured both coarse and fine loaf sugar, the latter equal in whiteness and purity to the best refined loaf sugar of this country. A good deal of the sugar manufactured, is exported to Arabia and adjacent ports, but the greater portion is consumed in Egypt. The Pasha is the sole manufacturer. In the citadel of Cairo is the cannon foundry, the musket, sabre, and pistol manufactory, and the mint. We were fortunate enough to see all these establishments at work. A great number of guns were in course of preparation, and others were completed and ready for service. They had both English and French models in the foundry, but the Pasha prefers the latter; and all the guns made, or making, are in exact accordance with the French pattern. We saw pieces of twelve, nine, six, and four pounds calibre, beautifully made, reflecting the highest credit on the artists. This institution was formerly under French management, but a Turk is at present the director. In the small-arm manufactory we saw many thousand stands of muskets, finished, and being made, besides pistols, bayonets, and sabres, for the cavalry; which last are very inferior to the English ones. At the mint, the Pasha coins gold, silver, and copper money, with English and French machinery. One of the foremen told us the French machines were much superior to the English; which idea had, no doubt, been instilled into his mind by the Frenchman, who, at one time, directed the operations of this establishment. The citadel of Cairo is of considerable extent, and defended by English eighteen and twenty-four pounders, mounted on cast-iron carriages. Several of the bastions and curtains overlook the city, and command it. A civil insurrection would soon be quelled by these formidable batteries.

Prior to leaving Alexandria, the Pasha honoured me with an audience, at his usual hour for receiving visitors, between eight and nine o'clock at night. Though sovereign of a magnificent empire, his highness is a man of

plain and simple habits. There was only one sentry at the palace gate, and the people appeared to be freely admitted into the vestibule, where I heard divine service performed, whilst waiting for the admiral commanding the fleet to leave the "presence." Even my donkey-driver, one of the lowest caste of Alexandria, was not prevented joining the Pasha's domestics—the soldiers off duty, and others, in the worship of their Creator. The admiral having taken his departure, the vice-consul and myself were ushered into a splendid hall of great dimensions, surrounded by gorgeous divans. At the upper corner of this sumptuous apartment sat Mohammed Ali, smoking a shibouque, and attended only by his interpreter, an Armenian, who speaks Turkish and French. He beckoned me to sit beside him, and then called out for "taza quwah," which is the Turkish, and also Hindoostane, for "fresh coffee." He did not offer me a shibouque, that being a compliment paid only to noblemen, ambassadors, general officers, and admirals. His highness is a very handsome man, with Roman features, a silver beard and moustache, and dark piercing eyes. His manners are gentle and urbane; and, during our interview, his countenance was lighted up with a most agreeable and benevolent smile. Having been informed that I came up the Red Sea, he questioned me very minutely on the proceedings of his governors and commanders at Mocha and Judda. Whether they were popular and liked by the Arabs, and conducted themselves in such a manner as to reflect credit on his government. Having satisfied him on those points, his highness next inquired my opinion of his troops, and whether they were equal to the Sipahs of Hindoostan. I told him that, in my opinion, his troops were excellently drilled, disciplined, and armed; that they would not disgrace the service of any European sovereign; that I was quite astonished at seeing the admirable way in which they manœuvred; that I was not surprised at their success in Syria; but that I conceived the Indian army fully equal to them; and, if both were united, would drive the Russians back to their Siberian deserts. His highness smiled at this allusion to Russia, which country he regards with as much hatred as does his nominal master, the Sultan of Turkey. The remainder of our conversation was of a private and miscellaneous nature, chiefly connected with the politics of Europe. He spoke of Louis-Philippe, Count Pozzo di Borgo, Lord Palmerston, Prince Metternich, and various other statesmen, as if he were intimately acquainted with all the measures with which their names had been mixed up. After imbibing coffee, we withdrew, highly delighted with his highness's intelligence, affability, and condescension.

Before concluding this sketch, I shall say a few words regarding the Pasha's navy. In the harbour of Alexandria I saw, lying at anchor, five or six line-of-battle ships, several frigates, sloops, and brigs of war; all commanded by Turks, and manned by Arabs. Nothing could exceed the order and regularity which prevailed on board these vessels: the decks were beautifully clean, the brass railings and mountings highly polished, and the guns, gun-rooms, and warlike stores, every way unexceptionable. But I was told by several officers of his highness's navy, that many of these splendid-looking vessels are unseaworthy, their lower timbers being decayed; and that it would be unsafe to make a voyage, even to the coast of Syria, in some of the ships which have the fairest outside appearance. From my own observation, I could perceive that the crews were inexperienced young men, brought

from the interior; the great majority of whom, I was informed, had never been outside the harbour. The commanders and officers likewise are indifferent sailors; possessing but little science, and hardly any experience. Such a fleet may be formidable when brought into collision with the Ottoman squadron, which is not much better, but against a European naval force, even with their best and bravest efforts, they could effect nothing. The "Nile," steam frigate of 1000 tons, is the finest vessel in his highness's service. She has English engineers and an English surgeon, but is commanded and manned in the same inefficient manner as the other vessels of the Pasha's fleet.

With the hope that this slight sketch may prove of use in enabling you to judge of the present state and resources of two highly interesting countries,—I remain, &c.

JAMES MACKENZIE.

11 Somerset Street, Portman Square.

*Egypt as it is in 1837.* By Thomas Waghorn, 8vo. pp. 30. London, 1837. Smith, Elder, and Co.

THIS pamphlet, in which Mr. Waghorn strenuously upholds Egyptian against Turkish interests, contains several passages which so forcibly illustrate the preceding communication, that we have selected them as a sequel.

Mr. Waghorn estimates the Pasha's army, in 1836, at 100,400 regulars, and 13,450 irregular troops; whereof 12,900 regulars, and 1900 of the latter force, were in "Hedgas and Yemen." He declares that the Egyptian fellah is delighted at the sight of Englishmen above all others who visit their land, and adds:—

"That Mahomed Ali has been obliged to take some of this class of his people for soldiers, I seek not to deny. Necessity demanded it. It did the same in England's wars, in the shape of impressment, because the service of the state required it. The system has, however, been discontinued in Egypt, as well as in England; never, I trust, to be revived in either. As far as Egypt is concerned, recruits are now supplied from Nubia and Sennaar; the fellahs of Egypt are no longer required for the purpose."

He says:—"When Mahomed Ali became Pasha of Egypt, that country had become a waste. It was partially rendered so by its having been made the field of war, where France and England fought for its conquest. Overrun by foreign mercenaries and Bedouin chiefs, cultivation was at a stand-still, famine in its provinces, with all the other miseries attendant upon war. How is it now? I find it improved in a degree unparalleled in any other uncivilised country in the same space of time. The land yields more and more luxuriantly; thus supplying to Mahomed Ali the means of working its civilisation. Having restored the productiveness of its soil, he next turned his attention to teach his people to protect their own land, without the aid of foreign and profligate mercenaries. He then endowed schools, which accommodate, with comfort, upwards of 20,000 youths, most of whom are taken from the mud huts of the Nile; and, as age and education fit them, they are placed in offices of trust and emolument; whilst the most intelligent of them are sent to England and France, in pursuit of knowledge, which they even now begin to impart to others."

The following completely agrees with what Capt. Mackenzie states:—

"I will now venture to assert, that, at no

period of the present generation, did the English name and character stand so high in Egypt as it does now; while, on the contrary, at no period has there ever been so little English interest in Egypt, when compared with the interests of other nations in that country. To what is this owing? I attribute it to our by-gone governments, who have never thought it worth while to maintain English interests there; while, on the other hand, the French have been secretly, and by degrees, stealing on to the second offices of trust in Egypt; and what, as a matter of course, will be the probable result or consequence of all this? and why comes it that we treat Egypt with contempt, and France courts her favour? Depend on it, that if ever another French force gets into Egypt, no matter under what special plea, contract, or promise, they will leave it again about the same time that they will quit Algiers, where they were permitted to go, by England, with an armament, for what they called the vindication of the honour of France. \* \* \*

I maintain that every thing in Egypt is growing French. I find this from the following facts, all falling under my own observation in Egypt:—1. With respect to the Egyptian army, Suleiman Pasha, a Frenchman, is second in command of it. 2. With respect to the Egyptian navy, Besson Bey, a Frenchman also, is its second in command. 3. With respect to its medical department, Clot Bey, a Frenchman, is physician-general-in-chief, with nearly a hundred medical French practitioners under him, in Egypt, Syria, and Arabia. Lastly, with respect to the engineering department, that is under Monsieur Linant, a Frenchman also. The whole of these are worthy of the master they so earnestly serve; and by that master their services are appreciated. I merely make these statements to shew that England, which always takes the lead in every other country, takes none in Egypt."

#### REVIEW OF NEW BOOKS.

*The Works of James Hall.* 6 vols. 12mo. Philadelphia, 1837. Key and Biddle.

THE works of Mr. Hall, one of the most various and agreeable writers of America, and one the more acceptable on this side of the Atlantic, from his lively descriptions of the people and natural pictures of the scenery of his country, are before us in a well-deserved second edition, and in six neat volumes. They comprise "Legends of the West," "Tales of the Border," and "Sketches of the West;" some of them short and interesting tales, others reaching to the extent of an entire volume. All possess the qualities we have just indicated; and we trust the following abridgement of one of the most practicable length for our columns, will shew that they need no other recommendation to English readers.

"Doctor Geode settled in an obscure town, far in the wilderness. It was a village newly laid out, upon the borders of an extensive prairie; a beautifully undulating plain, fringed with woods, and dotted with picturesque clumps and groves of trees. The grass, as yet but little trodden, exhibited its pristine luxuriance, and a variety of gorgeous flowers enlivened the scene. The deer still loitered here, as if unwilling to resign their ancient pastures; and at night the long howl of the wolf could be heard, mingled with the fearful screechings of the owl. The village was composed of log cabins, and was, with the neighbourhood around it, inhabited chiefly by backwoodsmen—a race of people who, delighting in the chase, and devoted to their wild, free, and independent

habits, precede the advance of the denser population, and keep ever on the outskirts of society. Ardent, hospitable, and uncultivated, the stranger is as much delighted with the cordial welcome he finds at their firesides, as he is struck with their primitive manners, their singular phraseology, and their original modes of thinking. Accustomed to long journeys, to frequent changes of residence, to protracted hunting expeditions, to swimming rivers, and encamping in the woods, they bear fatigue and exposure with the patience of the Indian: their figures of speech are numerous, and drawn from natural objects: and they have a fund of that intelligence which arises from extensive wanderings, from a close observance of nature, and from habits of free discussion, mingled with the simplicity induced by the absence of literature. A few months passed away delightfully with Doctor Geode. He roamed the forests and the prairies with the eagerness of one who had fallen upon a new world, more beautiful than that of his nativity. He walked and rode, hunted and fished, not for sport, but in search of scientific truth. The cabin which he occupied as a study, soon grew into a museum of natural curiosities. Every day brought some novel and interesting subject under his investigation. The treasures of knowledge which he had accumulated over the midnight lamp, seemed now to swell, and burst forth into life, as the exuberant flower springs from the folds of the bud. The world around him was teeming with living and beautiful illustrations of those abstruse principles that had been gathered into his memory with so much toil, and arranged with so much care. Not a wind blew, nor a shower fell; not a flower regaled his senses with its gaudy beauties or rich perfumes, without filling his mind with a sensation of pleasurable emotion. To him the phenomena of nature were all eloquence, and music, and symmetry. He had studied these things in the closet as mere abstractions, but now they came before him as sensible objects, bearing the stamp of reality, and glowing with the freshness of life. But, in the midst of these pursuits, my worthy friend entirely forgot to employ the ordinary means of getting into practice. He made no display of his skill, nor courted the acquaintance of any of his neighbours. No flashy advertisement extolled the merits of Doctor Geode, and informed the public that he was their humble servant. A wily competitor, taking advantage of this improvidence, represented my erudite friend as an insane gentleman, who roamed about gathering roots, and catching prairie flies; and the neighbours felt no inclination to consult a mad doctor. His own habits confirmed these mercenary slanders. His homely face was pale and sallow; his thick black beard was often allowed to remain a whole week unshaven; and, in his total carelessness of every thing relating to his own comfort, he sometimes walked from his shop to his lodgings without his hat, or with one boot and one shoe. His collection of stuffed birds, impaled insects, and pickled reptiles, might well bring his sanity in question with those who could see no advantage in this hideous resurrection of dead bodies. Moreover, he had tamed a crow, a bird held in particular aversion, in consequence of its depredations upon corn-fields, and pronounced by a popular verse to have been

Ever since the world began,  
Natural enemy of man;

and a black cat, who, of her own accord, had taken up her residence with him, was his constant companion. He soon found himself

\* The variation in Eastern orthoepy is most vexatiously perplexing. Pity but some standard could be adopted.  
—Ed. L. G.

avoided, like a mad dog in a populous town, or a freemason in the enlightened state of New York. Week after week rolled away, and not a patient called the skill of Doctor Geode in requisition. He wondered at this circumstance, and perplexed himself with vain endeavours to conjecture the reason. He saw that he was even shunned; but his modesty, as well as his independence, prevented him from inquiring into the cause. In the meanwhile his finances were exhausted, and poverty, with all its inconveniences and mortifications, stared him in the face. There is one truth, as regards the moral government of this world, to which there are few exceptions; it is, that good deeds always have their reward. So it happened to my friend. He was one day induced to enter a solitary cabin, in the outskirts of the village, by hearing, as he passed, the groans of a person who seemed to be in pain. A decent widow, who supported a large family by her labour, was suffering under a high fever, and in a state of delirium. Beside her sat a fair-haired girl, about fourteen years old, the daughter of a neighbouring gentleman, bathing her temples, and vainly endeavouring to soothe her torture. Without asking any questions, the humane physician rendered such assistance to the sufferer as her case required; nor did he quit her bed-side, until every alarming symptom was removed. The young girl, who at first shrunk back in alarm, was soon drawn to his assistance by the kindness of his tones, and now witnessed his promptitude and success with astonishment. He continued to attend her from day to day until his patient was completely restored, and then refused any compensation for what he considered a slight and a voluntary service. Being an intelligent woman, who had been accustomed to attend the sick, she readily discovered, from his tender manner and skillful prescriptions, that he was no ordinary man; and she now, in the warmth of her gratitude, revealed to him the arts by which his competitor had deprived him of the confidence of the public. Doctor Geode never did things like other men. Instead of getting angry, he was amused at the ingenuity of his rival, and at his own ridiculous predicament. He was born too far east to be overreached by a specious pretender; and, as his necessities were at that moment particularly pressing, he soon devised a plan for present relief, and for the utter discomfiture of his rival. Although his bashfulness, and habits of abstraction, had kept him aloof from an intercourse with his neighbours, he had not been unattentive to their traditions and modes of thinking; while he spoke little, he had listened and observed much. Some of their superstitions had struck him as remarkably amusing, and he was even then preparing an essay on this subject. With these landmarks to assist him, his scheme was soon digested. Having prepared a neat card, and drawn upon it a circle and a triangle, with red ink, he proceeded to trace over it several words in the Greek character. He then advertised, that 'Doctor Jeremy Geode, the seventh son of a celebrated Indian doctor, would cure all diseases, by means of the wonderful hygeian tablet, or kickapoo panacea, of which he was sole proprietor.' It was a happy thought! the virtues of a seventh son have long been well known; and, however our sturdy borderers may dislike their savage neighbours, the Indian doctor has always been in high repute among them. The reputed lunatic was at once elevated into an inspired mediciner; the crow, the black cat, and the collection of natural curiosities, became objects of respectful curio-

sity. In vain did the regular physician of the village denounce him as an impostor; in vain an incredulous few professed their entire disbelief. The doors of the seventh son were soon crowded with the halt and the sick. Among the first that came was Mr. Jones, the father of the fair-haired girl, a gentleman of information and property; a frank, hospitable man, who had taken up a favourable opinion of the doctor, and who became now, by his daughter's account of the incident she had witnessed, warmly engaged in his interest. What passed at the interview need not be repeated: Mr. Jones, at its conclusion, exhibited evident symptoms of having enjoyed a hearty laugh, and Doctor Geode had received some new views of western character. They remained firm friends, and Mr. Jones never spoke of the seventh son, but in terms of high respect. The success of the mystic tablet was triumphant, and its fame spread far and near. Nauseating and dangerous drugs were decried as useless and pernicious. It even became a matter of general remark and wonder, that people should be so stupid as to swallow deadly poisons, while health could be so much more cheaply purchased, by looking at a card. Faith alone was requisite to give efficacy to the spell. It is true that the charm sometimes failed; but this was always attributed to the unbelief of the patient, and the doctor forthwith proceeded to treat such cases *secundum artem*, concealing the fact, that he used the subtle minerals of the pharmacopoeia, and leaving the world to suppose that he practised only with the simples gathered in his botanic excursions. The consequence was, that his practice spread not only through the country around, but an immense number of patients were brought to him from a distance. As for the regular physician, he was obliged to quit the village. Happening to pass through that region, when the fame of Dr. Geode was at its zenith, I was astonished to hear the name of my old classmate, of whom I had lost sight for some years, coupled with miraculous cures by faith; and I determined to pay him a visit. Muffled in my cloak, and disguised still further by the alteration that time had made in my features, I entered his dwelling. It was a spacious log house, divided into several apartments; all of which, except one, were occupied by the sick. In the audience room, if I may so call it, sat the doctor; his black beard, which he had suffered to grow, overhanging his breast, and his raven locks almost concealing his features; while his mountainous nose, his calm but piercing eye, and his sarcastic lip, revealed to me, at a glance, my former classmate. He was surrounded by a group of persons, who sought relief from real or imaginary diseases. 'I have a desperate misery in my side,' said one. 'I've got the billiards fever,' groaned another. 'I am powerful weak,' drawled a third. 'My limbs are sort o' dead like,' whined a fourth. 'Oh, doctor, I've got the yaller janders powerful bad; I feel jist like I'd naaterally die off; and I can't hope myself, no how.' 'Can you cure the rheumatiz?' 'I've an inward fever.' 'Doctor, my peided cow is in a desput bad fix with the holler horn.' 'Ah, Dr. Geeho, you never seed sich a poor afflicted crittur as I be, with the misery in my tooth; it seems like it would jist use me up bodyaciously.' 'Oh, doctor, doctor, I've got the shaking ager so mighty bad, I aint no account, no how.' 'Mr. Geehead, I wish you'd look at my boy; he's got in the triflingest way you ever seed; he can't larn his book, and does nothing but jeest tell lies, and steal, study, all the time; he aint in his right mind, no how.' 'Canst thou minister

to a mind diseased?' inquired I, in a feigned tone. His quick eye, which had more than once rested on me, since I had entered the room, was turned hastily towards me, in eager scrutiny. Failing to penetrate my disguise, he civilly inquired my business. 'I know,' said I, in a mock heroic tone, 'that knowledge is thy idol, usefulness thy creed, the approbation of good men thy reward. I seek advice.' 'Your complaint?' inquired he, in a tremulous voice; for he more than suspected who was his visitor. 'The *cacoethes scribendi*.' 'Oh, si sick omnes!' exclaimed the seventh son, waving his hand over his valetudinarian levee, who stood gasping in awe, at this outlandish dialogue. 'It hath afflicted me from my youth,' rejoined I. 'Get you gone,' cried he, in a tone of grave sarcasm, while a joyful recognition sparkled in his eye. 'Get you gone: it is a loathsome, incurable disease, which criticism may correct, but the grave only can remove. It hath afflicted the world for ages; carrying with it revilings, and jealousies, and war. It maketh a man lean in flesh, and poor in substance. A hollow eye, a sunken cheek, a soiled finger, and a tattered coat, are its symptoms.' 'I crave a private consultation, learned doctor,' said I; and, accordingly, after dismissing his patients, he led me into his *sanctum*, and embraced me with the fervour of affectionate friendship."

He excuses his practice on the ground, that "one half the diseases which afflict mankind are imaginary, and should be treated as such. I practise upon this rule, and have found faith quite as valuable as physic."

Three years after his friend again encountered him, a highly established physician in a large city; and they agree to take a trip together to look at the old country quarters. On their route the doctor is taken alarmingly ill, and the story proceeds.

"We reached the broad prairies, and the region of thinly scattered population. The wide and beaten road was changed for the path that winded o'er the plains, or among the tangled woods. We forded the little streams, and crossed the rivers in canoes, driving our horses before us. Instead of meeting the travelling carriage, the stage, or the loaded wagon, we encountered the solitary hunter in his blanket coat, treading along with the stealthy step of the cat, and the watchful glance of the wary Indian. We lodged no longer at the inn, attended by assiduous servants, but slept at the settler's cabin, and sat as equals at his board. Two more days would have brought us to —, when my friend was taken ill. The attack was severe, and he thought his own case doubtful. There was no physician in the neighbourhood; and he himself was unprovided with such medicines as were suitable to his case. The fever was raging, and the pain intense. It was one of those cases in which the crisis approaches rapidly. Two days passed, and he hourly grew worse. I was almost frantic. At length the man of the house told us of an old woman, that had lately settled in the neighbourhood, who was 'a desperate good doctor.' 'There was a right smart chance of sickness, when she came into the settlement,' continued the man; 'a heap of people called on her; she had abundance to do, and she flew round among the folks mighty peart, I tell you. The way she fixed 'em was the right way, there's no mistake in it. I wouldn't give her for narry high larnt mercury doctor I ever see, no how.' 'But this is an extreme case.' 'No matter,' replied the hunter cheerfully, 'if the man was as cold as a wagon tire,

provided there was any life in him, she'd bring him to; there's no two ways about it.' My friend smiled. 'Send for the woman,' I exclaimed, 'she may tell us of some remedy.' A boy was accordingly mounted on the fleetest steed, and soon returned with the female Esculapius. There was nothing peculiar in her appearance, except that she wore a large black veil, which completely concealed her features. She required to be left alone with her patient; but, as I insisted on being present at the interview, an exception was made in my favour. She approached the bed, felt the sufferer's pulse, and passed her hand over his forehead, while the doctor, who seemed to recognise the skillful touch of a practitioner, mechanically put out his tongue. The woman turned to me and said, in a low voice, 'I can do nothing for this gentleman—he is very ill, and requires a greater physician than I am.' 'Do your best,' exclaimed I. 'Ah, sir, I have little skill in medicine. I am but a poor weak woman; a very humble instrument in the hands of Providence. I can do nothing here. This man needs medicine.' 'If you mean to say that you do your work by a spell, I insist upon your trying it.' 'Very willingly,' said the woman, meekly; and then, raising her voice, she exclaimed, 'Let no one speak.' She next turned to her patient, and said, 'Sick man! do you believe that I can raise you from this bed of pain?' The doctor, who, even in the hour of extremity, seemed to retain his relish for *hocus pocus*, nodded his head, while I felt an unaccountable awe creeping over me. 'Then look upon my face,' continued she, in a solemn tone, throwing back her veil, and displaying in her right hand the identical tablet of Doctor Geode. 'And look upon this tablet of health, and these mysterious figures, and charmed words, drawn upon it by the hand of the seventh son of a celebrated Indian doctor: look on them and believe, and be restored.' This was more than the doctor could stand. No sooner did he behold the workmanship of his own hands, and the pupil of his tuition, and witness the whole acting of that curious scene, of which he had been the inventor, than he burst into an immoderate convulsion of laughter. The woman gazed in amazement, for, in the altered features of her patient, she did not recognise her master. I ran to him in alarm; but he continued to laugh, rolling from side to side, throwing up his long arms, and screaming as if distracted. As soon as he was composed enough to speak, he exclaimed, 'Give her a fifty-dollar note, Charles! Go, go, good woman, you have done your duty well; go now, but do not leave the house.' 'Can it be possible,' continued he, as the wondering woman closed the door after her, 'can it be that there are two Richmonds in the field? No; it is my own veritable spell, and my very deputy herself!' and then he laughed again, until the whole house re-echoed the sonorous peal. The big drops rolled from his forehead. 'See there!' he exclaimed, 'behold the work of the faith doctor! Here we have been labouring these two days to break this obstinate fever, and to produce a perspiration, and lo! the cunning woman has wrought the desired change in a moment!' And it was exactly so; the violent muscular action, and the sudden revolution in the patient's train of thought, had produced instantaneous relief. A profuse perspiration, succeeded by a gentle slumber, relieved the most violent symptoms. When he awoke he asked for the doctress. 'I knew I was safe,' said he, 'as soon as I saw her face. She has a lancet and a box of calomel

pills in her pocket. No man need die of a bilious fever when these are near. I lost mine on the road. Send her in.' It is only necessary to add, that, after a few days' careful attention from the old lady, who was really an admirable nurse, he was able to resume his journey."

We have only to add, that he wins and wears the fair-haired girl.

*The Churches of London, &c.* By George Godwin, jun., Architect, assisted by J. Britton, Esq., F.S.A. No. VIII. Pp. 16. London, 1837. Tilt; Hatchards; Seeley; Weale; J. Williams; York, Bellerby.

THIS publication, we are glad to see, whether we look at the embellishments or letterpress, goes on with equal regularity and spirit. The present Number, relates to one of the oldest, and, consequently, one of the most interesting churches in the metropolis; namely, All-Hallows, Barking, with two views from drawings, by R. W. Billings, and engraved by J. Le Keux. The information respecting the church is derived from some sources of such research,\* that we are inclined to think an extract may be made from its early history, at once as acceptable to our readers as fairly illustrative of the work:—

"The parish church of All-Hallows, Barking, which is a very interesting remnant of by-gone times, both as regards its architectural characteristics, the numerous brasses and monuments that it contains, and the many vicissitudes it has witnessed, stands on the north side of the east end of Tower Street—the west end of the church being in Seething Lane.† Like many of the other old churches which are to be found in this metropolis—usually surrounded by houses, and disfigured by modern additions—there seems to be no record of the date of its foundation. The Emperor Phocas, says Newcourt,‡ commanded, at the desire of Pope Boniface IV., about the year of our Lord 608, that on the site of the Old Temple in Rome, called *Pantheon*, formerly erected in honour of all the pagan gods by the Emperor Domitian, the church of the Virgin Mary and of All the Martyrs should be built; that where formerly the worship, not of all gods, but of all devils was performed, the memory of all saints might then be celebrated: and this festival from that time was solemnised at Rome on the Kalends, or first day of November; 'for they feign that on this day all the saints meet together purposely to intercede for man.' About the year 804, the Emperor Ludovicus ordained that the festivity of All-saints, or All-hallows, as it was termed, should be solemnly celebrated in France on that day for ever, which example was followed by the whole church, and many religious buildings were dedicated in honour of that festival.§ Nearly all the churches so dedicated, which remain in London—and they are numerous—are of old foundation, and that of All-hallows, Barking, now under consider-

\* All honestly quoted and referred to, a merit rare in these days of book-making.—*Ed. L. G.*

† "In Seething Lane, or, as it was anciently called, *Sydon Lane*, stood a large house, built by Sir John Allen, lord mayor, and privy councillor to Henry VIII. It was afterwards Sir Francis Walsingham's, and after that became the property of Robert Devereux, second earl of Essex.—*Pennant's 'London,' 1813, p. 381.*

‡ "Repertorium," 1708, vol. i. p. 237."

§ "The first of November, or All-hallow's-day, and its vigil, known as *Hallow-e'en*, are even now regarded as festivals amongst the peasantry in many parts of England, Ireland, and Scotland. On *Hallow-e'en* it has been customary for youths of both sexes to assemble together 'to burn nuts,' to 'sow hempseed,' and practise various other charms, with a view to penetrate futurity—ever a ruling passion in an early state of society—and ascertain the name and features of their future partners. Bonfires were lighted on elevated ground, and it was made a night of general festivity."

ation, is amongst them. It has its distinguishing title from the circumstance, that it originally belonged to the abbess and convent of Barking, in Essex; which was founded in the year of our era 675, by Erkenwald, son of Anna, king of the East Angles, and afterwards bishop of London. The earliest notice we have of a building here, appears to relate to a chapel, on the north side, which was raised by King Richard I. (who reigned from the year 1189 to 1199), and was munificently endowed by several of his successors. The most remarkable thing in this chapel was a statue of the Virgin, which was placed there by order of King Edward I., about the end of the thirteenth century, in consequence of a vision which appeared to him in his sleep, commanding him so to do; and promising, that if he visited it five times in every year, and kept the chapel in repair, he should be victorious over all nations, be king of England when his father died, and subduer of the Welsh and all Scotland. To the truth of this story he swore before the pope, and obtained a dispensation of forty days' penance for all true penitents who should contribute towards the lights, repairs, and ornaments of the chapel, and should pray for the soul of King Richard, whose heart was buried beneath the high altar. Our Lady of Barking, as the statue was called, thus attained great repute, and numbers of persons continued to flock to her shrine, and, with rich offerings, to claim her intercession on their part with the Most High, up to the period of that Reformation which was so strongly called for. Previous to that event, however, other circumstances, connected with the chapel, occurred; among which it may be mentioned, that John, earl of Worcester, obtained a license from King Edward IV. to found here a brotherhood for a master and brethren, and gave to them part of the possession of the alien priories of Tooting-Beck and Okeburn. King Richard III., whose memory, from a variety of causes, has been rendered so entirely infamous, that we can hardly recognise him as connected with any act save one of blood, rebuilt the chapel, and founded therein a college, consisting of a dean and six canons, which was dissolved in the year 1548, and we must suppose that the chapel was then taken down; for we learn from Newcourt, that the ground was used as a garden during the reigns of King Edward VI., Mary, and part of that of Elizabeth. 'till, at last, a strong frame of timber and brick was set thereon, and employed as a store-house of merchants' goods.' Of the church itself, we find no account from which to judge of its original extent or form."

The subjoined brief notices will serve to fill up our sketch.

"The length of the church is 108 feet, the width 67 feet, and the height 35 feet. Within the church there are many interesting monuments and funeral brasses of early date; and, in reference to the latter, we may perhaps say, *en passant*, that stones, inlaid with brass, have been discovered, of a date as early as the year 1308, but that they did not come into general use until the middle of the same century. They were chiefly made in Flanders, and formed an object of considerable traffic with this country, until the time of King James I.

"Affixed to one of the pillars in the south aisle, is a plate of brass, presenting some doggrel verses, to commemorate Armac Aymer, governor of the pages of honour ('or master of the Heance men') to King Henry VIII., King Edward VI., Queen Mary, and Queen Elizabeth, during fifty-six years. The greater number of these brasses, and there are many more about the church than we have mentioned,

originally had religious inscriptions attached to them; but these, for the most part, were purposely defaced, or destroyed, at the time of the Reformation. At that epoch a commission was instituted, giving power to various persons throughout the country to remove or deface all objects which, in their opinion, might lead to idolatry or popery, whether shrines, relics, or pictures; and the most wanton devastation was committed, in consequence, in every church which possessed sepulchral monuments, by those to whom this power was entrusted. According to Fuller, Queen Elizabeth, in the second year of her reign, issued a proclamation against 'breaking or defacing of monuments of antiquity in churches, or other public places, for memory, and not for superstition;' and again, at a later period; but was unable, for a long time, to prevent their destruction. A similar wanton outrage of the remains of ancient art, took place during the dominion of Cromwell, when tombs were desecrated, and churches were used as barracks for the soldiers and their horses."

*Laili and Majnun; a Poem. From the original Persian of Nazami.* By James Atkinson, Esq. author of an "Abridgement of the Shah-Namah of Firdausi," &c. Published under the superintendence of the Oriental Translation Fund.

MR. ATKINSON informs us, that "the story of the loves of Laili and Majnun is one of the most popular in the East. There are several poems on the same subject by different authors, but that by Nazami is considered the best; and I believe this is the first time it has appeared in the European language." We, therefore, looked with considerable interest into the volume before us, anxious that our readers should be enabled for once to appreciate one of the principal treasures of the boasted Persian literature.

We presume we must consider the acceptance and publication of this volume by the Oriental Society, a sufficient guarantee of the writer's competency for translation. The many distinguished Persian scholars on its list compel us to silence on this head; but the work, we must say, does not do honour to their appreciation of English poetry.

To translate, just as by the help of a dictionary any one can translate, into a different language, and then mould the accidental endings into corresponding sounds, is, we submit, not poetry; nor even versification; but rather *versification*, which, like other *factions*, overlays its own aim and object. The choice of words and thoughts; the selection of phrases, that, being poetical in themselves, essentially differ from the language of common life; the condensation of expression and ellipses of logical arrangement, that mark the utterance of emotions, disdaining, in their passionate flow, the clearness and correction of general narrative or conversation, and thus making their influence *felt* rather than *imagined*: all these, which the original poet, and especially in the instance before us, supplies, his translator is bound to supply also; either by transfer, or, at worst, by substitution. What is it that, in the case of Nazami, has rendered him, in the minds of his countrymen, pre-eminent even over his great rivals, in the version of this mournful story? We cannot discover it here; and, with every disposition that curiosity and love of sacred song can supply, we have been compelled to throw aside the volume after every twenty lines, and, through a protracted perusal of months, are capable of fulfilling our critical duty.

The pastoral, more, perhaps, than any other poetry, requires adaptation to the language in which it is written, and taste and skill in that to which it may be transferred. The simplicity of rustic, imaginative life is akin to elegance, not to vulgarity; and finery is not more inimical to nature—poetic nature—than coarseness. The former warps the beautiful into artifice, but the latter degrades it down to disgust. In proportion, therefore, to the danger of confounding the rustic with the vulgar in the reader's mind, should be the care employed to preserve the strongly marked, though narrow, line of distinction existing between them. Phrases common to both often receive their colour from the context; and the translator is bound to guard against any false impression on this head; for, though his own reputation may be, and justly, indifferent, his author's is sacred; it is a trust he himself has sought, and he should therefore shield it the more faithfully from attack.

It must be evident to all the world, that a poetic history founded on the mere extravagances of love; extravagances, too, inconceivable in Europe, must of necessity require the utmost delicacy of language, and felicity of thought for its illustration, to save it, with us, from the charges of bombast and insipidity, the Scylla and Charybdis of amatory "Odyssey." The warmth of the Persian climate, the floridness of Persian imagery, the sweetness of the Persian language, and the genius of the Persian poet himself, have surmounted all the difficulties of the task, and woven for the reader's temples, a garland of flowers that charm by their diversity, and intoxicate by their varied fragrance. The severer taste of Europe bows beneath the spell, and yields a willing, though temporary, submission to the wand of the enchanter. But, let any one competent to the task, compare any passage of the original with the translation, and he must confess that, though the sense is given, the sensation is wanting. We shall give what struck us as the best passages of the translation: *sed heu, quantum mutatus!*

"The love that springs from Heaven is bless'd;  
Unholy passions stain the rest;  
That is not love: wild fancy's birth,  
Which lives on change, is constant never:  
But Majnun's love was not of earth,  
Glowing with heavenly truth for ever;  
An earthly object raised the flame,  
But 'twas from Heaven the inspiration came.

"Voices in guarded softness rose  
Upon her ever-listening ear;  
She heard her constant lover's woes,  
In melting strains, repeated near.  
The sky, with gloomy clouds o'erspread,  
At length soft showers began to shed;  
And what, before, destruction seem'd,  
With rays of better promise gleam'd.  
Voices of young and old she heard  
Beneath the harem-walls reciting  
Her Majnun's songs: each thrilling word  
Her almost broken heart delighting.

"They met; but how? hearts long to joy unknown  
Know not what 'tis to be, except alone:  
Feeling intense had check'd the power to speak;  
Silent confusion sat upon each cheek;  
Speechless with love unutterable, they  
Stood gazing at each other all the day.  
Thus, when a chamber holds no golden store,  
No lock protects the ever-open door;  
But when rich hoards of gold become a lure,  
A lock is placed to keep that wealth secure;  
So when the heart is full, the voice is bound—  
For ready speech with grief is rarely found.

"Khosru, and Kal-kobad, and Jám,  
Have all descended to the tomb;  
And who, composed of mortal clay,  
The universal doom can stay?  
For this, in vain, have youth and age  
Ponder'd o'er learning's mystic page;  
No human power can penetrate  
The mysteries of all-ruling fate;  
Fruit life is but a moment's breath;  
The world, alas! is full of death.

How many wept that fair one, gone so soon!  
How many wept o'er that departed moon!—  
How many mourn'd with broken hearts for her!  
How many bathed with tears her sepulchre!  
Round her pure dust assembled old and young,  
And on the sod their fragrant offerings flung;  
Hallow'd the spot where amorous youth and maid  
In after-times their dutious homage paid.

"The mournful mother gazed upon her child,  
Now voiceless—though her lips imploring smiled;  
Saw the dread change, the sudden pause of breath—  
Her beauty settled in the trance of death;  
And, in the frenzy of her anguish, tore  
Her hoary locks, the 'broider'd dress she wore;  
Dissolved in tears, her wild and sorrowing cries  
Brought down compassion from the weeping skies;  
And so intense her grief, she shivering fell  
Prostrate upon the corpse, insensible,  
And never, never rose again—the thread  
Of life was broke—both, clasp'd together, dead!"

We quote also a few instances of carelessness which we consider unpardonable.

"As if, ferocious spirits to quell,  
His form had been invisible,  
Or bore a life-protecting spell.

For who can free the heart from love, unchanging love?

The king was struck with wonderment  
At this miraculous event;  
And seeing, in that horrid cell,  
The guiltless courtier safe and well,  
He ask'd, with tears profusely shed,  
By what strange spell he was not dead?

Now Majnun, desolate, his fate perceived,  
As in a glass, the misery of his lot,  
And, from the first impression scarce relieved,  
Felt his abandonment, and only not forgot.  
Wasted and wan, he flutter'd where he lay;  
And, turning to that magic point which led  
To where his angel-face was wont to stay,  
Thus, in a melancholy tone, he said:

The poverty of even the best of these passages, must, we think, impress our readers as strongly as ourselves with the truth that Mr. Atkinson is not the knight destined to prosper in Persian exploit, even though he has succeeded in destroying its enchantment.

*Cambridge Crepuscular Diversions, and Broodings before Bed-time.* Pp. 31. Cambridge, Hall, Hankin.

THIS slight publication seems to be a college *jeu d'esprit*; and will, perhaps, be better understood and relished in its native place, and by those who know its ways, than by the rest of the world. There is, however, much good-humour and talent in it; as a sample of which, leaving the discussions on *Seediness*, *Wooden Spoon*, &c. out of the question, we shall copy an amusing Shrove Tuesday philological dialogue on the word *Pancake*. It follows.

"*Sloane*. Pancake? why there's little room for discussion there; the word, of course, comes from *πᾶν* and *κακὸν* because they are eaten on a day when we're shriven from *all* our evil."

"*Lobb*. Or because, perhaps, every thing that's bad enters into them as a compound, for I find them very unwholesome."

"*Grubb*. If you are on that cue, you may say, if you please, because in Ireland and in the North, they toss them up the chimney, and they come down again defiled with soot and all manner of dirt. But a truce to these sort of conjectures; you are as bad as my wise neighbours in hall. I see you are, like them, going down in a diving-bell, to find what is floating on the top of the water. But you must make another attempt; that will never do."

"*S*. Yes, but it will, though; and I believe it is the right one, for I am supported by the analogy of the Latin; *pancake* like *panis* signifies *vapor*; now, if we suppose *πᾶν* to have been a word used among the Greeks as another name to signify that mixture of flour and oil, which they also called *λάγανον*, it is

easy to imagine that the Romans, in bringing the delicacy from Greece, introduced the name as well, which, after a time, they translated into its Latin meaning, 'wafer'; and hence is our name *wafer* given to a flat, round cake of the same sort; this I think puts the derivation beyond a doubt."

"L. Well, you certainly trace it to its real origin, the frying-pan, when you look for it in *grease*; but I think your ingenuity is wasted, and as Grubb has been pleased to jeer, I'll just tell you at once what the true derivation is. I wonder, really, you were so blind as not to see at first that —"

"G. Stop, my gentleman, you're too matter-of-fact, puss must not be liberated just yet; I must first tell you what the other conjectures were. One gave the derivation you have suggested; another, contested that it was from *Πάν παστωριον Δεος*, the god of *Lycaeus*, and *καχάω*, because, they were once introduced at the *Lupercalia*, and by the novelty of the offering, might make the rustic god to *laugh*; or *Πάν καιω*, as another offered for an amendment, because, when Pan tried to make them for himself, being not a proficient cook, he generally burnt them. A third man would have *χίω* for *καίω*, because he, having seen them made, knew well they were first in a fluid state, and that the cook poured them, when thus liquid, into the implement that fried them. Others seemed to be taxing their ingenuity, and perhaps our patience, with finding more plausible methods of connecting Pan with the rest of the compound, when a new hint was suggested; for a man who sat next but one to me, bawled across a silent eating man, who sat between us, that the derivation, he knew, was from 'Panchaea,' a place in Arabia Felix, which, producing many other delicacies, might rank this among the number; which, being the most precious of its bounties, could well *καρ' ἑξῆς* monopolise the name of its native land."

"S. Not so bad of him, for he could have taken Maro for his authority. Panchaea, in the *Georgics*, is called '*Panchaea pinguis*,' an evidence of its notoriety for such a fatty produce."

"G. It was just that gentleman's authority that he took; for, being a man ready at quotations, and particularly well up with his Virgil, he quoted from the fourth *Georgic*,

*Pars epulis onerant memas, et plena reponunt Pocula; Panchaeis adolescunt ignibus aree;*

which latter part he translated, 'The grate is all in a blaze with the flames of the pancake;' such being evidently, as he said, the rendering of Panchaeian flames, especially as we learn from the context that they are getting ready something good for the dinner table."

"L. They had but an indifferent beverage, however, if we understand the words that follow to refer to bowls of Cape Madeira:

*'Cape Maonii carchesia Bacchi.'*

but I beg pardon for that; it's only *obiter*."

"S. Very good, Lobh, and not out of place here; it shews off well both your ready wit and your reading."

"G. True; but I've more to tell you before we get to the climax, or into the jelly-bag of the joke, which I see I must bring you to as quickly as possible, for the cat appears to be already scratching at the bag for an exeat."

"S. Not at all, Grubb; you're by no means tedious."

"G. Well, then, the silent young gentleman who sat at my left at length spoke. He was a better sort of *gourmand*, and this accounted for his silence, for his fish had not till now been despatched; and the last *bonne bouche*

vanished almost simultaneously with his taciturnity. He gave it for his decided opinion, that pancake owed its title to the fact of its being a sort of *panacea*, a general remedy for the ill-effects of fasting; a stock of solid nourishment laid in to prevent starvation, during the days of abstinence that follow Shrove Tuesday; a *panacea*, in fact, as good food always is, against the unpleasant symptoms that follow the going without any at all. He quoted something from Pliny to prove this, and something, I think, from Lucan, but I forget what; at all events, he thought that he had well proved his point; and, in the height of his self-complacency, rubbed his hand famously, and called to the waiter to bring 'A plate of pancakes, lemon, and brown sugar,' which feeding upon, he relapsed into his original silence. Of all the other conjectures that I can remember, there is but one other good one. A man who did not set up for a classic, asserted that pancakes were bread seals; for he traced the derivation from the French, *pain*, bread, and *cachet*, a seal, being, as he asserted, merely bread which had taken the circular form of a seal from the shape of the machine in which it was cooked: a modern etymology which sounded quite tame after the classical ones we had been treated with."

"L. Well, and what was the upshot of it all?"

"G. While we all wondering at the many derivations the word would bear, and were quite undecided which to select, one of our party exclaimed, with some vehemence, 'Who shall tell me why this is called a pancake?' when a rough jocund voice behind me humbly answered with a smile, 'Why, my wife and I calls 'em pancakes, 'cause they be *cakes* frizzed in a *pan*!' and, turning round, I traced the sound to the lips of a waiter, generally the most forward among his fellows, and who, hearing this exclamation, with none of our previous discourse, simply set the matter at rest, and outwitted us and all our classic erudition. You may imagine we looked at each other, and wondered till we smiled, and smiled till we all joined in a general laugh at ourselves and each other."

#### Sir B. Faulkner's Tour.

(Concluded.)

OUR present selections are of a kind which must gratify the tastes of the scholar and antiquary. At Herculaneum we are told,—

"The cicerone shewed us a deep bathing-trough of *terra cotta*, in which the skeleton of a man was found stretched at full length; possibly some poor helpless invalid, deserted by his friends, and unable, through his infirmity, to extricate himself before the fatal flood inclosed him. What could have tempted him to bathe at such a time? Why think about improving health, while life itself was in instant danger? Does not this discovery seem to lend some colour of truth to the opinion, that the destruction of the city was altogether unexpected, and that the story about so many thousands being destroyed in the theatre is far from so very apocryphal as some suppose? The excavations under the town of Resina have been discontinued. The inhabitants opposed the work from terror of the ground giving way, and his majesty is prevented carrying it on towards the fields from a similar objection on the part of the landowners. The few workmen at present employed at Herculaneum are occupied in uncovering the road outside one of the great gates, but no object has been met with worthy of

notice. I accompanied a friend to witness an excavation above the site of Herculaneum, where we discovered some walls supposed to be part of a suburban villa. We came, at last, to the entrance of a doorway, the threshold of which presented, in tessellated work, two fishes with trident-formed tails; but nothing besides of any interest, excepting some unusually vivid fresco-paintings on the side walls, the green tints of which had very little changed, though of all colours green is the most rarely found unfaded. The lava, over these ruins, consists of a congeries of lapillæ compacted with loose earth, almost as easily removed as so much sand. The walls had sustained much more injury than any which I observed in the town below, and stood in broken dislocated fragments; owing, no doubt, to their nearer contiguity to the torrent rushing direct from the crater. It seems strange the government do not set the excavators at work here; yet very little has been attempted beyond Resina, since the reign of Charles the Third. The expense would be trifling.

"The mode of peeling off fresco paintings is very simple and expeditious. A flat piece of wood, of the size of the painting, is placed firmly against the picture, round the edges of which a deep cut is made, with a sharp instrument, into the stucco, more especially over the upper part, and the whole is then detached and lifted off with ease, and in perfect integrity. Many attempts have been made to revive the antique mode of fixing colours, but hitherto all have alike proved fruitless. It has been doubted whether the ancients were acquainted with musical notation; but there is a fresco in this collection which, I think, renders the presumption, at least, extremely probable, if it does not put it beyond any reasonable cavil. In this painting, a female sits singing to the accompaniment of a lyre, played by another, assisted by a male performer on two reeds, evidently a music-master, or professor of the art. The singing lady holds before her a scroll, marked with straight lines, and several dots, presenting an appearance altogether different from what is observable in any other fresco, and so nearly resembling our own mode of noting sounds that the similarity forcibly struck a friend of mine when viewing it, as well as myself. Some may think that this scroll represents, not the music, but the verses of her song; but it does not appear probable: at least, it is generally contrary to modern experience, that she should have required such a refresher to her memory in a matter that may be presumed so familiar to her from habit. Be this as it may, the characters struck me certainly as very different from any I ever observed before, and both Gell and Jorio agreed to believe my speculation might be justly founded. The performer on the reeds has his foot raised, as in the act of marking the time, just like the leader of a modern concert. Many doubts have been entertained by travellers as to the use of glass in windows by the ancients of this period. To me it seems put beyond all question, that its use in admitting light into houses was perfectly known to them, and that its not being more generally in use was a matter of pure taste. Had we discovered glass only in a flat form in Pompeii, we might certainly have been justified in doubting whether the art of shaping it into vessels was arrived at; but having found so many specimens of all forms, flat and round, it is, I think, hardly rational to question that it would have been used in any one of these modes as readily as another, whenever it might be deemed either a convenience or a luxury.

Much of that kind of glass which we call ground glass, Sir William Gell told me, was found in the Pompeian baths, and obviously for the same purpose as we are in the habit of employing it ourselves, when we wish to admit light, but to prevent the interior of an apartment from being seen from without. If semi-transparent horn was, as we know, often used for windows, would the ancients have been likely to overlook a more diaphanous substance, of which they were equally in possession? I confess it has always appeared to me absolute trifling to make the thing a question at all; but that glass was actually so applied, a fragment of it may still be seen in the house which goes by the name of the Faun. The special preservation of this fragment is owing to the narrowness of the aperture, which resembles a loophole, and to the circumstance of the glass being firmly fixed in the cement. That glass windows were not in very general use is probable, not because they were expensive, or because the people were ignorant of their peculiar convenience, but for this simple reason, they were not needed for their climate. The luxury at which their architecture chiefly aimed was to exclude light and admit air; and it is so still in a great proportion of the houses in Naples, which are, therefore, unprovided with glass windows. Workmen and artisans who require light, prefer, when the weather will allow them, to carry on their business in the open air; and hence so many of the streets of Naples are crowded with blacksmiths, coopers, braziers, shoemakers, and a multitude of other handicrafts, as, no doubt, the streets of Pompeii were in ancient days. The very tailor of this climate has been tempted to forsake squatting for the more creditable posture of sitting like a man in the fresh air. In their very dark days, the few workshops are lit up with oil.

"We shall now (continues our pleasant guide) turn to the contents of the Pompeian pantry. We were assured, by the learned keeper of this unique collection, that the olives, if soaked in water, give out very sensibly the flavour of the fruit. You are aware that, among the surviving dainties, there is a large mass of a soluble material, which, when diluted, gives out a very perceptible vinous odour. Gell believed it to be wine converted into this form for the convenience of carriage, packing in a trunk, or the like—just as we do with our portable soup; and that the pieces were cut off with a chopping knife, as they were needed. It seems the Emperor of Austria had the curiosity to break the shell of one of the eggs brought hither from Pompeii, but found that the entire contents had escaped, with the exception of an extremely minute portion of a yellowish powder, not yet evaporated. Possibly, in a century or two, more of this may disappear also."

"Every body knows the difficulty of unrolling the Herculanæan manuscripts, but I had no idea that the labour was so tedious and unpromising. If the process goes on at the same rate as at present, another eruption may bury the whole lot afresh, before the work is completed. There are few hands employed, and only five interpreters of any ability; besides, those to whom we principally owe what has been already brought to light are either past work or gone to the tomb. The papyri are deciphered by the aid of a lens of only very moderate power: a strong magnifier is found to render the letters more or less illegible, by bringing into view the fibres of the material on which they are written. The subdued steady light of the shade answers best; and no lens is so good as the naked eye, when the sight is clear. It seems

next to impossible that any error should make its way to the press, from the care that is taken with the copies. After the text has been committed to paper, and undergone a strict scrutiny by the *Acedemia Ercolanense*, it is then engraven on copper, and carefully collated with the originals, which are kept preserved in frames, for future reference: the whole is then subjected to a fresh and final examination and revision, by the academy, before the last irrevocable step of sending it to the press. The quantity of matter in each page of the originals, is generally equal to an octavo page of our ordinary pica type. The lines contain only about 22 letters; but, to make up for the deficiency, there are commonly 47 lines in a column. The authors put into type do not amount to a dozen; they are all Greek but one, and fathered, with few exceptions, upon Epicurus and the eternal Philodemus. The greater number of the 1300 undeveloped papyri are compacted so firmly as to render any attempt at unrolling absolutely hopeless. It was under an arched roof, in *Herculaneum*, that the least injured manuscripts were found; and their preservation is supposed to be owing to their protection, under the vault, from either extremes of heat or moisture. Those are first selected for the operation of unrolling, which, after perusing a portion of the matter, the interpreter deems most likely to reward his pains. But, before he can form any opinion about this, it is often necessary to continue the examination for a good half year. In some rare instances the author's name is alluded to early in the work, or may be inferred from the text before much labour has been expended: but this happens very seldom, as the first few columns are almost always destroyed by the fire, and the name of the writer not discovered until the whole of the volume is unrolled; and then they are found in the concluding column, for the custom was to subjoin, as well as prefix, the title. It is provoking to see the process creeping on at this snail's pace. Why are not some hundreds of these idle ecclesiastics put in requisition for the work? We are told, that Hayter unrolled forty MSS. in two years, and with the same industry the whole collection would be unfolded in little better than half a century. Sir Humphry Davy despaired of arriving at a speedier process, and in his own attempts sacrificed not fewer than twenty-five volumes; at last owning his belief, that no better plan of development was ever likely to be hit upon than that which is at present in practice. The common opinion is, that the manuscripts found in *Herculaneum* belonged to a private collection, and that we may fairly hope, if the excavations be carried on, that we shall one day arrive at the treasures of a public library. It is very gratifying to hold out such expectations, but *cui bono*? While the process of development goes on as at present, our enjoyment of this treasure might be reserved for the millennium. The lines and letters in some of the papyri have a regularity almost typographical, and, no doubt, were executed by professional copyists: others are scrawled hastily in such a way as to suggest the idea of their being done by the author himself; a suggestion further corroborated by corrections which have every appearance of being the result of reconsideration. The persons employed in the slow, sedulous, and most billious occupation of unfolding these carbonaceous scrolls, are miserably remunerated. The highest price for unrolling and engraving a column on copper, is twenty-six ducats; subordinate labourers get ten ducats a-month. The chief

interpreters receive only thirty, the principal librarian forty. Government is quite apathetic, and seem as if they cared but moderately whether the manuscripts, museum interpreters, custodes, and all, shared the fate of Empedocles and his slippers. One of the head librarians had, at his own expense, and after years of labour, made out and published a complete catalogue of the books in the library, in three massive folio volumes; and the only return made to him by the government, was a present of ten copies of his own work. A few general observations will convey some faint notion of the kind of trash which rewards your toil in the perusal of these fragments. I shall take Philodemus, who, as every one knows, is one of the most voluminous and incontinent prosers which have been dug up; and he still keeps the interpreters busy. In a work of his which treats of domestic economy, he dwells at considerable length on the advantage of having a wife to superintend our household concerns, in opposition to the opinion of Theophrastus and some other philosophers, who are for refusing to women all share in domestic matters beyond that of the procreation and care of children, and doing the work of an upper sort of servant. The author devotes a lengthy space to consider the best mode of choosing slaves; he enlarges upon their disposition, age, form of their bodies, size, habits, the quantity of wine necessary to keep up their condition, &c. &c.; which topics are discussed just as the 'Farmer's Magazine' disserts upon the best mode of breeding, and feeding, and choosing our working cattle. Among the good points of a slave, he tells us, that he ought to be neither too dull nor too lively; and is clearly of opinion that, if slaves labour well, they should have some remuneration besides their maintenance. The distribution of their tasks he recommends to be regulated according to their respective strength and capabilities, and their flogging (contrary to our more enlightened notions in the British army) reasonable and gentle. He proceeds next to discuss the nature of true economy in the accumulation of wealth. A wise man he recommends to divide his property so as to be derivable from different sources, in order to prevent the untoward consequences of any sudden accident involving him in inextricable ruin. Speaking of the office of a steward, he distinguishes between two several kinds of agencies; one he calls the 'Attic,' and the other the 'Persian.' The former he severely condemns for leaving the factor at his entire discretion in the matter of purchase and sale. The Persian stewardship has his unqualified approval, as requiring the eye of the principal over all the transactions of his agent; these functionaries, it would seem, being in classic times pretty much what they are in our own. Anticipating the maxim of Lord Chesterfield about taking care of the pence, he insists largely on the prudence of economising in small matters; and we are told, with all due philosophic gravity, that it is unworthy of a wise man to rise earlier, or go to bed later than his slaves, adding the prudential caution, that he ought never to be without a dog at his door during the night. In another place, treating of the proper use of riches, he advances a position which the world, I rather think, might be less disposed to close with, than with some of those which have been mentioned. A wise man (he strictly confines himself to the wise) ought always, he says, to be a poor man, and it is his duty to indulge a cynical contempt for all wealth beyond what is required for his immediate necessities. Now, this hypocrite,

from the allusions to him in Horace and Cicero, we know, was himself among the most notorious raketells of his day—one of the most sensual in the sty of Epicurus. Lastly, he expatiates on the inestimable benefit of having a friend, though he candidly admits that the said friend is sometimes liable to become a bore—*σευχάδιος φίλος*. Such is the precious stuff of which the works of this renowned writer (and he is the choicest game that has been yet started) is manufactured, and every one of these profound prepositions is smothered under mountains of verbiage. To account for his exhaustive style, these observations of Philodemus are supposed, by his apologists, to have been delivered in the form of a lecture to his disciples; and that, as his principles of economy were diametrically opposed to those of the stoics, he may have considered it necessary to anticipate all his adversaries' possible, as well as probable, cavils. None of the stuff of these manuscripts has been translated into any modern language, a favour for which the world is indebted to a resolution passed by the Herculean academy. There is a treatise, by the same author, on music. It is of a purely moral character, and gives no hint at all on its principles as an art; the whole is a laboured anathema against the enervating influence of soft sounds, and intended to confute the reasonings of one Diogenes of Seleucia, who had written much on its effects in humanising the passions. Philodemus considers it purely a sensual affair, with the single exception of one description of harmony, consisting of those manly, severe, and sublime strains which raise the affections to the Gods. That, in some places, the text is not very faithfully restored by the interpreter, is evident from the fact, that the words introduced, though they make perfectly good sense, often overrun or fall short of the *lacuna*, which ought to warn us against placing too implicit faith in any restorations, especially where the hiatus are considerable, and even where the admirable connexion with the context would seem almost to insure fidelity. \*

"One of the restorers complained to me, that, 'although the originals, together with the restored matter and the annotations, have been regularly transmitted to the British Museum, yet that we never publish more than the naked text. When the restorations accompany the text, the annotations,' he said, 'become necessary to vindicate the licenses of the interpreter.' The great objection urged against restoration is its liability to mislead; but the publication of the very errors of the restorer is not without its use, as a means of suggesting more successful attempts. The difficulties in the interpretation are often fearful; indeed, that in many places any sense can be made of the author at all seems next to a miracle, while you have often for a quarter or half a column together, only here and there a scattered syllable, or even a single letter, to guide the inferences which are to fill up the blanks. The substituted words, in order to give verisimilitude of fidelity to the restored portions, must, of course, be made accurately to fit in with the spaces of the lacunae; and, to increase the puzzle, the idiom of the language must be kept to, and the very style, and manner, and spirit of the author strictly followed. Now, let us only reflect what an undertaking this would be in bringing to light any material portions of so mutilated a work in our mother tongue. I own that the notes of the interpreter have always appeared to me to contain by far the most entertaining part of the volumes which they have printed on this subject; and support

the sense of the author by a variety of citations, authorities, apposite passages, and analogies, which exhibit a familiarity with classical learning that is truly astonishing: but the restorer has committed a mistake in supposing that our museum has been guilty of any omission such as he alludes to. None of the Herculean manuscripts transmitted to this institution ever see the light under its sanction or authority; every portion of those manuscripts which have issued from our press is published by private individuals, purely on their own responsibility."

## MISCELLANEOUS.

*Principles of Homoeopathy*. By P. Curie, M.D. 8vo. pp. 195. London, 1837. Hurst.

*Homoeopathy briefly examined in a Letter to Sir Henry Hallford*. By a Licentiate. Pp. 66. London, 1837. Highley.

IN the first of these works, Dr. Curie pleads the cause of Homoeopathy with an earnestness which attests the sincerity of his own conviction of its beneficial character, and invites and challenges investigation with all the zeal of a firm believer. But, perhaps, the most direct object he has had in view, has been to pave the way for the foundation of a Homoeopathic hospital, which, we are told, is now in contemplation, and the first expense to be borne by a gentleman of great wealth in the commercial world, who has become a warm convert to the doctrines of Hahnemann, in consequence of ascribing his own cure, when in a desperate state of health, to the remedies prescribed to him upon that system. The second publication keenly and vigorously impugns the new doctrine as gross quackery, and inconsistent with itself as well as with every intelligible principle of pathology. We shall not interfere between the doctors; and have only to say that the benevolent feeling of the individual who desires to extend his own real or supposed blessing to the rest of the human race, can admit of no mistake.

*Transactions of the Royal Society of Literature*, Vol. III. Part I. 4to. pp. 285. London, 1837. Murray.

THIS Part does honour to the Society, and illustrates many subjects of high literary, classical, and antiquarian interest. All the papers, however, having been reported upon in the *Literary Gazette*, at the time they were read, we shall only state that the engravings add greatly to the value of several of them, and that they are well worthy of the attention of the learned world in their complete form.

*The British Cyclopædia of Natural History; combining a Scientific Classification of Animals, Plants, and Minerals; with a Popular View of their Habits, Economy, and Structures*. Arranged by C. Partington. 3 vols. 8vo. London, 1837. Orr and Smith.

THIS cheap publication contains a vast mass of useful information; and is, indeed, a complete vade-mecum of natural history. It is not a compilation, but a mature and diligent production, written from original sources, and bringing down to the present day the state of the science to which it relates. Altogether, we must accord to its author the verdict he claims, viz. that it is a work highly valuable—1st, as a book of reference; 2d, as a book of instruction; and 3d, as a book of pleasant reading.

*Lardner's Cabinet Cyclopædia, XCIII.: Biography*, Vol. II. London, 1837. Longman and Co.

THIS volume is chiefly compilation, and consists of lives of Shakespeare, Jonson, Beaumont

and Fletcher, Massinger, Ford, Webster, and some (ten) of the minor dramatic writers, their contemporaries. The quotations from their works are copious, and the whole, as a volume of miscellaneous reading, very agreeable. There is much selected and brought together, which extends over many old and large publications.

*Eighteen Maxims of Neatness and Order*, &c. By Theresa Tidy. Pp. 41.—*Selection of Fables from Florian*, &c. Translated and versified. By the Same. Pp. 49. London, 1837. Hatchards.

A RUN through some twenty editions, shews how justly the first of these little productions has been estimated by the young ladies to whom it is particularly addressed. The maxims are, indeed, very sound and good; and an observance of them must tend greatly, not only to the ease of the individual practising them, but to the comfort of the household of which she is a member. We give one sample:

"Never keep a professed receptacle for litter, which often degenerates into absolute rubbish, and never trust to a day of setting to rights: what is kept in its proper place never needs that trouble."

The second is a companion worthy of the association; the fables being well selected for their morals, and prettily turned in their versification.

*Biographical Memoirs of Lieut. Henry Miles, of the 1st Royal Scots Regiment, and of Lieut. Thomas Shore, of the 14th Regiment of Foot*. By Sir David Erskine, of Dryburgh Abbey, late Captain of the Corps of Gentlemen Cadets, Royal Military College, Sandhurst, &c. &c. London, 1837.

AN elegant little volume, printed for private circulation, but worthy of notice, inasmuch as it contains the memoirs of two gallant soldiers, who were well known in the army; both of whom lost their lives in the service of their country. The book, which is ably written by Sir David Erskine, is dedicated to the memory of the illustrious father of our present queen, the warm-hearted Duke of Kent and Strathern. *Last Lecture of the Season, delivered at the Literary and Scientific Institution at Staines*. By the Rev. R. Jones, D.D. Pp. 32.

WE notice this excellent discourse, because, in the small village of Staines, it shews what might and ought to be done in every town in the empire. The lecturer, like ourselves, is a zealous friend to literary institutions; and sure we are, that, were there five or ten thousand of them throughout the country, conducted as this appears to be, there would soon be small occasion for the outcry, "Educate the people."

*Observations upon Parliamentary Pledges by Candidates to their Constituents*. By C. Thomson, Esq., Barrister-at-Law. Pp. 40. London, 1837. Booth.

A VERY astute, able, and convincing pamphlet, on a subject of high political importance. No man of common sense, after reading it, can think otherwise than that pledges are not only inconsistent with the constitution, but alike subversive of the character of a representative, and of the interests of constituents and of the country.

"A few Observations on the Russian Fleet in the Baltic," is the name of a twelve-page pamphlet (Ridgways), in which the writer, in reply to some remarks on a publication by Commander W. H. Crauford, R.N., offers some very temperate and sensible observations on the naval force of Russia; and, from its state, the general finances of the country, and the high moral character of the emperor, shews that Britain has little or nothing to apprehend from that quarter.

There is also just published, in a cheap form, the Rev. Dr. Croly's Address to the London Conservative Meeting, to which is appended a very startling illustration of Roman Catholic pledges and oaths, with their forebodings

and breaches; from which, and from a historical retrospect, the able and learned writer contends that England, during two hundred years, has flourished whenever Protestantism prevailed, and sunk at home and abroad when Popery obtained the ascendancy.

#### ARTS AND SCIENCES.

*Notes from a Notice (of some time past) of the Journey of M. de Humboldt in Siberia, and Researches of Mr. Ehrenberg on the Organisation, and the Geographical Distribution of the Infusoria and Northern Asia.*

"THE journey," says M. de Humboldt's report, "which Mr. Ehrenberg, Gustave Rose, and myself accomplished, under the auspices of the Emperor of Russia, to the mines of the Ural and of the Altai, to the frontiers of Chinese Dzungaria, and to the Caspian Sea, has had in view a sufficient variety of objects to entitle the results to be given in memoirs and in particular works. We possess geological collections, made by ourselves, much more complete than any that had hitherto been brought from that part of European Asia. Mr. Rose has arranged them, in the museum of Berlin, by the side of the geognostic collections from Mexico, Quito, Southern Brazil, the Canary Islands, and different parts of Europe. I am occupied in concentrating the principal results of our labours, in a physical table of the countries we have traversed, a work which is about to appear, under the title of 'Geognostical, Mathematical, and Astronomical Observations.' Mr. Ehrenberg, whose former travels in Nubia, Dongola, and Abyssinia, had offered some very fertile means of comparisons and new views, will treat, in a separate volume, of the geographical relations of the vegetable kingdom between the Wolga, the Irtyche, and the Obi, between the north of the Ural and the steppe of the Kirghese.

"We will combine zoological descriptions, more especially those of fresh-water shells of insects and fish which abound in the great rivers, and in the Caspian Sea. I shall have the honour to communicate to the Academy the extract of a memoir, which is not yet printed, and in which Mr. Ehrenberg, after having characterised the variety of the great royal tiger of India, which shews itself to the north of the great Cordillera of the Celestial mountains (Tcheanchan), even to the north of Tarbagatai, and of the region of Diophtases, exposes the difference of the *Felis pardus* of Cuvier, of the *Felis chalybeata* of Hermann, which is the *Felis pardus* of Tamminch, and of the *Felis irbis* (long-haired panther), which Pallas has confounded with the *Felis pardus* of Africa, and of which we obtained a fine skin at Semipalatinsk, on the borders of the Irtyche. Mr. Rose has been successful in discovering sulphuretted tin in the Southern Ural, or Bachtseyre, and a combination of silver and of tellurium in a mineral of Sawodinsk, near the Altai. The existence of tin, and of tellurium, in Asiatic Russia, was, before our journey, as unknown as the existence of diamonds in European Russia.

"Mr. Rose, whose exactness in chemical analysis is well known, is occupied at this moment in a very extended work on the gold obtained from washing, and on the gold obtained from veins which are not yet destroyed, as well as on the proportions in which gold is mingled with silver in Siberia, the produce of which metal, at this moment, exceeds 6000 kilogrammes. There scarcely exists a country in the world in which the rocks and veins present a greater variety of minerals, equally remarkable for their beauty and for their chemical composition.

"The number of species of *infusoria* observed between the Caspian Sea, the Ural, and the Altai, has been 113, amongst which eight constitute new genera. Mr. Ehrenberg has succeeded, by feeding these transparent and gelatinous beings, in discovering the extreme complication of their organs, in colouring their mouths, their stomachs, the extremity of their alimentary canals, to paint them, if we may so express ourselves, interiorly in blue and red. In glancing over the eight plates drawn by Mr. Ehrenberg, we see at once the surprising complication of these beings, of which several are not more than 1-9000th part of a line (1-12th of an inch) in length. The author made use of a microscope by Chevallier, and generally of a power of 800 times the size. He gives the results of ten years of observations, which are so much the more sure, as the anatomy of the *mollusca* of the Red Sea had accustomed him to the use of microscopes and micrometers.

"The smallest *infusoria* which have been considered as the most simple, have all a mouth and organs of nutrition, and sometimes from thirty to forty stomachs. They all seize their prey, and live upon solid substances. In the *Monas termo*, which is only 1-1500th of a line in length, four stomachs, a mouth, and hairs surrounding that mouth, are visible. The *Verticella leucophrys* (*Paramacium*) have a more complex organisation. The number of eyes varies in the *Rotifera*, in the genera *Englena* and *Eosphora*; but what will most attract the attention of naturalists who are interested in microscopical anatomy, is the complication of the muscular and nervous system, the mouth, provided with cartilaginous teeth, the organs of nutrition and of generation of the *Hydatina senta* (*Verticella senta*).

"Mr. Ehrenberg discusses the genera which had been established on other principles; and he finds that the animals of the same species have been in the different stages of growth, and, according as they had had food or not, had been classed under different genera. Mr. Ehrenberg has frequently seen *infusoria* issue from eggs, and no direct observation led him to admit a spontaneous generation, nor an agglomeration of *infusoria* to form the rudiments of vegetables and of animals. He thinks that all infusory animals change their situation, and seek their food solitarily. Out of the 113 species observed and described during the course of the journey, thirty-one species belong to Europe, and eighty-two to Asia; two-thirds are also observed in central Europe. The *Kalpoda cucullus* appears to be the species the most generally spread. Mr. Ehrenberg found it from Mount Sinai to Dongola, near Berlin, at St. Petersburg, on the north of the Ural, and at the foot of the Altai. In the mines of Siberia, three species of monades are met with; and the *Kalpoda cucullus*, at fifty-six fathoms in depth, in places entirely deprived of light. The *infusoria*, according to their structure, form the natural class of animals which inhabit the sea and the continent. Some species are met with which, like cryptogamic plants, are identical under the most various zones. They appear to vary more from climate,—from Europe to Dongola, than from east to west,—from Berlin to Altai.

"The saline waters of the Asiatic steppes do not present any very particular forms. Dew, examined with the greatest care in the midst of the African deserts, offered no infusory animals, whilst eight different species were met with in the walls of the oasis of Jupiter Ammon.

"The researches on infusory animals made during the last journey of De Humboldt, extended for more than 50° of longitude, and 14° of latitude."

#### BOTANICAL SOCIETY.

AUGUST 3d. John Reynolds, Esq. in the chair.—Donations of some of the rare plants of Kent were announced, presented by Mr. G. E. Dennes, from whom also a paper was read, being a translation of the Report made to the French Academy of Sciences by MM. Mirbel, Dutrochet, and Auguste Saint Hilaire, reporting on the Memoir relative to the structure and development of the generating organs of a species of *Marsilea*, found by M. Esprit Fabre about the environs of Agde.—An interesting discussion ensued, after which the meeting adjourned.

#### HORTICULTURAL SOCIETY.

THE following is the address presented to Her Majesty by the Duke of Devonshire, on behalf of the Horticultural Society, soliciting the royal patronage.

*To the Queen's most Excellent Majesty.*

Most gracious Sovereign,—We, your Majesty's most dutiful and loyal subjects, the President, Vice-Presidents, and Council of the Horticultural Society of London, beg leave most respectfully to approach your royal presence, and, in the name of the Society, to offer our sincere condolence on the decease of his late Majesty our gracious Patron. Yet, whilst in common with all classes of your Majesty's subjects, we deplore the loss which the nation has sustained by the removal of so munificent a patron of science, we are not the less sensible of the gratitude we owe Divine Providence for having blessed us, in the person of your Majesty, with a successor whose accomplished mind and enlightened views are the theme of universal applause, and eminently calculated to adorn the throne of a kingdom now justly celebrated above all others for the splendour of its gardens, and the devotedness of its inhabitants to the peaceful occupations of Horticulture. While we humbly presume to take credit to our Society for the improvement in public feeling which has taken place in this respect, we gratefully acknowledge the important advantage which we have derived from the royal countenance, and as the love of natural beauty and the cultivation of the Fine Arts are especially innate in the female breast, we confidently anticipate that a pursuit which is so completely identified with the advance of civilisation, will flourish with renewed vigour under the fostering auspices of your Majesty. We therefore beg to offer our most heartfelt congratulations on your Majesty's accession to the throne of your ancestors, and venture humbly to solicit your Majesty's renewal of that patronage which has been accorded to this Society by your royal predecessors since the period of its Institution, and earnestly pray that your Majesty's reign may become illustrious by the general cultivation of all those arts of peace which so eminently conduce to the wealth and beauty of the country, and the enjoyments of all classes of your Majesty's subjects.

Given under our corporate seal at the Horticultural Society's Rooms, Regent Street, London, this 22d day of July, 1837.

Signed, on behalf of the Council,

DEVONSHIRE.

## LITERARY AND LEARNED.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

*Monday.*—Entomological, 8 P.M.; Marylebone Literary, 8½ P.M. (Mr. A. Parsey, on Perspective and Vision, and on the 14th.)

*Tuesday.*—Zoological, 3 P.M.

## FINE ARTS.

## NEW PUBLICATIONS.

*Portraits and Memoirs of the most eminent living Political Reformers.* Part I. Saunders, jun.

RILEY's "Conservative Statesmen" has probably given rise to the present publication. It is consoling and gratifying thus to see the encouragement of literature and the arts springing from a soil apparently so ungenial as party politics. This is to us forbidden ground; but, surely, it cannot be forbidden to any man who loves his country, to express his earnest hope, that the ultimate result of the fierce contest of antagonist principles now going on around us, may be the establishment of some enlightened and powerful government, under which the empire may enjoy a long and uninterrupted period of tranquillity and happiness.

The portraits in the first part of this new work are those of "Lord John Russell," after a bust by P. Hollings; "Charles Buller, Esq." from a painting by B. E. Duppa, Esq.; and "John Arthur Roebuck, Esq." from a painting by J. Watts; engraved in stipple, by W. Koll, E. Serven, and H. Robinson. The writer of the Memoirs (only two of which, however, are completed) is evidently a very able man; and, to say the least of him, no lukewarm reformer.

*The Silent Angel.* J. Bendixen, fecit.

Ackermann and Co.

A RICH and masterly specimen of lithographic power.

## SKETCHES.

## ATHENS.

April 1st, 1837.

THERE are few persons out of Greece, who are acquainted with the present state of the city of Athens. It is generally described according to the accounts which were published before it became the capital of the kingdom; and then it was certainly in a deplorable condition. It presented to the eye of the beholder only a mass of ruins, and you could perceive scarcely more than about twenty tolerably solid and regularly built houses. Accordingly, when the seat of government was transferred to Athens, it was with the greatest difficulty that some buildings could be fitted up for the members of the regency, the diplomatic body, the secretaries of state, and their offices. But the appearance of Athens has, since that time, been materially changed. On the site of most of the ruins, buildings have been erected; and they are executed in entire conformity with the plan of Athens. Several streets have been opened, levelled, and widened. The principal are, Hermes Street, Æolus Street, and Minerva Street. Hermes Street divides the city into two equal parts, parallel with the Acropolis. Æolus Street crosses Hermes Street, and extends to the Temple of Æolus, where a square of the same name is now being laid out. Minerva Street, the broadest of all, runs nearly in the same direction as Æolus Street. Solid and handsome buildings have already been erected on both sides of Hermes Street, in its whole length. There are not so many buildings in Æolus and Minerva Streets, but there is every appearance that they will be completed within

three years. Hermes Street is already levelled, and, as well as many others, will soon be paved. Half of the old Agora Street is already paved. Hermes Street, and Æolus Street, divide the city of Athens into four quarters. Of the streets of the second class, the principal are, Metagitnia, Palace, Agora, and Adrian Streets.

The government has neglected nothing to secure the health of the inhabitants of the capital. Large sums have been expended in repairing and cleansing the ancient sewers, which convey the water and filth of the city into the great canal, which divides the city into two parts. Besides this great canal, the following are worthy of notice; namely, the canal which runs through the whole of Metagitnia Street; another which runs from the square Sclaropazaron, through Adrian Street; and, lastly, the canal of Palace and St. Mark's Streets. The object of securing the health of the inhabitants would not, however, have been attained, had not measures been at the same time adopted for draining the neighbouring marshes. The overflowings of the Cephissus, formed in the grove of Olives, and in the plain between the Piræus and Athens, several pools of stagnant water, the exhalations of which were extremely noxious. The government has had them all drained, the bed of the Cephissus corrected, and canals made to carry off the waters into the sea. These operations have, besides, restored a not inconsiderable tract of land to agriculture. There are in Athens twenty public wells; and, besides this, the public buildings, and many private houses, have water, with which they are supplied out of the general aqueduct, on very moderate terms. This water, which is distributed in the city, comes from two sources; one at the foot of the Pentelikon, called the Fountain of St. Demetrius, which is connected with the city by an admirable canal, of the time of the Emperor Adrian, which is in perfect preservation, and is ten feet broad and twelve feet high; the other source is that of Tachymachos, at the foot of Mount Hymettus. There are in Athens a civil and a military hospital: the latter is remarkable for its solidity and handsome style of architecture, and is on a very healthy spot: the building of the civil hospital is beginning. Since the removal of the government to Athens, several other public buildings have been erected; such as the barracks, the artillery barracks, the mint, and the royal printing office: the last is an establishment that does honour to the government; it has nine typographic and seven lithographic presses, and above seventy workmen are employed in it. In a short time, the building of the University will commence: a church of the Anatolian dogma will be built at the same time. The palace of the king, the building of which began a year ago, will not be inferior to the edifices which formerly adorned Greece; the situation is equally beautiful and salubrious.

There are in Athens thirteen churches in which divine service is performed; twelve belong to the Eastern, and one to the Western Church. There are two cemeteries, one belonging to the commune, the other to the Protestants. What was formerly the Turkish school has been temporarily fitted up as a prison. Athens is also fortunate with respect to establishments for education. It is the seat of the university; of a gymnasium, in which the government has founded thirty exhibitions for poor students; of a Hellenic school, a city school, and the seminary for school masters. Besides these, there are several schools supported by private persons: for instance, the American Philhellenes; the girls' school of

Madame Polmerange, which has long been established at Napoli, was lately removed to Athens. In this school fourteen girls are clothed, maintained, and educated, at the expense of the government.

Manufactures are still very backward in Athens; and the same is the case in all the other towns in Greece: foreigners have, however, founded some establishments which promise well. The revenues of Athens have considerably improved; according to the statement of 1836, they had risen to nearly 120,000 drachms. They arise from the rent of buildings belonging to the town, from the excise, &c. We may further observe that, when a census of the population was made for the first time in 1833, it amounted to scarcely 7000 souls, whereas it is now 15,000, besides the military.

Athens stands on a spot which is rich in remains of antiquity; but, as the government has not yet been able to grant any considerable sum to make excavations in places where there is reason to hope that numerous antiquities might be found, the acquisitions hitherto made are limited to accidental discoveries in laying the foundations of new buildings. In digging the foundations of a house which Dr. Treiber and Mr. Origone lately built in the vicinity of the Temple of Theseus, the remains of a wall were found, and a part of the cornice of a column of the Doric order. M. Pataki, superintendent of the antiquities, caused further excavations to be made, with the permission of the owners; and a head of good workmanship was found, that, from the manner in which the hair is arranged, seems to be of the time of the dominion of the Romans. Thet a pedestal was found, with three words of an inscription. On the same day, a female head, of exquisite workmanship, was found; and another head, which seems to have belonged to a statue of Nerva. To judge by the direction of the wall, it probably belonged to a monument in honour of a Roman emperor; for, on a close examination of the workmanship of the cornice and the three heads, we may take it for granted that they are of a later date than the classic era.

## DRAMA.

*Haymarket.*—Since our last notice, a new drama, *The Young King*, has been added to the entertainments of this pleasant little theatre. The chief interest of the plot turns upon the discovery and counteraction by *Aloyse* (Miss Taylor), of a plan for the murder of the *Duke of Anjou* (Mrs. Nesbitt). The piece is in two acts, the first abounding in genuine fun. Faren, as a ridiculous old *maitre*, a regular twaddle, is perfectly absurd, and is greeted nightly by peals of laughter: in fact, he is irresistible. Mrs. Glover is also rich in the part of a warm-hearted, honest widow. So comic is the whole of the first scene between these two clever people, that it is some time before the audience can compose themselves for the more serious parts of the drama. Miss Taylor seems to have quite laid aside the affectation which, for a season or two, so disguised her, and appears, in the part allotted to her in this piece, the same agreeable *naïve* actress she was during her first London seasons. Mrs. Nesbitt looks handsome in her male attire, and plays the young gallant as boldly as need be. Collins, as the necessary lover, is also good, and sings a couple of songs very sweetly. Strickland and Haines have slight characters. Perhaps the first act promises too much, as the shortness of the piece does not allow of the full development of the characters; still, it is a pleasant light affair, and will, we

have no doubt, "hide its time" on these boards. We hope there will be no change in the performers of the several parts, as though, perhaps rather slight, none could be spared without great injury to the piece. We see Macready concludes his engagement to-night, in his own part of *Melantius*, in the *Bridal*. We have said "his own part," and it is a tragic one; but, even with the apathy there is about the stage (an apathy soon, we trust, to be changed for interest, when the *true* drama supersedes the rank charlatanism which has debased it), we are astonished at the absence of remark in the general press on the admirable manner in which he has been playing some of the best characters in genteel comedy. Power commences on Monday night. One attraction succeeding another—this is certainly the right, and, we hope, the advantageous manner of managing a theatre. A good play, and lively afterpiece, make the nightly entertainment at the Haymarket. The full house shews the playgoing public are pleased. We can only say, "go on and prosper."

**English Opera House.**—The *Mountain Sylph* has this week succeeded as the opening opera of the evening, and been extremely well sustained. Frazer and Durnset are the *rivals*, and Seguin, the *Wizard*; Miss Romer, the *Sylph*; Miss Pincott, *Etheria*; Mrs. Emden, *Dame Goullie*; and Miss Poole, her daughter, *Jessie*, which she plays delightfully. Peake's farce improves on every repetition, and so does Mr. Compton, in the part of *Frolick*. The house is, nevertheless, very thinly attended. A new opera, by John Barnett, is announced.

#### VARIETIES.

**Horticulture.**—At the last meeting of the Horticultural Society, a paper was read, from which it appeared that the red spider, and several other insects injurious to plants, could be destroyed by the simple process of crushing a bushel or two of laurel leaves, and shutting the plants up with them during the night, in a close place or frame. The prussic acid, it was stated, put an end to all the invaders.

**The late Balloon Accident.**—Since our last, the newspapers have teemed with various and somewhat conflicting opinions, respecting the nature of this calamity; but, in spite of the vamping and disguise it has undergone before the coroner and elsewhere, there seems to be only one opinion on the subject; namely, that, from the fractured condition of the parachute before the ascent, even if there had been a chance when the hoop was unbroken, there was no possibility, after its mishaps in the garden, of the poor victim's escape with life. The nonsense attempted to be made out about his having induced the fatal result by catching hold of a rope, is too obviously absurd to merit refutation; as is the still more obvious nonsense about the sacrifices ready to be made by the speculators, which it is clear, from the terms of poor Cocking's agreement, was to have been *nothing* for the first ascent. His temptation, in future promises, led him to his fate.

**Aerostation.**—The Bristol journals state, that an architect at Clifton has so far improved upon aerostation as to be able to construct a balloon, and, by the aid of horizontal propulsion, send it through the air, at the rate of fifty or sixty miles an hour. The machine is said to be very large, the impulsive motion to be communicated from the car, and the aeronaut to have the power of direction in himself.

—*Nous verrons.*

**The Colosseum.**—Appropriate and amusing

novelties have, since our last notice, increased the evening attractions of the Colosseum; and, in spite of politics to thin the town, and indifferent weather, the entertainments have been fully attended.

**Weather - Wisdom.**—Pretty well the last seven days, except that the fair and warm was a hurricane, on Saturday. Again, August 5. "Changes. Wind and thunder about the 6th and 7th. The first quarter, on the 9th, betokens high winds and thunder storms. The aspect of Venus to Saturn will bring rain about the 11th and 12th: bad harvest weather."—*Morrison*.

**H. B.'s Caricatures.**—Election times are always prolific of caricatures; and the talent of H. B. was pretty certain not to be idle on such an occasion. We have, accordingly, four novelties from his pencil and fertile fancy before us. No. 492. "Reorganisation of the Legion." Sir George Murray drilling a squad of the Spanish Legion, such ragged and forlorn fellows as paraded the streets during the late Westminster election. 493. "Grinding Young:" admirable portraits of Burdett, first as a crippled, gouty invalid mounting a ladder, standing on the ground "Westminster," into the mill which John Bull is turning; and next, walking off briskly on the other side, on the ground "North Wilts," quite a young and lively fox-hunter. 494. "The newest Universal Medicines," a happy pictorial version of Lord Durham's famous letter. The noble lord is seated as an apothecary, at table, compounding a drug, and saying,—"Now to extinguish that quack, Morrison!" His vials are labelled, "Conservative Opiate," "Radical Alcohol," "Whig Alkali," &c. &c.; and there are boxes made up for the Times, Standard, Morning Chronicle, and Globe; for D. O'Connell, and the Dublin Trades' Union Association; as well as for the Bishop of Exeter. In short, there is medicine for all parties, of all kinds and colours, intending to represent the letter of such perplexing import and dubious meaning, or no meaning. The idea is very original, and the execution equally clever. 495 is another of the best hits of this long, but always striking and entertaining, series of political histories. It is a scene from *As you like it*. Mr. Roebuck as the wounded, with an arrow, marked "Bath," sticking in his haunch, the rest of the herd in the distance trotting off; and Lord J. Russell, as the melancholy Jacques, lying in the shade and moralising on the event.

**Satisfactory Reference.**—A small wooden dog-kennel appears on a wall in Lambeth, with, chalked upon it, "To be sold. Inquire within." Where there is neither cat, dog, nor owner.

**Brains.**—The brain of man being taken in the proportion to his body is stated, by several writers, as 1 to 30 (it might more correctly be as 1 to 40), it is curious to observe that the proportions are in moles as 1 to 36; in the Ouistiti monkey, 1 to 24; in the rat, 1 to 76; in the mouse, 1 to 43; in the field-mouse, 1 to 31; in the elephant, 1 to 500; in the horse, 1 to 400; in the sparrow and cock, 1 to 25; in the goose, 1 to 360; and in the Canary, only 1 to 14.

**White Elephant?**—The lion of the day in Madras, at the present moment, is a white elephant, which has been sent from Coimbatore by government, in charge of a wet-nurse, *en route* to Ava, to be offered as a present by the honourable company to the king of that country. It appears that when the news got abroad, that Coimbatore had had the honour of giving birth to such a *rara avis*, the intelligence was conveyed with all possible expedition to Ava, where

it caused such a commotion as has been seldom witnessed; and the prime minister, and all the chief officers of state, were despatched to Rangoon to await his arrival. There they are now, for any thing that we know, and the white elephant is in Mr. Waller's stables, looking so much like a black elephant, that none but a connoisseur could tell the difference. We must do the white elephant the justice to state, however, that his skin is not quite black, and the hair, on various parts of his body, is gray or whitish. His eyes are blood-red, which is the distinguishing mark of an Albino in all animals; and it is supposed that his skin will become whiter as he grows older. — *Madras Herald, Feb. 8.*

#### LITERARY NOVELTIES.

Mr. Pote announces the Concordance of Manetho with the Greek Historians, as the second part of his forthcoming work, "The Shepherd Kings of Egypt."

#### LIST OF NEW BOOKS.

*Lives of the most Eminent and Scientific Men of Great Britain*, Vol. II. 8cap. forming Vol. XCIII. of Lardner's *Cyclopædia*, 6s.—*The Practice of Cookery, Pastry, and Confectionery*, in three parts, by Mrs. Fraser, with Plates, 12mo. 4s.—*Early Lessons for Children*, on Moral and Religious Duties, illustrated by Christian Examples, 18mo. 2s. 6d.—*Lessons on Form*, by C. Reiner, 12mo. 6s. (Pestalozzian System).—*The Basque Provinces*, by E. B. Stephens, Esq. 2 vols. post 8vo. 11. 1s.—*The History of Philosophy*, by W. Enfield, LL.D. new edition, 8vo. 16s.—*Remarks on Dr. Wiseman's Lectures*, by Philalethes Cantabrigiensis, 12mo. 4s.—*Fuller's Memoirs of Rev. S. Pearce*, with Additions by W. H. Pearce, 12mo. 4s.—*The Golden Pot of Manna*, by J. Burns, Vol. I. 12mo. 3s. 6d.—*An Act to amend the Law of Wills*, 1 Victoria, by R. F. Fisher, 12mo. 2s. 6d.—*Scripture Testimonies to the Messiah*, by S. P. Smith, D.D. 3d edition, 3 vols. 8vo. 11. 16s.—*Annual Register*, Vol. LXXVIII. for 1836, 8vo. 16s.—*Lectures on European Civilisation*, by W. Guizot; translated by Mrs. P. M. Beckwith, post 8vo. 10s. 6d.—*Hints to Parents who intend to bring up their Sons to the Medical Profession*, by W. H. Denham, 18mo. 3s. 6d.—*Dr. J. Wardrop on Diseases of the Heart*, Part I. 8vo. 4s. 6d.—*Elements of Physics*, by T. Webster, M.A. 12mo. 9s.—*Vicat's Treatise on Mortars and Cements*, translated by Captain Smith, 8vo. 10s. 6d.

#### TO CORRESPONDENTS.

THE ferment of politics has caused a perfect stagnation in publishing: hardly a volume of any kind has appeared during the last fortnight. In this scarcity, which will, of course, be made up by consequent activity, we are gratified in having it in our power to lay before our readers the paper with which our present number begins. The country, which it so well describes, is of great and growing interest; and, in order to bring all the writer's statements clearly before our readers, we shall, in our next, give a well-engraved map (not yet ready), as originally laid down and defined by Capt. Mackenzie, from his own observation.

M. K.'s pretty lines and offer are declined. We believe there is no periodical of any kind which thinks of "a consideration" for contributions of this class.

## ADVERTISEMENT,

Connected with Literature and the Arts.

IV.

**Stories for Children, from the History**

of England.

11th edition, 18mo. 2s. 6d.

**Gospel Stories for Children.**

A new edition, 18mo. 2s. 6d.

**Progressive Geography.**

**VALPY'S GREEK TESTAMENT.**

4th edition, with Parallel References, and other Improvements, 3 vols. 8vo. 2l. 5s. boards.

**GREEK TESTAMENT,  
WITH ENGLISH NOTES,**

Critical, Philological, and Explanatory, from the most eminent Critics and Interpreters: with parallel passages from the Classics, and with references to Viger for Idioms, and Bos for Ellipses. To which is prefixed, a short Treatise on the Doctrine of the Greek Article, according to Bishop Middleton, Mr. Granville Sharp, &c., briefly and compendiously explained, as applicable to the criticism of the New Testament. The various Readings are recorded under the text. Greek and English Indexes are added.

By the Rev. E. VALPY, B.D.

Two Plates are added, illustrative of the Travels of the Apostles, and a Map of Judea, and a Plan of the City and Temple of Jerusalem.

This work is intended for Students in Divinity, as well as the Library.

"This Greek Testament is the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish for only one edition."—*Horne's Introduction to the Bible.*

"Valpy's Greek Testament" is to be preferred to either Dr. Burton's or Dr. Bloomfield's."—*Christian Guardian.*

Also, 2d edition, 1 vol. 8vo. 1l. 1s.

**GREEK SEPTUAGINT,  
WITH THE APOCRYPHA.**

Edited by VALPY, from Bos and Holmes.

This edition is handsomely printed in one volume, 8vo. hot-pressed. For Use in Churches as well as the Library. "This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text) its price is so reasonable as to place it within the reach of almost every one."—*Horne's Introduction.*

This has been printed for Students attending College Chapels and Schools, as it has been long considered one of the most useful expedients for keeping up the knowledge of Greek after the Student has quitted his scholastic duties.

The Septuagint and Testament may be had in 4 volumes.

Printed and published by Valpy; and sold by all Booksellers.

Now ready, in 2 vols. post 8vo. price 1l. 1s. cloth, illustrated by a coloured Map of the Seat of War,

**THE BASQUE PROVINCES;**

Their present Political State, Scenery, and Inhabitants; with Adventures amongst the Carlists and Christians.

By WILLIAM BENNETT, Esq.  
Rivington, St. Paul's Churchyard, and Waterloo Place.

In 8vo. price 7s. 6d. bds.

**A GUIDE to the READING of the  
GREEK TRAGEDIANS;** being a Series of Articles on the Greek Drama, Metrical Rules from Porson and others, Choral Systems, Canons of Criticism, &c. Collected and arranged by the Rev. J. R. MAJOR, M.A.  
Head Master of King's College School, London.  
"This volume is a storehouse of knowledge."—*Editor.*  
Printed and published by Valpy; and sold by all Booksellers.

London: W. Edwards, 18 Ave Maria Lane.

Price 1s. the fourth edition of

**W. STRATFORD'S ENGLISH  
GRAMMAR,** with Exercises and Key, intended for the Use of Schools, &c. From numerous testimonials in favour of the Work, the following is selected.  
"Mr. W. Stratford has published a fourth edition of his Elementary Grammar. We come time ago strongly recommended Mr. Stratford's book to our readers, and particularly to schools. We think the plan a very good one, and, although professedly compiled for the younger classes only, it gives all the rules, with exercises for more advanced pupils."—*Northampton Herald.*

Particularly recommended to the attention of Schoolmasters and French Teachers

**A NEW and CONCISE FRENCH  
GRAMMAR.**

## MR. COLBURN'S NEW PUBLICATIONS.

NOW READY.

MRS. GORE'S NEW NOVEL, in 3 vols. post 8vo.

**STOKESHILL PLACE; OR, THE MAN OF BUSINESS.**

By the Authoress of "Mrs. Armytage," "Mothers and Daughters," &amp;c.

**THE SPAS OF GERMANY.**

By Dr. GRANVILLE, Author of "Travels to St. Petersburg," &amp;c. In 2 vols. 8vo. with Thirty-Eight Illustrations.

"We recommend this work, with its numerous embellishments, to the attention of our tens of thousands of tourists. Dr. Granville has, in these volumes, given us a full description of the principal Spas of Germany—of their medical properties; of the company assembled to try their efficacy; of the modes of travelling to and from them; of the cookery; of the charges; of the country; of the people; and, in short, of all the elements of a continental excursion through foreign lands; with notice more particularly directed to such resorts of health or pleasure."—*Literary Gazette*.

**WANDERINGS IN GREECE.**

By GEORGE COCHRANE, Esq.

Late of Queen's College, Cambridge, Knight of the Royal Military Greek Order of the Saviour, &amp;c.

In 2 vols. 8vo. with Portraits of the King and Queen of Greece, and numerous other Illustrations. 24s. bound.

"The author of these agreeable volumes is a diligent observer, and has had ample opportunities of forming a correct judgment on the present state and future prospects of Greece. His work is equally interesting for its classical reminiscences, and for the view it affords of the actual condition of society, and the physical and political aspect of the country."—*Morning Post*.

**THE CITY OF THE SULTAN;**

Or, Domestic Manners of the Turks.

By MISS PARDOE, Authoress of "Traits and Traditions of Portugal," &amp;c. 2 vols. post 8vo. with numerous Illustrations, 32s. bound.

"These volumes are the work of one who set forth resolute to see, and was not to be daunted by dangers or difficulties. We find her bandying compliments with beys and pashas—presiding at Mussulman dinners—nestling among the cushions of the Tandoor, or partaking of the bath with the Fatimas of a Turkish household, gathering up their prattle, and learning how to manage a 'yashmac' as well as the best of them—mingling, without prejudice, with Jews and Greeks, turning dervishes, and state officers—and even visiting the mosques of the City of the Sultan at midnight, and in disguise. Her experiences are highly curious and interesting, and are most agreeably presented to the public."—*Athenaeum*.

**CAPTAIN MARRYAT'S NEW NOVEL,**

SNARLEY YOW; or, THE DOG FIEND. 3 vols.

"Not inferior to any of Captain Marryat's previous works, 'Peter Simple' alone excepted. It is grotesque and humorous from beginning to end."—*Athenaeum*.

"This is a work in a completely new style, and full of character and spirit it is. The dash of historic character gives great effect to the wild and animated narrative."—*Literary Gazette*.

**TRAVELS IN CIRCASSIA, KRIM TARTARY, &c. IN 1836-7.**

Including a Steam Voyage down the Danube, from Vienna to Constantinople, and round the Coast of the Black Sea.

By EDMUND SPENCER, Esq. Author of "Germany and the Germans."

In 2 volumes 8vo. with Map of the Black Sea, and numerous Illustrations, bound.

"We are delighted with this work, and yet, we do not know whether to say it is more interesting or important."—*Literary Gazette*.

"Mr. Spencer is a sensible, honest traveller, with health, strength, and an enterprising spirit. Circumstances favoured him, and he availed himself of all that offered; and our obligations to him are increased, for the haste he has made to communicate the information he collected to the public."—*Athenaeum*.

**MEMOIRS OF COL. CHARLES SHAW, K.C.T.S.**

Late Brigadier-General Spanish Auxiliary Legion, &amp;c.

Written by HIMSELF.

And comprising a Narrative of the War in Spain and Portugal, from its Commencement in 1831, to the Dissolution of the British Legion, in June 1837.

In 2 vols. 8vo. with Portraits of Admiral Napier and General Evans.

"Colonel Shaw writes as a soldier should write, candidly, fearlessly, and vigorously. Whether considered in a political, military, or social point of view, his volumes deserve to be read with the deepest attention, as tending to throw an entirely new light on a subject hitherto imperfectly understood."—*Sunday Times*.

**CAPTAIN ALEXANDER'S NARRATIVE OF A VOYAGE AMONG THE COLONIES OF WESTERN AFRICA.**

In the Flag-Ship Thalia; and of the Kaffir War of 1836.

In 2 vols. 8vo. with Maps and numerous Plates, by Major C. C. Michell, R.H. 32s. bound.

"A most interesting account of the Colonies of Western Africa. Very little is known of the new settlements on the African frontier; and it is a matter of surprise to us that no work, except Mr. Martin's, has been hitherto published descriptive of the establishment and rapid rise of these acquisitions. The volumes before us contain a great deal of valuable and interesting intelligence, and a very animated description of the proceedings of the British and native forces."—*John Bull*.

**MR. BURKE'S HISTORY OF THE LANDED GENTRY.**

A COMPANION TO THE PEERAGE AND BARONETAGE.

Now in regular course of Monthly publication. To be completed in Sixteen Parts, commencing March 1st. Large paper edition, price 7s. 6d. each Part; small paper, 4s. 6d. each; comprising Accounts of all the Eminent Families in the United Kingdom, and of upwards of 100,000 Individuals connected with them.

Illustrated with the Armorial Bearings of each Family, Portraits, &amp;c.

NEARLY READY.

**UNCLE HORACE.**

By MRS. S. C. HALL,

Authoress of "Traits and Sketches of Irish Character," "The Buccaneer," &amp;c.

Printed by JAMES MOYES, of Brook Green, Hammer-smith, in the County of Middlesex, Printer, at his Printing Office, Number 28 Castle Street, Leicester Square, in the said County; and published by WILLIAM ARMIGER SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, August 5th, 1837.

#### REVIEW OF NEW BOOKS.

*Abstract of Proceedings relative to the Trade and Navigation of the Indus, since the Settlement of the last Treaty respecting that River.* Pp. 50. London, 1837. J. Unwin.

IN a geographical and statistical, and, still more, in a mercantile light, the present is a very important pamphlet; and having in this and our last *Gazettes*, directed attention to subjects of much public interest as connected with the East, we cannot take a fitter opportunity to look further into the same quarter.

Notwithstanding the negotiations of Col. Pottinger, little was done towards the opening of the Indus to British trade, till the end of 1835; but since then some steps have been taken, which bid fair, we trust, to obviate any greater delay in occupying this grand and natural channel to the traffic of central Asia. Lieuts. Carless and Wood, of the Indian navy, have surveyed the mouths of the river; and, besides Lieut. Wood,\* Capt. Burnes not only has explored it, but treated with the Ameers of Sind. Mr. Masson, our resident at Caubul, has made a useful report on the growing trade with Afghanistan; and, from various other sources, the best of information has been obtained.

The "Agra Ukhar," too, of the 11th February, states as follows:—"We noticed in our last the approaching steam navigation of the Ganges and Jumna; a measure which will be most materially facilitated by an important discovery, which, we learn, has just been made, of a bed of coal in the south-eastern corner of the Mirzapore district, near Bidgehur, on the Soane.† This mineral, too, has been found at Hazareebaugh, and presents so few difficulties to being worked, that parties have offered to supply it to government at the very reduced rate of five or six maunds per rupee. Its superiority over Burdwan coal, too, is considerable; and this, combined with its being so accessible, will admit of its being supplied at Dinapoor on much more favourable terms than the Burdwan coal has hitherto been. Here, then, we see one of the most serious obstacles to the establishment of a steam river communication removed; and an abundant supply of an article indispensable in machine labour, and, indeed, in a high state of production, added to the other resources of the country."

"The project (says the pamphlet) for navigating the Indus has, however, owing to the commercial crisis which has lately taken place in England, been suspended for the present. In the meanwhile, the opening afforded by the river for commercial enterprise, is becoming more and more tempting every day. The importance of extending our political and commercial relations with the tribes and states north of the Indus, as far as Caubul and Bokhara, seems to be fully recognised by the government of India; and one of their last acts has been to despatch a mission under Capt.

Burnes, for the purpose of entering into commercial treatises with the rulers of the countries in question. This officer, at the same time, has had placed under his command, engineers and other officers, for the purpose of effecting a scientific survey of the countries he is to pass through, and the government of India have determined upon procuring a perfect survey and map of the Indus throughout the whole course of its navigation. It may be as well to add on this occasion, that one of the objects of Capt. Burnes's mission is to ascertain the practicability of establishing large fairs, like those of Leipsic and Novogorod, on the banks of the Indus, for the purpose of securing to British enterprise a portion of the large and valuable commerce of central Asia, which is now carried on almost exclusively with the latter mart. The position of Mithunkot, on the Indus, is deemed peculiarly favourable for this purpose, as it is only about half as far as Novogorod from Bokhara, through which a large portion of the traders from Cashgar, and the southern and south-eastern portions of Asia, pass to the former place. The project, too, seems feasible enough in other respects; as assemblages, such as are proposed, accord with Asiatic habits of commercial dealing."

After some other remarks, it is added—  
"Hence it appears that scarcely any thing is now wanting to render the Indus the channel of an enormous trade. Situated more advantageously than any other stream for becoming the commercial outlet and inlet to the vast and populous territories on the north and west of the Himalaya mountains, as well as a large tract south of that chain, all it has required to become available for that purpose, has been the protection and superintendence of a good government. These are now afforded; and political events clearly point out the stream as likely to become, at an early day, the advanced post, if not the boundary, of British power in India. The time, therefore, has surely arrived, when a moderate outlay of capital may be staked with advantage, to introduce steam navigation upon such an admirable field, and thus open central Asia more completely to British trade, and enable our manufacturers and merchants to compete throughout that vast tract of country with their rivals, the Russians. All that is required for this purpose at present, is a single steam boat of moderate dimensions, to be employed experimentally, either as a tug or cargo boat; and the first price of such a vessel, it appears by a recent estimate, would be about 4000*l*. From 5000*l*. to 6000*l*., therefore, would secure the object in view; and even if devoted without any prospect of return, does not seem too much to promote a great national object."

The first appendix to this important statement details the particulars of the treaties of 1832 and 4; with the governments of Hyderabad and Khypoor, the tolls and taxes, &c. &c.; and the following is given as a note of the Sind territories:—

"The Ameers possess altogether, on the right bank of the Indus, an extent of territory in length, from the sea to Mithunkote, of five hundred and fifty-two miles, as follows—

From the sea to Ooplanee .....	34 miles.
" Ooplanee to Tattah .....	29 "
" Tattah to Hyderabad .....	72 "
" Hyderabad to Sehwan .....	108 "
" Sehwan to Bukkur .....	174 "
" Bukkur to Mithunkote .....	135 "

On the left bank, the extent is 27 miles less, it being only 180 miles from Bukkur to Subhul-kote, where the dominions of Buhawal Khan commence. The state of the banks of the river are sufficient proof of the discouragement that intercourse up and down the river labours under. They are, in most places, covered down to the very edge of the water with thick jungle and trees, which render tracking not only most difficult, but, now and then, impossible; and the first obvious step for an enlightened government to take would be, to clear away (which might be done at a very small expense) a path, from 20 to 50 paces broad, agreeable to the nature of the soil, along both sides of the river. This simple operation would remove at once one half the natural obstacles to the upwards navigation. The downwards navigation is quite independent of the state of the banks, as all that is required in it is to keep the vessels in the strongest part of the current; which is easily done, by occasionally rowing, or setting a lug sail on a small mast in the forepart of the boat."

Among the manufacturing data it is told that:—

"The better sort of calicoes of Sind are now quite superseded by the manufacture of Great Britain, and the celebrated loonges (silk cloths) of Tattah are only made to order."

The next two appendices are from the able pen of Captain Burnes, and throw more, and important, light upon the navigation of the river, and the merchandise best suited to its traffic as well as the traffic of adjacent countries. Among his observations, the following strike us as being of particular interest:—

"It appears that there is much error abroad, regarding the trade on the Indus. Enterprise will, doubtless, do much to create and improve commerce; but, for the present, it is a trade by the Indus, and not on the Indus. It is, in fact, a transit trade to western and central Asia; a line, however, which ought to supersede that by Sonmeeanee to Candahar, and by Bownugger to Pallee and Upper India. If the mercantile community hope for any increased consumption of British goods in Sind itself, they will be disappointed: the time may come, but, at present, the bulk of the people are miserably poor, and there are, really, no purchasers."

"The whole population may amount to a million. The greater portion of it is movable; the large places are not numerous; Shikarpoor is the first in importance, and has a population of about 25,000, which surpasses that of the modern capital, Hyderabad. Tatta, the ancient metropolis, has about 15,000 souls. The only other places of note are Subjul, Khypoor, Ladhkane, Bukkur (with Roree and Sukker), Selwun, Hala, and Churachee; which latter is a sea-port, and the only one accessible to ships in the country. The inhabitants of Sind are chiefly Mahomedan. A fourth of the population may be Hindoo. There are no people of

\* "Lieut. J. Wood, of the Indian Navy, is the first officer who has ever navigated the Indus by steam, and his success merits notice, since he reached Hyderabad without even the assistance of a local pilot."

† Sulphate of iron has also been found to exist in abundance in the same place.

other tribes or creeds, if we except a few Seiks of the Punjab, called Seik Lobanee. The Mahomedans are tall and well proportioned; very dark in complexion: all other Mahomedans shave the hair of the head, but the Sindians preserve it, which gives them a look very different from other Asiatics; they also wear caps instead of turbans. Sindies is a term generally used for those who live in temporary villages. They are mostly the original inhabitants, converted to Islam, who have intermarried with the conquerors. There are Mahomedans in Sind, and Hindoos in Cutch, who claim one lineage. The Hindoos do not differ from those in India; they are fairer than the Mahomedans. The Lohanu and Bhatesa tribes prevail; they are purely commercial; they are not oppressed more than in other Mahomedan countries; they are often employed in places of confidence; they amass wealth, but they conceal it, and wish to appear poor."

The general population are in a condition of abject misery:—

"There is no intermediate class between the rulers, their favoured syuds, and the common people. Some Hindoos are rich, but the mass of the people are poor. Their dress, squalid manners, and filth, all, more than another, attest it. They have no education; few of them can read; very few write. In physical form they seem adapted for activity; the reverse is their character: their faculties appear benumbed. Both sexes, Hindoo and Mahomedan, are addicted to 'hang,' an intoxicating drug, made from hemp; they also drink a spirit distilled from rice and dates. Debauchery is universal, and the powers of man are often impaired in early life: they do not seek for other than gross and sensual amusements. People only congregate to visit the tombs of worthies or saints, who are deemed capable of repairing the wasted and diseased body, as well as the soul. They have a few social qualifications, and, even in common life, keep up much formal ceremony. There are no healthful exercises among the peasantry; who, as well as the grandees of the land, lead a life of sloth: to be fat is a distinction. A better government would ameliorate the condition of this people; without it, the Sindian and his country will continue in the hopeless and cheerless state here represented. I venture to reverse the observation of Montesquieu, and say, that the mediocrity of their abilities and fortunes is fatal to their private happiness. The effect is also fatal to the public prosperity."

The last paper in our pamphlet relates to Canbul:

"Kábul, the capital city of an extensive kingdom, is not only the centre of a large internal traffic, but enjoying eminent advantages of locality, ought to possess the whole of the carrying trade between India and Turkistán. A trade has ever existed between India and Afghanistan; the latter deriving from the former a variety of commodities foreign to the produce of its own soil, climate, and manufactures, while she has little to return beyond fruits of native growth. Afghanistan is dependent upon India for articles indispensable for the convenience of her inhabitants, and the carrying on of her few manufactures, as fine calicoes, indigo, spices, drugs, &c. Of late years, the introduction of British manufactured goods, as fine calicoes, muslins, chintzes, shawls, &c. has produced a new era in this trade, superseding, in a great measure, the inferior importations as to quality from India, and the more expensive fabrics from Kashmir. The consumption of these manufactures at

Kábul, although extensive and increasing, will, from causes, have a limit, but to what extent they might be transmitted to the markets of Turkistán, cannot be so easily defined. At the same time that British manufactured goods have found their way to Kábul, so have also Russian, and, what is singular, even British manufactured goods may be found at Kábul which have been imported from Bokhara."

The competition between Russian and British merchandise in these parts is developed; and, after giving a list of the former, the writer observes:

"In glancing over this imperfect list, it will be obvious that many of the articles of Russian manufacture most largely imported to Kábul *viâ* Bokhara, ought to be superseded by similar ones from Bombay. From Orenberg, the point whence traffic between Russia and Bokhara is principally conducted, there are sixty-two camel or kafia marches, and from Bokhara to Kábul, thirty-five camel or kafia marches, being a total of ninety-seven camel or kafia marches, independent of halts. In the distance, travelled duties are levied at Khiva, Bokhara, Balkh, Muzzar, Khulam, Hybuk, Qunduz, Kahmerd, Solghan, Bámian, and Kábul. That the supplies from Bombay to Kábul have been hitherto inadequate for the wants of the markets, is, in a great measure, owing to the sluggishness of the Afghan merchants. That they will cease to be so, may be hoped from the opening of the navigation of the Indus, and the conversion of Mithankot into a mart, which will bid fair to become a second Bombay for the merchants of these countries."

"Tea is exported largely from Russia to Bokhara, of a kind called there 'Khoosh booe.' This is rarely brought to Kábul; but large quantities of ordinary kinds of black and green tea are brought there from Bokhara, which seem to be imported from China *viâ* Khokan and Yargand. A superior kind of tea, called 'Bankah,' is sometimes to be procured at Kábul, but not as an article for sale. The consumption of tea will, in process of time, be very considerable at Kábul, the habit of drinking it being a growing one. At Qandahar it does not prevail; and tea, I believe, is seldom or ever carried there for sale. As a beverage, it is also nearly unknown in Bilo-chistan and Sindh. It is considered cheap at Kábul at six rupees the charruk, or one-fourth of a seer. Honey and wax, exported largely from Russia to Bokhara, are not introduced to Kábul, which is plentifully supplied with excellent qualities of these articles from its native hills, as those of Bungush, Khonur, and the Sufaid Koh range. The trade between Russia and Bokhara yields to the government of the latter a yearly revenue of forty thousand tillahs, collected from the Kafilas passing to and fro. As khiraj, or duty, is levied at the rate of two and a-half per cent *ad valorem*, the whole amount of the trade will not be less than 1,600,000 tillahs, or about 12,500,000 rupees, a large excess to the amount of trade between Kábul and Bokhara, which would seem to be about 2,500,000 rupees. The merchants of Kábul have many of them commercial transactions with Russia itself; and their agents, or gomastahs, are resident at Orenberg and Astrakan, while their intercourse with India seems to exist rather from necessity than choice. The season for the traffic of Kábul inclining towards Russia for articles of European fabric, may, perhaps, be discovered in the remoteness from it of any great mart for British manufactures."

But "the intercourse between Kábul and

India would be exceedingly promoted by opening the anciently existing high-road from Kábul to Multan, &c. *viâ* Bungush and Bannu. This route is very considerably shorter, leads chiefly through a level, fertile, and populous country, is practicable at all seasons of the year; and, no doubt, could be rendered safe, were the governments on the Indus and of Kábul to co-operate."

With this we must conclude our sketch, which will, we hope, fix mercantile attention upon the Indus, with the new features thus opened to view, through the medium of that mighty stream. The small work, from which we have copied it, is well worthy of the regards of the London, Liverpool, Bristol, and Glasgow commercial circles, and, indeed, of the manufacturer and merchant generally throughout the empire.

*Stokeshill Place; or, the Man of Business.*

By the Authoress of "Mrs. Armytage." 3 vols. 12mo. London, 1837. Colburn.

CERTAINLY, society in the present day is the furthest possible removed from what is called "a state of nature." Every relation is complicated, and every motive is a sort of moral Mathews, appearing on the stage in half-a-dozen disguises, till it almost becomes a question which is the real person after all. Hypocrisy is the universal cloak which is perpetually being pierced by the shafts of ridicule—sneers are the artillery of artificial existence. We dread arguments for two reasons; we do not like the trouble of reasoning, and we are also afraid of not being listened to. But a sarcasm is soon uttered; and its ill-nature, much more than its wit, ensures attention. A sort of glittering *persiflage* floats over to-day, like the mist peculiar to an English landscape—it is difficult to reduce the objects to their actual proportions. Moreover, every thing now-a-days is involved; there are no single interests. Family interest is jarred by the money interests; and the high places of feudal aristocracy are as much broken in upon by new opinions, as the old sequestered garden and the quiet path are being broken up, first by agriculture, then by commerce. "I bore," said a proprietor of the old school, "the canal that went through my meadows, with some sort of patience; but how can I endure the rail-road that cuts across my very lawn." Now, the exterior world is but a copy from the interior; the intricate machinery is but a type of the more intricate movements of the moral world. Daily we are perplexed with change; and such an infinity of small objects crowd before the good of any one great purpose, that life is subdivided into far more squares than a chess-board; and as there are but few skilful players, the various movements are apt to get not a little in each other's way. No one possesses greater skill in taking up the thread, and unwinding it, till daylight breaks into the social labyrinth, than Mrs. Gore. She possesses a singular faculty of detection. She

"Is a keen observer, and she looks Quite through the deeds of men."

She has also the power of making her discoveries very amusing to her readers. The great characteristic of her mind is shrewdness—she detects rather than creates; she investigates before she embodies; but what reality does this give to her works? Years hence, we believe that they will be taken up as the most curious and accurate pictures ever drawn by a living writer of an actual time. Take the volumes now before us. Was a country neighbourhood ever more accurately set down in all

its bearings—only a little more amusing than real life? Every character is a moral essay turned into a dramatic entertainment. The young heir, selfish with premature dissipation; the head flattened down, as the Indians flatten the skulls of their children, by the boards of over-indulgence. Then the two country gentlemen, each with his single idea—one of his pedigree, the other of his peerage; one looking back, the other looking forward, but each on a like limited scale. The hero of the book is equally admirably “coloured after nature;” still, we cannot but think he is dealt with over harshly. We cannot help commending him a little more to the sympathy of the reader than the author quite meant to excite. The heroine is an exquisite creation. Feminine, gentle, “a child, and yet a woman too,” learning her own powers only by the affections—endurance taught by “the unconquerable strength of love.” But we always say to a story what Wordsworth says of the river to which he has given “the immortality of verse,”

“Be Yarrow still unseen, unknown :”

at least, till our readers shall choose to see it for themselves. We shall, therefore, content ourselves with such snatches at the narrative as let in as little of the daylight as possible.

“Lady Shoreham was a woman unexceptionable in conduct, character, and manners, as regards the superficial moralities of life. She had been a respectful daughter to reckless parents; a deferential wife to a husband, who valued her less than the least valuable drawer of his cabinet of medals; and was now a devoted mother to the three children he had bequeathed to her guardianship. But, as there exist certain infatuations, known by the names of egotism, favouritism, nepotism, Lady Shoreham was the slave of an *engouement*, which, for want of a better name, must be termed familyism. Till the period of her marriage, her brothers and sisters represented in her eyes a privileged race, to whom the interests of the whole world were to be sacrificed; but, from the moment of becoming a mother, this idolatry was transferred to her children. She held their finger-achs to exceed in importance the plagues and pestilences depopulating a province; and a whole navy might sink unheeded, so that the pleasure-boat of the young viscount floated in smooth water. The weakness was as little unnamable as any weakness can be, that implies indifference towards the sufferings of mankind; for she gave up her time and thoughts to the advantage of her offspring, and would have considered her own misery, and that of the whole human race, as unworthy to be weighed against a flood of tears from the eyes of any member of her beloved family! Yet, on points unconnected with this besetting weakness, Lady Shoreham was a woman of tolerable judgment. Where those three idolised beings did not intervene, she could see with a penetrating eye, and even feel with a kindly heart; though, where Lord Shoreham and his sisters were concerned, she became the puppet of her ramifying selfishness. This foolish partiality produced a twofold evil; by rendering a pleasant woman at times a very disagreeable companion, and by misleading the young people as to their own consequence. The boy viscount had made his appearance at Eton, puffed up with maternal inflation; and the ‘six months’ buffeting and mockery, by which the mistake had been cudgelled out of him, was a sufficiently severe school; but the two girls, who knew nothing of the world, either through the microcosm of a public

school, or the magnifying-glass of society, had still their lesson to learn.”

*Sketch of Character—an Offer of Marriage.*—“Mr. Barnsley looked wistfully from his Bath post, towards the library time-piece, and perceiving the hands to be advancing towards five o’clock, when he himself ought to have been advancing towards the town of Westerton, at the hour of three started up, desired John to light his taper, and, hastily sealing the three letters already completed, placed them in post-bag array, and shut up the unfinished fourth in his desk. ‘Are the horses to come round, sir?’—inquired John, fancying himself already at the wickets on Stokeshill Green. ‘No!—desire Miss Barnsley to step into the library.’ ‘And Miss Winston, sir?’ demanded John; who, accustomed to see his young lady constantly attended by her governess, had begun to regard them as swan and shadow. ‘No!—only Miss Margaret. Tell her that I am in haste, and wish to see her immediately.’ And while John hurried across the hall and vestibule towards the morning-room, in which the young lady of Stokeshill and her preceptress usually passed the morning, Mr. Barnsley gathered together the hat, gloves, and riding-cane, prepared for him by the footman; and, with the hat on his head, and cane under his arm, stood drawing on his gloves at the window, as if in the utmost hurry for departure, when Margaret’s gentle step traversed the floor, and his daughter stood beside him. ‘You sent for me, papa?’ ‘Yes, my dear. I have, unfortunately, only a few moments to spare. I am in the greatest haste—two hours behind-hand in an appointment with Dobbs and the surveyors at Westerton, about the new toll-house! But it is indispensable that I should say a word to you, Margaret, before I go out. I have received a letter, since breakfast, from Mr. Sullivan, of Hawkhurst, proposing for you, for his son Edward.’ ‘Proposing for me?’—Edward Sullivan!’ ‘Edward Sullivan.—I don’t wonder you are surprised. I was amazed myself. A year or two hence might have been time enough to think of such a thing. However, the proposal is made, and must, of course, be answered. Old Sullivan has done things as handsomely as his estate and nature would allow. He undertakes to settle a thousand a year; but I need not trouble you with particulars. Indeed, I am in such a confounded hurry, that it is impossible to explain myself more fully; but, while I am at Westerton, you and Miss Winston can make out a civil letter to the young man, stating how much you feel honoured, and so forth. About your motives for refusing him, you can say what you like;—that you feel too young to think of matrimony,—that you do not wish to quit me at present,—in short, what you please.’ ‘But, must I write?’ demanded Margaret, with a deep blush. ‘Surely, as Mr. Sullivan referred himself to you, the answer ought to come from yourself.’ ‘Oh! there was a letter enclosed from Ned Sullivan,—a young man’s nonsensical letter. I have locked it up somewhere in my desk; I will give it you another time. You must, of course, express yourself grateful for the kind sentiments it contains; and tell him that you are not . . . but Miss Winston will instruct you better than I can what it is the custom for young ladies to say on such occasions. Let the letter be written before I come back.’”

*The Young Lady’s Reflections.*—“But were their destinies, if thus united, likely to have proved happy?—Margaret raised her blushing cheek from her hand as she asked herself the question; for, though alone, she blushed at

familiarly entertaining an idea from which Miss Winston had scrupulously taught her to recede; and, though excused to her conscience, by the great event of the day, for pausing to contemplate the subject, she was forced to admit herself a very incompetent judge of the question. What did she know of Edward, more than that he was a good shot, that he had a good seat on horseback, a good countenance, and tolerably good address; and that he was the second son of Mr. Sullivan, of Hawkhurst Hill, one of the wealthiest proprietors of the county of Kent? They were neighbours’ children, it is true, and had occasionally met in familiar acquaintance as long as Margaret could remember. But the greater part of Edward’s life was passed at Harrow and Oxford; and his sojourns at home had left a deeper impression on his own feelings than on those of Margaret Barnsley. After half an hour’s meditation upon his moral qualities and endowments, Margaret was forced to confess, that of the Edward Sullivan with whom the day before she had fancied herself so well acquainted, she knew little or nothing. A second time she blushed, while admitting to herself that she should have liked to see and study Edward’s letter of proposal, before she proceeded to reply. But she feared there might be impropriety in suggesting this to her father. Her father had desired her to confer with Miss Winston touching the terms of her rejection; but no choice had been supposed possible; nor did Margaret feel injured by so peremptory a disposal of her destinies. She felt conscious that she was too young to marry—too young to be allowed to deliberate on such a point; for Edward had found no opportunity to enlarge her sense of her own rights or sensibilities. All these cogitations ended in the recollection that her letter was to be ready before her father’s return from Westerton; and Margaret, sighing as she rose from the table, found that the time was come for consulting Miss Winston. For the first time in her life she felt disinclined to make Miss Winston’s opinion as finite as a Median or Persian decree. She was persuaded her governess would be shocked that any one should have ventured to make a proposal of marriage to a child like herself; to her pupil—her automaton;—who had not yet quite completed her course of universal history, and was still occasionally reproved for the uneven stitches in her embroidery. Still, the thing must be done. It was nearly six o’clock. The butler made his appearance in the library, to fetch the letters for the post-bag; and Margaret, as she took her father’s three epistles from the writing table, and placed them in Lawton’s hand, perceived that one was addressed to John Fagg, Esq., solicitor, 14 Lincoln’s Inn; one to the secretary of the Salamander Insurance Company; and one to the adjutant of the county militia. Such was the urgency of the correspondence which had left Mr. Barnsley only seven minutes and three seconds, to debate with his only child on a measure involving her happiness for life!”

The young heir of Shoreham has been kept as much as possible from the contamination of his uncles, who, having ruined themselves, are not unlikely to assist him in the same progress; but, on the day he comes of age, they come to.

*Slang Specimens of High Life.*—“‘Shoreham, my boy!’ shouted a strange voice, as a strange head, in a strange straw hat, was thrust into the library, ‘are you here or whereabouts?’ ‘Come in, Alfred, come in!’ cried the dutiful nephew, without stirring from the hearth-rug;

while Lady Shoreham escaped through the saloon, to recover her self-possession, and give the necessary orders; and Barnsley bowed and stared, as the extraordinary figure of Parson Drewe advanced into the room, gaitered and jacketed for his journey as other men equip themselves for a shooting expedition. 'Where's Gus?' inquired Lord Shoreham. 'In confab with the head coachman—finding out whether there's a tailor at Westerton he can trust to mend the spring of the britschka,' said Alfred Drewe, throwing himself into a chair, and placing his muddy leather gaiters on a beautiful ottoman, embroidered by the fair hand of his niece, Lucilla. 'That was a clever smash you gave us at the toll-bar; and faith, my fine fellow, you must pay for it!' By Jove! I thought you were over,' cried Lord Shoreham, laughing heartily at the recollection: 'but, I say, Alfred, what the deuce did you do with that letter of mine?' 'What letter? To Lady Catalpa?' 'No, no—to my mother.' 'Your mother? Devil a word do I remember about the matter. I took Lady Cat's myself, as an excuse for a call. If you trusted me with any thing for the post, I dare say I gave it to my tiger to drop in; and the young dog (who is apt to take a drop too much) seems to have dropped all recollection of the business.' 'Very unlucky!' said Lord Shoreham; 'but we must make the best of it.' 'By George! how they have ruined the place!' ejaculated Parson Drewe, looking round. 'How easy to see, by all these gimcracks, that a woman's finger has been in the pie;—(hope it won't prove a pigeon pie—eh! Shoreham?) Not a chair for a fellow's legs, when he comes in from shooting; and, instead of a good comfortable rug before the fire, for man and beast to stand or lie on, a strip of velvet, painted to look like a leopard's skin! Why not a real leopard's skin at once? Except, now I think of it, that they're all bought up for the Bloomsbury hammercloths. Tigers are sure to sport a leopard's skin.' 'Come, come, don't put your foot into it,' cried the young peer: 'I'll take odds that the mayor of Westerton has got one, at this moment, on his family coach. But here comes Augustus. Take it coolly, for he's in a devil of a way about the britschka.' Barnsley felt uncomfortable; and, but that his black silk stockings and white waistcoat left no pretext for retiring to dress, would have been heartily glad to get out of the room. The 'devil of a way' of a man recently taken up as disorderly in a row at the opera, excited fearful surmises in his mind. What, therefore, was his surprise when, the library door having opened an inch or two and shut again, a spare, middle-aged man, of formal demeanour and immovable countenance, traversed the room like clock-work, seated himself gingerly in a chair, and began filipping off the dried spots of mud contracted by his nether habiliments during his journey. 'Well, what do the fellows say? is it much of a smash?' inquired the parson. 'Not much,' replied Augustus, in a calm, dry voice. 'We shall get back to town with it, and then it must go to Hobson—(Hobson's your man, I think?)' addressing his nephew, 'and be done up. The linings are ruined, and the scratch can't be got out without varnishing.' Barnsley, startled by the quiet apathy of the modern dare-devil, was shocked to perceive the proverb reversed, and that for 'Nunky pays for all,' was in future to be read 'nephew.' He almost shuddered when he thought of the hundred and forty-two thousand pounds to be transferred on the morrow! 'We have but five minutes to dress for dinner,' said Lord

Shoreham, deferring to a more convenient season any remarks he might have to make on this summary arrangement. 'Then I shall wait for supper!' was the quiet reply of Augustus. 'Between a journey and a meal, a bath is indispensable. Is it Lady Shoreham's custom to dine at six o'clock?' 'The custom of the country, I fancy.' 'And a deuced good custom, too!' cried Alfred. 'Shoreham, my boy! I hope you're not ass enough to have a French cook? A French cook may be a good thing in France, where the devil sends the meat, no matter where the cooks come from. But, 'pon my soul! to see one of those frog-faced fellows larding a side of venison, or stewing down a fine turbot till you might card it into wool, is enough to drive one distracted.' 'I know nothing, at present, of the system here,' said Lord Shoreham, spoiling a fine solid glowing fire by a superfluous poke; 'but let me hear of anything French in my kitchen, except truffles or capers, and out of the window it goes—neck or nothing.' And after a vehement, master of the house-like ring, he desired the groom of the chambers to shew him to his room, following him across the hall, arm in arm with the parson; while Augustus remained stationary before the fire, gently caressing his own shins. 'A very fine young man, sir!' observed Barnsley, after a silent *lêlé-à-lêlé* of some minutes. 'Who, sir,—my brother?' demanded Augustus, in the same quiet voice. 'I meant Lord Shoreham,' said Barnsley, with a patronising smile, amazed at the gentleman's dulness. 'I had the honour of knowing the late lord well.' 'Sir, you have the advantage of me:—I never knew any one less!' observed Augustus, as impassive as before, but beginning to stroke his chin instead of his legs. 'Have you brought down any thing new, sir?' demanded Barnsley, after another trying pause. 'Nothing but a pair of pumps,' replied Augustus Drewe, as drily as ever. 'You misunderstand me, my dear sir,' said Barnsley; 'I wished to inquire if there was any thing new in town when you left it?' 'Asparagus is in, and, I fancy, sea-kail,' replied Augustus, vacantly; and Barnsley perceived at length that he was mystified, and doubtful whether to resent as an affront what might be the commonplace of an eccentric, like 'Gus,' wisely took up the newspaper to screen his irritation."

Mrs. Gore is a very prolific writer: it is the case with all original minds. All they see is suggestive, and the later works as fertile as the first; but the power is better managed by being better understood. *Stokeshill Place* ought to be very popular this autumn. There is good shooting, and an amusing party assembled. Our readers cannot do better than try its capabilities.

*An Inquiry into the Nature and Form of the Books of the Ancients; with a History of the Art of Bookbinding, from the Times of the Greeks and Romans to the present Day, &c.* By J. Andrew Arnett. Pp. 212. London, Groombridge; Edinburgh, Oliver and Boyd; Dublin, Curry; Paris, Galigani; New York, W. Jackson.

This little volume ought to find a niche in every library, be it large or limited; for it relates to an art which has preserved, preserves, and will preserve, the treasures of all. It is an unassuming work, a curious work, an interesting work, and an entertaining work; which is much to say of a work upon so dry a subject as bookbinding,—and we remember the common adage, "as dry as a board."

Mr. Arnett tells us, that we have of late

reached a great pitch of progress in this art; and that things are so well and tastefully done now, there can hardly be any further improvement. We are glad to hear it; for in most other mechanical and manufacturing produce, though England certainly possesses the power and means to surpass any competition, yet true it is that a really genuine and superior article can scarcely be obtained in the country for love or money. To what is this owing? To the mercantile spirit of underselling, which substitutes low prices and vamped up, imitative productions for the best qualities. Ingenuity is tasked to the utmost, to make the spurious look as well as the excellent; and where ingenuity fails, adulteration and fraud step in to support the imposition. It is a fact, that pay what price you may—all that is asked—you cannot, in one case of a hundred, buy what is called a first-rate article throughout London. Yet every thing is ticketed and sold by the highest name which the market calendar affords; and whether you eat, drink, dress, furnish, medicate, ornament, use necessities or luxuries, you are more or less cheated; and an honest character of the goods (a monstrously wrong name) is never to be heard from trading lips.

Bookbinding is, we hope, from Mr. Arnett's testimony, a brilliant exception from the common rule. Would that the insides of the books were the same! And, *apropos* of books, he seems to think that the name *book* is equivalent to *beech*, and is derived from early performances being written on the bark of that tree. Thus it may happen, that, like the *birch*, it has had an intimate connexion with learning.

But, adieu to conjecture! and let us turn to our author's honest efforts, which he thus describes:—

"Our endeavours to illustrate the rise and progress of the art of writing and composing books, and the successive improvements in bookbinding, are now brought to a termination. The simple records of the earliest people; the rolls of the Greeks and Romans; the massy and costly books of the monasteries and churches; the elaborately ornamented volumes of a later period;

'Firmly clasped in oak, and velvet bound';

and the highly finished works of modern days, with other incidental matter, have been enlarged upon. With what degree of success, it is for others to arbitrate."

If our judgment may be taken, we repeat that he has executed his task very ably, and well deserves the applause not only of every book-worm, but of every book-reader. As an example of his manner, we will quote a little from his view of the sixteenth and seventeenth centuries in England.

"The influence of circumstances is seen in the exterior of early printed books and manuscripts, bound after the invention of printing. Luxury and splendour were studied by the great, and a considerable degree of elegance by all classes of scholars, which arose from the limited number of copies printed, and the consequent value of them to the possessors. The folio and the quarto were the usual sizes; which, from their breadth, afforded ample room for the display of whatever taste the ingenuity of the binder might suggest; and, from the specimens which have been given of the embellishment of their side covers, it is evident that they were no mean artists. The multiplication of books, it has been seen, led to a less expensive mode of binding, though still retaining much ornamental beauty. This may be pronounced the style peculiar to the six-

teenth century. In the whole of the bindings of this period, a minute care attended every operation required. The workmen, or perhaps the printers, whom, it has been shewn, were also the binders of their works, appear to have been desirous to thus preserve them to posterity. They are folded with an anxious care for the evenness and integrity of the margins, and it is rare that any transpositions of sheets are found. To guard against this, in the infancy of printing, they had a *Registrum Chartarum*, for the convenience of the binder, of the signatures and first words of the sheets. About 1469-70, alphabetical tables of the first words of each chapter were also introduced as a guide to the binder. The name and place of the inventor of signatures is not known; they appear in an edition of Terence, printed at Milan, in 1470, and were introduced by Caxton in 1480. The Abbé Reve ascribes the discovery to John Koehlf, at Cologne, in 1472. There is a solidity about these books, which testifies no little labour in the beating and pressing of the sheets when folded. They continued the use of a slip of parchment round the end-papers, and first and last sheets of many, to preserve the backs from injury, and to strengthen the joint. The last leaf is also strengthened with the addition of other paper, and in this position the fragments of some printed works and prints, previously unknown, have been discovered.

"A curious specimen of binding of this period is mentioned by Scaliger, as being on a printed Psalter his mother possessed. He says the cover was two inches thick, and in the inside was a kind of cupboard, wherein was a small silver crucifix, and behind it the name of 'Berencia Codronia de la Scala.' This kind of binding was not unusual on small books of devotion, containing, like the above, some small subject of adoration, or relic of a saint. Mr. Hansard speaks of a book he had seen with a recess for a relic, and the relic a human toe. The larger volumes of this period are further protected by the addition of metal clasps, corners, bosses, and bands. The clasps are sometimes attached to strips of strong leather, fastened to the boards with rivets, in which way the catch is also secured. Others are of a more elaborate workmanship and finish, being jointed to a piece of the same material, firmly rivetted to the sides. The boards are further protected by corners of brass, frequently much ornamented, and extending a considerable way on the cover. On others, a plain piece of brass, wrapping only a small space over, and others simply protected by brass bands rivetted to the edges of the boards. The centres of the boards often present a large plate or boss of brass, similar in character to the clasps and corners. Notices of the earlier use of bosses, clasps, and corners, have before been given. Wood's MS. in the Bodleian Library at Oxford, was once very superbly bound and embossed. Much of its beauty is now defaced; but on the bosses at each corner is still discernible, 'Ave Maria gratia plena.' The colophon states it to have been finished in 1558. A folio Bible, printed by Barker, in Archbishop Whitgift's Hospital, at Croydon, Surrey, given by Abraham Hartwell, secretary to the archbishop, in 1559, presents a very good specimen of the bindings of the period. It has a very curiously ornamented cover, protected by large brass bosses and clasps. In the library at Lambeth Palace, is a characteristic binding of the period, richly covered with gilt ornament, on a copy of Archbishop Parker's edition of the Psalms, 4to. 1570. To prevent the books being abstracted from their

libraries, the worthies of this period were accustomed to chain them to the shelves. Of this peculiarity, an early notice occurs relative to the books left by Richard de Bury, to (Durham) Trinity College, Oxford, in 1345. After the college became possessed of them, they were for many years kept in chests, under the custody of several scholars deputed for that purpose; and a library being built in the reign of King Henry IV., these books were put into pews or studies, and chained to them. They continued in this manner till the college was dissolved by Henry VIII., when they were conveyed away, some to Duke Humphrey's library. Leland (1538), speaking of Wressil Castle, Yorkshire, says, 'One thing I likid exceedingly yn one of the towers, that was a Study, caullid Paradise; wher was a closet in the middle, of 8 Squares latished aboute, and at the Toppe of every Square was a Desk ledgid to set Bookes on Cofers withyn them, and these semid as yoined hard to the Toppe of the Closet; and yet by pulling, one or al vould cum downe briste highe in rabettes, and serve for Deskes to lay Bookes on.'

Mr. A. notices the advance of the art in various countries, and particularly in France and England, where superiority seems to have alternated. He now gives the palm to London, though there are some admirable binders in Paris.

"The nineteenth century, witnessing as it has the collection of many, and augmentation of other libraries, tended much to this result in both countries. In England, the art can boast a long list of patrons in the Dukes of Devonshire, Sutherland, Marlborough, and Buccleuch, the Marquesses of Lansdowne and Bath, Earls Spencer, Cawdor, Clare, and Burlington, Lords Vernon and Acheson, the Honourable Thomas Grenville; Sir F. Freeling, Sir R. Colt Hoare, bart., Sir Mark Sykes, Baron Bolland, Mr. Heber, Dr. Dibdin, Mr. Hibbert, Mr. Dent, Mr. Bernal, Mr. Drury, Mr. Pettit, and a host of others, who have contributed much to the successful progress of the art. The increased employment is shewn by the number of master binders in London, A.D. 1812. At a general meeting in December, of that year, no less than one hundred and fifty-nine subscribed their names to the regulations of prices, &c. adopted. Of these many were first-rate artists, and several still continue to execute bindings in the first style of the art."

Speaking of the moderns, we may mention the most ancient:—

"Daguen, an Irish monk of the early part of the sixth century, is the earliest practitioner known, connected with the art of binding books. He is celebrated as a skilful illuminator of their interiors, and not less so of the embellishment of their exteriors, binding and ornamenting the covers with gold, silver, and precious stones."

The plain and good old English style of this volume has pleased us much; and, before we conclude, we would fain mention it as an example to the majority of our scribblers. With these it is no longer the language of a Hooker, an Addison, or a Swift, that is employed, but a mere "Babylonish dialect," in which cant, vulgarity, Gallicisms, and every species of barbarism, have almost superseded the original English. If it be true that "the best things become, by corruption, the worst," we can derive no great consolation from considering the excellence which we have thus suffered to be depraved. In our language we had every thing to lose, but nothing to gain. We are, it must

• "Corruptio optimi omnium pessima."

be observed, here speaking of the general popular style, not of the insulated or technical language of science. The progress of knowledge or discovery will necessarily bring with it new names for new things. We complain of a very different innovation, indeed, of the adoption of new names for old things. Unsatisfied with the natural stores of genuine English, we have sought for the "*Pan de tras trigo*" of Sancho Panza. We have preferred, like true children, the frippery trinket of paste or glass to the glorious splendour of the diamond. Of the general truth of this statement we can easily convince ourselves. Let us but observe the prevailing style of mixed conversation; let us open a newspaper, a parliamentary report, or half of the volumes written within the last thirty years; and we shall soon be introduced to a number of exotics, not more foreign to taste and good sense than to the genius of that noble language into which they have so forcibly intruded. We shall there meet with the "quiz," the "bore," or the "hoax." We shall hear of a friend "announcing" (kind man!) his speedy arrival—of his "starting" (perhaps on ship-board, too) at such an hour—of a house or horse "of that description" not suiting the wants of the speaker—of the "nervous" situation in which he was placed—of his being dreadfully "fagged" by the business of the day, &c. &c.—of the "imposing attitude" of a country—of "conquering a peace"—of great generals giving in their "adhesions"—of a play or melodrama "well got up"—of an actor or actress making his or her "début," &c. &c. &c.—of an honourable member "hlinking" a question—of his giving "garbled" extracts from some document—of questions occurring at last in "a tangible shape"—of the grand "features" of an inquiry or debate—of just "reciprocity"—of the "ideas thrown out" by a learned gentleman, &c. &c.—of the prevalence of "crime"—of the history "of mind"—of the "perfectibility" of man—of "codification," &c. &c.—of ideas not consistent with these "views"—of things being in the "liquid form"—in the "form of powder," &c. &c. &c. "Am I asleep or awake? Am I in England or Japan?" says a correspondent, who has noticed these follies. "Is it possible, is it credible, that such abominations, such portentous jargon, could have been endured by a nation that produced a Shakespeare or a Bacon? Yet such is the fact, the melancholy fact! The person who ventures to disapprove or reject these eloquent tropes is considered as a being of other times, as an honest, well-meaning man, perhaps, but fitter for the moon than the earth—unacquainted with the elegancies of social life—and, to conclude all, 'a true pedantic bore!'"

*Chapters on Early English Literature.* By J. H. Hippisley, Esq. M.A. 12mo. pp. 344. London, 1836. Moxon.

THIS is a pleasant volume, written as all people write on their favourite subjects; combining both interest and labour. The author so well explains his object in the Preface, that we cannot do better than let him speak for himself:—

"The advantages of literary history, as a branch of education, have scarcely been sufficiently appreciated. The improvement to be derived from such a study is twofold: on the one hand, the taste and imagination are cultivated by selections from authors otherwise prolix, or occasionally even impure; on the other, the mind of the reader is awakened to one, at least, of the most important branches of

history—the moral and intellectual history of mankind. In the pursuit of this latter subject of inquiry, the most trivial, as well as the most sublime authors, have their value; and brief accounts, or short abstracts, are often equivalent to the study of entire volumes. Sometimes, the intellectual character of a particular period is to be collected from the nature and subject matter of the works themselves; in other instances, those very works undesignedly occupy the province of history, and exhibit to us a curious portraiture of contemporary manners: and in this view the mediæval poets of Europe are especially valuable."

Mr. Hippiusley draws attention by examples from Chaucer, &c. to the descriptive taste which has always been a peculiar feature in English literature. We believe that this love of nature has done much towards keeping the true and the beautiful alive. No other poetry is filled with the delicious landscapes of our own; and the woods and green fields among which our most popular writers have sought their inspiration, have given their own strength and freshness to the song. Mr. Hippiusley winds up with so favourable a view of modern literature, that we must quote it by way of encouragement.

"When we look back upon this brilliant period of English literature,—an age which, in fertility, may be compared to that of Pericles at Athens, or of Lorenzo at Florence,—we may be tempted to inquire what advance the nation has since made, or what accessions have been added to the rich fund which then accrued to England. If we direct our attention to the department of poetry alone, we must confess, that in majesty of thought, the Elizabethan poets have been surpassed in one solitary instance only; but in delicacy of sentiment, and freedom from all ribaldry and indecency; in polish, though not, perhaps, vigour of language; and in harmony of versification, what comparison will the older poets bear with those of the past or present age? Add to this, that the landscape scenes of modern poetry are, beyond comparison, more true, more rich, and more various than those of their mediæval predecessors. Every schoolboy might point to passages of 'The Seasons,' or of 'The Task,' which would illustrate this statement; and from these he might turn, for sublimity, to the Alpine scenery of 'Manfred,' for vivacity and lively touches, to the Highland glens and mountains of the 'Lady of the Lake,' or, for simplicity and its attendant, true poetry, to 'The Excursion.' These qualities, in which the modern school of poetry has indisputably surpassed the more ancient, are, it will be said, but the minor graces and embellishments of the art; the dress, rather than the graceful figure itself; the Dutch school of painting compared to the Roman. This degeneracy, if it must be so called, has been the constant attendant of art in refined ages, but more especially, perhaps, of poetry. Poetry is the natural growth of a rude and uncultivated soil; and in that soil, unfettered by the mechanical difficulties of sculpture or painting, it soon springs to maturity. In an age entirely destitute of letters, poetry is, of necessity, the only literature. Metre is required to aid the memory; and even metaphors, which, in after ages, are the work of art and design, are at first adopted from poverty of language. There is a youth, also, and youthful feelings, in nations, as well as in individuals. In rude ages, the mind is unoccupied by more serious pursuits; the heart is not yet rendered callous by the vices, the follies, and intrigues of over-

grown cities: and the pastoral, roving, or adventurous life of enterprise in which infant nations are engaged, at once supplies themes for the bard, and disposes the minds of his audience to a rapturous admiration of his song. Hence that truth and simplicity natural only to a rude period; but affected, and, therefore, displeasing, in an age of comparative refinement. Hence the impracticability, either of imitating or translating the sublimity of Homer, or of modernising the simple diction of Chaucer. Poetry, in short, in order to progress, must be born again. What, then, are the characteristics by which the literature of the present age is most advantageously distinguished from that of almost all preceding periods? Next to a purer tone of morals, the foremost of all advantages, must be reckoned that critical and antiquarian spirit in historical research, which we recognise but indistinctly, and only in some rare instances, amongst ancient classic authors; and which, in our country, does not appear before the days of Leland, scarcely before those of Camden, Selden, and Dugdale. This laborious exactness, fostered as it has been, as well by religious controversy, as by the study of physical science, can only be rendered available through the facilities afforded to us, towards the preservation and inspection of ancient documents, by the art of printing. Wherever we cast our thoughts abroad, and into whatever train of ideas we may fall, in comparing the present with the past intellectual condition of the world, to this powerfully effective art, and to its consequences, by one channel or another, we must inevitably revert; and, indeed, if there is one circumstance more than any other, in which the literature of the present age displays an undoubted pre-eminence over that of every preceding period, it is not, generally speaking, so much in the advancement, as in the diffusion of knowledge. It would seem decreed, as if by an overruling Providence, that the treasures which, in past ages, were within the reach only of the wealthy or the learned, should be generally, though gradually, imparted to all classes of society. That such, at least, is the inevitable tendency of the facilities now afforded to all ranks, both of obtaining books, and of receiving instruction, must be admitted by all who do not perceive dark clouds gathering from some unknown and undefined quarter in our apparently bright horizon; or who do not view, in prospect, the incursion of barbarians from some southern or western hive."

We recommend this volume as an agreeable addition to the library, already well stored from the olden time; but it will be a still more valuable acquisition, where the taste for literature has only a feeling of property in a few favourite volumes.

*An Examination of Phrenology, in two Lectures; delivered at the Columbian College in February.* By Thomas Sewall, M.D. 8vo. pp. 70. Washington, Homans.

THE title page informs us that this volume has been "published by request;" and we do not wonder at it, for it contains one of the ablest anatomical expositions of the gratuitous assumptions of Phrenology which has appeared either in America or England. Dr. Sewall takes up the question like a man intimately acquainted with the structure and physiology of the human frame; and he demonstrates with great clearness and precision the leading absurdities of the hypotheses maintained by the disciples of this German school. He does not meddle much with their metaphysics, or moral

and religious deductions; but contents himself with demolishing their theory, as founded on the size, shape, or consistency of the brain, and the form of the bony covering in which it is lodged.

In the first lecture, however, where he generally introduces the system, about half a century ago, of Dr. Gall, "an ingenious and eccentric physician of Germany," he gives us a good retrospective summary of its history. He says:

"The works of Gall and Spurzheim are numerous, and evince great industry and perseverance, deep research and reflection, and, aside from phrenology, contain a great deal of general information. Most of their books have been republished in the United States. Such is a brief sketch of the history of phrenology, as furnished by Dr. Gall and his friends. Whether he was the originator of the science, or derived his first intimations upon the subject from some previous writers, is a question which I shall not discuss. Certain it is, that ideas, in many respects similar to those of Gall, were entertained and promulgated long before his time. Aristotle, the Grecian philosopher, who wrote more than three centuries before the Christian era, considered the brain as a multiplex organ, and assigned to each part its appropriate functions. In the fore part of the cerebral structure, he places common sense; the middle portion he assigns to imagination, judgment, and reflection; the back part he makes the great store house, or seat of the memory. This was the account of the divisions of the brain, given by Aristotle; and, however crude it may appear in its details, it was followed by many writers in the middle ages, with but little variation. But while he regarded the brain as multiplex, he considered a small head as the standard of perfection, and contends that it is indicative of a superior intellect. In this respect he is at variance with Dr. Gall, and other phrenologists of the present day. From various passages found in the works of Galen, it is evident that he was acquainted with the views of Aristotle upon this subject, and that he admitted the same doctrines, with some modifications. As late as 1296, Bernard Gordon, an eminent French physician and teacher at Montpellier, closely follows Aristotle in his divisions of the brain, and appropriated to each part particular faculties. In the thirteenth century, Albert, the great archbishop of Ratisbon, one of those who had laboured long for the discovery of the philosopher's stone, actually formed a head, mapped out into regions, in conformity with the divisions of the brain by Aristotle and others. In 1491, Peter Montagnana published an engraving of the head, in which he represents the seat of the *sensus communis*, a *cellula imaginativa*, a *cellula estimativa seu cogitativa*, a *cellula memorativa*, and a *cellula rationalis*. Michael Servetus, who died at Geneva, 1553, places the different mental faculties in different parts of the brain. He supposed that the two anterior cerebral cavities were for the images of external objects; the third ventricle, the seat of thought; the aqueduct of Sylvius, the seat of the soul; and the fourth ventricle, the seat of the memory. In 1562, Ludovico Dolci, a learned Venetian, published a work upon preserving and strengthening the memory; and, in illustration of his principles, he mapped out a head into regions, more elaborately than any one which had previously been formed. In a work of Jo. Baptistæ Portæ, an eminent Neapolitan philosopher and physician, published at Leyden, 1586, entitled 'De Humana Physiognomia,' there is contained so many of

the principles and illustrations of the phrenology of the present day, that it may well be questioned whether hints have not been drawn from this source by later writers. He proposes to discover the intellectual and moral character of man, by his physical organisation, colour, &c., and while he embraces the whole body, he lays particular stress upon the configuration of the head. He finds analogies between the human species and several races of the brutes; but discovers the general characteristics of man in the lion, and of woman in the leopard; and concludes by arranging under appropriate heads, the various signs by which the intellectual and moral character and disposition of every individual may be determined. \* \* \*

"As late as the middle of the seventeenth century, the celebrated Dr. Thomas Willis, a graduate, and for some time a physician at Oxford, and afterwards physician to King Charles II., published a work, in which he asserts that the corpora striata are the seat of perception; the medullary part of the brain, that of memory and imagination; the corpus callosum, that of reflection; and the cerebellum, he considers as furnishing the principle of voluntary motion. But by far the nearest approach to modern phrenology was made by that extraordinary man, Baron Swedenborg, the author of the system of doctrines of the New Jerusalem church. He not only considered the brain as composed of a plurality of organs, but maintained the principle that the exercise of the different faculties of the mind changes the configuration of the head, by promoting the development of their respective organs.

"I will only remark," the author very candidly adds, "that the fact, that the early writers knew something of phrenology, affords but slender proof that Dr. Gall borrowed his notions from them; since it is extremely common for men of genius to make the same discoveries, strike out the same trains of thought, and pursue the same course of investigation without concert, or the slightest knowledge of each other's pursuits. Whatever may be the truth with regard to the origin of phrenology, it is through the writings of Dr. Gall, supported by the untiring labours and invincible zeal of his pupils and disciples, that the science has been widely spread through the civilised world. And it is by these labours, and by this ceaseless spirit of exertion, that the subject has been brought to our shores, and has afforded the occasion to investigate it, and ascertain whether it furnishes us with that infallible guide in the study of human character, which has been pretended."

The Doctor goes on to define the nature of the (now) thirty-four organs, which are held to indicate the nine propensities, nine sentiments, and sixteen intellectual qualities of mankind. Having thus opened his way, he observes that: "The ground which phrenologists assume the right to occupy is so extensive, and the outlets for retreat are so numerous, that it is difficult to present an objection to the science, which cannot, upon the common principles of reasoning, be plausibly evaded."

This position is illustrated by examples; of which we copy one or two amusing instances:

"There is a celebrated divine now living in Scotland, equally distinguished for his amiable disposition, his gigantic powers of mind, and the great moral influence which he exerts upon the Christian world. This individual, it is said, has the organ of destructiveness very largely developed; and not having any counteracting organ very large, it is contended by those who are acquainted with the fact, that he

manifests his inherent disposition to murder by his mighty efforts to destroy vice and break down systems of error. In this way he gratifies his propensity to shed blood. By a recent examination of the skull of the celebrated infidel Voltaire, it is found that he had the organ of veneration developed to a very extraordinary degree. For him it is urged, that his veneration for the Deity was so great, his sensibility upon the subject of devotion so exquisite, that he became shocked and disgusted with the irreverence of even the most devout Christians, and that out of pure respect and veneration for the Deity, he attempted to exterminate the Christian religion from the earth. Other explanations, as much at variance with truth and common sense, are resorted to in carrying out the system. Allowing, therefore, to phrenologists the latitude they claim, it would seem impossible to present a case so contradictory to their principles as not to admit of prompt and plausible explanation."

But, coming more directly to the anatomy of the case, Dr. Sewall shows that, "Neither the cortical or fibrous parts of the brain reveals, upon dissection, any of those compartments or organs, upon the existence of which the main fabric of phrenology is based. No such divisions have been discovered by the eye or the microscope. The most common observation is sufficient to shew that there is not the slightest indication of such a structure. Indeed, no phrenologist, after all the investigations which have been made upon the subject, from the first dawn of the science to the present time—not even Gall and Spurzheim themselves—venture to assert that such divisions of the brain have been discovered. The fact of the existence of the horizontal membrane, called the tentorium, separating the superior from the inferior part of the brain, as well as the arrangement of the lateral ventricles, the corpus callosum, the fornix, and other parts, clearly shew the absurdity of the idea of organs as described by phrenologists. The notion, then, of the division of the brain into phrenological organs is entirely hypothetical; is not sustained by dissection; and is utterly inconsistent with its whole formation. These facts are perfectly well known, and are universally admitted by all anatomists."

By exhibiting the bones of various skulls, Dr. Sewall proved that "no phrenologist who discovers a protuberance on the skull, can determine whether it is caused by a fullness of the brain, at that part, or an increased thickness of the bone;" and then takes up another branch of the question, as follows:

"If the brain be composed of a plurality of organs, and that each is the seat of a separate faculty, it necessarily follows, that when any one of these organs is injured or destroyed, that its faculty must be injured or destroyed also. Yet in all the mutilations of the brain to which man has been subjected for two thousand years, it appears that the records of surgery do not furnish a single well authenticated case in which the loss of a particular faculty has happened according to the organ on which the injury was inflicted, while the other faculties remained unimpaired."

Again:

"To say nothing of the accidents of private life, there is scarcely a naval or military battle in which cases of injury of the phrenological organs are not met with in abundance; and yet the science derives no support from this source. If the theory of a plurality of cerebral organs be true, we might, perhaps, with some show of plausibility, by mechanical means as well as moral influence, agreeably to the propo-

sition of Emmanuel Swedenborg, endeavour so to modify the developments of the skull, as to promote the growth of the good organs, and repress those that are evil; and thus turn a sour into a sweet temper, and a knavish into an honest disposition. Upon this principle we might make our heroes and statesmen, our philosophers and divines, our poets and painters, and all of the highest order. For aught we know, the brain is a unit, and the whole organ is concerned in each and every operation of the mind."

Another portion of the phrenological data is thus exposed:—

"An argument frequently urged in the support of phrenology, is the success with which its principles have been applied to practice in distinguishing character. Dr. Gall himself, we are told, subjected his theory to the most rigid scrutiny, with triumphant success; that on several occasions he was enabled to ascertain, by the developments of the head, the precise crime for which multitudes had been convicted and sent to prison. To expose the absurdity of this argument, it is only necessary to bring to view the fact, that men of the same natural propensities, perpetrate different crimes, when placed under different circumstances; and that individuals of different, and even opposite tendencies, commit the same crimes when placed under circumstances which are similar; nay, that men often perpetrate crimes to which they have no natural propensity, but a deep abhorrence, when strongly operated on by external influences. One man commits murder wantonly, and, apparently, from the natural cruelty of his disposition; another, that he may inherit a post of honour, or possess himself of fortune; and a third, to conceal another crime which he has already perpetrated. One individual steals from the mere motive of acquisition; another, that he may possess the means to gratify his sensual desires, or foster his pride or ambition; while a third is impelled to the crime from extreme poverty. The history of man, in every country and age, will shew that nine-tenths of all the outrages committed, are the consequence of defective education, bad example, vicious company, or other circumstances which attend the offender, rather than any inherent propensity to the crime perpetrated. How preposterous, then, to look to the developments of the head as the measure of a man's virtues and vices, or even to regard his known propensities and dispositions as the true index to the history of his life. Can any one who reflects upon the various circumstances of human life, the incidents which often control man's destinies, the temptations which assail him in different situations, believe, that of the four hundred and seventy culprits examined by Dr. Gall at the fortress of Spandau, upon which so much stress has been laid, each was convicted of the precise crime for which he had the strongest propensity by nature? As well may we suppose that every one dies of the disease to which he has the strongest natural predisposition; that because a man is predisposed to apoplexy, he cannot die of fever, be buried in the ocean, or be struck down by the lightning of heaven."

We consider the reasoning of Dr. Sewall to be unanswerable, and have only to apologise for having made selections from it, instead of touching on all the grounds he has laid down. But, if three mortal blows will not cause death, neither will thirty; and phrenology has more lives than any cat, or it could not have survived till now, perplexing weak minds, though supported by very clever ones. We

will, therefore, only append two or three very brief passages to what we have already done; and thank the lecturer for their pith and force:—

"In concluding my remarks (he says) upon phrenology, a subject which has withdrawn, I fear, the attention of many able minds from far nobler objects, allow me to suggest some considerations in relation to your future pursuits, and the duties which you owe to yourselves, and to the world.

"In determining the objects of your pursuit, let me admonish you, that the period of human life is so short, the objects to which it can be directed to purpose so few, and those which invite your attention so numerous, that a judicious selection and limitation of them is indispensable to eminent success. Men are too liable to be engrossed by the novelties of the day, and to be led away by those subjects which serve only to amuse, not to instruct, the mind. How many great minds, capable of the highest effort, have dissipated their powers by the multiplicity and uncertainty of their pursuits! Do not weaken your minds by feebly grasping at every thing; and while you limit the objects of your attention, be sure that those you aim at are within the reach of attainment; and that they are such, too, as will render you useful, as well as distinguished, members of society.

"In the language of Napoleon, that great practical philosopher, whose knowledge of human nature was one of his most wonderful attainments, I would say—'Nature does not reveal her secrets by external forms. She hides, and does not expose, her secrets. To pretend to seize or penetrate human character by so slight an index' (as the developments of the head), 'is the part of a dupe or an impostor. The only way of knowing our fellow-creatures, is to see them, to haunt them, to submit them to proof. We must study them long if we wish not to be mistaken; we must judge of them by their actions. This is my opinion, and this has long been my guide.' Beware, gentlemen, of that delusive science, which pretends to detect and mark the countless varieties of human character, and gauge and measure the capacities of the human soul, by a graduated scale of brass; a science which finds an apology for the vices and follies of mankind, in the forms bestowed upon them by a good and all-wise Creator. Let me caution you, also, to distrust its application to yourselves, as well as to others, and not to rely on any native endowments, you may thereby be induced to attribute to yourselves, for the stations you may aspire to in life. What rank you shall hold among intellectual men, depends on your own exertions."

Much sound advice, which we rejoice to circulate through our columns! It does credit to the walls of Columbia College, within which it was propounded.

*The Library of Fiction, and Family Magazine.*  
New Series. No. I. 8vo. pp. 48. London, 1837. Ollier.

By some accident, this novelty for June escaped our observation, or we should not have been so long in noticing so pleasant an accession to our periodical literature. The contents possess variety and talent. The "Jilt," by C. Ollier, and the "Immured One," by George Crawford, are well-told stories; a "Visit to the German Universities," a good sketch; and the rest of the articles, in general, cleverly written. The following may be selected as a specimen of the original matter:—

"Death's Turn-out.  
By W. J. Thoms, author of 'Lays and Legends,' &c.

'Pallida mors æquo pulsat pede pauperum tabernas,  
Regumque turres.'—*Horace.*

'Death knocks as loud in Berkeley Square  
As he does in St. Giles's.'—*Original Translation.*

Death rose from off his tombstone bed,  
With joy and agitation,  
For he had had Malthusian dreams  
Of an overcharged population.  
And first he 'gan to don his clothes,  
His bony ribs to hide;  
Of a couple of palls he made his smalls,  
For his shanks they were somewhat wide.  
For a kerchief, around his neck he tied  
A winding-sheet in a noose;  
And he slipped his feet in the coffins of twins,  
Which made him a pair of shoes.

From fifty coffins the cloth he tore,  
(The owners were dead as mutton),  
And a gay coat made—for on it he wore  
A death-plate for every button.

As to what he had to cover his skull,  
I really cannot speak pos;  
But he made of his dart a walking-stick,  
And went forth like a *Plague* as he was.

First, he called on a brewer of high renown,  
And begged him to taste his own swig;  
But scarce had he time to twig the hop,  
Ere Death made him *hop the twig*.

He saw a parson, like many there are,  
Much fonder of taking than giving;  
So Death for once played the bishop's part,  
And deprived him of his *living*.

He made a lawyer, who was first in the land,  
And disclaimed all interference  
With the courts on earth—on those below,  
Soon enter his appearance.

He caught a thief, with purse in hand—  
The halter stopped his breath—  
For, as if by the sudden tidings killed,  
The noose it was his death.

A bellows-maker at his work  
Death saw, and seeing, grinned;  
And he who made the bellows blow,  
Right soon did *skip the wind*.

Unto a cobbler in his stall  
No better fate befell,—  
Death quickly made him leave his *mol*,  
And bid his *last* farewell.

A gardener—one of old Adam's trade—  
Who rose before Aurora,  
Death saw, and straight his power displayed,  
By proving the florist's *floorer*.

But Death at last met with his match,  
An Annuitant, eighty and eight—  
Death knew that his life would be death to a score,  
(For naught kills like envy and hate);  
So, because he should thereby get victims galore,  
He bade the old gentleman wait!"

*Wilson's Tales of the Border. Part XXXVI.*  
1837. Edinburgh, J. Sutherland; London, Groombridge; Newcastle, Brown; Glasgow, Salmon; Dublin, Cumming; Belfast, Archus.

THIS fasciculus for July, is intrinsically so well entitled to the public favour, that we need hardly superadd an inducement, by stating that the work continues to be published "for behoof of the widow" of poor Wilson, a man of very considerable native talent, cut off from the toils and pleasures of literature in the very prime of life. The Tales are very characteristic, and very Scotch. With so much prudence and caution as is generally displayed by the *dramatis personæ*, we are often surprised that misfortunes or calamities should by possibility be invented to give interest and variety to the narratives. But they are drawn from life, and such is life, that we all know it cannot be guarded, even by these qualities, from the ills and accidents which beset it. Nay, in, perhaps, the best story in this Part, viz. "The Salmon-Fisher of Udoll," the fatal catastrophe which darkens it, is absolutely caused by the over-prudence of the lover, who rather suffers his adored to perish of a broken heart, and blight his hopes for ever, than marry her whilst he is poor, and trust to Providence for a provision. The concluding anecdote of simple "Walter Wylie," is a fair example of the writer's talents. Its verisimilitude is obvious, and yet

there is a dry humour about it which makes it droll and amusing.

#### MISCELLANEOUS.

*The School for Statesmen; or, the Public Man's Manual; being a complete Guide to the Constitution since the Reform Bill.* By an old M.P. 12mo. pp. 319. London, 1837. Smith, Elder, and Co.

THIS is a bold title-page, for "a complete guide" to our present constitution must be a *rara avis*. The book, however, shews considerable acquaintance with constitutional reading, recent events, and political parties and circumstances. The writer, though not a party man, is Conservative, and holds that Whiggism has ceased to be, because, if the Whigs stand by the constitution, and resist innovation, they become Conservatives; and if they encourage change, they join the ranks of republicanism and revolution. The argument is carried on between a young parliamentary aspirant and the old M.P., the former being a bit of a Radical; and though, as we have hinted, there is much good sense and sound observation in these pages, we confess that we have been occasionally at a loss to determine which of the two had the best of the controversy.

*Dr. Lang's History of New South Wales.*  
2 vols. London, 1837. Valpy.

IN this second edition the reverend author has brought down his account of the colony to the close of last year, and made other additions which considerably improve his useful work. We rejoice to see it stated that New South Wales has made greater progress within the three years which have elapsed since Dr. Lang's first edition appeared, than during any previous period of equal duration; and that the most encouraging prospects may be entertained of the correction of all still existing errors, and the rapid increase of future prosperity. There is a very neat map and a plan of Sydney prefixed.

*The Picture of Scotland.* By Robert Chambers. Edinburgh, 1837, Chambers; London, Orr and Co.; Glasgow, Macleod.

A FOURTH edition of this excellent guide, which ought, indeed, from its merits, to exhaust a good edition every summer and autumn. The plates would be the better for being retouched.

*Parterre Français.* London, 1837. Strange.

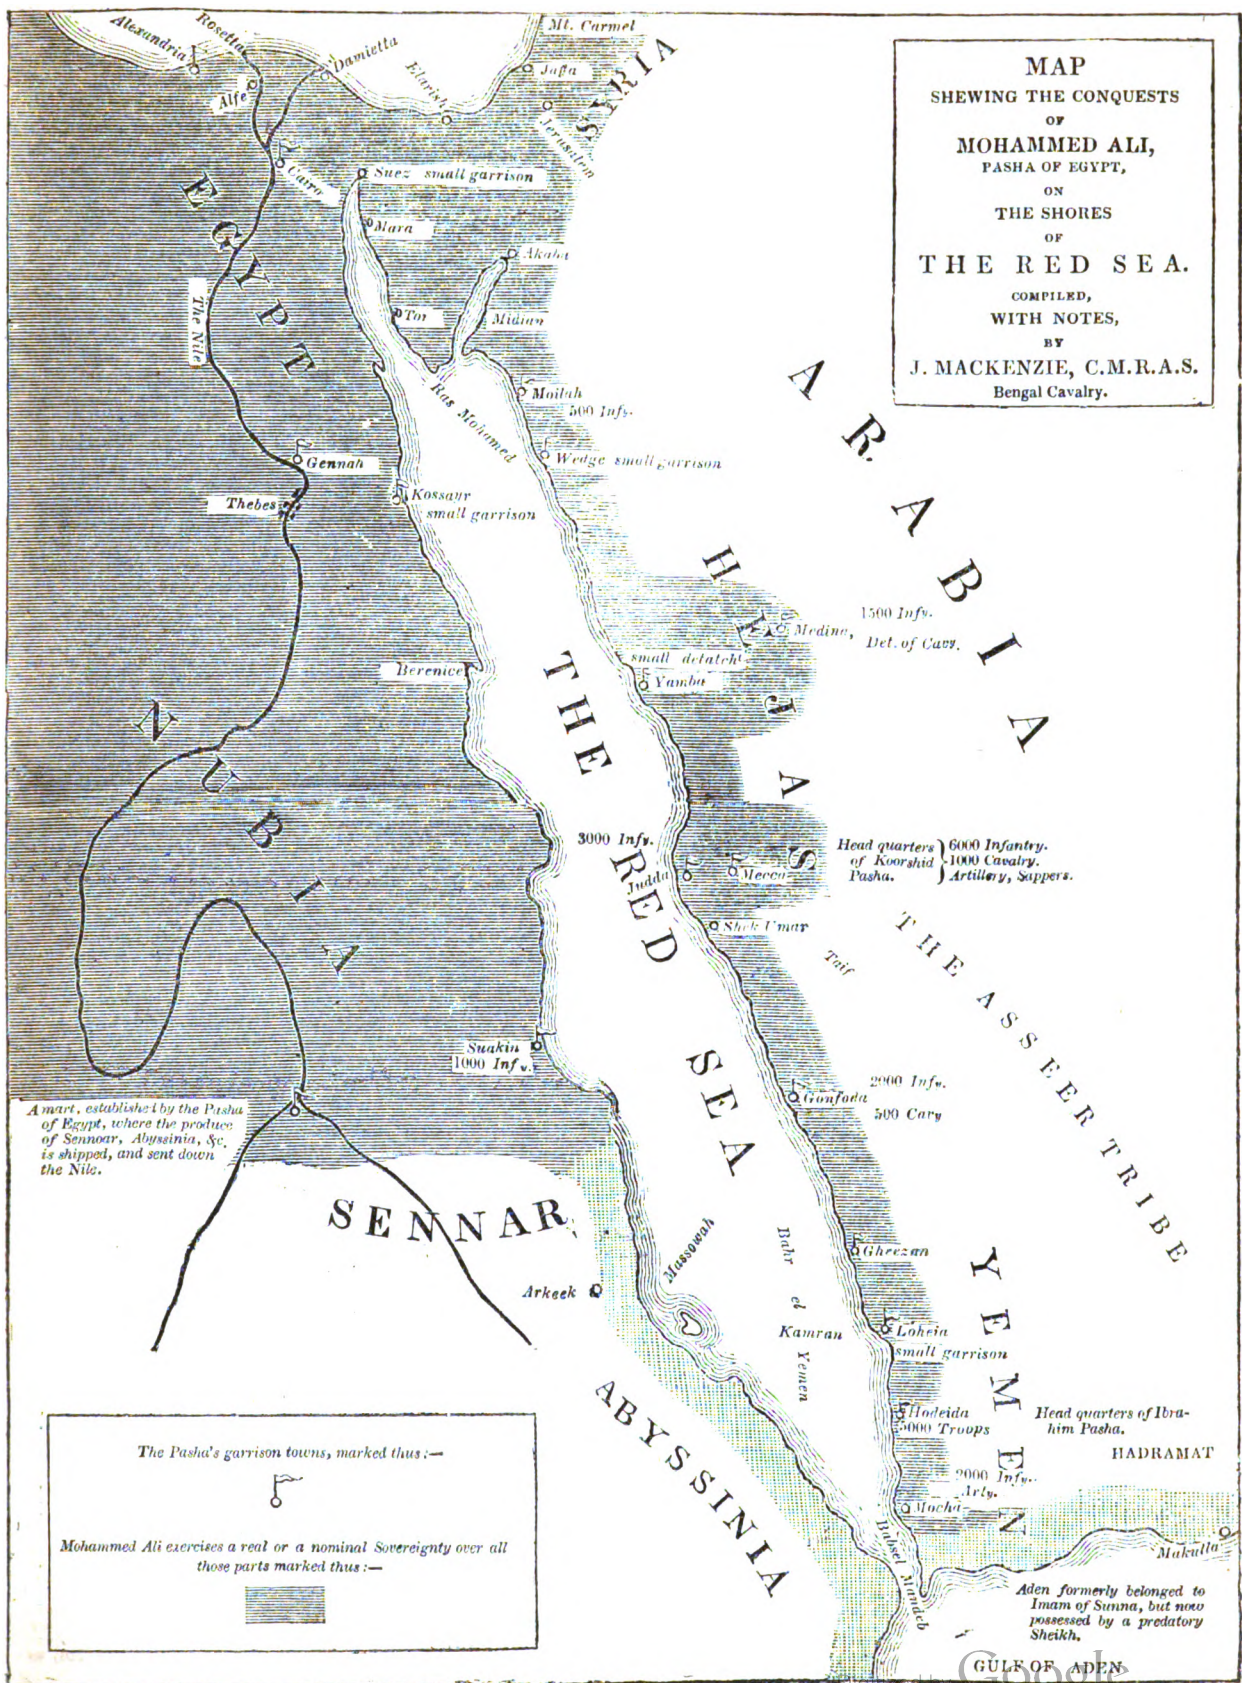

A NEW weekly publication, consisting principally of extracts from the best ancient and modern French authors, and well calculated to assist the student of the French language.

*Views of the Architecture of the Heavens: in a Series of Letters to a Lady,* by J. P. Nicholl, LL.D. F.R.S.E. Professor of Practical Astronomy in the University of Glasgow. 12mo. pp. 226. (Edinburgh, Tait; London, Simpkin and Co.)—The object of Dr. Nicholl, in this most delightful work, is to collect into one view the splendid results of the labours of modern astronomers in the most magnificent domains of the sublimes of sciences. These, hitherto, have only been accessible in the scattered volumes of the "Philosophical Transactions," "Philosophical Journal," &c. The points to which Dr. Nicholl directs our attention are those beautiful phenomena, the nebulae, and the double and triple stars, and the speculations to which a consideration of their structure gives birth. All these are of the most interesting description. We would willingly present our readers with extracts; but selection is difficult where all is excellent; and in the *embarras du choix* in which we find ourselves placed, we can only refer our readers to the work itself. It is a noble monument to the genius of the illustrious Herschels and the taste of the author.

*Winkelreid, a Tragedy in the German Language,* by Professor Charles Voelker, and translated by the Rev. Joseph M'Allister. Pp. 198. (Liverpool, Grapel.)—A strange medley German affair, founded on the history of Switzerland after the death of William Tell. The German is accompanied by an English translation.

*Bertinchamp's Theoretical and Practical German Grammar,* &c. Pp. 125. (London, Wacey.)—With forty easy and pleasing lessons. We can also recommend this performance to the same class of readers, and particularly to the less instructed in the language.

**LITERARY AND LEARNED.**  
**DIFFUSION OF USEFUL KNOWLEDGE**  
**IN AMERICA.**

WE are indebted to the Rev. Mr. Gorham D. Abbott, of New York, for No. I., containing the Prospectus, &c. of the recently instituted American Society for the above purpose; and as it brings forward some views of universal interest, we are induced to notice them, not only for their own sake, but for the sake of the association whence they emanate; an association to which every good citizen, of every nation, must wish the utmost extension and success.

At its outset, the Society appears to be patronised by many of the leading men of America. Of thirty-three vice-presidents, after the Hon. Stephen Van Rensselaer, president, four bear the title of "excellency," two are "right reverends," one a "general," and twenty-three "honourables." There is only one D.D., one M.D., and one plain esquire in the list; which is, therefore, pretty well be-titled for a land of republican equality. The abbreviated markings of their various provinces are also strange to a European eye; and we cannot tell, without some reflection, what to make of Tenn. Penn. Va. La. Ala. Ill. Me. Mo. Mich. Mass. and Miss. But, no matter what are the appellations or contractions, the design is most laudable and patriotic. Among the leading arguments for it, we are truly told,—

"In an undertaking of this nature, it were affectation, at this period, not to recognise the influence of the Christian religion, as the great source and the only preservative of all our blessings, individual and national. Its great truths and sanctions are the only foundation of sound morality, the only defence of public and private virtue, the only safeguard of the social and moral welfare of individuals and communities. Its principles can alone inspire that purity, charity, and order which are essential to freedom, and without which our free institutions must come to an end."

And, differing much in this respect from any prototype in the mother country, the Society says:—

"It will always encourage the circulation of good books, by whomsoever published. It will regard the author or publisher of a useful volume as a co-worker, and a public benefactor. And any individual who will employ the pen or the press in extending the influence of knowledge and virtue, will find in this institution a friend and ally."

In setting forth the importance of the Institution, it is observed, "If we look forward but a few years, we must see that the great mass of mind, throughout our land, cannot rest satisfied with any ordinary supply of the means of knowledge. The desire for knowledge will constantly increase, and the more regular and systematic the supply, the more steady and ever increasing will be the demand. In about twenty years, at the present rate of increase, our population will be doubled. Of course, if the means of intellectual improvement only keep pace with the increase of our numbers, we must, in that brief period, double the amount of all the publications now extant in the land, to say nothing of replacing the millions of volumes, which it is hoped will be worn out by careful use. And who can foretell the yet undiscovered progression which the mind of such a community will make in its demands for the means of knowledge?" \* \* \* If the mind of this nation shall be well-informed, well-balanced, well-disciplined, and regulated by principles of virtue

and piety, our glorious institutions will continue. But ignorance, immorality, and freedom, cannot co-exist. \* \* \* The committee are also impressed with a sense of the importance of such an institution, from the great and increasing influx of foreign population, for whose intellectual culture no suitable provision is made. During eight months, in the year 1836, from April 1 to December 1, more than 55,000 emigrants arrived at the port of New York. It is estimated that the average arrival on our shores is more than 10,000 per month, throughout the year. Every additional facility for crossing the Atlantic will be likely to increase the number; and no one can tell how great and numerous the arrivals from the old world will be, when steam-ships shall connect it with the new. It is said that there are 30,000 Germans in the city of New York. In Philadelphia and the State of Pennsylvania, the proportion is much greater. The Irish, Swiss, and French, especially in the valley of the West, swell the aggregate of our foreign population to a vast amount. They are cut off, in a great measure, from the use of books and other vehicles of information, circulated in their native tongue at home, and no adequate provision, if any at all, is here made for their improvement. This institution hopes to render invaluable service to them and to our country, by providing books of elementary instruction and general information on all subjects, expressly for foreigners and their children; and thus to diffuse among them right views of their relations and duties as men, and as American citizens; of the nature of our government and civil institutions, and the obligations they impose on all who enjoy their blessings."

More particular details follow of organisation, views, means, regulations, &c. &c.; and there is a brief account of the chief literary and scientific societies of England\* and France, from the proceedings of which every useful hint is suggested for adoption in the American Institution.

Altogether it seems to be a well-matured plan, and one founded on the soundest principles for the improvement of men in social life. Again we most cordially wish it immediate and lasting prosperity.

*Diffusion of Useful Knowledge.*

WHILE we are upon this subject, and when a transatlantic institution is, in a considerable degree, modelling itself upon an English prototype, it behoves us, in justice to literature and knowledge, to warn our American compatriots on the necessity of adhering steadfastly to the sound principles they have laid down, and in no case to depart from their fair professions. With all its merits, to which we have ever been ready to bear due testimony, we are bound to notice, that we have received many appeals on the subject of the London original Association. This will be exemplified in the following:—

*To the Editor of the Literary Gazette.*

*Chatham, April 11, 1837.*

Sir,—In a recent Number of the *Literary Gazette*, after paying, in some degree, a well-merited compliment to the "Penny Cyclopædia of the Society for the Diffusion of Useful Knowledge," you designate it "a truly valuable dictionary, brought down to the information of the present day." That it is so, to a certain extent, I admit; but the mode of selection adopted by the editor, appears to me in many respects objectionable. Some of the sciences absorb a far greater space than seems due to their merits; thus contracting, within very narrow bounds, the articles which treat of sciences of equal, if not greater, value. For example,—in the part for February, consisting of 110 pages, considerably more than one-third of

these are dedicated to natural history, exclusive of botany. No doubt the different branches of zoology are of much interest, but, surely, not of such paramount importance, as to take up one-third of a work ostensibly dedicated to the purposes of general knowledge. Nearly the whole of the illustrations are subservient to zoology, otherwise occupying so much space, while many articles, which the cuts are admirably adapted to explain, are left without this useful aid. That other sciences suffer, in consequence of the editor thus succumbing to the hobby of some favoured contributor, I think you will be disposed to admit, when you inspect more narrowly the relative proportion of the different articles contained in the seven volumes already published, as compared with their scientific value. Many of the biographical articles are slovenly in the extreme. In the notice of Gibber, his controversy with Pope, which led to the publication of his famous "Apology," is not even alluded to. Cartwright, the inventor of the power-loom, and the noted political pamphleteer of the same name, have due mention; but the inquirer will look in vain for Christopher Cartwright, the excellent Hebrew scholar, who died in 1682; for Thomas Cartwright, the noted puritan, and author of many learned works; or the poet, William Cartwright, the contemporary and friend of Ben Jonson. Some of the criticisms are sufficiently ludicrous. Cowper's unreadable version of Homer, is pronounced to be the "best we possess." That it is so, the admirers of Pope and Southey may be reasonably disposed to doubt; nor will they easily suppress the smile of contempt at the illiberal and unfounded assertion, that "Pope, it is well known, translated not from inclination, but for money." That Cowper was "a man gifted with a decidedly poetical temperament," I do not pretend to dispute; but the remark, that Pope's "merits chiefly consist in powers of wit, which are certainly great, and in a facility of rhyming, which is certainly extraordinary" (thence inferring his want of the more elevated qualifications of the poet), only proves that the critic's judgment is narrowed by the prevailing cant of the day, which seeks to exalt the writers of a particular class and sect, at the expense of their less orthodox but more eloquent predecessors.—I remain, &c., T. C. S.

The following also appeared some time ago in the "Times" newspaper, and agrees with a reclamation addressed to us:—

"In August, 1839, a prospectus for the publication of an atlas, under the direction of a long list of noblemen and gentlemen, styling themselves 'The Society for the Diffusion of Useful Knowledge,' met my eye. It set forth that the work would become 'of unexampled cheapness, and would consist of at least fifty plates.' This seemed so tempting, that I became a subscriber. We are now, sir, advanced more than six years. The work has 'dragged its slow length along' to the extent of fifty-five numbers (or 110 plates), and we are threatened with thirty-eight plates more, 'according to the best view which can at present be taken,' and this exclusive of 'six or seven cities,' so that in the end 'at least fifty plates' means 150, and possibly a score or two more. Let us now see how the unexampled cheapness is made out:—

75 numbers, at 1s. 6d. each .....	£ s. d.
2 portfolios (one will not hold them), published by the same society, and, of course, of unexampled cheapness .....	5 12 6
also .....	0 14 0
Binding 150 maps, say two volumes, at 10s. .....	1 0 0
	£ 7 7 6

So that this is the unexampled cheapness! The convenience I need not say is great, of having 100 loose maps lying about for nearly one-sixth of the average duration of a man's existence, during all which time you are enjoying the anticipation of possessing, in your old age (if it shall please Providence to spare your life), an atlas 'of unexampled cheapness.' The Society, of course, are 'all honourable men,' otherwise I should say this was indeed 'humbug, and something more.'

There may be matters *here* to amend; and in the meantime such notice is worthy of transatlantic attention.

**FINE ARTS.**

**NEW PUBLICATIONS.**

*Wanderings and Excursions in South Wales.*  
 By Thomas Roscoe, Esq. Parts III., IV., and V. Tilt.

The pencils of Cox, Watson, and Wrightson, have furnished the illustrations of these three Parts; and they are exceedingly picturesque. The descriptions are full of vivacity. The following account of a South Cambrian wedding is amusing enough.

"Saturday is fixed as the day of marriage, and Friday is allotted to bring home the furniture of the woman; generally an oak chest,

\* By an error of the press, p. 31, the Royal Society is stated to have commenced in 1833 instead of 1835.

a feather bed, clothes, and crockery. The man provides a bedstead, table, dresser, and chairs. The evening is employed in receiving the presents of money, cheese, and butter, at the man's house, from his friends; and at the woman's house from her friends: this is called *purse and girdle*—an ancient British custom. All the presents are set down on paper, and when demanded, they are to be returned. On Saturday, the friends of the man come on horseback to his house, to the number of fifty or a hundred, eating and drinking at his cost, making their presents, and repaying those made at their wedding. Ten or twenty of the best mounted then accompany the bridegroom to the house of his intended, to demand her of her friends, who, with the lady, appear as uncomplaining as possible; and much Welsh poetry is employed by way of argument, one party being within the house, and the other without, abusing each other heartily, in language something more sonorous than 'choice Italian.' Formal orations are delivered by some of the out-door party, and replied to by others, appointed to conduct this nuptial negotiation. At length the father appears, admitting and welcoming his guest; they alight, take refreshment, and proceed to church. The girl mounts behind her father, mother, or friend, upon the swiftest horse they can procure, and gallops off, with her intended husband, and all the wedding guests, riding after in full chase.

'Over the hills and far away'

go these bride-hunters, till the girl or her steed grow weary, and she suffers herself to be quietly conducted to the church and married. All the party then return to the married couple's house, eating at free cost, but finding their own liquor. Many of my Welsh friends tell me they have often joined the wedding troop, and that the chase is a most animated and amusing scene,—the bride leading the cavalcade of merry equestrians in any direction, and the whole party scouring the country like man-folks."

*Picturesque Illustrations of Great Britain and Ireland, the Fifth Series; comprising Views in the Counties of Chester, Derby, Nottingham, Leicester, Rutland, and Lincoln.* Parts 30-4 to Parts 35-9. Fisher, Son, and Co.

THE last-mentioned Part "brings this series of picturesque illustrations in England to a close for the present." During the progress of the publication, we have frequently been called upon to admire the skill and fidelity of Mr. Allom, from whose drawings the plates have been engraved; and the perspicuity and simplicity of the historical and geographical descriptions, which have been furnished by Messrs. Rose and Noble. So extensive, so pleasing, and, at the same time, so cheap an English topographical work, does not exist.

*Sketches in Spain.* By George Vivian, Esq.; Lithographed by Louis Haghe and P. Gauci. No. II. Colnaghi and Co.

IN this second Number, Mr. Vivian fully maintains the high artistic character which he obtained by his first. "Segovia," "Convent of Campo Santo, Valladolid," and "Plain of Valencia and Convent of St. Miguel de los Reyes," are especially beautiful. The lithographical, or rather, we believe, the zincographical, part of the publication, does Messrs. Haghe and Gauci great credit. We never saw prints of the description so completely identified with the finest aquatintas.

*A Walk through Richmond and Twickenham Meadows.* W. B. Cooke, Nottingham; Tilt, Fleet Street.

NEITHER at this, nor at any other season of the year, does Richmond need any recommendation of its pastoral and local beauties to the residents of the metropolis or its vicinity: yet, many who visit it may wish to know more of its peculiar points of attraction; as, also, of the residences of those who have occupied the public regard in times past, as well as of those who now inhabit seats and mansions in and about so favoured a spot. To such, this brief survey will afford the needful information, and to nothing more does it pretend; but it is further illustrated by a tastefully executed vignette view of Richmond, from the Thames, by W. B. Cooke.

*The Encyclopædia of Ornament.* By H. Shaw, F.S.A. Nos. V., VI., VII., and VIII. Pickering.

No description can do justice to the beauty of this publication, or to the care and attention with which the details of the various plates are executed. Among the most striking of the subjects in the Numbers lying before us, are the "Designs for Goldsmiths' Work," by Hans Holbein, and various specimens of "stained glass."

*Specimens of the Details of Elizabethan Architecture.* Drawn and engraved by Henry Shaw, F.S.A. Parts VI. and VII. Pickering.

GENERALLY speaking, these details are more curious and elaborate than they are beautiful. Some of them, however, are well deserving of attention; and they all evince Mr. Shaw's fidelity, knowledge, and skill.

*Wood's Views in London, Westminster, and their Vicinities, No. I.* Orr and Co.

ALTHOUGH not ranking with the "costly, erudite, and elaborate works which have been compiled, descriptive of the rise and progress of the vast metropolis of England," yet conveying a very pleasing notion of the populous and busy scenes which it professes to illustrate. The plates in this first Number are from drawings by J. H. Shepherd, and the descriptions are by W. G. Fearnside.

*Christchurch, Woburn Square.* Drawn and lithographed by S. Russell. A PRETTY view of a pretty church.

#### SKETCHES OF SOCIETY.

##### THUGS AND THUGGEE.

IN the "Edinburgh Review" for January, No. 130, there appeared a very striking and interesting article, respecting the Thugs, or Secret Murderers of India; which has, as so extraordinary an exposition must have done, excited very general popular notice. The volume (8vo. Calcutta, 1836) on which it was written, is entitled "Ramaseena, or a Vocabulary of the peculiar Language used by the Thugs: with an Introduction and Appendix, descriptive of the System pursued by that Fraternity; and of the Measures which have been adopted by the Supreme Government of India for its Suppression;" and the details unfold the measures of one of the most remarkable associations for robbery and butchery that ever stained the annals of mankind. We regret that the reviewer has altogether avoided the philological part of the work; which we think (for we have not the book) must have afforded some key to the origin of this strange phenomenon, and, perhaps, let us more into the se-

cret of its religious combinations and mysteries. But leaving this source of inquiry for the present, we shall proceed to make some additions to the "Edinburgh Review," which have reached us from the East, and which, we trust, will partake of the interest so powerfully created for the subject.

From the "Ramaseena," and the remarks of the writer, we learn that the Thugs have existed for ages, and ramified over the whole of the vast peninsula, from the Himalayas to Cape Comorin. Their trade has been the murder of travellers, with peculiar ceremonies, and the disposition of their corpses after plundering them. The craft was regularly organised; had masters, singularly enough, called *Burkas*, and novices, called *Kuboolas*. When out upon their expeditions, they were divided into scouts, sextons, shumseas, or holders of land, and bhurtotes, or stranglers; and assumed every possible form of society and character, such as rajas with their suites, merchants with their attendants, strangers, boatmen, &c. &c. The goorn, or fully instructed operative, taught the cheyla how to waylay and strangle his victims; and all was done in the name of the Goddess Kalee, Kunkalee (man-eater), or Bhudkalee. They ate sacred sugar under a tree; and a pickaxe, in the keeping of the leader of the gang, was, as it were, the holy standard under which they committed their ruthless crimes.

The review describes, from the evidence and confessions of the murderers tried by Capt. Sleeman, at Jubbulpore, the cruel massacre of a Moonshiee and his family, of a fine old soldier and his servants, of a sixty-soul affair (for the assassins remember their atrocities by the numbers murdered), of five hundred recruits, and other bloody scenes. Also, some equally revolting deeds in boats on the Bengal river. The Northern Thugs, it seems, murder women as well as men; those south of the Nerbudda do not; and, it is generally stated, "The Thugs are forbidden by their rules to kill women of any description, and either men or women of the following classes:—fukeers, bards, musicians by profession, dancing men or women, washerwomen, sweepers, oil-venders, blacksmiths, and carpenters, when found together, maimed or leprous persons, men with cows, and Ganges water-carriers, while they have the Ganges water actually with them; but if their pots are empty, they are not exempted."

It was, in 1831, that a gang of these monsters was discovered and seized in Malwa; and since then the governor-general has vigorously prosecuted a plan for their extermination. By October 1835, fifteen hundred and sixty-two had been committed, of whom three hundred and eighty-two were hanged, and nine hundred and eighty-six transported, or imprisoned for life. Both Mahomedans and Hindus belong to the association; and its hands are kept up by regular descent from father to son, or by adoption, though the latter is not very common. The gipsy tribes, it is noticed, are strongly suspected of Thuggery.

Such are the particulars exhibited in the "Edinburgh Review," which further adverts slightly to certain ancient matters connected with the system. Seneca mentions Philetas, or Fonderis, in Egypt, who appear to bear a resemblance to the Thug stranglers; and Thevenot mentions the Thugs themselves, in the sixteenth century.\* These miscreants main-

\* "The Bengal Hurkaru" says,—"The origin of Thuggery cannot be traced with perfect accuracy; but there are grounds for believing that it originated with some vagrant Mahomedans, in the neighbourhood of

tain that the sculptures in the famous caves of Ellora are exhibitions of Thuggee; and they insist on the divine origin of its murderous practices. The sacrifices are made in honour of Devej, Kalee,† Durga, Bhurvanee, names of the Goddess of Destruction, and the beginning of the establishment was a rite belonging to her.

"They have a tradition that a demon, by name Rukut Beej Dana, infested the world, and devoured mankind as often as they were born or created; and to enable the world to be peopled, Kalee Davey determined to put him to death. This demon, they say, was so tall that the deepest ocean never reached above his waist; and he could, consequently, walk over the world at his ease. Kalee Davey attacked him, and cut him down; but from every drop of his blood another demon arose, and as she cut them down, from every drop of their blood another demon sprung up, and the numbers increased at this geometrical rate, until she became fatigued with the labour. On this she formed two men from the sweat brushed off from one of her arms; and giving them each a handkerchief, told them to put all these demons to death, without allowing one drop of their blood to fall on the ground. After their labour was over, they offered to return to the goddess the handkerchiefs with which they had done their work; but she desired them to keep them as the instruments of a trade by which their posterity were to earn their subsistence, and to strangle men with these handkerchiefs, as they had strangled the demons, and live by the plunder they acquired; and having been the means of enabling the world to get provided with men by the destruction of the demons, their posterity would be entitled to take a few for their own use. \* \* \* A Thug considers the persons murdered precisely in the light of victims offered up to the goddess; and he remembers them, as a priest of Jupiter remembered the oxen, and a priest of Saturn the children sacrificed upon their altars. He meditates his murders without any misgivings; he perpetrates them without any emotion of pity; and he remembers them without any feelings of remorse. They trouble not his dreams, nor does their recollection ever cause him inquietude in darkness, in solitude, or in the hour of death."

In the midst of their frightful career, however, they are troubled and deterred by various omens and auguries (the Pilpaoo and Thibao), very like those of Greek and Roman paganism, and of others familiar to northern superstitions, such as the flight of birds, the cry of hares, and the crossing of wolves.

From India we learn, that notwithstanding the revelations in Captain Sleeman's work, the extent of the system is not yet considered to be entirely developed; though the annexed table exhibits a statement of the most remarkable Thuggees on record, as ascertained on the trials to which we have referred.

Delhi, in the seventeenth century. The weapon originally used, we infer from Thevenot's description, resembled the *lasso* of the South Americans, or that of the ancient Sagartii; and was used not only for the destruction of men, but for the capture of horses, cattle, &c. Whatever, however, may have been its origin, the Thugs of the present day admit that the great trunk of the present system, on which offsets have at intervals been grafted, were seven clans of Mahomedans from Upper India. The belief now so universal among Thugs of the divine origin of the science appears to be of Hindoo growth; and, by some inexplicable confusion, which it is quite impossible to trace, while the Hindoo Thug worships the goddess Kali as his guardian saint, the Mussulman worships Bhowani with similar superstition."

† "They all believe Kalee to have been extremely black, and to have had features so terrifically hideous that no mortal man could dare to look upon them."

"Statement of the most remarkable Thuggees on record, compiled from Captain Sleeman's work."

Date.	Number of Thugs employed.	Place of Murder.	Number of Persons murdered.	Amount of Treasure.

1833	56	Between Hyderabad and Masulipatam	Unknown.	10,000
				24,000

The following," continues our authority, "is a brief summary of what has been effected for the suppression of Thuggee. In nine years, more than 2000 Thugs have been arrested; 1470 have been tried and convicted, in 167 trials, for the murder of 947 persons. Of these, 382 have been hanged; 909, transported; 77, imprisoned for life; 92, imprisoned for certain periods; and 21, acquitted. Besides these, 11 have escaped, 31 died before sentence, and near 250 have, at different times, been admitted king's evidences, and exempted from death or transportation—first, to secure the conviction of those already in custody; and, secondly, to aid in arresting their associates at large. 'As every man,' observes Captain Sleeman, 'has, on an average, been on more than ten of these expeditions, it is probable, that the enumerated cases of crime charged against them are not one hundredth part of those perpetrated by them in their career of guilt. In some recent cases, 206 prisoners were convicted of the murder of 440 persons!'" It is truly gratifying to find so much has been accomplished. In Malwa, Guzerat, Rajpootana, and Delhi, Thuggee has been, in a great measure, suppressed. Great progress has also been made in the Lower Doab, in Oude, Aydrabad, and the Deccan. In the Concan and Malabar it appears never to have existed. But much yet remains to be done throughout the whole of Southern India, in the Carnatic, Mysore, and the Circas; also, in Gwalior and Bundelcund, in Orissa, Behar, and Bengal. Captain Sleeman anticipates the greatest difficulty in dealing with the river Thugs of Bengal, who are supposed to be 390 strong; and who, he thinks, will, probably, defy the efforts of our government, without some special measures be sanctioned for their suppression. We believe he alludes to the difficulty of convicting, in consequence of the impossibility of discovering

\* "This great plunder was the cause of a tax being imposed on Thugs of Rs. 24.8 triennially per family, at Gohud, in Central India."

† "These men were Dacoits, returning from a plundering excursion."

‡ "In this affair the Thugs travelled 160 miles on the most friendly terms with their intended victims."

the bodies of the murdered victims. If this be the case, some special enactment should be passed by the council, without delay, to remedy the evil. We observe that, in the convictions on all the above trials, the *bhurotote*, or stranger, has been invariably executed. As the *bhurotote* is the most experienced of the party, and must have given proofs of his judgment, courage, and skill, before he is permitted to undertake the office, he is always an exceeding villain. The *shumseas*, or those employed to hold the hands of the victim, are considered to be a lower order of villains; and with these, the sentence has often been commuted to transportation. We are inclined to think it would be far better to hang them all like pirates, or any other wretches of the same class, who are totally beyond the pale of humanity.

But the description of the assassinations on the river in Bengal, is a worthy sequel to the *land* accounts, extracted by the Edinburgh reviewer. "Q. I understand you have served with the river Thugs of Bengal?—*Shumshera*. On one occasion only. I had been on one expedition with Dilawur Khan, and one with Futteh Khan; and, after these, I went with Bhowur Khan and Moradun, two Lodah Thugs, and joined Jhoollee Khan the fair, and Gholamun. Jhoollee Khan had a man to carry his bundle, by name Nathoo, as he was to act this season with Jypaul Kaet, a Jamadar of the Bongoos, or river Thugs. He acted as their sotha, or inveigler, this season. We joined Jypaul at the Mormakeya Ghat, where he had two boats at the different Ghats, two and three coes from each other. Jhoollee Khan brought two *beetoos* to the boat, which Jypaul commanded in person, and Bhowur Khan and I embarked with them. As soon as we had all got on board, Jypaul said, in Rumasee, 'Let the Boras (Thugs) separate themselves from the *beetoos*,' and we did so, leaving the two travellers together. Four men were on the bank, pulling along the boat; one was at the helm, acting at the same time as the *bykuree*, or spy, and seven of the gang were below with us and the travellers. We had got on about a cose, when the *bykuree* at the helm, seeing all clear, called out, 'Bhugna ko pawn do,'—'Give my sister's son pawn.' This was their mode of giving the *jhirnee*, or signal, and the two *beetoos* were strangled. After strangling them, they broke their spinal bones thus, by putting their knees upon their backs, and pulling up their heads and shoulders. After doing this, they pushed them out of a kind of window in the side. Every boat has two of these windows, one on each side, and they put the bodies out of that towards the river. They break the spinal bones to prevent all chance of the people recovering and giving evidence against them. We generally stab the dead bodies through on both sides, under the arm pits; but they are afraid to cut or stab the body, lest there should be signs of blood upon the water, as the corpses pass other boats that are following them on the river."

"Q. How are the river Thugs not suspected by the people who live on the banks of the river?—*Shumshera*. They are very well known by the goreys (policemen), and some other people of the small villages along the banks of the Ganges; they sometimes keep their boats near these villages for several days together. The two lotahs taken from the two men, whose murder I have described, were given to the gorey of the village of More, whom Jypaul, after the murder, sent off for eight annas worth of spirits. These Thugs never keep any part of the booty but the money, lest it should bring

them into trouble. The clothes of the two men were thrown into the river. The principal men of the gang, or the shrewdest of them, go along the roads, each having a servant carrying his bundle, and proceeding towards the ghat, where his boat is to be found, whether going up or down the river. When a traveller overtakes him, he learns whither he is going, pretends to be ignorant of the road, to be going to the same place with the traveller, but to be entirely unacquainted with it, and anxious to have somebody to instruct him. If the traveller had not intended to go by water, the Thug soon pretends to be much tired, and wishes that he was near a boat. The traveller expresses the same wish, and they agree to diverge from the road to the river. Coming to the ghat, the Thug pretends that he is a good hand at a bargain, and is allowed to agree for a passage for both. He bates down the master of his own boat, after a good deal of disputing, to half price, and the beetoo is much pleased, and expresses his gratitude: they embark, and the beetoo is killed as soon as they get away from other boats. If the beetoo suspects or dislikes the first man, he soon falls in with the inveigler of another boat, who learns it by a sign, and pretends to enter into the beetoo's feelings and anxiety to throw off the first, who, on some pretence, remains behind, while his friend takes on the traveller to the other boat, further on than his own, where he is disposed of. They are much more numerous than we are. I have not heard of more than about thirty families of Moteas; and the Lodabas are not much above two hundred men; but the Bongoos are very numerous, I have heard.

"Q. What do they consider the best season for their work?—*Shumshera*. The months of November, December, January, and February. In March it becomes too hot, and in the rains the river is considered to be too rapid, and the boats cannot be pulled along the banks.

"Q. This lad says the Bongoos are known to the villagers on the bank of the river?—*Bukhtawur*. He is a mere boy; if they were known to the villagers, how could they escape so well? They rarely keep their boats near villages; but when they do so, they conciliate the goreyts, and other policemen, that they may not ask questions.

"Q. They never keep any thing but money, he says?—*Bukhtawur*. Rarely. They throw every thing else away, in order to keep clear of the custom-house searchers, who are very numerous in that quarter."

(Conclusion next week.)

#### ELECTIONS.

WHAT has the *Literary Gazette* to do with elections or party politics, we hear some of our readers say, on beholding the above head. In truth, very little, though politics are so intimately mixed up with every thing around, that it is not easy to steer quite clear of them. At present, however, our only purpose is to draw from the store of old reading two or three curious illustrations of the elections of former days.

The following letters are to be found amongst the Harleian manuscripts:—

"After my very hearty commendations,—Whereas, there are to be returned by you, against the parliament, two burgesses for Gatton, in that county of Surry which theretofore have been nominated by Mr. Cople, for that there are no burgesses in the borough there to nominate. Forasmuch as by the death of the said Mr. Cople, and minority of his son, the son, with his lands, are within the survey and rule of the Court of Ward, whereof I am his majesty's chief officer; you shall, therefore, forbear to make return of and for the said

town, without direction first had from me therein, whereof I pray you not to fail, and so, I bid you heartily farewell.—From the Court of Saint James's, this 13th of November, 1584.

—Your very loving friend, W. BURGHEY.

"To my very loving friend, Walter Covert, Esq. Sheriff of the County of Surry and Sussex, and to his Under-Sheriff or to other persons."

And, a few days afterwards, the following letter was also written:—

"After my hearty commendations,—Whereas, in the indenture returned for the Borough of Gatton, in the County of Surry, Mr. Frauncis Bacon and Mr. Thomas Bushoppe are nominated burgesses. Forasmuch as Mr. Frauncis Bacon is returned also for another borough, and so certified and sworn, you shall appoint in his room and place Edward Browne, Esq., and so certify him with Mr. Bushoppe: so, fare you well.—From the court, this 24th of November, 1584.—Your loving friend,

"W. BURGHEY."

"Dublin, Nov. 26th, 1661.

"Gentlemen,—His majesty having commissioned the lords justices speedily to convene a parliament here, they, in order thereto, have sent out writs to the several counties and boroughs in this kingdom, for electing members to serve in parliament, which will begin the 8th of May next; and, therefore, shall entreat you to choose Colonel Randle Clayton to serve as one of the burgesses of the corporation. And if you have not agreed upon another for yourselves, then William Fitzgerald may be the other; and one or both, if chosen, shall serve you gratis, and act as earnestly in your concerns as any other you shall choose. The performing whereof shall be acknowledged as a kindness due to your friend and servant,

"ORRERY.

"For my respected friends, the Sovereign and Inhabitants of the town of Kinsale."

[From the Southwell MSS.]: (He was one of the Lord Justices at this period.)

#### MUSIC.

1. *A Selection of Psalms and Hymns, &c.* By the Rev. H. H. Milman, M.A. To which is added, Mr. Sale's *Concise System of Chanting*. 18mo. London, 1837. Nichols.
2. *Psalms and Hymns for the Service of the Church, being a Collection of Tunes adapted to the various Measures of the several Selections made for the Church, and more particularly to that compiled for the Use of St. Margaret's, Westminster.* By the Rev. H. H. Milman, M.A. &c. To which are added *Chants for the Services, Responses to the Commandments, and a Concise System of Chanting, &c.* The whole selected, adapted, composed, and arranged, by J. B. Sale, &c. 4to. London, 1837.

THAT there exists a common belief of the necessity of some revision of the Psalms to be used in the Church, is sufficiently proved by the numerous attempts which have been made of late years, by various members of the establishment, to produce such a version as might be suitable for general adoption. Another selection by the Rev. Mr. Milman, a gentleman eminently qualified for the task, both by his various acquirements, and his poetical taste, is now to be added to the list. The psalms contained in it, comprise such of the New Version, by Tate and Brady, as, in the opinion of the editor, may be most frequently introduced with advantage, into the service of the church, and with the hymns which are selected from those of Ken, Addison, Heber, and others of our best writers, including Milman himself, combine to make this one of the best

works of the class we have seen: its value being, moreover, considerably increased by the system of chanting which precedes it, a system exceedingly simple, but apparently well-calculated to facilitate a more general participation in this portion of the service.

If the text has fallen into good hands, we may also say the same with regard to the musical department of the accompanying volume. Mr. Sale, who had the honour of being appointed the musical instructor of her present majesty, has passed, we believe, fifty years of his life in the musical profession. During the whole of this period, he has been attached to one or other of our principal choirs, thus necessarily becoming, not only familiar with all the best works of the great composers for the church, but so deeply imbued with the spirit which characterises those productions, that a selection of sacred music, formed under his judgment, could scarcely do otherwise than realise all the expectations which its announcement may have raised.

Mr. Sale's endeavours to produce a work which might help to restore our parochial psalmody to the importance it formerly enjoyed, when its influence on the minds and morals of the people was generally recognised, have been ably seconded by contributions, not only from the most eminent of his professional brethren, but also from many distinguished amateurs; and the result is a collection of psalm tunes certainly unequalled in this country. Not only does it contain all the chief of those which have been so long admired for their simple grandeur and devotional spirit, and others composed by Mr. Sale and his friends in the same chaste and judicious style, but also many of exquisite beauty, the production of Bach, Luther, and other great *chorale* writers of Germany.

The volume is dedicated, by special permission, to the Archbishop of Canterbury, and is well deserving of that sanction on the part of his grace, which such permission implies. It is beautifully printed, and could not have appeared at a fitter moment than the present, when the friends of the church are bestirring themselves to render it as perfect as possible. If, in the language of an eloquent writer in the "Quarterly Review," "the hymns and harmonies of devotion may be as efficacious as sermons in weaning the heart from its sins, and tuning it aright to receive the lessons of religion," it is fitting that steps should be promptly taken for the improvement of the musical portions of our church service; and we know of none which could be more readily adopted, or with a better prospect of success, than the use of Mr. Sale's admirable collection.

#### DRAMA.

Covent Garden is busily preparing for the new season, and we hear that an efficient company, in the various walks of the drama, are rallying round their brother performer, to aid him in his manly effort to rescue the stage from its long period of eclipse. They ought, indeed, to make common cause with him; for he is only One in the front of their own battle. The public, we have no doubt, will support a legitimate national drama; but it would cool its spirit if it found that those whom it was willing to aid did not aid themselves. They have been buffeted, disgraced, and cheated: all have complained, and, unfortunately, too many were compelled, by their circumstances, to submit to vulgar insolence, indignities, and impositions. It must be their own fault if they are not now redeemed from the odious bondage and thralldom. Let them make the theatre their

pride, and it will surely be their profit. There is a scholar and a gentleman at the head of the enterprise; and one whom experience has taught what is due to every member of the profession. Mr. Macready, an ornament to the boards, will know how to estimate their other ornaments and useful subordinates, behind the curtain as well as before it. As lovers of this great living branch of literature, we earnestly hope that the chance will not be thrown away: we exhort the performers of every class to be true to their own interests, and save us from a relapse into utter degradation. Mr. Webster's success in the Haymarket is a propitious omen.

**Haymarket Theatre.**—On Monday Mr. Power commenced his engagement at this theatre, and has since repeated several of his best characters to crowded and delighted houses. His American accident has diminished none of his powers. The same nice discrimination, mingled with the same breadth and fun, distinguishes his acting in every part. It is a rare union—that talent which draws the most minute traits, be they individual or national, and yet revels in drollery and humour, till the spectator, with aching sides, and mirth-watered eyes, can scarcely perceive the finer lineaments of the performer's art. There is no exaggeration, no clap-traps for effect, but the whole seems as natural as nature; and the look, the gesture, the speaking, and the silence, are all perfect studies of the truth. No wonder, that on a stage where every thing can be seen and heard, such personations should be rewarded with unbounded applause.

**English Opera.**—On Wednesday *Blanche of Jersey*, a new musical romance, the music by Barnett, and the drama by R. Peake, was produced here with complete success. It is a story of great interest; and the author has treated it so skilfully that it never flags. The heroine is represented by Miss Romer, and, even in the *Somnambula*, she never appeared to more advantage. Messrs. Fraser and Seguin are her chief musical supporters; and Compton, in a comic character, is made to relieve the serious parts. The music is tasteful and pleasing.

**New Strand Theatre.**—On Monday a new burlesque, from the pen of the well-known Tom Dibdin, author of successful pieces, the titles of which begin with every letter in the alphabet, was added to the attractive *Sam Weller*, at this theatre. It is called *Alexander the Great in Little*, and embraces the full force of the company, including Mrs. Stirling, who has, we are glad to add, recovered from a fortnight's severe illness. Miss Daly and Mr. Hammond, who are a host in their own persons, make this really funny affair a most laughable finish to an evening's amusement, from which the audience depart exclaiming against the heat of the weather, and the being obliged to laugh too much.

#### VARIETIES.

**The Queen.**—Her majesty has munificently and feelingly sent a donation of fifty pounds to the widow of the unfortunate aeronaut, Cocking. It is an atonement for the royal patronage, so glaringly advertised, of the public place where he was made a sacrifice. *Appropos* of this matter. On Wednesday evening the Nassau balloon had a magnificent ascent, with six or seven passengers, the proprietors of Vauxhall having "most kindly granted the use of it, and Mr. Green most generously his valuable services" on the occasion, for the benefit of the poor woman whom they so recklessly contributed to make a widow, and "who is en-

tirely without the means of support." Such terms of puffery ill become the transaction; nor are we much in love with the newspaper accounts of the affair, in which the public are violently scolded and dragooned for looking at the balloon in the air, from any where but the crowded interior of Vauxhall Gardens. It does seem hard that we must consent to be crushed whenever it may please these aeronaut speculators to take a flight for their own benefit, with which no science (except that of money taking) has any thing to do.

**Sir Michael Faraday.**—In a late No. we noticed the respect paid to the fine arts by the knighthood conferred on Sir R. Westmacott; and it is with equal pleasure we record a similar honour done to science in the person of Mr. now Sir M. Faraday. He had previously received high consideration from the universities and from government, and it was only fit that the crowning acknowledgment should come from our young Queen.

**M. Angelo.**—It is stated from Rome, that the great works of M. Angelo, in the Chapel of St. Paul, in the Vatican, viz. the Conversion of St. Paul, and the Martyrdom of St. Peter, are ordered to be cleaned by the papal government. It is added, that they have suffered no other injury than that of being covered by smoke, &c. from the burning of tapers and incense.

**Mrs. Lewson.**—We do not know whether a new death and burial can properly be called a revival or not; but the town and country journals of the last ten days have had a droll affair of this kind, viz. a long account of the decease and funeral of Mrs. Lewson, aged 116, the dear old lady having left this world, and been interred, two and twenty years ago, and had her jewels, clothes, &c. publicly exhibited in London for several years past.

**Olive-Tree.**—Our philanthropic friend, Mr. Joseph Hamilton, of Annadale Cottage, near Dublin (see former *Literary Gazette*), has presented her Majesty with an olive-tree from Jerusalem. We trust it may be a true type of peace, increase, and happiness.

**Definitions.**—Equality is the being equal; punctuality, a little before your time.

**Weather-Wisdom.**—The harvest weather is very good; not "bad," as predicted in our last. The Almanac proceeds, "Middle of the month windy and cloudy. Unsettled, with high winds and cold rains about the 16th."

**Cocoa-nut Oil.**—Cocoa-nut oil being now imported into England in considerable quantities, I shall only express my opinion, that its present retail price, of 4s. 6d. per gallon, weighing 9 lbs., must give an enormous profit, as the cost-price, at Bombay, on the 28th of January, 1837, was 1s. 9d. for 18 lbs. avoirdupois; and in Ceylon it is much less. In fact, the present charge upon the cost-price is 312 per cent. I must express my regret, also, that it is not more generally used in England; for, instead of the detestable smell of fish-oil, it has rather an agreeable odour; and it is readily consumed in open glass vessels, with floating or standing wicks, whatever the temperature of the air may be.—*Col. Sykes, in a Paper on the Cultivated Oil and Cordage Plants of Dekkan; communicated to the Section of Agriculture and Commerce.—Royal Asiatic Society.*

**The late Bishop Corrie, of Madras.**—At a very numerous meeting of the community of Madras, it was proposed by Sir F. Adam, seconded by Sir R. Comyn, and unanimously carried, that a monument in the cathedral, to the memory of the late prelate, should be erected by subscription; and that, after setting

aside a sum sufficient to defray the expense of the monument, the residue should form a fund for the endowment of scholarships, to be called "Bishop Corrie's Scholarships," in Bishop Corrie's Grammar School. A considerable sum was immediately collected, and the example of Madras is now being followed in other parts of India, where the virtues of this good man are highly venerated.

**Legal.**—It is a singular fact, that the Common Pleas and Pleas of the Crown were not held before judges specially assigned to those courts, but before the chief governor of Ireland; and if he were otherwise engaged, before commissioners appointed by him, which, perhaps, may be the origin of the Court of King's Bench in England exercising jurisdiction over the King's Bench in Ireland.

**Railroads in Holland.**—A railroad between Amsterdam and Haarlem is about to be begun.

**Local Readings.**—The Cornish papers state that a shower of flies had fallen at Redruth; but the Brighton, and other watering-place journals, deny the possibility of there being "a shower of flies." They say it must be a mistake, though flies are always busiest in showers.

#### LITERARY NOVELTIES.

**Chinese Literature.**—It is not, perhaps, so well known as its literary importance deserves, that Dr. Morrison, the great Chinese scholar, left his very curious collection of works in that language on sale for 3000*l.* to his native land, upon the condition that a professorship of Chinese should be founded by the Institution purchasing them. The London University is, we are told, endeavouring to raise the money. But, what a glorious opportunity would this be for Oxford or Cambridge, to facilitate, from their ample funds, a course of instruction in a language spoken by so large and separated a portion of mankind, and containing historical and other documents of unquestionable authenticity, and, probably, validity also. Such an opportunity may not again occur; and we are assured, that there are at this moment in Great Britain one or two men capable of filling the chair, and taking the lead of Europe in a branch of knowledge in which even Klaproth himself was signally deficient.

#### LIST OF NEW BOOKS.

#### TO CORRESPONDENTS.

Rigel, accepted.  
The Map, illustrative of Capt. Mackenzie's Journal, will be found at the end of our Reviews.

ERRATA.—In our last Number, page 508, col. 1, line 33, for "Koll," read "Holl;" and for "Serwen," read "Scriven."

## ADVERTISEMENT,

Connected with Literature and the Arts.

## CLOSING OF THE PRESENT EXHIBITION.

## BRITISH INSTITUTION, PALESTINE.

PALESTINE.—The Gallery, with a Selection of Pictures by Ancient Masters, of the Italian, Spanish, Flemish, Dutch, and French Schools, is open daily, from Ten in the Morning until Six in the Evening, and will be closed on Saturday, the 30th inst. Admission, 1s. Catalogue, 1s.

WILLIAM BARNARD, Keeper.

## NOW OPEN.—DIORAMA, REGENT'S PARK.

PALESTINE.—New Exhibition, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.

Open daily, from Ten till Five.

## TO BOOKSELLERS, PRINTERS, and STATIONERS.

PALESTINE.—To be disposed of, with immediate possession, an Establishment, Bookbinding, Printing, and Stationery Business, elegantly situated in a large City in one of the Midland Counties; the Premises are spacious, and the Connection, which is highly respectable, is capable of much extension.

For further particulars, apply, if by letter, post-paid, to Messrs. Whitaker and Co. Ave. Maria Lane; or Mr. Groombridge, Finsbury Alley, Finsbury Row, London.

## TO ARTISTS, TOURISTS, and ADMIRERS OF THE FINE ARTS.

## PARLOUR'S PORTABLE SKETCHING-CASE, or DELINEATOR, is confidently recommended to the notice of all persons attached to the Science of Drawing, as being infinitely superior to the Camera Lucida, and all other instruments hitherto used for the purpose of Sketching.

The Sketching-Case may be held in the hand, and a correct Drawing made of any object or landscape; or it may be attached to a table, in the same manner as the Camera Lucida. It is simple in its management, and does not exceed, in size, the common Sketching-Book. Manufactured for the Patentes, by Messrs. Parson and Sons, 150 Cheapside; may be had, also, of Smith and Warner, Marylebone Street, Piccadilly; Jones and Son, Opticians, Charing Cross; and at all other Opticians and Artists' Repositories. Ladies and Gentlemen who have the Camera Lucida may have the Delineator added to their own store.

67 Paternoster Row.

## TO the SUBSCRIBERS TO HOGARTH'S ORIGINAL WORKS.—Messrs. Baldwin and Cradock have to inform the Subscribers, that No. I. of this splendid Work, to complete their Sets, is now ready for delivery; containing—

The Weighing House.

Frontispieces to Tristram Shandy.

Pins, or the Battle, with Table-page.

Table of Contents, &amp;c.

Complete Sets, with fine Impressions of the Plates (some of them being copies of Subscribers who had failed to remove their Numbers in the time limited) may be had of the Publishers, in 35 Numbers, price 5s. each.

## HUNDRED MILES AN HOUR.

TANNER'S PENS go faster—quite safe—no sprinkling and false marks—famous workers, and no mistake—every pen test-tried—3500 specimens written with the one same pen—Platinum and Zinc don't corrode—only one fault, last too long—capital hit, suit every body—best the cheapest—Tanner's Pens therefore superlative—immense sale—unprecedented generous support—discerning liberal public—Tanner's sincere grateful acknowledgments.

No. 34, Crown Street, Finsbury Square; and all Booksellers.

## BOOKS IN THE PRESS.

## THE FAMILY LIBRARY.

On Friday, the 1st of September, will be published, embellished with Engravings, price 5s. in cloth boards,

## THE HISTORY OF THE BASTILE and its PRINCIPAL CAPTIVES. Forming Vol. LXIV. of the "Family Library."

London: Printed for Thomas Tegg and Son, Cheapside; and may be procured, by order, of all other Booksellers in the Kingdom.

THE HALL OF JOHN HALL.  
 In 8vo. pp. 602, price 10s. One Guinea, elegantly printed on fine  
 wove paper, embellished with illuminated and other Plates,  
 and handsomely bound in cloth, and lettered,  
**THE FIRST VOLUME OF**  
**PROLUSIONES HISTORICÆ;**  
 or, Essays Illustrative of the Hall of John Hall, Clit  
 tizen and Merchant of Salisbury, in the Reigns of Henry the  
 Sixth and Edward the Fourth.

By the Rev. EDWARD DUKE, M.A. F.A.S. and L.S.  
 "This is a singular volume, evidently the production of a  
 scholar possessed of vast information, and whose mind has  
 been exercised by much reflection. It is replete with just ob  
 servation, intermingled with much good-humour and dry re  
 mark. We wish the ingenious and lively author of this volume  
 all the success his interesting work deserves, and as much plea  
 sure in compiling his second tome, as we have found amusement  
 in reading the first."—*Edinburgh Magazine*.

"This work deserves a place amongst the curiosities of literature."  
 —*John Bull*.

"The learned author has spared no pains in adapting his la  
 borious researches to the capacity of the general reader, as well  
 as to the antiquary and the virtuoso. The work contains much  
 useful and valuable information of the olden time, many ancient  
 and interesting documents, and abounds with historical and  
 amusing anecdotes. It is, indeed, well calculated to form a gem  
 not only in the cabinet of the antiquary, but also in the library of  
 the scholar and the man of taste."—*Edinburgh Herald*.

"We have here a very extraordinary work, evidently the result  
 of vast labour and research; the mind engaged in its production  
 being that of a sound scholar, and a man deeply acquainted with  
 history and human nature in general. It is a curious antiquarian  
 work, and the learned will prize it as a rich gem; but it is  
 written in a popular and rather humorous style, explaining, in a  
 familiar way, so many matters of universal interest, that it will  
 not be confined to the libraries of the learned, since it is of equal  
 concern to the public at large, to whom, we have no doubt, it  
 will prove unusually attractive."—*Edinburgh Gazette*.

"This work will be esteemed by those who like to make the  
 history of manners auxiliary to the history of events and persons.  
 Most heartily, indeed, do we 'throw our old shoe' after it."—*Literary Gazette*.

"The 'Prolusiones Historice' of Mr. Duke are not only a valu  
 able accession to the mass of antiquarian knowledge generally,  
 but have the additional merit of possessing a high degree of local  
 interest. The style is fluent and effective. It may be regarded as  
 the overflowing of a vigorous and cultivated mind, unpractised  
 in the mystery of authorship, yet stored with extensive and varied  
 research, and habituated to deep, accurate, and curious research."  
 —*Edinburgh Journal*.

"We know not when we have met with a more amusing pub  
 lication than the first volume of a work entitled the Hall of  
 John Hall."—*Bristol Journal*.

"The goodly first volume, devoted to this subject, is quite a  
 curiosity of literature. The treatment of all the subject, be  
 sides the curious knowledge we have already spoken of, Mr. Duke  
 displays a good deal of easy power."—*Spectator*.

"We have never encountered any antiquarian disquisitions  
 that were so amusing, delightful, and instructive. Whether we  
 regard the author's spirited and lighthearted style, the ingenuity of  
 his conjectures, or the extent of his reading and research, we  
 regard the 'Prolusiones Historice' as possessing no ordinary charm for the learned  
 and the unlearned. In the way of appendix to the volume, there  
 are a great number of notes, not less curious and illustrative of  
 the main narrative, than of uncommon research, and deep ac  
 quaintance with the olden time. The engravings add also to the  
 value of the work. In short, we could on any day, at any  
 time, every day of the year, and from any part of the volume, reap  
 welcome amusement, harmless enjoyment, and no small portion  
 of historical knowledge. With impatience we wait for the re  
 mainder of the work, being sure of an architectural treat."—*Monthly Review*.

"This is a most curious and very amusing book, which is to be  
 followed by another on the same subject—the sooner the better.  
 The author's research is wonderful. The book is, in fact, a fine  
 illustration of the domestic manners of the times in which this  
 hero of merchants flourished."—*Metropolitan Magazine*.  
 Printed and sold by Breddle and Co. Salisbury; and also by  
 Nichols and Son; Pickering; and Messrs. Arch; London.

In 1 vol. price 7s. beautifully illustrated,  
**THE PROGRESS OF CREATION,** consid  
 ered with Reference to the Present Condition of the  
 Earth.

By MARY ROBERTS,  
 Author of "Annals of My Village," &c. &c.  
 "This volume forms a profitable addition to that important  
 class of works which now abound in our language, whose aim is  
 to improve the heart as well as the understanding, by making the  
 discoveries of science subservient to the great interest of religion.  
 We particularly recommend this work, as eminently calculated  
 to exalt the mind and purify the heart."—*Scots Times*.

### REVIEW OF NEW BOOKS.

1. *Female Beauty, as preserved and improved by Regimen, Cleanliness, and Dress, &c. &c.* By Mrs. A. Walker. Pp. 435. London, T. Hurst. 2. *The Ladies' Science of Etiquette.* By AETHEL. Pp. 64. Glasgow, J. Reid. 3. *The Philosophy of Courtship and Marriage.* By EOWIKOS. Pp. 62. Glasgow, Symington and Co.; Edinburgh, Oliver and Boyd; London, Whittaker and Co. 4. *The Honours of the Table; with Hints on Carving.* By Trussler Redivivus. Pp. 72. Idem.

ON looking at the title-page, and glancing over the contents and illustrations of the first of these publications, we were forcibly struck with the notion, that it must be a most objectionable book, and calculated to be injurious to the welfare and happiness of man-kind. What, said we, instruct in further captivating arts, those who already possess the power of disturbing all philosophy, and destroying the peace of every mind? It is a monstrous thing; and

'To gild refined gold; to paint the lily;  
'To throw a perfume o'er the violet;

and on the too dangerous charms of female beauty to bestow a stronger magic, is wasteful and ridiculous excess. Gray beards will be brought into peril. Married men, after the honeymoon (say two months), will be unable to resist the increase of extraneous attractions. The young (except dandies and exquisites, who think only of their own pretty selves) will be ruined, without a chance of rescue, and horse, foot, and dragoons, put *hors de combat*. Teach the mischievous how to do more mischief: it is scandalous! Mrs. Walker has much to answer for; and we shall be glad to revenge ourselves upon her, by picking out a few of her faults; say in composition to begin with.

"I am sure (she affirms), that the girl who at fifteen strives not to please, will be an ill-natured and disagreeable woman at five and twenty;" meaning, that a girl who does not strive to please at fifteen will not be a very amiable person at twenty-five. That is true enough; but who ever saw a fifteener that did not try to please? as well expect philosophy at eighteen! [God save the Queen]. But let us proceed: we like the atom-ality of the following paragraph, *nation well*:

"I may say (says Mrs. Walker), that the whole plan of the work is new as well as systematic; and that not less new are—the consideration of dress as a fine art having definite principles—the vindication of the superiority of fitness to fashion, of cleanliness to cosmetics, and of natural complexion to artificial paints—the view of the relation of colours to each other, of their application to the face by contrast and reflection, and of their power to correct every fault of complexion—the exposition of the various modes of enhancing the effect of fine forms and features, and of correcting faulty ones—the generalizations or simplifications which regard the composition of dress—the views as to character, simplicity and ornament in dress, &c. &c. &c. as well as the method of illustrating these by drawings."

But, having done our spite, we may confess, that Mrs. Walker, admirably assisted by Parris

and Wright, with forms and countenances on which, by a simple contrivance, changes of dress and colour are made to shew their different effects, and by Sir A. Carlisle at the top of her medical advisers on the subject of regimen and health, has really produced a work full of excellent precepts for the proper care and cultivation of the fair sex. There is nothing left out; and the necessary attention to cleanliness, ablutions, the hair, nails, bathing, air, colds, &c. &c. &c. is not only enforced with judgment, but particular directions are given for every circumstance or condition in life.

It is to Part III. "Dress," that we turn for more particular notice; the introduction is grand—*rotundo ore*.

"Clothing (quoth Mrs. Walker), is intended to act as a barrier between the natural temperature of the body, and the external temperature of the atmosphere—a barrier which ought to be more or less impervious, according as the changes or excesses of external temperature are more or less likely to injure the organs. The properties of the various substances, used as clothing, arise from their being good or bad conductors of caloric (or the cause of heat), and electricity, from the quantity of moisture which they imbibe, either from the external air, or from the emanations of the body, and from the facility with which they allow it to escape. It is evident, that that substance which is a bad conductor of caloric will be the warmest, because it neither allows of the escape of the caloric from the body, nor permits any caloric to penetrate it, and it consequently leaves the internal heat to concentrate on the surface of the skin."

Having thus scientifically laid the solid foundations of millinery, the writer offers some very judicious remarks on the wearing of flannel, and shews, that its habitual use, next the skin, is to be deprecated, inasmuch as it prevents its being efficaciously employed in cases of need, when it would be an invaluable remedy.

Stays are rather delicate subjects for male critics, and, therefore, we pass them by with our *Alace*! Buses are still more ticklish, and corsets—we must refer to Mrs. Huntley, p. of mystical numbers, thrice three, or in figures 333. We will, however, venture to touch upon the bustle. Nothing, we are assured, "can be in worse taste than the monstrous and ill-shaped bustles we commonly see, sometimes placed altogether on one side, and sometimes so irregular, that they look as if some domestic utensil were fastened under the dress. French women have a much better contrivance, which they call a *tournure*. The *tournure* is a handkerchief, drawn by the end through the stay-lace at the waistband. It raises up the folds of the dress, makes them fall with elegance, and diminishes, in summer, the necessity of wearing a number of muslin petticoats. By way of giving a finish to the style and arrangement of the dress, the robe is then drawn a little on one side, pressed down on the hips with the back of the hands, and the tips of the fingers are passed several times through the folds behind." Garters are important, now that her majesty wears one upon her arm; and it is delightful to know, that the meanest of her subjects may

do more than that, for, "if the calf of the leg is slender, and the knee small, two garters may be worn; one above, and the other below."

But we must leave this really practical, sensible, and useful volume to the sex for whom it is intended: they will find it full of good advice upon almost every subject which concerns their daily and nightly comfort, their external appearance to the greatest advantage, and to their general health and happiness. To finish; we shall take leave to quote some observation on the imitation on the French fashions, which, though not very gallant towards our continental rivals, contains some just and pointed counsel.

"The women of France, considered generally, are the ugliest in Europe. Their forms are angular, meagre, and arid; their skin of greenish brown, or olive hue; their hair of an opaque dirty looking black, and excessively coarse; their forehead low; the general configuration of the head, as observed by Count Stendhal, like that of the monkey; their eyebrows compressed; their upper lip frequently covered with mustaches; and their voice rough. The most conspicuous point, in their moral character, is a degree of vanity so excessive, that, combined with such an exterior, it seems, to the calm and sensible observer, at once ludicrous and contemptible—an affectation so monstrous, and attended with such shrugs, shrivels, and grimaces, with nasal *ongs* and guttural *hrrs*, so brutal in sound, that, on first witnessing them, we begin by thinking it an unmerciful quiz, and end by discovering it to be a disgusting reality. Strange to tell, it is in this very ugliness and vanity, which have just been described, that originates French fashion. The deplorable physical condition and the extravagant mental desire combine to engender a desperate ingenuity in the invention of some palliation from dress and manners, which may mitigate such a condition. No violation of nature, accordingly, prevents the adoption of a dress which may serve for concealment. But the matter ends not here. The same vanity which engenders French fashion spreads its influence. Affected attitude, impudent strut, and impertinent chatter, are not more natural to that people, than they are necessary to the presentation of these monstrous inventions as absolute beauties. The combination of these is called, '*un air imposant*,' '*la mine imposante*.' And they do, indeed, impose upon the weaker, that is, the more numerous, minds, in all the surrounding countries. Does a Frenchwoman assume an immense bonnet, in order that the ribands and other appendages of which it admits may either soften or withdraw attention from her angular features? The Englishwoman throws aside her smaller bonnet, within which beauty alone could be seen, and obtrudes on the spectator a trumpery dress instead of charming features. How stupid and absurd a sacrifice! Does a Frenchwoman assume *des fichus montans*, frills, &c. because her neck, which may be relatively long, is black and skinny, and presents the horrible *cordes au cou*, or stringy neck, caused by passion, crying, shrieking, loud talking, &c.? The Englishwoman, whose neck may be relatively short, round, polished, and white, absurdly adopts

the same disguises, and leaves herself as little neck as a pig! Does a Frenchwoman assume monstrous sleeves, *en gigot*, to canvas a waist in which there is almost always a vaccine expansion of the lower ribs to appear less by comparison? The Englishwoman, whose waist is almost always slender enough, not only adopts the French monstrosity, but laces herself until she brings on the frightful catalogue of diseases described by Mr. Coulson, in his interesting work on the 'Deformities of the Chest.' Does a Frenchwoman assume a wide skirt and numerous trimmings to aid the last-mentioned purpose as to the waist, as well as to conceal her meagre and bony limbs? The Englishwoman follows the example, and adds to her ample hips and relatively shorter limbs, until she converts herself into a formless mass. Does a Frenchwoman adopt the strongest and most glaring colours, to overpower the yellow, green, and black horrors of her visage, or the frightful mustaches of her upper lip, or her coarse and dirty black hair? The Englishwoman assumes the fashionable colour, which is equally calculated to make her look ill and the Frenchwoman well, and which renders her exquisite complexion insipid, and gives to her soft and placid features the air of '*un moulon qui réve*.' So complete is the imposition generated by French ugliness and vanity, that the French, as a pastime and solace to these amiable qualities, employ themselves extensively in making models and pictures of dresses, which they never wear,—which their means, indeed, do not permit of their wearing,—but which strangers, in their simplicity, adopt. So complete is this imposition, that the most ignorant French pretender finds instant employment as a dressmaker in London; her stock in trade being formed so monstrous as utterly to destroy our *bellezza pellegrina*, colours that render our women hideous, and (though last not least) the incapability of speaking one word of English. So complete is this imposition that, in London, many English dressmakers, when their features are hard enough, and their complexion dark enough, find their profit in assuming French names, and in refusing to speak one word of English. Some, indeed, of the more daring make a curious mixture of both languages; while the less capable pretenders stupidly speak one word or sentence of tolerable French, and the next of vulgar English! Bating the imposition, however, the success of these women is as well warranted as that of their genuine French rivals. In both, that success becomes the natural and merited punishment of the silly and vulgar creatures (for there is a vulgar of all ranks), who, instead of enhancing their beauty by the fitness of dress, deteriorate it by fashions which they run after with the mob, and which alone would render them vulgar if they had no other claim to vulgarity, in that want of mind which knows not how to consult individual beauty and turn even vulgar fashions to its purpose. Happily, a new era has lately commenced. Enlightened women of all ranks begin to extract, from the fashion of the mob, only what suits their individual forms and features: all begin to understand the influence of the various forms of dress upon the figure and the features, and that of the various colours of dress upon the complexion. One of the most fashionable dressmakers, a few days ago, said, 'We are now finding out that all imitation is vulgar, seeing that no two persons are alike!' Accordingly, in walking at the west end of the town, about five o'clock during the season, we meet many ladies who, without entirely abandoning the vulgar fashion, yet

admirably modify it, or boldly depart from it, to suit their own figure, features, or complexion. These ladies may know little or nothing of the general principles of dress which are here delivered, and which are applicable to every one; but each has at least more or less perfectly discovered what suits her individually; and it is often delightful to observe the ingenuity with which this is applied. The ladies are now numerous who purchase no article of dress merely because it is of a shape or a colour which is preferred by the vulgar who follow every fashion, but which would destroy all pretension to beauty on her own part. Such errors are now committed only by the most ignorant and tasteless persons. On the contrary, it may be extensively observed, that ladies of the most refined taste are distinguished, especially as to promenade dress, by the simplest and chastest costume; and so surely is this the case, that if any one happen to follow a lady whose dress is marked by these characteristics, and which presents sombre and, in themselves, less agreeable colours, he may almost certainly predict handsome features and a beautiful complexion; because these colours, if judiciously chosen, render almost every complexion striking and brilliant. When ignorant people, who understand not the meaning of such a choice of forms and colours, observe such unexpected beauty, their surprise is expressed in exclamations, and they never fail, in their ignorance, to add, 'How much more beautiful she would be if the forms and colours of her dress were prettier,'—that is, more gaudy! Their mistake is gross and vulgar; and the frequent occasion of it is a proof that, at least among certain classes, public taste is rapidly improving."

The second publication on our list, and the third, are, apparently, from Greeks of Glasgow (ASTEIH and *Egwriotes*), and it might have been more captivating if the latter had taught the Philosophy after Marriage, as well as in the progress towards that happy condition. But before coming to it, we must say a few words to No. 2, a work which has had the distinction of being prosecuted by the "Hints on Etiquette," and convicted of piracy, in the clear estimation of lawyers, judge, and jury. Thus did the "Science of Etiquette" find out, in quite another sense, the "Philosophy of Courtship," i. e. damages and expenses! Let this be a warning to all future writers on the subject, and, unless they have something new to propose, let them eschew it. Are there two ways of making a bow? no; unless they tell you to bend your head backwards: two ways of sitting on a chair? no; unless you turn the chair upside down like the tumblers at Bartlemy fair: two ways of entering a room? no; unless you prefer the window to the door: two ways of going out? no; unless you abandon the common walk, and execute the feat by somersets: two ways of eating? no; unless you employ your nose instead of your mouth, and spoil your snuff-hole for ever. It is, indeed, a dangerous vanity to pretend to go beyond the "Hints" on teaching etiquette. It was, under such circumstances, no bad contrivance to make a book for ladies; and it has other novelties beside its first conception. Thus the darlings are told—

"If any one introduces himself to you in a manner betraying the least want of respect, either towards you or himself, you can only turn from him in dignified silence; and if he presumes to address you further, then there is no punishment too severe."

We wish its nature had been defined; the vulgarity of the denunciation is too appalling

to be endured! But the following is more, and wonderfully clear; and we think the Glasgow ladies are not over and above obliged to the writer for the supposition.

"Avoid all indelicate expressions, and appear not to understand any that may be uttered in your presence. Some ladies not only relish *double entendres*, but actually use them. Yet, however much it may create a feeling of cleverness at the moment, cool reflection is, afterwards, sure to condemn it both on the part of the speaker and listener. Such discourse, wanton glances, and lightness of carriage, are considered by men as gauntlets to dare them to speak and act in a more free and unguarded manner than they otherwise would have the boldness to do. Let it be impressed upon your mind, that many ladies have lost their character through a little indiscretion on these heads—and it is as bad with the world to appear to have lost caste, as really to have lost it." Let not ASTEIH venture to walk in the Gorbals after such insinuations as these. We would not ourselves, notice him further, but for the following not unbefitting sequel to the language and conduct just indicated: "Custom allows ladies, at the end of an entertainment, to dip their fingers into a glass of water, and to wipe them with their napkins; it allows them, also, to rinse the mouth, using their plate for this purpose; but custom sanctions in vain what is of itself disgusting. It is for the mistress of the house to give the signal to leave the table; all the guests then rise, and, offering their arms to the ladies, wait upon them to the door. We should not leave the table before the end of the entertainment, unless from urgent necessity. If it is a married lady, she requests some one to accompany her; if a young lady, she goes with her mother."

The Philosophy book, No. 3, is a most grand-floquent affair, and, as the author alleges, "pregnant with matter;" and, indeed, so fond is he of this phraseology, that we might say of him that he is "pregnant with pregnant." It occurs for ever; but the work is finely studded with other tit-bits of composition. For instance: "Wherever the discoverer has lighted upon a country where it [marriage] did not exist in some shape, he has ever found a community pre-eminently distinguished for rudeness and barbarism." \* \* \* Many a one chooses a wife with no greater forethought or consideration than he would a horse or a dog—looking merely at her *external points*." Bachelors must ultimately be wretched, though "Out-door amusements, such as the theatre, the ball-room, or the convivial board, may afford him a certain degree of gratification;" [very odd out-door amusements!] and so for him, the single man, when he comes to his finale, for "The footsteps which prowl about his bed will sound like the flapping of the wings of unclean vultures wheeling around the expiring victim, their each individual feather quivering with impatience for the moment when the last beat of the pulse, and the last inhalation of vital air, will surrender the victim to their obscene orgies."

Leaving particulars for general principles, we are told with equal luminousness, that "Man is essentially a social being. The only

\* See note in the first col. of the next page.

† The contrast is superlative: "The married man is prepared and fore-armed for these vicissitudes. He has comfort still. His children, clustering like ivy around the aged trunk, shelter and defend it from the cold blast—an arm is ever ready for his support, a hand is never wanting to drug the cup or smooth the pillow. Gold can do much, but all the wealth of Ormus and of Ind. could not purchase comforts and consolations such as these to the solitary man. Gold might embellish the costly scutcheon, but it could not purchase tears to wet the velvet of the coffin." Why not?

source of true philosophy hath said, '*non est bonum esse hominem solum*;' and experience hath ever shewn that pleasure unshared loses half its relish, and no sorrow so deeply corrodes the heart as solitary sorrow;" from which we gather this simple axiom, that

Pleasure doubled is double,  
Sorrow doubled is halved.

Or that

Pleasure halved is doubled,  
Sorrow halved is quartered.

Q. E. D.

We must, however, find room for some more specimens of this amazing classic, near, if not of, the University over which Sir Robert Peel presides, and if not a wise man of the East, at any rate a glory to the West—of Scotland. Listen. "Experience teaches, that when parties associate constantly, as in the married state, *there comes to an amalgamation of tastes and feelings, even as the tendril suits itself to the shape and direction of the tree around which it clings*;" or, in other words, man and wife become as like each other as a bramble and a beech-tree!! But we become sentimental: "Depraved, indeed, to a singular degree, must be that man whom the thought of a young, loving, and beautiful wife, would not draw from the wine cup ere the mercury had reached the point of excess. Miserably depraved as human nature is, I think better of my kind than to imagine that many could be found capable of callously resisting such an appeal." Who ever heard of people taking mercury with their wine before? Surely this is not the famous Glasgow punch! What follows is droll enough: "When a man *once sees his way before him*, he may not only safely but advantageously marry, for, by so doing, a spur will be given to his exertions, more effectual and quickening than any abstract maxims of prudence, or even ambition itself, could supply. *He will rise earlier in the morning, and sit later at night*;" and this reminds us of the Scotch song—

"John Anderson my Jo John,  
I wonder what ye mean,  
Ye rise sae early in the morn,  
And sit sae late at e'en."

But after all, "When people talk of the expenses of a married establishment, they seem to forget the fact, *that there is no housekeeper equal to a wife*." Mark that, ye licentious libertines! though "An excess either way is pregnant with probable consequences equally pernicious, and opposed to a rational chance of happiness;" and the author again repeats, in the same page, "I am aware of no subject so pregnant with disputes and heart-burnings."

There seems to be a spice of the trader in our teacher of philosophy, for he decries "the penury of mere birth," as compared "with the fruitful cornucopia of trade;" and speaks of "Some odious little comparison between the stream of blood which for ages had flowed in heraldic and well-counted dignity, and that which had its source and fountain-head in the counting-room or cotton-mill." And, again, you are thus to treat your wife: "Make a companion of her, in the fullest acceptation of the term, and do not consider it beneath your dignity to suit your conversation to her tastes and intellect. The price-current may contain matter vastly pleasing to you, but it is very probable that your young wife would as lief hear you discourse of other matters than the price of cotton, or the texture of broad cloth."

\* "There is a freemasonry in the returned pressure of the hand, which is *more pregnant* with meanings than a whole portfolio of letters." \* \* \* Be as much at home as possible. A pregnant source of discomfort in the nuptial state, is *unpunctuated habits of the husband in this respect*."

What, indeed, does she care, if *rums &rix, and sugars is fell*?

A young woman who marries a man old enough to be her father, seems to stir up all the gall in the writer's nature, and he denounces the prudent mammas who make up such matches. "Alas (he coarsely cries) for the frequency of such cases! When will mothers cease to play the parts of shamelessly avaricious bawds? The term may sound harsh, but I have written it advisedly, and there it shall stand. \* \* \* The only fitting response which youth can make to the matrimonial solicitations of age is *anathema maranatha*."

A wife ought to know a little of domestic duties, though our author is not too exigent. "I would not (he says) ask her to compound a pudding, or *ready a steak* with her own hands; but I would have her to *know something* of the nature of such operations, in order that she might check carelessness, or instruct ignorance in the 'help.' I would deem it unreasonable to ask her to adjust the apparatus of the dinner table, but I should like to see her with an eye schooled to detect any irregularity or misplacement. \* \* \* I know (he learnedly adds, though we cannot tell why he uses the Latin\* in writing for ladies) that I run no small risk of being accused of Spartan barbarism, when I assert that a knowledge of the *ars culinaria* should form part of every young lady's education." And what follows is still better: "I do not say that you should teach a woman ropedancing, because she may possibly elope with the manager of a circus. But I would have her educated so as to meet all the probable exigencies and vicissitudes of life." But health in a wife is even more important than ropedancing: for, "When health is wanting, there can be no certain or permanent happiness. The house becomes, so to speak, an infirmary, to which every succeeding birth adds a new patient—the pathway from the bed-chamber to the churchyard is defined with fearful distinctness—and madness, with his rattling chain; and gibbering idiocy, with his cold and meaningless smile, are seldom far from the mansion." But forewarned, forearmed; and the wooer has plenty of good advice in these pages. *Ex. gr.* "Love, like fire, is a good servant, but a bad master; and to follow, exclusively, its dictates, is as unsafe as to *fetch a dangerous leap blindfolded*. Whenever one begins to feel affection 'tugging at his heart,' therefore, he should put in exercise an extra proportion of caution and deliberation. A beautiful garden smiles before him; but if he rush headlong to banquet in its charms, he may, perchance, be overwhelmed in the *bogs and quicksands which intervene, and the fair prospect vanish from his grasp*."

\* Like the elfin bell in the mountain pool.

This chapter, therefore, shall be mainly devoted to certain little matter-of-fact suggestions, to which the lover might as well take heed, ere he *plunge into the Rubicon by popping the question*. I may premise that *I am not groping* among the unknown paths of theory—my motto is 'nothing if not practical'—and with the Trojan prince I may say, in reference to the matters I now treat of,

—*Quæque ipse vidi  
Et quorum pars magna fui!*

At Glasgow there is an admirable means of testing a young lady's literary and moral taste, which, we regret to think, exists not in London,

\* And Greek, too, for urging that man and wife should be of the same religion; he says, "Where this is not the case, there never can be that reciprocation of feelings and affections which constitutes the *τὸ καλὸν* of the matrimonial state."

or any where between the metropolis and Gretna Green. Mr. *Equivocal* informeth, "If you wish to know the bent of her mind, so far as literature is concerned, let her accompany you to my friend Symington's Emporium, and request her to select, from his store of tomes, a volume which may be an appropriate present to your sister. This is a test which will be more effectual, because altogether unsuspected. In *acted* conversation she might dote upon Hannah More, but depend upon it she will select her namesake *Tom*, if she really prefer the one to the other. *Probatum est*." To crown his precepts, this 'special long-eared quad. says, "I would also call in Phrenology, as the counsellor, of all others, the most to be depended on. \* \* \* When a man acts with inconsideration in this respect, I know of no sight more terrific, than the cloud of bills which darken his table at the close of the first six months from the date of marriage." See also that the husband hath the organ of philo-progenitiveness, for "the man who hath no love for children—who shrinks from their fondling embrace, and turns away with stolid apathy from their lisping prattle, is a species of *Iulus natura*, or social monster, who is greatly incapable to act a befitting part in the domestic drama. If you are cold and careless in this respect, be certain that there is something unsound at bottom." We fear that, whatever the author himself may be in this respect, he is deplorably unsound in the upper story; but not being a jury de *lunaticis inquirendo*, we now leave him to his fame and fate.

The carving directions (No. 4) are so much as before, that we need not cut out many specimen slices; the following, of the newest order, may suffice:—

"In eating your soup, to poke your nose into the plate is vulgar and unbecoming. It has the appearance of being used to hard work. \* \* \* If it be necessary, then, to avoid this error, it is much more so to avoid 'smelling at your meat,' when on the fork, before putting it to your mouth. \* \* \* To be well received, be circumspect at table, where it is exceedingly rude to scratch any part of your body, to spit, to blow your nose (if you cannot avoid it, turn your head), to eat greedily, to lean your elbows on the table, to sit too far from it, to pick your teeth before the dishes are removed, or leave table before grace is said. \* \* \* Pinch no one in conversation to make him listen or admire a witticism."

"To young ladies, who ought to be the patterns of society, the models of politeness, the *bears ideal* of good taste and good manners, we would say, permit a few words of friendly advice. To be what you ought to be, 'never be afraid to blush; do not talk loud; refrain from talking much; do not even hear a double *entendre*; avoid lightness of carriage; be discreet; affect no languishing; dare to be prudish; be not too free; dread to be cheap; be modest, and moderate in dress; shun the idea of a vain woman; study dignity of manner; boast not of your appetite, nor say any thing that conveys an indelicate idea; receive a salute modestly; be affable with the men, but not familiar; be civil, but not complying; be not always laughing and talking; seem not to hear improper conversation.' [This looks deuced like our Greek friend, the Philosopher, No. 3, upon the manners of Glasgow gentlemen and ladies; but we proceed.]

"When a bird is cut up, and served round to the company to take that part of it which they like, it would shew a becoming modesty to take the worst part." [It would be funny to see every body do this; eat all the necks, backs

drumsticks, &c, and leave the legs, breasts, and wings.]

"As eating a great deal is deemed indelicate in a lady (for her character ought to be rather divine than sensual), it is ill manners to help her to a large slice of meat at once."

For the present, enough. As we intend very shortly to be in Glasgow, should we acquire any further information likely to be advantageous to our readers in London, Paris, or elsewhere, we shall hasten to communicate it in a distinct article.

*A Handbook for Travellers in Southern Germany, being a Guide to Bavaria, Austria, Tyrol, Salzburg, Styria, &c. the Austrian and Bavarian Alps, and the Danube from Ulm to the Black Sea.* 12mo. pp. 407. 1837. London, Murray; Leipzig, Black and Armstrong; Paris, Galignani.

THE preceding volume, dedicated to Northern Germany, with all the care and attention almost peculiar to German productions of this class, is here followed up by an equally well arranged and copious Guide for Travellers in the various countries mentioned by the title-page. Steam and railroads facilitating the intercourse of the traveller in every direction, the tourist is no longer content with a trip to Brussels or Paris, or a visit to the Rhine, the Rhone, or the Po. The immortal human thirst for enterprise and the acquisition of more information, impel him to the Danube and the Wolga, the Nile and the Euphrates, the Black Sea and the Caspian, the Andes and the Himalaya,—the uttermost corners of the earth; and, by and by, when these, also, are exhausted, he will, unless aërostation gets to be sufficiently improved for lunar and stellar voyages, weep, like Alexander, because he has no other world to itinerate. Perhaps, from this, our divines may point a moral, and tell him to look forward to the world to come; and, surely, when lassitude has succeeded all his other pursuits, the time will be good to impress this salutary counsel on his soul.

But we shall not speculate on the future, nor on the spiritual course which may naturally be suggested by circumstances as yet to be born, though apparently fast approaching; our business is with to-day, and with such people as may desire this pleasant autumn, when the harvests of Europe are gathering in an abundance without precedent, to recreate themselves with an excursion through any of the routes described in the volume before us. The land is wide, and has many interesting sights to shew. Fine cities, with rich museums and galleries of fine arts; natural scenery of every form of grandeur and beauty; courts, camps, and nooks of rural simplicity; diversities of language, of costume, of manners, and of feelings; the ruins, the remains, and the legends, of former ages; the improvements, the inventions, and the superstitions, of the present era;—all illustrated in vivid shapes, and offered to the consideration of the intelligent mind. Not an hour need be spent in vain; and, together with the acquisition of knowledge and the useful powers of comparison, there is to be gained that most invaluable of all blessings, that which enables the fortunate proprietor to enjoy and double all the rest, the blessing of health.

Away, then, Handbook in hand, for the Continent! with light luggage, an equable temper, and a desire to be pleased; and though we do lose our readers for a month or two, we shall be gratified to think, that when they return, they will be the better qualified to

appreciate and relish our never-enough-to-be-admired-and-valued lucubrations for their instruction and delight!!

A work of this kind does not require or admit of much quotation to support the testimony to its worth. The best recommendations must be accuracy in directing the roads, indicating places of halt and refreshment, and not passing by any remarkable objects without telling us when and how they can be seen to advantage. All these fair qualities, as far as our experience can judge, are possessed by this Guide; and its map, and money-tables, &c. complete the sphere of its utility. We will just copy a few passages to exhibit its style and method:—

"Markt. Between this place and Braunau, the Salza falls into the Inn. These two rivers divide the Bavarian from the Austrian territory. The Bavarian custom-house is at the village of Simbach, on the left bank of the Inn; and on the right is the first Austrian town. Braunau. Inn, Traube, not good, though best in the place. Here passports and baggage are examined by the Imperial officers. Braunau has 2000 inhabitants, and is partly surrounded by its ancient wall and ditch, though they no longer serve for its defence. In the parish church is the tomb of one Steininger, whose death was caused by the length of his beard, which tripped up his heels. A portrait of him and his beard, is seen on the gate leading to Salzburg. Palm, the bookseller, who was murdered by Napoleon, for publishing a pamphlet against him, is buried in the same church. He was seized by a party of French *gens d'armes*, who crossed the frontier for the purpose, and, being tried by a court-martial, was shot here."

We go to the Danube, noticing that the author points out several errors in Mr. Quin's work on that river, though, in other respects, he does justice to him, Mr. Planché, and other English writers.

"For 60 miles below Alt Moldova, the Danube is not at all times navigable, and from this point begins the excellent road, recently constructed by the Hungarian government, along the left bank of the Danube to Orsova. When the river is low, the steam-boats descend no further than Moldova, and passengers are here embarked on board the *Tünde*, a sailing cutter with a small covered cabin capable of holding about 25 persons. This journey will be performed in carriages as soon as the new road is finished. The cargo, carriages, and heavy baggage, are transferred to barges, and follow the cutter at a slower rate. At other times, when the river is full, Drenkova, 12 miles lower down, is the station where steamers stop. Travellers should not quit the steamer without securing a basket of provisions, wine, &c. from the steward, as nothing in the shape of refreshment, except maize flour, and bread of the blackest hue and hardest substance, or of accommodation, is to be procured between this and Orsova, a voyage of eight or ten hours at the quickest; sometimes extending to three days, up the stream. Moldova lies at the foot of the mountains, a spur of the far distant Carpathians, which for some distance have been seen on both sides gradually approaching the river, and now appear to close all passage downwards. Mr. Quin singularly enough suggests the plan of constructing a canal from Rama, opposite Moldova, to Widdin, by which he proposes to avoid the great bend which the Danube here makes. He is quite justified in following up this suggestion with the remark, that he 'despairs of such a work being un-

dertaken within the next half century,' since the mountains, which he would be required to cut through, to effect his project, run in an uninterrupted ridge between the two points he has mentioned, and rise to a height of from 4000 to 6000 feet. He might as well talk of cutting a canal through North Wales, taking Snowdon by the way.

"Alt Orsova. Inn, Kaiser von Oesterreich, which furnishes three or four tolerable sleeping apartments: bed, 25 kr.; dinner, 30 kr.; breakfast, 15 kr. There are other small inns in the town; and it is proposed to construct a new one, which shall deserve the name of an hotel in a short time. 'Orsova is a military village, about three miles from the frontier, with about 900 inhabitants, chiefly Wallachians, a race distinct from both Hungarians and Slovacks, intruders, as it were, in this land, though, in the course of centuries, they have pushed themselves into the heart of it, from their own country (Wallachia Proper), so as to form the majority of the inhabitants in many provinces. They have a more wild and barbarous appearance than even the other races which inhabit Hungary, and are clad from head to foot in sheep-skins, wearing high hairy caps, like the end of a mop, and long cloaks with the wool outside, reminding one of a door-rug. With their low foreheads, unshorn locks, and filthy persons, they really look not much superior to the animals whose skins they occupy: at least, such was my first impression as I threaded my way through a crowd of the lower sort, collected together in the ante-chamber of the inn, which re-echoed with their wild cries, and was redolent of the fumes of garlic and schnaps, which the host was dispensing to an already half-intoxicated party of them. These, however, were labourers of the lowest grade. The female Wallachs, when young, are often very pretty; they wear a peculiar costume, a sort of apron, dyed red and black, falling nearly to the feet before and behind, the lower parts of which consist of a long fringe of the same colour, which dangles about their feet. They enclose their feet in high Hessian boots of bright red leather, and are generally occupied, in or out of doors, in busily twirling the spindle. Outside the town, by the water-side, and near the ferry over the Danube, stands the Parlatorium, a wooden shed in which the market (Skela) is held. On account of the quarantine regulations, the inhabitants of Servia and Wallachia are prevented coming in contact with the subjects of Austria, and dare not cross the frontier without an escort. The Austrian quarantine is five days for those who come out of Wallachia, and ten for those from Servia; the Wallachians again have a quarantine of five days against the Wallachians, so that none of the three parties can intermix for the purpose of buying or selling, nor can they touch each other's goods. On this account the building where the market is held is divided by three partitions, breast high, behind which the dealers of the three nations are congregated. In an open space in the centre is a table, by the side of which the Austrian quarantine officers take their stand, aided and supported by a guard of soldiers with fire-arms and fixed bayonets, to enforce order and obedience. Whenever a bargain is made, the money to be paid is handed to one of the attendants, who receives it in a long ladle, transfers it to a basin of vinegar, and, after washing it, passes it on to the opposite side. The goods to be purchased are placed within sight, and are immersed in a tub of water or fumigated, when they happen to change owners."

It is an amusing sight to see the process of bargaining thus carried on by three parties at the distance of several yards from each other, attended by the vociferation and gesticulation inseparable from such business. When the bartering is transacted, the Wallachians and Servians are escorted back to their own territory, as they had previously been in coming to the spot, by a guard of soldiers.—*MS. Journ.* Any person wishing to visit the Turkish fortress of New Orsova, on an island about two miles lower down, the Iron Gate, or Trajan's Bridge, must take with him from Orsova an officer of quarantine and another of customs, who are paid at the rate of about two florins a day, and must return before sunset. If the traveller ventures to cross the frontier without a guardian, he cannot return without passing ten days' quarantine."

We shall conclude with some of the general remarks upon the ancient empire of Austria.

"It has been the fate of Austria, hitherto, to have been described almost exclusively by writers who have taken a prejudiced and one-sided view of her government and institutions; and who have not even done justice to the beauties of the country, the flourishing condition of her manufactures, the bravery and loyal spirit of her inhabitants, and the happy condition of the majority of the population. In stigmatising the government as the most tyrannical of despotisms, they have overlooked the fact, that the subjects living under it, especially the lower orders, are the most contented and joyous in Europe, because actually the best off in worldly matters, the least taxed or oppressed by fiscal burdens of any kind. They have represented Austria as a land of darkness and ignorance, as the *Bœotia* of Europe, forgetting that education is more widely extended among the common people than in any other country of Europe, except Prussia, and this entirely by the government itself, for the Austrian rulers turned their attention to this subject earlier than those of most other countries, and have been ceaselessly employed for the last century in establishing schools in every part of their dominions. The Englishman may learn with surprise, and no little shame, that the number of persons who can read, write, and understand the elements of arithmetic, is beyond comparison greater in the hereditary states of Austria than in his own enlightened country, or in France. In Austria Proper every child must go to school for a certain number of years; even poverty is no excuse, since schools are provided in every parish, with such endowments as to enable those who cannot pay the very small sum required, to obtain gratuitous instruction. No person can marry, or set up in any trade, without producing a written certificate of their attendance at school. Numerous normal or pattern schools, in different parts of the country, furnish a supply of teachers; that of Vienna alone sends out between 1600 and 1700 annually. Though it is deemed sufficient that the great mass of the lower classes should possess the mere rudiments of knowledge, or such good and practical information as shall fit them for their station in life, without rendering them dissatisfied with it, those among them whose talents or intended profession render further intellectual acquirements desirable, are sent to grammar schools, high schools (*gymnasias*), and universities, to complete their education; with the prospect, if they distinguish themselves, of afterwards being placed in one of the public offices, and of certain promotion, if their talents and conduct attract the attention of their superiors, who are always

on the look out for rising merit, and anxious to gain it over to the side of the government. Within the last fifteen years schools have been established in every parish of Venetian Lombardy, so that the despotic government of Austria is bestowing upon its Italian subjects a boon denied them by all previous rulers. Public instruction is also making progress in the more remote provinces, in Illyria, Gallicia, and even in Bohemia and Hungary. Here, indeed, the number and difference of race and language, among the subjects of Austria, interpose very serious difficulties. Out of a population of nearly 34 millions, only 6 millions are German; the rest are, Slavonians (16,000,000), Hungarians (4,500,000), Italians, Wallachians; Jews, Gipsies, &c. Let the Englishman, who enters Austria, however proud (and justly) he may be of his own free country, nation, and institutions, reserve the pity which he may be inclined to bestow upon the condition of the Austrians, because they possess neither constitution, representation, free press, trial by jury, nor 'any other of those elements which go to make up what is termed liberty.' Let him rather observe the fortunate lot of the peasantry, their superiority in worldly prosperity, perhaps even in moral advancement, over the same class in his own country, the almost total absence of beggary, the rare occurrence of crime; and remember the words of the poet—

'How small, of all that human hearts endure,  
The part which laws or kings can cause or cure!'

Good humour, joviality, and a love of pleasure and tranquillity, are the distinguishing features of the Austrian national character. Under a government which affords them such enjoyments they desire no change; and so far from envying John Bull, they rather look with commiseration, not unmingled with ridicule, upon some of those anomalies which they discover in English manners and habits. \* \* \*

"*Austrian Cookery, and Inns.*—There are two reasons why something on the above important subject should be said in this place: first, because Austria is universally allowed to be the land of good living, and dinner is a portion of the business of the day regarded with more importance here than elsewhere; in proof of which it may be mentioned, that the usual morning salutation is not, as with other nations, 'How do you do?' or 'Good morning,' but, 'I wish you a good appetite,' and, after 12 o'clock, the usual dinner hour, 'I wish you a good digestion.' The second reason for the introduction of such a subject is, that the stranger visiting, for the first time, this remote part of the Continent, and not much acquainted with its manners and language, must necessarily stand in need of some information, to enable him to interpret an Austrian bill of fare, and to know what to expect, and what to ask for at inns. The restaurateurs of Vienna, Prague, and Pesth, are not much less skilful than those of Paris, and their cuisine nearly resembles the Parisian. Styrian capons, Danube carp, and *fogasch*, a species of perch procured only from the Plattensee in Hungary, are among the peculiar delicacies to which the epicure will direct his attention. Vienna is plentifully supplied with game; and here, as elsewhere in Austria, the puddings (*mehlspeisen*) have attained the summit of perfection. Our business is chiefly with the 'cuisine sauvage,' and the prospects of the traveller in remote districts, far away from cities, and in the midst of the mountains. Dinner is always commenced with soup, usually bread or egg soup, very tasteless. To this usually succeeds boiled beef, and then the national dish, chicken

fried in lard, and cut into pieces, called *gebackenes huhn*, or vulgarly, *bock hähn*: it is, on the whole, not a bad dish, and is, beyond doubt, the best mode of dressing a fresh slaughtered fowl, as it rarely happens that the animal is killed until the dinner or supper, of which it is to form a part, are already ordered. The traveller may safely ask for this dish when in a hurry. In Hungary, the national dish is a fowl stewed with red pepper, called *paprica hähn*, which is also by no means an unsavoury dish. It is necessary to warn the stranger against veal (*kalbs fleisch*), the constant recurrence of which will almost bring him to loathe the sight of it. *Sauerkraut*, which is cabbage cut into small pieces, laid in a cask between layers of salt, pressed down by weights above, and thus pickled in its own juice for six or eight months, is to be met with every where; but the English rarely succeed in accommodating their palates to it. Even the epicure, however, may dine in content, if the bill of fare do but contain trout (*forellen*); and there are very few seasons and situations in which they are not to be met with among the mountains. It would indeed be worth the trouble of a journey to a gourmand, merely to eat the trout. They are the fish bred in the cold snow-fed rivulets of the Alps, brought from thence and prepared for the table in stews, perforated with holes, sunk in some running stream. They are carefully fed; and when required for the table, make but one leap from the cold water into the saucepan. They are brought to table either fried, or simply boiled in their own dark blue coats, beautifully spotted with red; and, when in good condition, have all the firmness of the white of an egg. The fish tank, with which every mountain inn in Austria is provided, often contains salmon, grayling, carp, or char; they are fed with bullock's liver cut in pieces, and are often in better condition in the stew than when first taken; no one thinks of carrying or sending dead fish for dinner. *Chamois venison* (*gems fleisch*), and game of various kinds, including black cock (*schildhahn*), and sometimes cock of the woods (*auerhahn*), are by no means uncommon. The wines of Austrian growth, chiefly the produce of vineyards around Vienna, are, for the most part, sour, and not good; those of Hungary are far better. The *Ofen* is a very excellent red wine; *Schomlauer* and *Nessmühler* are good white wines. The inns, in large towns, are pretty nearly alike in all parts of Germany; but those in the remote parts of Austria, among the mountains, display some peculiarities worth notice. On arriving at the post-house, or inn, the new comer must not expect to be ushered in by a trim waiter, with napkin tucked under his arm. He will most probably have to find his own way, under a low archway, by a passage which, though boarded, serves for the ingress and egress of horses and carriages, to the public room, or *Gast Stube*, which he will, perhaps, have to share with the people of the village; unless, as sometimes happens, there is an inner or better apartment for guests of distinction. It is generally a low apartment, with vaulted roof, supported on massive buttresses; at the door he will find a little cup for holy water; not far off hangs a crucifix, sometimes with a figure as large as life; and the walls are ornamented with stags' horns, or a chamois' head, probably, trophies of the rifle of mine host. The furniture consists of heavy tables of unpainted wood, which, when the housewife is tidy, are kept as clean and white as ivory. Several sleepy-looking peasants will usually be seen seated on benches around them, half enveloped in the smoke of their pipes, nodding

over several huge beer glasses with pewter lids. In the corner stands an unwieldy stove, the general point of attraction in cold weather. If the stranger, in search of some member of the establishment, extend his researches, he may, perhaps, find his way into the kitchen; in the centre of which, below a gaping chimney, is a raised platform paved with stones all scorched and black. Upon this culinary altar a wood fire is blazing, over it hangs a caldron, while around it, if it be near noon, the usual dinner hour, two or three busy females will be assembled, each tending some department of cookery, and too busy to notice the stranger. It is, however, to be hoped that by this time the *kellerin* (female waiter) will have made her appearance. She is a bustling, active damsel (often the landlord's daughter), with ruddy cheeks, and a good-humoured smile for every body, very trimly dressed, and bearing about her the symbols of her office, a bunch of keys on one side, and a large leathern purse on the other. Through her active mediation, the traveller's wants (provided they are not extravagant), are soon attended to, and in half an hour the trout and chamois are smoking on the board, and with the never-failing friendly salutation of 'I wish you a good appetite,' he is invited to commence his repast. Sometimes mine host himself appears, and seats himself by the stranger's side, as it would be considered rude to leave him alone during dinner in this country, a piece of old-fashioned politeness which an Englishman, if not prepared for it, might call impertinence. As he rises from table, the guest is probably wished 'a good digestion;' for the donceur of a five-kreutzer piece when settling his bill, the *kellerin* will smother his hand with kisses; for here the expression, 'I kiss your hand,' in return for a favour, is not confined to the word, but is followed by the act, and as he leaves the house a hearty greeting of '*glückliche reise*' from the whole household, will follow his departing steps, provided he have conducted himself properly. The traveller cannot fail of being struck with the warm reception which he meets with often at the little out-of-the-way inns in the Tyrol. The hospitality which he receives resembles more the welcome of a friend than the ordinary entertainment of a passing guest; there seems an anxious and disinterested study on the part of the inmates to make the stranger comfortable, and not to contrive how to get the most out of him, as in Switzerland. Still there is no cringing or obsequiousness, and the traveller must not return the attempts made to please him with complaints or dissatisfaction, else there is a chance of his being left supperless. He must, moreover, not entertain exaggerated expectations of an Austrian larder; and he should even be prepared to put up with the inconveniences of a German bed. The bedroom, it is true, will often be found deficient in convenience, destined for ten or fifteen tenants at one time, and the beds not always provided with clean sheets, unless a little coaxing be employed to put the *kellerin* into good humour, and thus obtain the concession of this point. As a general rule, however, the cleanliness of the inns of Tyrol, Austria, and parts of Styria, is most praiseworthy, as will forcibly occur to the mind of the traveller as soon as he crosses the frontier of Italy, and sighs with regret for the clean sheets which he has left behind. In the course of repeated journeys in various parts of Austria, the writer has had occasion to remark, that he almost invariably met with the kindest reception in those places where his countrymen were least known. Is not the reason of this, that the English carry

their prejudices and habits about with them every where, expecting, most unreasonably, to find abroad every thing they are accustomed to at home, instead of endeavouring to conform with the habits of the country in which they are travelling?"

*Voyages up the Mediterranean, and in the Indian Seas; with Memoirs, compiled from the Logs and Letters of a Midshipman.* By John A. Heraud. 8vo. pp. 231. London, 1837. Fraser.

THIS is a volume of peculiar interest; the original matter possessing the charm of ingenuousness and genuineness rarely met with in observation on foreign parts; and the task of editing the youthful, and, alas! posthumous, proofs of excellent understanding and high talent, being performed with skill and judgment, and, better still, with right feeling and in a right spirit. "This volume," says the advertisement prefixed, "is faithfully compiled from the logs and letters of the midshipman whose memoirs it professes to preserve. Mr. William Robinson was an enthusiast in his profession, and, at an early age, fell a martyr to his zeal. It is not too much to claim for him the character of being the 'Kirke White' of the navy. His career, though brief, was honourable; and he yet lives in the influence which his memory continues to exercise, over those who shared with him the adventures of a naval life. The present work was projected to perpetuate the benefit of his example; and the editor has aimed at no meaner end than to make it, so far as he had ability, a manual for the conduct of a sailor who would rise in the noble profession of his choice."

Nothing can more truly describe the work. William Robinson, the son of Dr. Robinson, LL.D., intended also to follow the profession of the law, was, at sixteen years of age, so affected in health by study and confinement, that he was forced to abandon his application; and Captain W. H. Smyth, being a friend of his father's, he, in 1821, accompanied that gallant and accomplished officer as a midshipman to sea, in his well-known survey of the coasts of Africa. From Alexandria to Tripoli he visited many places, and in his letters home describes the impressions made upon him in so natural and lively a manner, as to produce a very pleasing effect. Thus:—

"On the 6th of September the *Adventure* sailed from Malta, and, after a voyage of four days, arrived at Tripoli. On the 10th she cast anchor, about two miles from the town. She received a salute of seventeen guns from the pasha's batteries, which was returned. When the crew had prepared the presents intended for the pasha, viz. four field pieces, and several cases of powder and shot, Captain Smyth went on shore to visit his highness, who, on account of former acquaintance, received him with great personal kindness, and granted every thing that could be desired for the prosecution of his researches along the shores of the Great Syrtis and the Cyrenaica. Having obtained a vessel, the presents were all safely landed, with which the pasha was so much delighted, that he ordered the gunner to fire them twenty-one times, and then made him put some mules to harness, and draw them about his court-yard, with which he was as much pleased as astonished; for there was not such a thing as a wheel in the place. Nothing like a cart or wheel-barrow was seen any where, camels being their mode of conveyance for every thing. When all was finished, the pasha presented the gunner with a Turkish sword, much to his

liking; and sent a very superb one, with a real Damascus flaming blade, and a bit of the horn of the rhinoceros, which had been blest at Mecca, to Captain Smyth, as a mark of his particular regard, a day or two after. He also made a present to the ship's company of two bullocks, three sheep, and a host of poultry, with bread, eggs, grapes, pomegranates, and pumpkins, in great quantity. Our midshipman next gives a description of Tripoli and its inhabitants, which will be found interesting, as the first impressions of a youth so suddenly transported from his native to oriental scenes. "When first you land," he observes, "you are surrounded by a multitude of black people, who look more like ghosts than human beings, their dress being a pair of loose trousers, with a blanket thrown over them, so as only to shew their jet black faces; by their dress they really seem afraid of cold, although it is actually so very hot to Europeans. Their dress differs according to their rank; some have blankets thrown over their left shoulder, and brought down under the right arm, with a very loose pair of trousers, big enough to hold a week's provision; and others, who are of a higher class of inhabitants, have turbans, with a most elegant jacket, worked with gold lace, and yellow shoes or boots, just which suits the fancy of these oddities. The admiral of the pasha's fleet came on board the other day, and breakfasted with the captain: his jacket, which was purple, was most superbly worked with gold, and is said to have cost a thousand dollars, which was presented to him by the pasha; over the jacket he wore a black velvet cloak, almost as superbly worked as the jacket. He is a Scotchman—turned Turk, no doubt, for the handsome clothes he wears. All the men have immense beards and mustachios."

Could the most experienced traveller draw more vivid pictures? But again:—

"September 28th.—Saw the barge, and came to anchor off Monastere. This place has truly the appearance of Africa; olive and date-trees grow down to the water's edge as thick as they possibly can, and, consequently, great quantities of oil are made and exported. The French have got hold of this trade. The captain went on shore to pay a visit to the sheikh, and took some of the officers with him: we were received very politely; he was sitting squat on a couch, and did not rise at our entering, but bowed his head, and made a *salam*. He speaks Italian, which is the language spoken in most Turkish towns by the higher class of people. After sitting some time, coffee and lemonade were brought in. A curious ceremony was then performed. The sheikh had been honoured by the bey with the *byr-noose*, or vest of crimson cloth edged with gold lace, and ornamented with fringe and balls. This is esteemed a high honour; it was given to him because the Bey of Tunis was pleased with the manner he governed the district allotted to him. The cloak was paraded round the town, spread on a black man, one of the pasha's guards, and attended by one hundred horse and two hundred foot soldiers. On entering the room in which we sat, the black made a low bow, solemnly kissed the robe, put it over the sheikh's shoulders, and then kissed his neck. The guards and other people were now allowed to kiss the front and back of his hand; some his elbows, and some his neck, according to their several ranks; while the captain and we congratulated him on his new dignity. By this time the room was crowded to excess, and I was glad to make my escape to the window, to see the soldiers exercise. They

put their horses at full speed, let go the bridles, and took deliberate aim between the horse's ears; they then discharged their muskets as near the sheikh as possible, twirled them three or four times over their heads, tossed them underneath their arms, and suddenly brought their horses up, all standing. The foot soldiers were drawn up in rows, more like a multitude of beggars than troops; and had neither uniform nor arms. The band consisted of two drums of clumsy workmanship, and seven or eight pipes, exactly like those with which the shepherds are generally represented in classic authors, and which make a droning noise like bagpipes. This town is different from Tunis and Tripoli, in respect to its inhabitants; being all Turks or Moors, without the Frank intermixture usually met with."

In the bay of Cagliari he tells: "We went one Sunday to see the bishop perform high mass, in commemoration of the new pope's election. It was short; and the dressing him in his robes took up most of the time, as there was a new robe to every prayer. All this was done before the altar, which was lighted up, although before noon. When the people were to kneel down, the music played a dull tune, and when to rise again, a sort of country dance. Whenever any of them came into the church, they dipped the tip of their finger in holy water, and crossed themselves; but if any person was crossing himself, and a friend of his touched him, it would answer the same purpose. Last of all the bishop's mitre was placed on his head, a large silver staff, like a shepherd's crook, was presented to him, and he hobbled out of church, followed by the whole tribe of priests. We were introduced to him afterwards; he is very old, and so fat that he can hardly waddle or speak." We question if the strongest anticatholic politician of the present hour, could paint a more ridiculous scene of mummery and absurdity.

At page 147 there is a noble anecdote of the coolness and intrepidity of the writer of these remarks. It is thus related:—"In the accident now under observation, Mr. Robinson's assistance was greater than would be inferred from his own account of it. It was he who perceived the vessel edging away in such a direction that she must inevitably strike on a dangerous shelf of rocks, which he had been surveying. He kept his eye on her; he saw her strike, and almost immediately disappear, except only the topsail yard, to which the crew and passengers had ascended. He hastened to their assistance, and, with great coolness and skill, so placed the barge, as with the assistance of the small boat, to take off all the people from the wreck; soon after which the vessel went down. She was a Sardinian hombard, the *Sacra Famiglia* of Cagliari, to which place she was bound from Marseilles. Having divided his clothes among the unfortunate crew and passengers, he supplied them with three days' provisions, and put them on shore on the coast of Sardinia. Thus, by his coolness and intrepidity, thirteen of his fellow creatures were preserved from imminent destruction!" Poor fellow, he went to the East Indies, and just after passing with honour for his lieutenantancy, was seized with dysentery, and died at Penang, where his shipmates have erected a deserved monument to his memory.

But we will not dismiss our readers in gloom. What he would have been may fairly be predicated from what he was; and his loss to his family was a grievous affliction, to his country (rich as she is in naval heroes) a subject of sincere regret. Sailors, however, grieve not

for long after the casualties of life, and we (as they might do) conclude our notice, with a characteristic sketch of a Gosport ball, in 1825, from the pen of our then hopeful and healthful middy.

"I went," he writes, 'the other night to the Gosport subscription ball, to have a peep at the Gosport beauties; when, after bowing and scraping, and excusing myself to my polite partner for being out of practice, as not having danced for some time, and hoping she would help me through with the quadrilles, she very politely answered, that 'I ought to learn before I came there, as she was not fond of teaching!' I was not, however, to be taken easily aback; and managed, accordingly, to get through two sets of quadrilles, and two country dances. So much for Gosport.'"

*The History of the Presbyterian Church in Ireland.* By James Seaton Reid, D.D., M.R.I.A. Minister of the Presbyterian Church, Carrickfergus. Vol. I. 1834. II. 1837. 8vo. London, Whittaker and Co.

WE deferred our notice of the first volume of this valuable historical work until the appearance of the second, and, we presumed, concluding volume; from the preface to which we now learn, that the first edition of Vol. I. "has been long since exhausted," and that it is Dr. Reid's intention to complete his undertaking in a third volume.

The first volume, which opens with a deeply interesting sketch of the progress of the reformed religion in Ireland during the sixteenth century, brings down the history of Presbyterianism to the year 1642; from which period the second volume carries on the civil and religious history of Ulster to the year 1690; and in the third, and concluding volume, Dr. Reid says, "the narrative will be continued to the present time, and to which will be appended several authentic tables, and other documents, exhibiting the statistics and existing position and circumstances of the Presbyterian church in Ireland."

It is impossible for us, with our limited page, to do justice to the calm and diligent research which is evident in the volumes before us, and which is generally convincing, and seldom tedious. We, therefore, select, as a specimen of the plain and agreeable style of Dr. Reid, the account of the national change from the Roman Catholic religion professed under Mary to the Protestant doctrines by law established under Elizabeth.

"So soon as circumstances permitted, which was not until the beginning of the year 1560, a parliament was held in Dublin, for the purpose of again transferring the sanctions of the law from the Romish to the Protestant faith. With the exception of the opposition given by the nobles, which, however, was so alarming as to induce the deputy to prorogue the parliament in a few weeks, this important change was speedily effected. Of nineteen prelates who had conformed to popery under Mary, only two now adhered with steadfastness to their profession, thus exhibiting another degrading instance of clerical tergiversation. The Commons, consisting of representatives from ten counties out of thirty-two, and from about twenty towns, principally under the influence of the crown, acquiesced more readily, though not without evident reluctance, in the proposed measures, so that the whole ecclesiastical fabric was again overthrown as promptly as it had been constructed at the accession of Mary. By this parliament, the ecclesiastical jurisdiction was restored to the crown, and a new oath of

supremacy appointed; the use of the Common Prayer was enforced; and all subjects obliged to attend the public service of the Church. A most absurd enactment was passed, respecting the use of the Common Prayer Book by those who might be ignorant of the English language. It was one of the essential principles of the Reformation, that divine service should be conducted in the language of the worshippers. As English was not a spoken language, except in the metropolis and some of the principal towns, one of the most obvious measures of the court ought to have been to have the Liturgy translated into Irish, and ministers speaking this tongue provided for that vast majority of the population who knew no other language. Accordingly, one of the instructions given to Sir James Croft in a preceding reign, had been to procure such a translation; but no efforts had been made for that purpose.\* Instead, however, of reviving this wise and salutary measure, and giving it the sanction of legislative authority, it was inconsistently enacted, that where the minister, and, by implication, the people, did not understand English, the public service should be performed, not in the Irish tongue known to both parties, but in the Latin language unknown to either. The reasons assigned for this singular order were as insufficient, as the measure itself was absurd and ridiculous. They were founded on the pleas, that the Irish language was difficult to be printed; and that, if printed, few even of the native reformed clergy could be found competent to read it.† And thus, for the sake of these temporary obstacles, which prudent and zealous rulers would soon have found means of removing, the dissemination of the truth through the country was effectually impeded, and the most ignorant, as well as the most numerous, class of the community were cut off from the benefits of divine worship, and attached more strongly to their ancient errors."

We are almost tempted to make some observations on this passage, if our rule of abstaining from political and religious discussions did not check our inclination. Among the many curious historical passages in Dr. Reid's volume, the following, which is new to us, will be read with sorrow, at the ingratitude exhibited towards the brave, and almost romantic, defenders of Derry and Enniskillen. It is a sad lesson to mankind not to put their faith in princes.

"It is painful to be obliged to add that the gallant defenders of Derry and Enniskillen were treated very ungratefully by the state. Instead of being in anywise rewarded, they did not even receive the amount of pay which was acknowledged by parliament to be justly due to them. In 1601, the officers and men of both garrisons constituted Colonel Hugh Hamill, of Lifford, their agent and trustee, and authorised him to make the necessary applications to the crown and to parliament for their arrears. Seven years afterwards he resigned this office, and his brother, William Hamill, who resided principally in England, was appointed in his room. He used every effort in his power on behalf of his employers, but without success; and, in 1714, he published a statement of his proceedings, and a strong appeal to the public, entitled 'A Memorial, by William Hamill, Gent., Agent and Trustee for the Officers and Soldiers of the

\* "According to Cox (l. 290), the first instruction given him, 'to propagate the worship of God in the English tongue, and the service to be translated into Irish in those places which need it.'"  
† 2 Elizabeth, chap. II. sect. 13.

two late garrisons of Londonderry and Enniskillen in Ireland, their relics and representatives. Dedicated to his principals.' London, 1714, 8vo. pp. 40. This effort, in their favour, met with no better success; and he was again compelled to lay their hard case before the nation, in a second publication, with this sarcastic and significant title, 'A View of the Danger and Folly of being Public Spirited and sincerely loving one's Country, in the deplorable Case of the Londonderry and Enniskillen Regiments; being a true and faithful Account of their unparalleled Services and Sufferings at and since the Revolution. To which is added, the particular Case of William Hamill, Gent., their Agent.' London, 1721, 4to. pp. 74. From this work it appears, that, after two and thirty years' tedious and fruitless negotiations, the following arrears were still due to the eight regiments that formed the garrison of Derry during the siege:—'Baker's regiment, 16,274*l.* 9*s.* 8*d.*; Mitchelburn's, 9,541*l.* 16*s.*; Walker's, 10,188*l.* 13*s.* 6*d.*; Munroe's, 8,360*l.* 2*s.*; Crofton's, 7,750*l.* 11*s.* 6*d.*; Hamill's, 8,969*l.* 13*s.* 6*d.*; Lane's, 8,360*l.* 2*s.*; Murray's, 5,312*l.* 9*s.* 6*d.*; making a total of 74,757*l.* 17*s.* 8*d.*—not a farthing of which appears to have been ever paid!"

That this remarkable statement, against the honour of "the glorious, pious, and immortal memory of the good and great" King William's government, proceeds from no party feeling, is demonstrated by the concluding paragraph of Dr. Reid's second volume.

"So soon as Mr. Adair returned to Belfast, this important letter was presented to Schomberg. Under his fostering influence the Presbyterians enjoyed ample protection and toleration; so that, when King William arrived in Ulster, a few months afterwards, he found them, as a body, more numerous and influential than he had anticipated, and not unworthy of peculiar favour. With alacrity, therefore, he redressed their grievances, and vindicated their rights; and to this renowned sovereign—truly of glorious memory, not as the founder of a party, but as the intrepid assertor of civil and religious freedom—may, in a great measure, be ascribed the subsequent prosperity of the Presbyterian Church in Ireland."

#### *Cory's Egyptian Chronology.* [Second notice.]

IN resuming the subject of Mr. Cory's volume, and before passing to its second portion, it is incumbent on us to obviate even a possible imputation of oversight on so important a question as that of the Trinity.

We recur a moment to the Mythological Inquiry to notice an error at page 66, last line. The name of Ormuzd is written in the Zend of the Zend-Avosta, as Ahoeroehe Mazdaö; of which Anhouma is not the translation, but the equivalent, in the Pehlion portion. The proper meaning of Omanus ('Omanus, as the Greeks wrote it) is *unity*; that of 'Omanus, *essence*, or *vitality*. This last is a corruption only, and assimilates to Anhouma.

The Chinese sect of the Lao-tse, alone quoted by Mr. Cory, is comparatively recent. These and the Buddhists, both late, inculcate a Triad doctrine; but the original Chinese notion is of Tien, and a *light shining*; and of Pon-ko, who formed the world, of which the Yin and Yang are the two component principles (not *powers*) *Mosc* and *Fem*.

To say nothing of the Chinese Tao producing the Yin and Yang; and these, masculine and feminine, principles producing three

Creators: a process that argues a human mode of increasing or extending deification by mental cogitation; the existence of the San Pao sect, unnoticed otherwise in the volume, is so confined, and so obscure, that it makes, we think, against the proposition of a fundamental religious tenet in China. Nor is the Triad of Thibet at all more satisfactory for Tatar, unless it can be shewn that the Delai Lama's authority was universal there, and *ab initio*; and that the belief was not borrowed from their Sanscrit or Persian neighbours, and prevalent in only a portion of Tatar.

The recent work of Mr. Mushat, on the Trinities of the Ancients, a volume of considerable talent and laborious research, published nearly at the same time as Mr. Cory's book, takes a totally different view of the conclusion. "It is hard to be conceived (he observes, p. 27) how men of learning and judgment could adopt an opinion of this kind (the Platonic Trinity) without the most incontestable evidence: for, surely, the Trinity is a doctrine the least obvious to the understanding of one to whom revelation was a dead letter." In common with Mr. Cory, he attributes the fancy to the later Platonists; and we must observe, that the unavoidable ignorance and wilful distortion of their celebrated school, and its fellow-labourers, have been most injurious to learning and reason. Anxious to find a parallel for Christian revelations, they tortured every dull idolatry of Egypt into a divine mystery, which none can credit, and none have effectually refuted. It is strange, we conceive, that, in our ignorance of Egyptian lore, we should have resorted to channels so confessedly tainted by equal ignorance and greater partiality. It is clear that, so far as Plutarch, Macrobius, Porphyry, &c. are concerned, they had few or no certainties to go upon: that the real knowledge was lost; that their conjectures might be correct or otherwise, but not entitled in any case to more consideration than those of their successors in Egyptian inquiry—vitiated, as the former obviously were, by Greek imagination and Eastern metaphysics: till we discard those writers, therefore, or reduce them to their proper value in estimation, we shall succeed only in obscuring our own view of Egypt as it really existed.

The admirable volume of Dr. Pritchard on Ancient Egypt, which we are happy to see translated into German, we presume through the strong recommendation of the Danish Professor Rask, who asserted its superiority to most modern works of its kind, combines and brings before the eye of the reader all that need be known as containing certainty. Of the ingenious suggestions to reconcile the conflicting authorities, we need not speak here, nor of the effort of Rask to supersede these, in his own volume, on the additional authority of the Parisian Marbles; since it is surely extravagant and monstrous at once to receive and reject Manetho's authority. Mr. Cory, who considers the first fifteen generations to be astronomical, falls into similar error. It is too much to require, with Volney, that we should consent to imagine the earth, sky, or the sky, earth: the principles stated in Dr. D'Oyley's admirable letters on a parallel question, and which had the effect, we are told, of convincing his able adversary, are decisive here. Mr. Cory is, however, far more successful in the brilliant hypothesis of his own framing. Discarding the fifteen dynasties of the Cynic circle (a radical fault, in our opinion), he finds the sixteenth dynasty reigned 190 years; and the Shepherds' 511 years of rule fills the exact period between

the foundation of Egypt, 2192 B.C. and the Exodus, 1491 B.C. He has not, however, accounted for this sixteenth dynasty, and the fifteenth also, being shepherds, as Manetho apud Eusebius states them to have been (Pritchard, p. 30). We must also be hypercritical enough to object that the date is too exact, and that it makes no allowance for the intercalary days, that in 700 years would have made a difference of nearly ten. As it is, however, Mr. Cory has the undoubted merit of adducing the most tenable hypothesis that has yet appeared, and one well deserving of serious consideration.

The argument that tends to prove the identity of Joseph, the son of Jacob, with the second Hermes, is, we consider, correct. The readers of the volume will recur to it with pleasure, in the author's own words; but he has overlooked what we conceive the strongest corroboration, namely, that the original, or first Hermes, was, probably, the Patriarch Abraham. We take this opportunity of stating the fact, for so we consider it; and it is only the want of space in our columns which prevents our going into the evidence, though, we shall be happy to maintain this opinion hereafter. Meantime, we confine ourselves to remarking, that the identity of nation adds force to the identity of designation in the two cases.

Whether the name Zaphnath-Paaneah means Revealer of Secrets, in Hebrew and Coptic; or, as Forster considered it, Priest of the Eternal Spirit; or, as Jerome thought, Saviour of the Earth; or, the Gift of the God of Life, as Dr. Loewe's extraordinary labours have shewn it to be in the Egyptian;—we must object to Mr. Cory's transfer of *ph* to *th*; for, it is more probable that the hieroglyphic is misinterpreted, than that the change could have occurred.

This is almost the only objection that we can take to Mr. Williams's "Essay on the Hieroglyphics of the Ancient Egyptians"—a work of extraordinary care, talent, and profound investigation, and to the particular merits of which, our former review scarcely rendered justice. We have since followed the author, step by step, through his laborious investigations, constantly (with the sole exceptions referred to) satisfied with the results; and the more so, as our own humble inquiries, begun on a different principle, and conducted through a series of operations of a totally different nature, have uniformly produced the same conclusions. We agree, that the Coptic is more probably a deduction or derivation from the language of the hieroglyphics than the language itself—the common root of the Hebrew, Arabic, Ethiopic, Chaldee, and Phœnician, is, as he shews, more likely to be the tongue required (p. 6), and the evidence (at 7 and following pages) is to us decisive on this head; see pp. 11, 12, 14 to 17, for ample instances; and the doctrine of the Ovals, at pp. 18, 19, is borne out by the facts the author adduces. As to the reading of the Oval, or Cartouch, we must say, in spite of all that has been written on the subject, we are very far from being convinced, that the common system is correct, or the only one. It is, in truth, confessedly unequal to its object, and, therefore, we cannot conceive why Mr. Williams's book should have been so coolly passed over. His detection of Champollion's errors, such as quoting for Coptic what is not Coptic, or, otherwise, has not the assumed meaning in Coptic, are startling evidence of his ability for the task he has so long and sedulously pursued; and it, perhaps, will be found, that the two systems do not differ materially, but, in some cases, actually confirm each other. We hope, therefore, to see the labours of this sound and un-

suming scholar take their deserved place in public attention.

If we wanted any further confirmation of Mr. Williams's opinions, it would be found in the pamphlet of Dr. L. Loewe, to whom we have already alluded. His work, entitled, "The Origin of the Egyptian language proved by analysis from the Hebrew," is, as far as it goes, a satisfactory demonstration of the affinity in identity for which Mr. Williams argues. The extraordinary fact, that the Egyptian and Hebrew coincide in sound and sense, fully shewn, pp. 6, 7, and the number of words in parallel, pp. 14 to 25, in this mere introductory essay, induce us to augur highly of the talents and future success of this deserving and ardent scholar, now, we understand, seeking in Egypt herself, the proofs of those mysteries she seems fated no longer to conceal. That in his scarcely attained manhood, he has so succeeded by his single exertions, is a fact that reflects no less honour on himself, than the ready patronage his acknowledged merits have won from several of the English nobility, is a triumphant answer to the detraction that ever gnaws itself away against our aristocracy.

We cannot, however, conceal an opinion that Egypt has ever been too much overrated. Silence can be a proof of wisdom only in the mouth of folly, and the shroud that veils Egyptian antiquity from the eye is but a doubtful passport to fame. We doubt, with the jester of old, if the d—l could read the hand; yet what need for concealment existed if the object was not to stultify and imbrute the humbler multitude. If this is wisdom, the Brahmin is as a god; and how could alphabetic writing be unknown in the days of Cadmus and the Exodus of Moses? The ignorance that, in the last century, questioned the authenticity of Hebrew records, on this ground, was but folly denying Fact—a fact preserved with care and reverence by a whole nation; embracing all standing traditions, or supported by them; and offering, in testimonial, a code—not an irregular legend, but a code—civilised and perfected to a high degree of justice and refinement. Surely, ignorance and love of paradox could sink no lower!

But the same evidence that rescues the Pentateuch, involves Egyptian claims in doubt and disbelief. We mean, of the Egyptian *proper*. Their hieroglyphics are the painted shroud of history; and however beautiful, and however elaborate when considered in themselves, in reference to historic truth, we are forced to confess that Greece was but a glowing phantasy, and Egypt a mighty and magnificent lie. That land appears to have had but the negative principle in itself; and, like its own *ἦρ*, to have been but the feminine development of nonentity in intellect—a void, or chaotic womb, where foreign infusions lay and ripened to maturity. What were her superior inventions in the scale of national improvement? Her architecture was Ethiopic; her pyramids theirs, or the Shepherds'; her hieroglyphics and mechanics were Phœnician; her letters, Syrian; her astronomy, Chaldean; her calendar, Persian; her numerals, perhaps, native, for they were a clog to calculation. Her mathematics were Hebrew; her medicine and anatomy, Babylonian, but devoid of that tendency to improvement which distinguished the latter, and against which, in Egypt, death was denounced. She took from the stranger the heavenly doctrine of the soul's immortality, only to reduce and degrade it below the level of humanity. The Arab was her merchant; the Tyrian, her navigator; the Scythian in-

structed her martial array. Her sculpture, though borrowed, was but as the eastern; of her likewise borrowed arts of design and colouring, the former was a laboured measurement, the latter as powerless, but as exact as that of Etruria and China. Her splendour was but a golden chain; her pride was servitude; her monuments were the stamp of her shame. And what was her boasted civilisation? The successive billows of Ethiopic conquest and migration, that swept down the feeble forms of existing institutions in their course, bore, also, in their ample bosom, the dark germs of future fertility, to inundate and clothe the aridity of Egypt. There the prophetic curse on the descendants of Ham (for such, and no more, does Canaan denote) was signally complete in that mental deficiency and obtuseness, which, in every age, has rendered the glory of Misraim, a disgrace; and still, undeniably, through every page of recording time, a servant of servants has he been to his brethren. We challenge the Christian, the infidel, the pagan,—those who embrace, or doubt, or deny the sacred denunciations,—to arraign its completeness, or to controvert its historic truth.

Let us call this hypothesis, and every step of history treads and tramples the mouldered fragments of the past into yet more hopeless ruin. Let us examine it as a fact, and every trace and hue of that past glows in its fittest and native place; the errors and obscurities of later inquiry, that cast their shadows to obscure and perplex history, are swept away, and the undisfigured canvass presents to the eye the charm of historic beauty, and the simplicity of historic truth. Ask for the Egyptian, and behold him as he is!—not the conqueror, not the sage, not the worshipper of immortality, but the slave of the stranger, the blind servant of illumination, the abject idolater of the kindred brute at his side, or of the very reptile that crawls beneath his feet. Such as the Copt is, the Egyptian was:—dull, lost, and degraded, can we ask for details of his fate? He knows not now; he never did know them! Mr. Lane's admirable volumes,\* confirmed by every tongue that records the scenes, by every eye that has witnessed their state, gives, in its very meagreness, the fullest account: their wants, their existence, their present lot, their past attainments, their powers, and their place—all are nothing!

In conclusion, we would recommend to Mr. Cory, a sequel to his "Ancient Fragments," in a collection of historical passages from the Greek writers, such as he alludes to in that work, as parallels to the notices it contains of Egypt, Phœnicia, &c.‡

#### MISCELLANEOUS.

*Lectures on English Poetry, to the Time of Milton*, by Stanhope Busby, Esq. Pp. 118. London, 1837. Whittaker and Co.

A SLIGHT sketch of our early poetry, or rather, of our early poets, in which the writer tastefully notices their peculiar characteristics.

\* See Lane's "Modern Egypt" *passim*; but especially the second volume.

† See especially Capt. Mackenzie's Journal, in our *Literary Gazette* of Aug. 5.

‡ At one of Mr. Pettigrew's lectures on opening a mummy, where some of the ablest expounders of hieroglyphics were present, it was agreed that the name on the case was either *Ortesio* or *Reroe*. A jocular friend was so amused with this, that he undertook to prove the Egyptian to be a mere variety of the Lowland Scotch dialect. We have forgotten the whole of the example, but we remember something about "Saw ye me dine at th' Abbey with the Ramsays and their nephew, who gave us ham and ices," of which the original roots were *Medinat-abou*; the nephew, *kneph*; and the refectory, *Ham, Annon, and Is!*

*Sequel of the Policy of England towards Spain*. Pp. 205. (London, Ridgway.)—This is rather a ponderous pamphlet, in answer to the *Quarterly Review*, on Lord Cardwell's work, and incidentally on that work itself. It seems to proceed from a source of much information and authority on the Christiano side.

*Literary Leaves, or Prose and Verse*, by D. L. Richardson. Pp. 468. (Calcutta, S. Smith and Co.)—It is some years since Mr. Richardson figured in our London literature, and displayed a degree of zeal and perseverance which attracted considerable notice. We are glad to see that a Bengal climate has not relaxed his energies. The volume before us consists of various pieces, in prose and verse, all evincing a degree of taste and talent which, if not of the most vigorous order, is always pleasing enough, and displays an intelligent mind, devoted to the lighter pursuits of the belles lettres.

*A Guide for the Sick Chamber, &c.*, by a Lady. Pp. 191. (Edinburgh, Fraser and Co.; London, Smith, Elder, and Co.; Dublin, Curry, Jun. and Co.)—A pious selection of hymns, prayers, and portions of Scripture, well suited to soothe the chamber of affliction.

*Lessons on Form, as given at the Pestalozzi School, Chesham, Surrey*, by C. Reiner. Pp. 215. (London, Taylor and Walton.)—The rudiments of geometry are very well explained in these lessons, and the pupil sufficiently prepared to enter upon the higher elements of the science.

*Southey's Copyist*, Vol. XIV. (London, Baldwin and Cradock.)—The *Odyssey* concluded, with a fine frontispiece of Ithaca, and a still lovelier vignette of the same, by Harvey; the former engraved by Goodyear, the latter by Goodall. The famous Battle of the Frogs and Mice fills above twenty pages of the conclusion.

*Five Arabian Tales, in German*, by A. Lewis Grimm. Pp. 165. (London, Wacey.)—Another very charming volume for the German reader. The wild tales of Araby are capitally rendered.

*Donati's German Grammar, on a new and improved Principle*. Pp. 97. (London, Noden.)—A fair elementary book. The new principle consists in using Roman instead of black letter, which is good for English learners' eyes, but bad when one comes to read German works in the ugly old costume.

*Ballads and Romances, Tales, Legends, and Idylls of the Germans, &c.*, by W. Klauer-Klätowski. Pp. 384. (London, Simpkin, Marshall, and Co.; Rolandi; Dublin, Milliken; Paris, T. Barrois, fil.)—A very admirable selection, and rendered doubly acceptable to English readers of the German language by a translation of difficult words and passages, and very useful explanatory notes by the intelligent editor.

*Investigation, or Travels in the Boudoir*, by Caroline A. Halsted. Pp. 208. (London, Smith, Elder, and Co.)—A very charming guide to information on many subjects which interest the middle orders of society. A prettier or more instructive book could hardly be put into the hands of females and youth. The embellishments are very neat, and do much to render the agreeable text still more agreeable.

*Guide along the Danube, &c.*, by R. T. Claridge. Pp. 240. (London, F. C. Westley.)—A very nice little guide-book, not only for the river Danube, "its banks and bays," now so attractive to English tourists, but also to Constantinople, many parts of Greece, and Venice.

*The Oakleigh Shooting Code*, by T. Oakleigh, Esq. Pp. 206. (London, Ridgway and Sons.)—Approaching August, with its grouse; September, with its partridges; October, with its pheasants and hares, not to mention the merits of this work itself, as an epitome of information respecting these and other sports, have called for a second edition of the "Code"; which we recommend to all our sporting friends.

*A Turkish Grammar*, by W. Schroeder. Pp. 142. (London, Schloss.)—A new and revised edition of a publication calculated to be of much use to travellers and mercantile men, from having a collection of familiar sentences with French and English translations. More elaborate works may be requisite for the learned; but this is a very desirable publication for practical men and purposes.

*The Language of Birds, &c.*, by Mrs. G. Spratt. Pp. 342. (London, Saunders and Otley.)—A beautiful little lady's miscellany, gaily illustrated by twelve coloured plates of pretty birds, and giving an interesting account of the feathered songsters, with a number of appropriate selections concerning them from popular authors in prose and verse. It is altogether not only handsomely "got up," but rendered still more deserving of praise for its literary matter. What a present for the best behaved during the midsummer holidays?

*The Botanist; containing accurately Coloured Figures of tender and hardy Plants, with Descriptions, &c.* Conducted by B. Maund, F.L.S. and others. 6 Nos. (London, Groombridge.)—Among the many popular and truly valuable periodicals of the present day, the *Botanist* may justly be ranked, both as regards the value and originality of its matter, and the beauty and accuracy of its naturally coloured illustrations. The class to which every flower belongs is distinctly specified; and all the divisions and subdivisions, by the plant, pointed out, and illustrated with appropriate engravings, in a neat and novel manner. Nor is the literary portion confined to mere dry botanical matter, but branches out into descriptions, highly instructive and entertaining; and, above all, contains beautiful and apt quotations from the inexhaustible stores of poetry. We are sorry to put any qualification upon our praise; but we do think, that "The Rosa Alpina" should not have been named "The Rose of Sharon," *scilicet* "the rose without a thorn," and may be said to be of this new (and we think inappropriate) name, as it is conformed with the genuine rose that already bears it.

Better have called it the "Rose of Paradise," and our fancies would readily have transplanted it to some imaginary Eden, such as Milton has created, where bloomed  
 "Flowers of all hue, and without thorn the rose."

There is something natural, pardonable, and poetical in thus meeting the minds of the immortals half way; the associations are pleasing. We link a beautiful flower to beautiful poetry, and they become one, and are wedded in inseparable loveliness. Let this hint be taken; and if we must have new English names, let them be the best, and of a kindred with the golden links of song. Enchain them with some thought which can never die. Here we have a rose without a thorn, the beautiful illustration of the sweetest line on flowers in Milton's Paradise, the regal flower of his own garden, the companion of his own down-glancing Eve; in a word, the "Rose of Paradise," before the flowers "their sad embroidery wore."

On the Efficacy of Carbonic Acid Gas in the Diseases of Tropical Climates, &c. by John Parkin. Pp. 64. (London, Allen and Co.; Higley.)—Mr. Parkin strenuously recommends carbonic acid gas in diseases induced by tropical heat and malaria, and cites many cases of successful treatment. He particularly directs his remarks to the cure of dysentery, both in its acute and chronic stages.

An Analysis of the British Ferns, and their Allies: with copperplate Engravings of every species and variety, by G. W. Francis. 8vo. pp. 68. (London, Simpkin, Marshall, and Co.)—An excellent and satisfactory description of a striking tribe of plants, which, though destitute of flowers, form picturesque and interesting features in many an English landscape. Their bitter principle causes all animals to reject them as food, unless driven to it by famine; and the same quality has led to their being employed in brewing instead of hops—an great improvement, though they contain much tannin and gallic acid, which precipitate feculent matter in the wort.

## ARTS AND SCIENCES.

### ELECTRICAL SOCIETY.

ON Saturday evening, the following extracts of a letter from Andrew Crosse, Esq. giving an account of himself, and of his most recent experiments, to W. Leithhead, Esq. were read:—

"Broomfield, near Taunton, August 4th, 1837.

"I am happy to hear that the Electrical Society is going on so well, and shall be ready to contribute any thing in my power to assist it. I commenced my philosophical pursuits at a very early age, viz. at twelve years old, at Mr. Sayer's school, at Bristol, where I studied Cavallo on Electricity, and saved my pocket-money to purchase an electrical machine. In fact, I made my first machine out of a quart bottle, supported by the ends of an old box, and furnished with an iron wire, by way of handle. Before I was fourteen years old, I believe I had read all that was then known of the science; and I attended all the lectures delivered at that time at Bristol. From that time to this, I have been the humble servant of science; and so I shall remain to the close of my life. Those who have attributed vanity or ambition to me have not known my feelings, as I never was more satisfied than I am at present, with my own ignorance of the grand cause of electrical excitement, and its connexion with magnetism, light, and heat. I have, within the last two months, obtained some very interesting results; and I think I may say, have made another step in the mode of procuring or producing crystals, viz. by transferring the electric energy from the zinc and copper plates, to other substances not metallic, in contact with them. Thus, by causing the combined metallic arcs to rest upon quartz or limestone, I have altered the direction of the crystallising action, and transferred it to those substances. In this way I have covered a piece of limestone with very perfect rhomboidal crystals of selenite, or sulphate of lead, which exactly resemble nature, and bear the scrubbing brush quite as well as those of the same kind taken out of a mine or quarry. I have, likewise, in the same manner, covered a piece of quartz with crystalline sulphate of lead, and have other experiments in action which I cannot yet disturb, in which, to all appearance, I have crystals of quartz growing

upon pieces of natural massive quartz. I am more than ever of opinion, that it is possible to form artificially every kind of mineral found in the earth. In one of my experiments, I have a thin incrustation of metallic copper, covering, to a great extent, the surface of a solution of the acetate of copper, and growing from the upper edge of a negative copper plate, in layers, one growing out of the other. In this experiment, the arc of zinc and copper is placed in the magnetic meridian, and it is curious to observe that on the eastern side, the layers of copper only extend to the distance of  $\frac{1}{2}$  of an inch from the eastern edge of the copper plate, whereas on the western side, the layers of copper extend to the distance of 2 inches and  $\frac{1}{2}$  of an inch from the western edge of the same copper plate. Whether this depends on magnetic or other causes, I cannot say. In another experiment I have formed a specimen of magnetic oxide of iron, but not possessing polarity. In another, I have formed a mineral fungus, in the shape of a common trumpet-mouthed fungus, which is found on trees, &c. It grew out of an electrified jar, filled with hydro-sulphuret of potash, and is  $\frac{1}{2}$  of an inch in length, and  $\frac{1}{4}$  in diameter. Whether it would have grown in an unelectrified jar I am ignorant. I hope, before long, to be enabled to forward you a paper on my favourite science, and some crystals, when I procure some duplicates. I am, in the mean time, &c.

"ANDREW CROSSE."

Mr. Lynn exhibited to the meeting, and explained the principles of a working model of his electro-magnetic carriage. Adjourned to October.

## FINE ARTS.

### NEW PUBLICATIONS.

*The History and Antiquities of Haddon Hall.* By S. Rayner. Vol. II.—*A Supplementary Number of the History and Antiquities of Haddon Hall.* By S. Rayner. Derby, 1837, Moseley; London, Weale.

WE noticed, on its appearance, the first volume of this account of the finest relic of the English architecture of the middle ages. The volume before us completes the work; of which it is with justice said, in the publisher's prospectus, that "it must be alike interesting to the antiquary, the amateur, and the architect." The following is the general description of the hall:

"In the midst of romantic scenery, on a rocky eminence, at the foot of which flows the river Wye, and not far from its confluence with the Derwent, stands the castellated mansion of Haddon. Its embattled parapets and crested turrets, proudly towering above the branching woods in which it is embosomed, cause it, when viewed from the vale below, to assume the appearance of a formidable fortress. The building, however, in its present form, is not in the least calculated for defence or protection against a besieging force, according to the military tactics of any period; though there can be little doubt that this mansion, which was the work of different ages, occupies the site of a Norman castle, portions of the lower part of which may be traced in the walls of the towers which overlook both the upper and the lower portals. The general arrangement of this structure is that of a castellated hall, exhibiting some of the characteristic features of the more ancient castles, which were the residences of the nobles and other great landed proprietors of this country from the time of its subjugation by the Norman William, and his followers, till near the close of the fifteenth century, when the triumph of Henry VII. over

the partisans of the rival family of York, terminated the long and sanguinary contest for the crown between the Yorkists and Lancastrians, in the course of which, great numbers of the ancient nobility and chivalry of England perished in the field or on the scaffold. Peace and good order being to a certain extent established, it was no longer necessary that the dwellings of those belonging to the higher orders of society should be strongly fortified buildings, in which their families and retainers might be protected from the attacks of those whom national discord or private feud had made their foes; for now, those who had been accustomed to decide their quarrels by the sword, more frequently resorted to the courts of justice for the redress of injuries, such as had heretofore been the causes of violence, rapine, and bloodshed, in abundance. Hence arose the necessity for erecting habitations more adapted for the convenient accommodation of the owners and their domestics than the old castles which they had previously occupied; and a new mode of building was, consequently, introduced. But it could not reasonably be expected that, under such circumstances, domestic architecture should be exempt from the defects commonly observable in most works of art of a comparatively early date. Those who were employed to construct new habitations, or to alter and adapt old ones, at a time when the crenellated bastion, the moat, and the drawbridge, were no longer essential appendages of the dwelling of a manorial proprietor, must have laboured under peculiar difficulties in the execution of the tasks assigned them; and it almost necessarily followed that their modifications and reconstructions must often have displayed characteristics of the ancient fort, and have presented few of the conveniences, and fewer still of the beauties, which distinguish the noble mansions and palaces of modern times. There can hardly be conceived a more striking contrast to the sombre grandeur of Haddon Hall, than is exhibited by the splendid magnificence of the neighbouring pile of Chatsworth. The former of these buildings, as Mr. King remarks, is 'one of the most perfect and most curious of the class of castellated houses now remaining; but when viewed as a whole, is almost devoid of all real elegance, or comfortable convenience, and fitted only to entertain a herd of licentious retainers.' In the latter edifice we perceive a unity of design and adaptation of parts, not only beautiful when separately considered, but also deriving new beauties from their connexion with the other portions of the structure to which they belong. The various divisions of the edifice harmonise with each other, and combine with the adjacent scenery to constitute a picture of surpassing elegance and splendour. But how much soever the mansion of Haddon may suffer by comparison with the productions of modern architects, and however deficient it may be in provision for the enjoyment of the comforts and the luxuries of life, yet it cannot be denied that it is not only interesting as a model of the domestic arrangements of noble families in former times, and as a picturesque object, suited to the character of the bold and romantic landscape of which it forms a prominent part, but it is likewise deserving of the exact attention of artists and amateurs, as affording examples of elaborate and beautiful workmanship, in the carved panelling of its wainscoted apartments, and in the elegant tracery of some of the ceilings."

Mr. Rayner observes,—"The present Duke of Rutland has displayed his taste, his judg-

ment, and his regard for our national antiquities, by giving directions that Haddon Hall shall be kept in proper repair, so that it may serve as an unique model of an old English baronial mansion, and as a valuable monument of the skill and taste of the architects of the middle ages."

Unfortunately, however, the same care has not been extended to the antique furniture of the apartments; and it is painful to read of the manner in which it has been allowed to go to ruin.

"According to Lysons, about 1760, such of the furniture of this mansion as was thought valuable, was removed to Belvoir Castle; and, at the same time, that which was not wanted was lodged in a barn on the north side of the Hall, one end of which extended into what is provincially called 'a by-water,' being a branch of the river Wye. The whole quantity consigned to this miserable repository amounted to ten wagon loads. Here the furniture was kept till the moisture arising from floods and rain reduced the wood-work to a state of rottenness and decay; and then it was ordered to be used for fuel. Fifteen bedsteads were put into a long room near the house, which had been a granary, and is now a stable; and, after being left for a time to fall in pieces, they likewise were ordered to be cut up and burnt. The neglect and consequent destruction to which these relics of antiquity were thus consigned, may be imputed to the person who was then agent to the Duke of Rutland; and who made this unfortunate use of the discretionary power with which, it may be presumed, he was entrusted by his noble employer. This agent, also, when the old building required slating, contrived to raise the requisite funds, or a part of them, by disposing of such of the useless lumber (as he no doubt considered it), as was not fit for fuel. For he sold a lot, consisting of pewter dishes, and iron and brass utensils, with eighteen guns, and half a dozen swords, to one Matthew Strutt, for the sum of twenty pounds. The old man, who now has the care of the mansion, and who acts as a guide to visitors, says, that among the brass articles thus sacrificed, there were curious candlesticks, eighteen inches in diameter at the bottom, with rich mouldings; and he also describes as remarkable, some singular curtain-rods, and carved bedposts, having 'knobs' in the middle, richly carved, a foot and a half in diameter."

The prints in the present volume are from sketches by Mr. Rayner, and Mr. Cattermole, and are, at least, equal in merit to those by which the first volume was illustrated.

The main object of the "Supplementary Number" is to supply professional men with more precise details of the ornamental parts of the edifice, executed in such a manner as to serve the purpose of working drawings. The plates are six in number, and are beautifully executed (in a species of lithography new in this country, but borrowed from a German work of a similar kind) from drawings by H. Duesbury, architect.

#### DISCOVERY IN MEDAL DIE-SINKING!

An amusing bit of hoax has been going the round of the papers this week, about certain pseudo discoveries made by Signor Pistrucci, who holds an appointment in the Royal Mint, as medallist; viz., that he has found out a mode of making dies, without engraving them,—a wonderful invention, which his love of the English makes him freely give to the public, though he might have secured incalculable advantages by a patent! Funny—a

patent! for a process which has been known to every die-sinker in Birmingham for at least thirty years; of which we have seen numerous proofs in specimens made by the process described—a process which was known also at the Mint before Signor Pistrucci held an appointment there, to devote above twenty years of his invaluable time chiefly, if not entirely, to the execution of a yet unfinished medal to commemorate the battle of Waterloo. He is a clever artist, and 'tis a pity that his attention should be removed from this work, to search after such "mare's nests" as a "discovery;" which, because it is good for nothing, is given to the public, with much credit for liberality. The affair has been proclaimed in the *Times* and other papers, and extinguished by an *exposé* in the *Chronicle*. The statements, for and against, are too long for our columns, especially as much detail has been given in the daily papers mentioned. The only chance of repayment for the publicity given to the process which Signor Pistrucci has discovered is, or ought to be, from the forgers of the coin of the realm, who will not fail to pick up a hint or two from the puff; for if a knowledge of the Birmingham practice has been kept from them, as well as from the Signor, until now, they ought in gratitude to send him an appropriate proof of their skill in a medal of honour! struck by the process.

#### SOCIETY FOR THE ENCOURAGEMENT OF BRITISH ART.

ON Saturday last, this Society decided, by lot, who were to be the fortunate possessors of two pictures, purchased by this Society, to encourage young artists of talent in the preceding exhibition at the British Gallery. The pictures were *Paola and Francesca*, from Dante, by Mr. Cope, and a cattle-piece, by Sidney Cooper—a judicious choice, and evidence of the improved judgments of the committee. Our excellent friend, Mr. Moyes, the printer of the *Literary Gazette*, was the fortunate winner of the picture by Mr. Cope. There were 240 subscribers, at a guinea each, who have the honest gratification of feeling that they have contributed to the encouragement of art by the purchase of two pictures, the production of young men of talent. Fortune may, in turn, smile upon them.

#### MARYLEBONE LITERARY AND SCIENTIFIC INSTITUTION.

WE attended two lectures on "Perspective Rectified," delivered by Mr. A. Parsey, at the Marylebone Literary and Scientific Institution, on the 7th and 14th instant. It is not a subject on which we can enter into details; but, as far as we are able to comprehend Mr. Parsey's principles, we by no means agree with them. Among other "rectifications" of perspective, Mr. Parsey maintains that, in a drawing or picture, vertical lines, for instance, the lines which bound a tower that is equally broad at the base and the summit, and horizontal lines, for instance, the lines which bound the top and bottom of a level wall, viewed in front, ought to be made to converge, because they appear to converge in the reality. Now Mr. Parsey forgets that a drawing or picture itself runs into perspective; that if the lines in question be drawn parallelly, they will, when the drawing or picture is viewed from the proper point (and there is but one proper point), appear to converge, precisely as they appear to converge in the reality; and that, if to this apparent convergence an actual convergence be added by the artist, the perspective will become exaggerated

and false. Nor can we admire the tone in which Mr. Parsey speaks of science and scientific men. It is a tone which it is evident he is not at all entitled to assume.

#### SKETCHES OF SOCIETY.

##### THUGS AND THUGGEE.

PROCEEDING to the end of our information on this remarkable subject, we have, in the first place, to continue the revelations respecting the robberies and murders on the rivers, as extracted from the witnesses and criminals at the trials before Capt. Sleeman.

"Q. Where do the river Thugs reside chiefly?—*Imam Buksh*. They formerly, as I have heard my father and other old men say, constituted the exclusive population of some villages, till a *gardee* (inroad) was made upon them, and their villages were pulled down about their ears.

"Q. What was the cause of this?—*Imam Buksh*. They never kill women; and there was a party of five travellers, four men and one woman, who wanted to pass across the river with them at Rajmahul. They contrived to leave the woman behind; and this led to the discovery of the murder of the men. From that time they have been scattered over the district of Burdwan; and now they live in villages occupied by other people, four or five families of them in a village. They go in considerable parties, and have generally several boats at the ghat at the same time. The ghats most frequented by them are those of Kohelgaum, Rajmahul, Moremukaea, an invalid station, and Monghyr; but they go on so far as Cawnpore, and even Furruckabad. Their murders are always perpetrated in the day time. Those who do the work of the boatmen are dressed like other boatmen; but those who take a part in the operations, are dressed like travellers of great respectability; and there are no boats on the river kept so clean and inviting for travellers. When going up the river, they always pretend to be men of some consideration going on pilgrimage to some sacred place, as Banares, Allahabad, &c. When going down, they pretend to be returning home from such places. They send out their *sothas*, or *inveiglers*, well dressed upon the high roads, who pretend to be going by water to the same places as the travellers they fall in with. On coming to the ghat, they see these nice-looking boats, with the respectably dressed Thugs amusing themselves. They ask the *manjee* (captain) of the boat to take them and the travellers on board, as he can afford to do so cheaper than others, having, apparently, his boat already engaged by others. He pretends to be pushed for room; and the Thugs pretend to be unwilling to have any more passengers on board. At last he yields to the earnest requests of the *inveiglers*, and the travellers are taken up. They go off into the middle of the river, those above singing, and playing, and making a great noise; while the travellers are murdered inside, at the signal given by three taps, that all is clear; and their bodies are thrown into the river. The boat then goes on to some other ghat, having landed their *inveiglers* again upon the roads.

"Q. How many of these river Thugs do you suppose there are?—*Imam Buksh*, I have never served with them but once, and cannot say; perhaps from two hundred to two hundred and fifty.

"Q. You are said to have occasionally gone with the river Thugs; what do you call them?—*Bukhtawur*. We call them *Pungoos*.

On one occasion only have I ever served with them.

"Q. What was the said occasion?—*Bukhtawur*. About fourteen years ago I had been on an expedition from Chupra to Moorshedabad. We were twenty-two Thugs, under Sewbuns Jemadar, who was a Rajpoot. Two of our gang, Khoda Buksh and Alee Yar, had often served with the river Thugs, and used to interest us by talking about their modes of proceeding. On the other side of Rajmahul we fell in with two of these Thugs. They had two bundles of clothes, and pretended to be going on a pilgrimage, and had with them five travellers, whom they had picked up on the road. Sewbuns recognised them immediately, and Alee Yar and Khoda Buksh found in them old acquaintances. They got into conversation with them; and it was agreed that Sewbuns, I, and Dhorda Kormee, should go with them, and see how they did their work, while the rest of the gang went on along the bank of the river. We embarked at Rajmahul. The travellers sat on one side of the boat, and the Thugs on the other; while we were all three placed in the stern, the Thugs on our left, and the travellers on our right. Some of the Thugs, dressed as boatmen, were above deck; and others walking along the bank of the river, and pulling the boat by the goon, or rope; and all, at the same time, on the look-out. We came up with a gentleman's pinnace and two baggage-boats, and were obliged to stop and let them get on. The travellers seemed anxious; and were quieted by being told that the men at the rope were tired, and must take some refreshment. They pulled out something, and began to eat; and when the pinnace had got on a good way, they resumed their work, and our boat proceeded. It was now afternoon; and when a signal was given above that all was clear, the five Thugs, who sat opposite the travellers, sprung in upon them, and, with the aid of others, strangled them. They put the roomal round the neck from the front, while all the other Thugs put it round from behind; they thus push them back, while we push them forward. Having strangled the five men, they broke their spinal bones, and pounded their private parts; and then threw them out of a hole made at the side into the river, and kept on their course, the boat being all this time pulled along by the men on the bank. The booty amounted to about two hundred rupees. We claimed and got a share for all our party; and Sewbuns declared that we were twenty-nine, while we were really only twenty-three, and got a share for that number. He cheated them out of the share of six men. We landed that night, and rejoined our gang, and operated upon the roads leading along the river Ganges till we got to the Moremukaea ghat, where there is an invalid station, about four cose the other side of Bar. Here we fell in with the same party of Pungoos, or river Thugs, who had three travellers with them. I did not join them this time; but Sewbuns, with two other members of our gang, went on board, and saw them strangled. What share he got I do not know.

"Q. Where do they reside?—*Bukhtawur*. They reside about Beerbhoom, Bancoora, Kutna-Kutooa, Sewree, and other places in the district of Burdwan, which is a very large district. Kulna and Kutooa are two distinct towns on the Bhageeruttia river, half way from Calcutta to Moorshedabad, though we always join their names together in speaking of the place. Thugs do not live in these or any other towns, as they are there always liable to be a good

deal annoyed by police questions, but in small villages round about them.

"Q. What do you call police questions?—*Bukhtawur*. Questions about who's come; who's gone; who's born; who's dead; what's your occupation; whence your income? and so forth. These questions annoy Thugs a good deal, and oblige them to share their incomes with the police men, as well as with the Zumeendars."

Captain Sleeman states, that he has rarely discovered in Thuggee "any instance of what may be termed wanton cruelty: that is, pain inflicted beyond what was necessary to deprive the person of life—pain either to the mind or body." We have already alluded to their general implicit deference to omens, and to the regulations of their sect. These regulations prescribe that the following classes shall be exempt from their attacks: washermen, bards, fakeers, saiks, dancing boys or men, or musicians, sweepers, oil-venders, blacksmiths, and carpenters, when found together, maimed and leprous persons, a man with a cow, *Burhumcharies* Nanuk-shahees, Ganges water-carriers when conveying the holy-water, and women. Few deviations from the above appear to have been perpetrated, and it seems to be the general feeling among Thugs, that to those deviations, and the vengeance of the goddess thus engendered, we are indebted for our surprising success in suppressing Thuggee. We may here add, that from attempting the destruction of Europeans they are deterred by three motives: first, Europeans seldom carry valuables; secondly, they usually carry pistols; and, thirdly, such a hue and cry would be raised after a missing European, that the consequences would be too probably fatal. In respect to the above exemptions, it may be observed, that the Mussulmans appear somewhat less scrupulous than the Hindoos: whenever a woman has been murdered, it has usually been by the former. In respect to the proportion of these castes, it may be stated, that in the Doab four-fifths are Hindoos. In Bengal, Behar, and Orissa, they are about half and half; but throughout the rest of India, the far greater portion are Mussulmans. The most crafty, intelligent, and daring of all Thugs, are those from Arcot, in the Carnatic, seventy miles west of Madras. By a sort of general assent, these men are the most to be dreaded; wherever they go they appear to be recognised leaders. It appears from Captain Sleeman's work, that the great carriers of grain, salt, and merchandise over the larger portion of Hindoostan, the Brinjarries, are frequently engaged in Thuggee, whenever occasion offers, and that many have procured a great portion of their wealth from these horrible practices. We had often surmised, from what we personally knew of the characters of these men, that such was the case; but we were not aware till now that the fact was well authenticated. From their having no fixed habitations, and mingling so little with the inhabitants of the country through which they pass, their detection would seem especially difficult; the more especially as they seldom retain any plunder except money, for fear of the custom's officers, and have no local authorities to conciliate. The attention of Thugs to omens is extraordinary; nor less singular is the superstitious belief they entertain in the inspiration of the consecrated pickaxe, which is carried in the waist-belt of the shrewdest, cleanest, most sober and careful man of the party, and is considered their protector and guide, and, in fact, to possess a host of virtues. They believe that no man's family long survives an ordinary

murder, but becomes extinct; and, in like manner, they believe that a Thug who kills without attending to the omens, &c. loses his own children, and is never blessed with more, and cannot escape punishment. They believe that the nonobservance of these omens has been, in a great measure, the cause of their present misfortunes—that Kali has deserted them; for that in former years, when 'there was something like religion and good faith among them, they found friends every where,' and that retribution was severely visited by the deity on the heads of several native princes and others, who had seized and punished many of their class.

The following part of an examination explains some of the process of juvenile initiation into the mysteries of Thuggee.

"Q. And your children, too, reverence their Thug fathers like other sons, even after they have become acquainted with their trade?—*Sahib*. The same: we love them, and they love us the same.

"Q. At what age do you initiate them?—*Sahib*. I was initiated by my father when I was only thirteen years of age.

"Q. Have you any rule as to the age?—*Sahib*. None; a father is sometimes avacious, and takes his son out very young, merely to get his share of the booty: for the youngest boy gets as much in his share as the oldest man; but, generally, a father is anxious to have his son in the rank of the *Burkas* as soon as possible; he does not like to have him considered a *Kuboola* after he has attained the age of puberty.

"Q. How soon do you let them see your operations?—*Sahib*. The first expedition they neither see nor hear any thing of murder. They know not our trade; they get presents, purchased out of their share, and become fond of the wandering life, as they are always mounted upon ponies. Before the end of the journey they know that we rob. The next expedition they suspect that we commit murder, and some of them even know it; and in the third expedition they see all.

"Q. Do they not become frightened?—*Sahib*. Not after the second or third expedition."

It is remarkable also, that, notwithstanding their horrible principle of destroying life, sacrificially, so great is the Thug detestation of bloodshed, that they never use the weapons they carry for self-defence in any case whatever. There are also, it appears, some oaths, which they dare not violate, even for the purposes of concealment. Their religious feelings are further attested by the fact of their making offerings, proportioned to their success, in their temples: and the chief of these, at Mirzapoor, whose priests are also Thugs, is, consequently, furnished with the most splendid contributions of this nefarious trade. Besides, Hindoos and Mussulmans of every class belonging to this sanguinary sect, the jermadar of the village is found in general to be the participant and regulator of their enterprises and booty. If not actually one of the gang, every artifice and means is used to win his connivance. If he enter the brotherhood, one tenth of the pearls, gold, jewels, and richer articles, are his; and a sixth of the coin and inferior property in the division. Of the booty, each man seizes and carries off whatever falls in his way, till the general allotment, when each portion is given up, upon oath, for the general benefit; and of the shares, the Shemseas and Warawuls, those who hold the victim's hands or legs, and his horse's bridle—the scouts, or Tillai, who look out against interruptions during the murder or burial—and the

Lugghees, or grave-diggers, all follow the Bhurtotes in a claim for additional shares before the whole gang participate in the spoil. Splendid shawls and brocades, which might be identified, are torn into strips, that each may divide the danger; heavier articles are destroyed, if they cannot be disposed of by the inferior bankers, who, for their own interests, keep up a connexion all over the country; and the religious mendicants, who are eternally traversing Hindostan, lend themselves to facilitate the communication from place to place. The priest, the monk, the noble, and the farmer, all, however apparently or in reality engaged in other pursuits, thus combine into one system, for communicating information of victims, or for concealing the murderers, whenever inquiry happens to be made. They recognise their brethren by a sort of freemasonry, and use, like the gipsies, a peculiar slang, not a separate language. In the nizam's territory they are not scrupulous as to the burial of the dead, which, whenever it occurs, is performed with the *nishan kassi*, or sacred pickaxe; and it is always itself carefully deposited in the ground by the bearer, Nishan Wallah, at every halt, with its head in the direction of the intended route. The strangulation, formerly effected by a rope, is now performed with a cotton cloth or handkerchief, the *paku* or *roumal*. The victim is thrown off his guard at the last moment by the inquiry, What time of night do the stars say it is? and as he, in common with the rest, raises up his head, the *maujeh*, or signal, is given, and, his neck thus freely exposed, receives the fatal knot. If the soil is light (as the Review notices), the bodies are pierced by weapons, that they may not swell and burst their graves, which are extremely shallow. In other places the earth is carefully plastered down, and *chulees*, or fire-places, are constructed upon it, to conceal any trace of the transaction, the soil removed being, in such cases, carried carefully away to some distant spot.

At other times, the route of one gang is marked by the direction of these *Chulees*, and by a foot impressed on a particular place, selected and smoothed for the purpose, and with the toes turned towards their course: for these signs, in cases of doubt and difficulty, such as the meeting of roads, the fords of rivers, the succeeding gangs are prepared to look.

Notwithstanding the systematic dissimulation of their conduct, these murderers are represented as mild, cheerful, and unobtrusive; attentive to their duties; and, in other respects, good members of society; particularly observant of cleanliness and neatness. They pride themselves, too, on honesty; and, as they distinguish their human sacrifices from murder, which they profess to abhor, so also they are anxious to have it understood, that their taking of booty is not theft. In fact, even when condemned to death, they are solicitous that the documents containing their fate should not designate them thieves or murderers.\*

The accounts of this system seem to have taken the world by surprise; but Indian papers, and the *Asiatic Journal* have contained repeated notices of the Thugs, or Phansigars. As descendants of the original destroyers, they only carry into regular system the human sacrifices which the goddess Kali, Devi, or Dabie, demands at festivals from all her worshippers. In Bahar, where civilisation had not fully penetrated thirty years ago, the festal

days of the goddess were celebrated by innumerable throngs; and images were substituted for human offerings, which the English, as the natives stated, would not allow to be sacrificed. In fact, the first day of the festival, the goddess was worshipped as the *Destroyer*, afterwards as the *Rescued from danger*, and, finally, as the *Dea Genetrix*, with the most revolting rites: but it is remarkable, that the native traditions, of the second event, were more consonant, as *mythoi*, with historic truths than any of the similar details printed and published in England.

There is little doubt but that, in many of the neighbouring countries, sects, somewhat similar in denomination and rites, still exist; but, as these do not carry their practices to any thing like the same horrible lengths, it might be difficult to determine which are the real corruptors of the original tenets. We may recur to this hereafter.

#### BIOGRAPHY.

W. DANIELL, ESQ. R.A.

THIS admirable artist died on the 16th, at Brecknock Terrace, New Camden Town, after four months of extreme suffering. In him the Academy has lost one of its brightest ornaments, and society a most amiable and kind-hearted man. To his indefatigable industry and versatile talents, the *Literary Gazette* has ever borne ample testimony. His pictures, in the last exhibition of the Royal Academy, have never been surpassed by any of his best performances. His exertions on that occasion were great, and met with deserved approbation. Besides the Panorama of Madras, painted conjointly with Mr. Parris, and that of the Island of Ceylon, and the Capture of the Elephant, by himself, the works of Mr. Daniel, in the *Oriental Annual*, and other publications, are before the public, to a greater extent than those of any other member of the Royal Academy, with the exception of the late Thomas Stothard; and, like him, his talents were the union of grace and design. His age was 68. His uncle, who is now living, is 88.

#### MUSIC.

NEW PUBLICATIONS.

*My Little Barge Hasts o'er the Deep: a Barcarole.* The Poetry by L. C. Plumer, Esq.; the Music by H. Lee. Lee.

A LIGHT and extremely pretty barcarole; the symphony and accompaniment simple and easy. To amateurs, who find it difficult to remember any thing when asked to sing, this would prove a perfect treasure.

*The Little Gay Deceiver: a most Lachrymose Ditty.* By the Author of "Mephistophiles in England." Power.

WITH no great claims as to wit, but withal so perfectly absurd, that we defy its being heard without roars of laughter.

*Hey! for the Bonny Braes: a Ballad.* The Poetry by John Imlah, Esq.; the Music by Alexander Lee. Lee.

A LIVELY and spirited Scotch air. We should say, arranged by Mr. Alexander Lee in a most agreeable manner.

*Of What is the Old Man Thinking? Ballad.* The Poetry by Thomas Haynes Bayly, Esq.; the Music by J. P. Knight. Mori and Lavenue. MR. BAYLY's words are ever sweet. This is not one of his best ballads; but will be a favourite with many. The music is less suited to the words than is usual with this gentleman's songs. It is, however, very superior to the mass of music published daily in London.

*My Love is o'er the Sea: send him Home! a Ballad.* The Poetry by Andrew Park, Esq.; the Music by Alexander Lee. Lee.

A BEAUTIFUL ballad, as sung by Mrs. Waylett, almost the only ballad-singer we have left. It will also be found a great acquisition in the drawing-room.

*God save the Queen, the National Anthem.* Arranged by G. Herbert Rodwell. D'Almaine and Co.

AN excellent arrangement of our National Anthem; the last verse is new, and, to our minds, as good as need be: it is not a song to display any great imagination, "Queen and her" being the only necessary alterations.

#### DRAMA.

*Her Majesty's Theatre* concluded the subscription season on Tuesday, but finishes with an extra night to-night. Throughout, the vocal attractions have been of the highest order, though the operas have not always been equal to the performers. The ballet has been less deserving of applause, for, except the everlasting crouching and *espièglerie* of Duvernay, in the *cachoucha* dance—the *allurements*—whereof seemed nightly to gratify certain old beaux and younger *roués*—there has been nothing in that line to attract spectators.

*Drury Lane.*—At a general meeting of the Proprietary, on Thursday, a precious report of the Committee was read; from which it appeared, that all the statements of unbounded success, &c. which appeared in the bills throughout the season, were gross falsehoods, and that, instead of these delusions, the concern had been reduced to the utmost distress. The report then proceeds to throw dust in the eyes of the proprietors, renters, and public, by alleging almost every cause but the truth, for the failure of the speculation. It never seems to occur to the Committee, that character has any thing to do with the affairs of a theatre, or that such a property may be ruined by brutalised men and degraded women, and utter disreputableness throughout. The Committee, however, bear the highest testimony to the virtues and efforts of their lessee; with whom, we fancy, they are going to try it on again in honest and holy fellowship.

*Haymarket.*—The novelties of the last week have been *The Nervous Man*, for the first time at this theatre, in which Farren and Power are rich in the two opposites; and Buckstone's new comedy, *Love and Murder; or, The School for Sympathy!* part comedy, part farce, in three acts. The whole comic talent of the house is employed in this piece. The plot is far too complicated for us even to attempt to unravel; we shall, therefore, content ourselves with speaking of the merits of the writing and of the performers. The dialogue is not quite so smart as it might have been; and there are not so many "hits" as usual in Mr. Buckstone's works; but, to atone for this, the piece is full of bustle and incident. Mrs. Glover has a capital part, and makes the most of it; she is certainly an admirable actress, and, though not quite so young as she has been, her spirit is the making of any part entrusted to her. Mrs. Humby, also, in one of her waiting-maid characters, is irresistibly funny. Buckstone, with his usual modesty, has given himself a secondary part, leaving to Farren the most prominent one; they are both perfect. Mrs. Nesbitt and Miss Taylor look prettily, and play their nice parts very cleverly. Mrs. W. Clifford and Mrs. Tayleure, also do justice to their more subordinate ones. Strickland,

\* A scull of one of their chiefs is to be seen in the museum of the Royal Asiatic Society: it is small, and with a low forehead.—*Ed. L. G.*

Saville, &c. &c., complete the cast, and aid in rendering this one of the most amusing and laughable pieces we have seen. We cannot resist quoting a new turn given to the much abused clubs. Mrs. Nesbitt, in making an assignation for the evening, says: "My husband will be sure to be at his club." The listening husband's (aside) is, "Oh! these clubs, what opportunities they do give the wretches!"

**English Opera.**—A new ballet, called *Diana and Endymion*, has been produced here, in which Miss Ballin and M. Gilbert, display much activity.

#### VARIETIES.

**British Institution.**—We hope that none of our readers who love the arts, and have had it in their power to visit this splendid collection, have omitted to avail themselves of the opportunity. If there be any such, we beg to intimate to them, that after next Saturday they will be too late.

**Mrs. Cocking.**—We are glad to see the subscription for poor Mrs. Cocking is filling benevolently. Besides her Majesty's fifty pounds, the exhibition at Vauxhall Gardens, on Wednesday week, produced above a hundred and eighty pounds, and there has been a tolerable list advertised, varying from five pounds to ten shillings. We trust enough will be raised to purchase a decent annuity for the bereaved old lady.

**Magnetism.**—Professor Parrot, of Dorpat, has undertaken a journey to the North Cape, to take magnetic observations; and he has invited men of science, in various parts of Europe, to make corresponding observations on the 21st, 24th, 28th, or 31st of this month (August), with a view to throw further light on the theory of the magnetism of the earth.

**Mr. Faraday.**—We learn, and we need hardly say with no great regret (for no title could illustrate a name so eminent in science), that we were misinformed respecting the knighthood conferred on Mr. Faraday. Sir A. W. Calcott and Sir W. J. Newton, of high rank in the fine arts, have been graced by that distinction.

**Weather-Wisdom.**—We fear last week must have been another balm for those who relied on the prediction of "windy," "cloudy," and "unsettled;" though glorious weather for the crops and the country. What we have since the 16th, is equally at issue with prophecy: but we quote as usual. "The sun having the declination of Saturn and Jupiter on the 18th and 19th, will bring thunder, lightning, wind, and rain. The sun with Jupiter brings warmer weather, yet windy about the 22d."

**Iron Smelting.**—The *Cambrian* newspaper states that a Mr. Crane, who had secured himself by a patent, has fully succeeded in smelting iron with anthracite coal submitted to a warm blast; and augurs an immense increase of profitable iron-works from this source, as the iron-stones largely alternates with anthracite, and thus, instead of being confined, as heretofore, to districts where bituminous coal is found, the manufacture may be carried on in extensive tracts of country where the anthracite abounds.

**Entomology.**—A Parisian correspondent of the *Times* (August 13) notices that no *hannetons* (Maybugs, or beetles), which were last year collected by the bushel, are this season to be seen; whilst an immense multitude of *papillons* (moths) rise, at sunset, every evening from the Pont Royal, and other places about Paris.

The French Association for the Promotion of Science is to meet at Metz on the 5th of Sep-

tember, six days before the *British*, at Liverpool. We observe, by the newspapers, that Newcastle-upon-Tyne is already putting forth a feeler to obtain the honour of the latter for the ensuing year. The claim stood very well at Bristol last year. (See *L. G.*)

**Cardinal Fesch.**—This celebrated person has sold a number of his pictures to raise a sum for the relief of the distressed manufacturers of Lyons; and it is mentioned to be his intention to found a school of the Fine and Useful arts at Ajaccio, in Corsica, whither he has already sent a large collection of ancient sculptures, and a great number of paintings are to follow.

**Dramatic.**—America has won one of our most accomplished vocalists from us. Madame Caradori Allan, with her husband, sail to-day for New York, where this chaste and admirable singer is engaged for fifty nights. We believe some 5000*l.* is secured; and, if purity and excellence deserve that sum, it is in this instance well deserved. Buckstone leaves the Adelphi for Drury; but Yates and John Reeve, though both on the doctor's list, are not so ill but that they may be expected to appear, in good order, at the opening of the minor.

**The Trade of the Indus, &c.**—Bearing upon this subject, treated of in our first paper in the preceding *Literary Gazette*, the annexed extract will be found to give some important intelligence.

The real secret of the ill success that has hitherto attended the opening of the navigation of the Indus, is the poverty of the countries it communicates with, and the force of habit which keeps the little trade they possess in the channels in which it has taken place for a length of time. In the course of a few years, however, a gradual change may be expected, and symptoms of it are even now discernible. Amongst these, the importation of wool, from Mekran and Candahar, is one of the most important and promising. This valuable staple, which has only recently figured in the trade of India, it appears, may be obtained in vast quantities in the countries to the north and west of the Indus; and as the demand for it at home appears to be nearly unlimited, we do not doubt that, as the trade with them has been opened, it will rapidly increase; and when it becomes of more magnitude, that the advantages of the Indus for carrying it on will be more appreciated, especially as wool is a bulky article, upon which the expenses of land carriage tell most seriously.—*Bombay Courier.*

**European Publishing.**—The annual issues of the English press average about twelve hundred volumes; those of the French and German, five thousand each. In ten years to come, estimating from the increase during ten years past, there will be issued in England, France, and Germany, more than one hundred and fifty thousand new books. There are more than eighty periodicals in Great Britain, devoted to all the various departments of useful human knowledge. Many of them are conducted with great ability. The number, also, in France and Germany is very considerable.—*Prospectus of American Society, noticed in preceding Gazette.*

**Arabian Travel.**—A letter from Bombay communicates the following intelligence regarding the progress of the passengers and packets of the *Hugh Lindsay*, on her trip to the Gulf in September last:—"We heard last night of the safety of Messrs. Stewart and Alexander, who set out from here in the *Hugh Lindsay*, in September, and chose the route through Arabia. They were stopped and robbed at Lemloon; Mr. Fitzjames, who was car-

rying a mail, was with them, but we are happy to find they are all now safe on their way, and it is supposed their money will be returned to them. They had money and coins to the amount of 400*l.* with them. The mail is safe."

Lemloon, the place mentioned above, is a village in Arabia, upon the Euphrates, about midway between Bussorah and Hillah, and ten miles below the marshes which bear that name.—*Calcutta Courier, Feb. 7.*

**Pumpkin Sugar.**—Sugar extracted from pumpkins, say the French journals, is equal, in every respect, to beet-root sugar.

#### LITERARY NOVELTIES.

Mr. William Savage has in the Press, the Case on the 43d of Elizabeth, with the Opinion attributed to Mr. Serjeant Snigge in the reign of James I., with Observations respecting the Author.

In the Press.

Wanderings and Excursions in South Wales, including the Course of the River Wye, by Mr. Thomas Roscoe, with Plates, from Drawings by Harding, Cox, Fielking, Crewick, &c.

#### LIST OF NEW BOOKS.

Robinson's Greek and English Lexicon of the New Testament, edited by Dr. Bloomfield, 8vo. 28*s.*—Copies for Writing Greek in Schools, by A. B. Evans, D.D. Head Master of Market Bosworth Free School, 4to. 5*s.* cloth.—An Essay on the Properties of Iodine and its Compounds, by C. Cogswell, A.B. M.D. 8vo. 5*s.*—Discourses, chiefly on Doctrinal Subjects, by the Rev. R. Nesbitt, Broomfield, 8*vo.* 7*s.* 6*d.*—Hand-Book for Travellers in Southern Germany, 18mo. 9*s.* 6*d.*—Lectures on English Poetry, by S. Busby, Esq. 12mo. 3*s.*—A History of British Quadrupeds, by T. Bell, F.R.S. Professor of Zoology in King's College, 8vo. with 200 Illustrations, 28*s.*; royal 8vo. 2*l.* 16*s.*; imperial 8vo. 4*l.* 4*s.*—Ten Sermons on Popish Errors, preached at Liverpool, 12mo. 6*s.*—Exercises in Orthography, on entirely a New Plan, by H. Hopkins, 18mo. 1*s.* 6*d.*—An English Grammar, by M. Green, 18mo. 1*s.* 6*d.*—Archbold's Recent Criminal Statutes, 12mo. 5*s.*

#### METEOROLOGICAL JOURNAL, 1837.

August.	Thermometer.	Barometer.
Thursday .. 10	From 46 to 73	29.89 to 29.64
Friday .. 11	.. 51 .. 73	29.63 .. 29.65
Saturday .. 12	.. 47 .. 73	29.60 .. 29.54
Sunday .. 13	.. 43 .. 78	30.04 .. 30.11
Monday .. 14	.. 40 .. 78	30.15 .. 30.18
Tuesday .. 15	.. 40 .. 75	30.18 .. 30.12
Wednesday 16	.. 47 .. 76	30.05 .. 30.02

Winds, S.W. and N.E.  
Generally clear; a few drops of rain on the afternoon of the 16th.  
Edmundson.

CHARLES HENRY ADAMS.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the Meteorological Society. July 1837.

Thermometer—Highest.....	80.00	.. the 27th.
Lowest .....	39.00	.. 1st.
Mean .....	58.43145	
Barometer—Highest.....	30.06	.. 1st and 2d.
Lowest .....	29.11	.. 29th.
Mean .....	29.74247	

Number of days of rain, 10.  
Quantity of rain, in inches and decimals, 1.64.  
Winds.—3 North-East—1 East—3 South—9 South-West—3 West—10 North-West—3 North.

**General Observations.**—The month was very fine, the quantity of rain being small, little more than one half of the quantity in July last year, and twenty-one days were without any rain. The mean temperature was higher than in the same month last year, but not so high as in the two preceding years. The barometer was lower, as respects the extremes, than in the corresponding month last year; but there was an extraordinary coincidence in the mean and that of last year, the difference being only the 0.039th part of an inch. Thunder was heard on the 18th, in the afternoon; the wind chiefly from the Westward, veering from the South-West to the North-West.

#### TO CORRESPONDENTS.

**The Medallie Engraving.**—To Mr. Ogilby, and other subscribers, who have written to us respecting the Medallie Engraving, which was given with our No. 1047, we beg to observe, that, being printed on stiff paper, it cannot well be forwarded by post; and if so sent, would be inevitably spoiled, and rendered useless as an illustration of the subject. We will, however, keep copies to be delivered whenever it may suit the convenience of our distant friends to have them called for.

Mr. Haynes Bayly's new Novel reached us too late for notice this week.

**ERRATUM.**—In last Gazette, page 506, col. 2, line 6 from bottom, for reason, read reason.

13 Great Marlborough Street, Aug. 18.  
**MR. COLBURN** has just published the following New Works:—

I.  
**Stokeshill Place; or, the Man of Business.**  
 By the Authoress of "Mrs. Armitage;" "Mothers and Daughters," &c. 3 vols.

II.  
**The Spas of Germany.** By Dr. Granville, Author of "Travels to St. Petersburg," &c. 3 vols. 8vo. with 38 Illustrations.

III.  
**CAPTAIN MARRYAT'S NEW NOVEL.**  
**Snarley Yow; or, the Dog-Fiend.** 3 vols.

IV.  
**Travels in Circassia, Krim-Tartary, &c. in 1830-7; including a Steam Voyage down the Danube.** By Edmund Spenser, Esq. 3 vols. 8vo. with numerous Illustrations.

V.  
**Wanderings in Greece.** By George Cochrane, Esq. 3 vols. 8vo. with Portraits of the King and Queen of Greece, and numerous other Illustrations.

NEW PART OF **ENCYCLOPEDIA METROPOLITANA.**  
 Price 15. 1s. boards. Part XLVI. of

**THE ENCYCLOPEDIA METROPOLITANA;** or, Universal Dictionary of Knowledge; on an Original Plan, combining the twofold advantages of a Philosophical and Alphabetical Arrangement.

See This Part contains—in Pure Sciences, Theory of Probabilities, by Mr. De Morgan; Definite Integrals, by Mr. Mosely. In Mixed Sciences, Botany, continued. In History, to nearly the end of the Seventeenth Century; and in the Lexicon, to Saxicola. London: Printed for Baldwin and Cradock; J. G., and P. Rivington; J. Duncan; B. Fellows; Suttaby and Co.; E. Hodgson; J. Dowling; G. Lawford; T. Loxcock; J. Fraser; J. M. Richardson; J. Bohn; T. Altman; J. Bain; H. Dixon; J. Bryant; S. Hodgson; R. Hodgson; F. Westley; for J. H. Parker, Oxford; and J. and J. Deighton, Cambridge.

"The Proprietors regret extremely the length of time which has elapsed since the publication of Part XLV., and which is attributable solely to the much-lamented death of the late respected Editor, the Rev. Mr. Smedley. They trust, that in the hands of the new Editor, it will be possible to publish the few remaining parts with considerable dispatch; and as Mr. Smedley had nearly completed his arrangements for the completion of the work, there will be no difficulty in effecting it in a consistent manner."

**NEW WORKS** published this day,  
 By Richard Bentley, New Burlington Street,  
 Publisher in Ordinary to Her Majesty.

I.  
**Narrative of an Expedition into the Interior of Africa,**  
 By the River Niger;  
 In the Steam-vessels Quorra and Alburkah, in 1833, 1835, and 1836.  
 By Macgregor Laird and R. A. C. Oldfield, Surviving Officers of the Expedition.  
 In 3 vols. 8vo. with Map and numerous Plates.

II.  
**The Bivouac;**  
 Or, Stories of the Peninsular War.  
 By W. H. Maxwell, Esq.  
 Author of "Stories of Waterloo," "My Life," &c. 3 vols.

The following will appear in a few days.

III.  
**Kindness in Women;**  
 A Novel.  
 By T. Haynes Bayley, Esq. 3 vols.  
 "Kindness in women, not their beautiful looks, Shall win my love."—*Shakespeare.*

IV.  
 2d edition, revised, with Additions, in 3 vols. 8vo. with numerous fine Portraits,  
**THE LETTERS OF**  
**Lady Mary Wortley Montagu.**  
 Edited by Lord Wharncliffe.

V.  
**THE NEW VOLUME OF "THE STANDARD NOVELS."**  
 With the Magazine, on the 31st inst. complete in 1 vol. neatly bound, and embellished with Two Engravings by Greatbach, from Designs by Cawse, price 6s.

**Mr. James's "Philip Augustus."**  
 Forming the New Volume of  
**The Standard Novels and Romances.**

**DR. PHILIP ON INDIGESTION.**

7th edition.  
 A Treatise on Indigestion, and its Consequences, called Nervous and Bilious Complaints, and on the Nature and Treatment of the Organic Diseases in which they sometimes terminate.  
 By A. P. V. PHILIP, M.D. F.R.S.L. and E. &c.  
 Price 6s. 6d.  
 London: Henry Remshaw, 356 Strand.

Price 1s.  
**ASTRONOMICAL TABLES for 1838;**  
 comprising the Latitudes, Longitudes, and Declinations of the Sun, Moon, and Planets, for each Day at Noon; the Right Ascension of the Meridian, Lunations, &c. &c. Also, Astronomical Phenomena.  
 By Lieut. R. J. MORRISON, R.N.  
 Member of the London Meteorological Society, and Author of "The Meteorological Almanac."  
 London: Sherwood, Gilbert, and Piper, Paternoster Row.

**MR. MACRONE** has just issued the following New and Seasonable Works:—

Dedicated, by permission, to the Queen.  
 1 vol. demy 18mo. 9s. cloth.  
**LONDON AS IT IS.**  
 By John Hogg, M.D. &c.  
 "A condensation of vast materials of the highest value."—*Atlas.*

II.  
**Murray's "Summer in the Pyrenees."**  
 2d edition, 2 vols. 8vo. Plates, 24s.

III.  
**Guizot's European Civilisation.**  
 Translated by Mrs. Colonel Beckwith. 1 vol. post 8vo.

IV.  
**Franklin's Tableaux from "Crichton."**  
 Twelve exquisite Plates in Outline.  
 Royal folio, 31s. 6d. boards.

V.  
**Thelwall's Life and Correspondence.**  
 The First Volume, 12s. 8vo.

VI.  
**Cooke's "History of Party."**  
 First and Second Volumes. (Vol. III. just ready.)

VII.  
**Schiller's "Bride of Messina."**  
 Translated by George Irvine, Esq. 1 vol. 8vo. 6s.

VIII.  
**Brydges' Moral Axioms for the Young.**  
 In easy Compleats. Small 8vo. 3s. 6d. boards.

IX.  
**Runnymede's Letters**  
 To the People and their Representatives. 1 vol. post 8vo.

X.  
**Willis's Pencilings by "The Way."**  
 A new edition, greatly enlarged, 2 vols. post 8vo. 31s. 6d.

XI.  
**Strang's "Germany and the Germans."**  
 3 vols. 8vo. beautiful Plates, 24s. cloth.

XII.  
**Thomson's "Italy and Switzerland."**  
 1 vol. post 8vo. 10s. 6d.

XIII.  
**Faulkner's "Letters to Lord Brougham,"**  
 From France, Switzerland, and Italy. 1 vol. post 8vo. 9s.

XIV.  
**Spain and the Spanish War.**  
 1. Twelve Months in the British Legion. 1 vol. 10s. 6d.  
 2. The Court and Camp of Don Carlos. 1 vol. 12s.  
 3. Movements of the British Legion. 1 vol. 12s.  
 4. The Andalusian Sketch-Book. Twelve coloured Plates, 31s. 6d.  
 John Macrone, St. James's Square.

7th edition, improved (30 Plates and Cuts), 18s. cloth.  
**INSTRUCTIONS TO YOUNG SPORTSMEN,** in all that relates to Guns, Shooting, and the Game Laws.  
 By Lieut.-Col. F. HAWKER.  
 "Col. Hawker is one of the best shots in England, and his 'Instructions to Sportsmen' the very best book we have on the subject."—*Blackwood's Magazine.*

Also, 8vo. Plates and Woodcuts, 15s. in boards,  
**The Gun; or, a Treatise on the Nature, Principle, and Manufacture of the various descriptions of Small Fire Arms.** By William Greener.  
 "By far the best work ever written on the subject."—*Extract of a Letter from Col. Hawker to the Author.*  
 London: Longman, Orme, Brown, Green, and Longmans.

RELIGIOUS DOUBT.  
 Second edition, revised, 18mo. 6s.  
**A TREATISE ON THE NATURE AND CAUSES OF DOUBT IN RELIGIOUS QUESTIONS** (having an especial reference to Christianity). With an Appendix on some Common Difficulties, Lists of Books, &c. &c.  
 "This is a very sensible, and we regret to have cause for saying, a very 'seasonable little work.'"—*Monthly Review.*  
 London: Longman, Orme, Brown, and Co.

**SIR WALTER SCOTT'S HISTORY OF SCOTLAND, FOR THE USE OF SCHOOLS;**  
 In 3 thick vols. together or separately, with a Coloured Map, 10s. 6d.

**THE HISTORY OF SCOTLAND, from the earliest Period to the Close of the Rebellion 1745-6;**  
 contained in "Tales of a Grandfather."  
 By Sir WALTER SCOTT, Bart.  
 Robert Cadell, Edinburgh; Whittaker and Co. London; and all Booksellers.

In 18mo. price 3s. in cloth,  
**LECTURES ON ENGLISH POETRY, to the Time of Milton.**  
 By STANHOPE BUSBY, Esq.  
 London: Whittaker and Co. Ave Maria Lane.

In 1 vol. 18mo. price 10s. cloth; large paper, royal 8vo. price 16s. cloth.  
**THE POETICAL WORKS OF RICHARD LLOYD,** the Bard of Snowdon; comprising Beaumaris Bay, and other Poems. With a Memoir of the Author, and a Portrait and View of his Residence. Dedicated, by permission, to His Royal Highness the Duke of Sussex.  
 London: Whittaker and Co. Ave Maria Lane.

18mo. price 1s. 6d. bound,  
**EXERCISES IN ORTHOGRAPHY and COMPOSITION,** on an entirely new Plan, containing much valuable Information on various Subjects.  
 By HENRY HOPKINS,  
 Conductor of a School at Birmingham.  
 London: Simpkin, Marshall, and Co.; and E. C. and W. Osborne, Birmingham.

No. 1075. LONDON, SATURDAY, AUGUST 26, 1837.

### REVIEW OF NEW BOOKS.

*Biographie de Napoléon Louis Bonaparte.* Extrait de la Biographie des Hommes du Jour. Pp. 30. A Paris, 1836. De l'imprimerie de Poussielgue.

*Relation de l'Entreprise du Prince Napoléon Louis, et Motifs que l'y ont déterminé.* Par le Vicomte F. de Persigny, Aid-de-camp du Prince dans la Journée du 30 Octobre, 1836. Pp. 48. Londres, 1837. Imprimé par Schultze and Co.

THESE two pamphlets have attracted our notice, as they relate to an individual whose recent exploits and movements have excited much public attention. It is true that, with the exception of their biographical traits, they are of a strong political cast; yet, as this scion of the Napoleon family is a marked man, and one likely to figure on the scene hereafter, and still more as he appears before us in the character of a *littérateur*, we think a short notice of these pages may be read with general interest.

The first publication opens with a glowing panegyric on Prince Napoleon Louis, evidently meant as a preparation for, or aid to, his dashing attempt at Strasburg; and, together with every passage in both narratives, upholds him to view as the perfect *beau idéal* of the "Young France." His baptismal name of Charles Louis Napoleon has been changed to Napoleon Louis, and he is now esteemed the representative of the Bonaparte dynasty, agreeably to the decision of Napoleon, and an act of the senate in the year XII. From these data we gather, that the imperial dynasty was limited to the issue of the emperor, the issue of Joseph, king of Spain, and the issue of Louis, king of Holland. Neither Lucien Bonaparte, who would never be a king, nor Jerome, who was king of Westphalia, nor their children, were included. Thus, after the death of his elder brother, and of the Duke of Reichstadt, the subject of these works became their apparent to all that might descend to the representative of the imperial crown.

He was born 20th April, 1808, the very crisis of the highest exaltation of that gigantic power; and his birth was celebrated with all the *éclat* so gratifying to the Parisian people. He was inscribed, as just stated, in the imperial dynasty, and when the Duke of Reichstadt died, "*on ne sait de quelle mort*" (p. 7, and a sinister insinuation), he, of course, took the Napoleonic position of that youthful prince.

He was educated by his mother, Hortense Beauharnais, the daughter of Josephine, and sister of Eugene, in a style of manly cultivation, as well as of sedulous attention to his mental qualities: and we are informed that his uncle Napoleon, at his private repasts, used to be fond of seeing him and his brother, as children, and exercising them playfully in various modes calculated to develop their intellects. At seven years of age he was consequently, enthusiastically devoted to the emperor and to France.

When a change came over the spirit of the Napoleon dream, he, like others of the race, was obliged to leave the country. He was confirmed at the cathedral of Augsburg, under the patronage of his uncle Eugene, whom he

much resembled in features and disposition (*cœur*); and passed his summers with his mother, now designated Duchess of St. Leu, at Arenenberg, the estate which she had purchased in Switzerland, and where she is now, we are told, in a state of health which points to a speedy grave.

In 1830, we find him in Italy, and so deeply involved in insurrectionary movements, as to be compelled to fly from the Roman police. Having joined his brother, the revolt broke out, and some desperate fighting ensued. The brother, however, died at Forlì, and our hero retreated for shelter to Ancona. The place was soon surrounded by the Austrian troops, but he effected his escape in disguise; and the more readily as his mother had given out, and got it to be believed, that he had already fled to Greece. From Ancona he went to Paris, and announced himself, *sans cérémonie*, to Louis Philippe, who does not seem to have been over well pleased either with the visit or visitor. The king was not quite ready to fraternise with the principles of these Italian revolutions; and so Charles Louis was ordered to quit France. Upon this, he wrote a letter to his majesty, in which he "*reconnaissait le roi comme représentant de la grande nation; il sollicitait l'honneur de servir dans les rangs de l'armée Française; il se faisait gloire d'avoir embrassé en Italie la sainte cause de l'indépendance des peuples; il demandait à mourir un jour en combattant pour la patrie.*" To this no answer was returned; and he came to England, where he remained a short period, improving himself in various ways by observation on foreign manners, manufactures, and affairs.

In 1831 he returned to Switzerland, where a secret deputation of the discontented Poles waited upon him, with the request that he would put himself at the head of the nation in arms, and lead the insurrection against the Russians. This office, prudential considerations forced him to decline; but the offer shews that he even then occupied a station which caused him to be looked up to as one in whom opposition to the established order of things in Europe was likely to meet a friend and ally.

The death of the Duke of Reichstadt is represented to have made him a still greater object of jealousy to the sovereigns around, and he was accordingly watched in every motion; but his tact and judgment taught him to defeat all the arts and machinations of the espionage to which he was exposed. He appeared to be intensely occupied with literary pursuits, and published a pamphlet, entitled, "*Considérations Politiques et Militaires sur la Suisse*;" which is said to afford proofs of indefatigable zeal in the studies of philosophy and political economy, and to display very high talent in the writer. It made a great sensation in Helvetia, and the author rose to envious popularity in that land. He also gave the world a "*Manuel d'Artillerie*," which is highly spoken of by his biographers, whose sentiments, be it understood, we are, throughout this sketch, repeating. He was nominated an honorary citizen of Thurgovie; a compliment previously paid to Ney, Metternich, and Capo d'Istrias: and, in 1834,

attained the rank of captain in the regiment of artillery of Berne. At the *Weapon-shows*, and other public occasions, which are still the country customs, he figured as a distinguished actor; and in gymnastics, rifle-shooting, &c. often bore off the prize.

The first pamphlet concludes with a vivid reclamation against the exile of the Bonaparte family from France—dwells on their devotedness to it, and especially on the attachment of our hero;—and predicts that he will, at some future day, serve in the French armies with *éclat*, and, if necessary, die the glorious death of a soldier citizen.

Vicomte Persigny, besides a biography agreeing with the preceding, gives a detailed and very stirring account of the bold enterprise at Strasburg, on the 30th of October. From the statement, it appears that the insurrectionists relied chiefly on the unpopularity of the king, which they concluded from the various attempts against his life; on the strength of the republican party; and on the prestige which the name of Bonaparte would carry with it to the army, and the population. They justify the measure on the ground, that the revolution of 1830 did not restore the liberties of the people, but was merely a change of dynasty without benefit to the nation; and contend, that the various plots, risings, and conspiracies since then, demonstrate this to be the general feeling. The consequent discontent would be in their favour, and the representative of the new (Orleans) line would be as easily overthrown as any former occupant of the throne. The pamphlet asserts, that if the king had fallen by the hands of Alibad, the most frightful disorders would have ensued; and thence deduce their own right to plant a firmer and more popular leader at the head of affairs, whether republican, consular, or royal. Induced by such representations and considerations, Napoleon Louis agreed to devote himself to this daring adventure. He thought that, owing to their recollections of his uncle, he could rely on the army of the Loire; and many officers repaired to him to concert the best steps to be taken to realise their project. The whole circumstances shew how easy it is to get up an *émeute* in France. In 1832, we are told they were equally ready to join in a similar attempt, if our hero had appeared in the character of lieutenant-general of his cousin the Duke of Reichstadt, furnished with a simple letter from him as Napoleon II. At all events, somebody was to be put forward to consolidate and represent the Democratic Principle in France; and whether in reality, or the mere pretence of ambition, hence the origin and ready accession of allies to all these movements in the neighbour country. M. Carrel was, it seems, consulted on this occasion, and confessed that he could not rally a single party (the republican). "How, then, said he to the agent, could I rally all parties (comment me serait-il possible de les rallier tous ?)"

Napoleon Louis, however, under some pretext, went to Baden Baden, and the *projet* was matured with a "great number of officers in the garrisons of Alsace and Lorraine." He

then proceeded, on the 25th of September, "to hunt in the principality of Hechingen;" in reality, to meet his friends. But mishaps beset the very first arrangements. Three days he waited fruitlessly at the rendezvous; and matters were much disconcerted. At last, Lieut.-col. Pasquin, Col. Vaudrey, and others, entered into communication with him, and the dash was made. The public and newspaper accounts have made the world acquainted with the leading incidents; and M. Persigny only enters more fully into the details, and recounts the accidents and fatalities by which the enterprise was frustrated. From his statements it would seem that it was all but completely successful. Before the conspirators emerged from their place of meeting, at day-break, on the momentous 30th (all the rest of the story putting us strongly in mind of the scenes in "Venice Preserved"), their leader thus addressed them:—

"Voici, Messieurs, un moment solennel. Dans peu d'instans nous allons commencer une grande entreprise. Si nous réussissons, les bénédictions du peuple seront notre récompense; mais, si nous échouons, le vulgaire nous couvrira de boue. On ne trouvera pas assez d'expressions pour peindre la folie, le ridicule de notre entreprise. C'est là le martyre des temps modernes. Nous le supporterons avec calme et résignation. Nous nous rappellerons la longue agonie de l'empereur à Sainte-Hélène. Les hommes de cœur nous tiendront compte de nos efforts. Nous mourrons victime d'une grande cause. Le peuple Français nous plaindra."

Well, fail they did, and the sequel is generally known. Napoleon Louis was sent to America under escort, whilst his associates were tried and miraculously acquitted.

From America he very recently returned to England; and from England, by means of personating some one else, obtained a passport, took the steamer to Rotterdam, and has thence, as we see by the papers, made his way to Arenenberg.

Since writing this sketch, we have had sent to us another small brochure of 40 pages, *Lettre du Prince Napoléon Louis Bonaparte à sa Mère*, in which he recites his "Malheurs," in endeavouring faire "envisager la cause Napoléonienne comme la seule cause nationale en France, comme la seule cause civilisatrice en Europe," &c. &c.; but we have no time to look over this personal narrative, and can only mention that the latest foreign notice we have seen of him is in "The Augsburg Gazette," which, under the head of "Rubrique de Zurich," claims him as a citizen of Thurgovie, and denies the right of the French ambassador to demand his expulsion from independent Switzerland, and the more especially as his associates were acquitted. The "Morning Post" of the 14th, states that he reached his mother's château on the 5th instant, where his presence was a great consolation to her; and what is rather surprising from a journal of its politics, talks of possible circumstances enabling him "to call forth the unanimous energies of a glory-thirsty and generous people, by skilfully turning into account those magic 'Napoleonic Souvenirs,' in order that they may (as on the foundation of the imperial dynasty) attain once again that sublime desideratum in the political world, viz. 'an unequivocal and satisfactory amalgamation of all parties; and by such a means, to consolidate exemplarily, upon a sympathetic and adamant basis, the true national interests of the most preponderating constitutional government on the Continent.'"

The language is foreign, but the "Morning Post" is the published authority.

*Kindness in Women.* Tales, by Thomas Haynes Bayly. 3 vols. 12mo. London, 1837. Bentley. No one can forget the charm of Mr. Bayly's exquisite ballads—simple, natural, they came to the general heart, because they expressed the general feeling. "One touch of nature makes the whole world kin;" and that one touch was the secret of his popularity. The charm pervades the present work. The story of "Kate Leslie" is told with the most touching pathos, and her character sustained in all its womanly beauty to the last. Mr. Bayly has succeeded in throwing a charming familiarity around his *locale*. We become quite acquainted with the parsonage, its green lawn, and little fountain. We shall not, however, break in upon the progress of the narrative, but select a very pathetic episode:—

*The Strong Man of the Fair.*—"The poor boy, for he really looked little more, proceeded to realise all the promises made in his printed bills. Prodigious were the weights he raised; and some that it was utterly impossible for him to move from the earth, were placed upon him; and though they did not crush him, his sufferings must have been acute, and he bore them without flinching. Large and muscular though his frame appeared, his fair countenance was that of a stripling; light hair curled round his forehead, now bathed with the dews of over-exertion, and on his cheek there was either the hectic of ill health, or a spot of ronge, ill put on, to imitate youth's roses. In every pause there was a short dry cough, never to be mistaken by one who has heard that fatal signal by his own fireside: but he still proceeded with his task, though each new effort was more difficult and painful than the last. At length but one feat remained to be performed; but it required more exertion and endurance than all the rest. His legs were to be fastened to an upright pillar, and when his body was in a horizontal position, all the weights which he had raised singly were to be supported by him in one accumulated mass. I hastily rose to leave the booth; but just as the exhibitor was preparing himself for the effort, a little boy ran to him on the stage, and whispered something in his ear. The young man clasped his hands, kissed the child, and then looked wildly and wistfully on those around him; and when the person who had assisted him prepared to put the fastenings on his feet, he started back, and I heard him say, in a low voice, 'No, no, I can do no more! Therese—I must go to her; she will die,—she will die!' His rough companion made some hasty answer; and he then pressed his hands firmly on his forehead, and leaned against the side of the stage, apparently in a state of exhaustion. I would gladly have seen the curtain fall; but those who, like myself, had paid their money at the door, expected to have their money's worth; and, after a very brief pause, loud shouts were raised, and the last act of the exhibition demanded. I saw the young exhibitor rouse himself with an effort, and, calling to his assistant, he cried, 'Now—quick, quick, and let me go to her!'"

The spectator follows and assists him home. "Hush!" I whispered; 'he is quiet now—I think he is asleep. Take some of this nourishment; nay, consider how important it is that, when he wakes, he should find you better.' Therese was struck with the truth of this, and took some of the refreshment I offered her; but, with my consent, she gave a large portion

to the little child. He ate eagerly, for a moment; and then we saw him divide what she had given him, and lay the largest portion aside. 'What are you about?' said I, gently; 'cannot you eat it?' 'Hush!' whispered the little fellow, with tears in his eyes, and pointing to the sleeping man: 'papa has had none, you know.' We did not speak for some moments; for we were touched by the child's simple words. 'How old is the boy?' I inquired, at length. 'Four years old. His poor father is not yet two-and-twenty: he looks younger in face; and as for his figure, you must not judge of that—every muscle has now been unnaturally forced.' 'Hush! he wakes.' And the Hercules began to move; and, slowly and feebly raising himself from the ground, he sat up and looked wildly around him. 'Something nice for papa,' cried the child; and, running to him, it placed before him the little treasure it had saved. 'Frederick! Ah! I remember now,' said he. 'Therese—she is not—no, no, no—she lives!' and he rose and rushed into her arms. I knew that they had sufficient sustenance for that night, and softly, and without one word of adieu, I rose and left the house. I called the next day, and found Therese in a deep sleep, or rather torpor, and her husband, who sat pale and motionless by her side, raised his finger to his lip as I entered. I took a seat at some distance from the bed, and silently watched the group—the dying woman, her distracted husband, and the little boy, who, kneeling at his father's feet, held one of his hands, and buried his face in his lap. At length the young man raised his head, and his eyes met mine. Slowly and hopelessly he shook his head, and, rising, walked over to the part of the room where I was sitting, followed by the child. 'We need not fear disturbing her,' said he; 'she will soon slumber in the grave, without a dream, without a sorrow!' 'Nay, hope for the best,' I replied, taking his hand. 'Perhaps that is the best for her,' he cried; 'but for me, and for this poor boy—oh! what will become of him?' 'Alas! I can do little,' was my answer. 'You!—you are a stranger—you have given us your sympathy—what could we expect more? Besides, you have no wealth!' 'Indeed I have not.' 'Oh, I knew it! Had you been rich, instead of pitying me, you would have soon found out some early error, some past folly—any thing—as an excuse for not relieving us. But she still lives, and I can still support her.' 'You will not attempt that painful exhibition to-night. You cannot endure the fatigue; your hand now burns with fever.' 'So much the better; that fever will support me. Look at these limbs, that I was once proud of—their strength cannot be gone; and if I earn enough for her and the boy, what can I require? When the muscles shrink, 'twill be time for me to think of food.' 'Do stay at home, papa,' said the boy. 'I can't do like you; but I'll go and do my best, if it's to feed mamma.' 'Poor boy!' cried his father, kissing him. 'Oh, I shan't mind—I like jumping about, and I'll do my very best.' We were interrupted by Therese, who, starting from her trance-like slumber, called for her husband and her boy; and, knowing that I could do no good, and that my presence might be felt as a restraint, I left the room without attracting her attention. That night the lamps again beamed from the booth of the Hercules. The populace, attracted by the favourable report of the few who had witnessed his exertions on the preceding evening, now thronged the space allotted for spectators; and, leaving

his poor Therese more feeble and exhausted than he had ever yet seen her, the strong man, after kissing again and again her cold and colourless lips, once more went forth to expose himself to public wonder. His limbs trembled, and his temples throbbed, whilst he again assumed the dress he was accustomed to wear; the very effort of fastening his sandals seemed too much for him; cold drops stood upon his forehead, and the beating of his pulse seemed audible; but the heavy weights were placed before him, and, hailed by shouts and acclamations, the strong man proceeded with his task \* \* \* Poor Frederick knelt weeping by the corpse of his mother; but the orphan boy was the only mourner. In the same hour that Therese ceased to breathe, her husband fell dead upon the stage: the iron weights rolled heavily from him to the feet of the spectators, for the strong man had broken a blood-vessel."

The last story is a light farce: Liston might have acted the hero; and the story of "My Friend Bob" is most amusing. There are, we must especially mention, some exquisite snatches of song, as headings to the chapters.

*The Life of John Thelwall.* By his Widow. Vol. I. 8vo. pp. 477. London, 1837. Macrone.

A BUST-PRINT prefixed to this volume, gives the idea of Thelwall being a very large man, and does not strike us as being particularly like him in the features, though there is some resemblance. It is thus a much more correct indication to the contents of the volume itself, than the show-signs one sees at fairs are to the interior sights of the booths, or the portraits of individuals in exhibitions are to the originals whom they so invariably flatter and so often misrepresent. In the book, as in the bust, it seems to us that Mr. Thelwall is made too big, and that he is flattered, like beasts in the caravans, and the encouragers of the fine arts, at their own personal cost, in the rooms of the Royal Academy. Not that we mean to disparage this political enthusiast; on the contrary, we are strongly inclined to the belief that he was a good-hearted and worthy man, very sincere in his convictions, very zealous in propagating the opinions he considered right, and among the most able and eloquent of the party to which he, throughout life, professed and devoted his warm allegiance. Whether he was weak and mistaken or not, it is no part of our task to inquire. We had some, though slight, acquaintance and literary intercourse with him, and never observed aught in these, or his social and domestic relations, which might not have become one of the most quiet and respectable of London's citizens.

Before we come to speak of the volume, which is our more immediate concern, we may as well say a few words on the growing fashion of having men's lives edited by their widows. It is a sad fate. *So did not*, though only with a difference in absurdity, the Dame of Ephesus mourn her love, but *so did* Mrs. Heber; and albeit some forty-six years have elapsed since Mrs. Thelwall was made a wife, we do not think it a sufficient excuse for the folly of being now imprinted as an editor, and especially the editor of a publication, every page of which shews that she could have had very little, if any thing, to do with it. Would Mrs. T., for example, have written this:—

"However, he (Thelwall) was now in his turn rewarded by the happiness he shed around him, and by the affectionate and grateful care of those beings who, not too late, appreciated

his worth. In the summer of 1789, he was enabled to visit some relations in Rutlandshire, when he had the satisfaction of completely recovering his health; and, at the same time, he formed an attachment to the lady, who was afterwards the wife, who shared his fate during his political struggles. He found her a simple, innocent, unsophisticated little maiden, of rather more than fifteen; mild and sweet in her disposition, and with a sylph-like form, and a beaming eye, which spoke the capability of the mind within. Thelwall beheld her with delight, and compared this being with those he had before fancied he could be happy with. The comparison between the town-bred fiction of fashionable life, and the innocent reality of rustic purity, operated in favour of the modest country-girl, and the romantic idea entered his head that he might develop the germs of intellect which were so inherent in this child of nature, and like Mr. Day, the author of 'Sandford and Merton,' educate his future wife. He caught at the thought with eagerness, and not being by any means then, or at any after period of his life, a being that woman would look upon with contempt, it will not appear difficult to believe, that he very soon won the affections of the young lady; and, before his return to London, they had mutually pledged each other to eternal fidelity. \* \* \* On the anniversary of his birthday, when he had completed the twenty-seventh year of his age, in 1791, he was married to his 'Stella,' who was then little more than seventeen, and who shared, with the most devoted fidelity, all the storms of fortune which befel her husband in the ensuing ten years of his life."

Seeing, therefore, that the widow could not have edited this book, we are more at liberty to presume the truth, viz. that the task has been executed by a person of Thelwall's own principles, or, in the language of our day, a thorough-going out and out Radical, for they were called Reformers, Sansculottes, Democrats, Jacobins, Republicans, and Revolutionists, then, though now all the names, except those three beginning with R, have merged into another R, Radical. In this way we might say, the Riter, whilst he exalts the party to which he belongs, never speaks of those opposed to them but as oppressors, tyrants, persecutors, calumniators, villains, and such like. He relates their acts, and describes their doings, as might be expected from a hot opponent. It might be true that the law was stretched beyond its due in the instances he cites; that some individual hardship and wrong was endured, and that public measures of potent vigour and severity were passed and enforced—what then? why does not he, as an impartial historian would, shew us the converse, and in fairness allow, that there might be great and just motives for extraordinary proceedings. Look at the miseries and horrors which France has gone through since 1792, and compare the petty sufferings so loudly dwelt upon in this volume, with the mass of bloodshed and guilt from which, in the view of the government inflicting these sufferings, it was their object to save England. Again, we state, it is remote from a literary journal to pronounce whether they were or were not mistaken; but, in scanning the merits of a work of this kind, we are bound to point out so extreme a dereliction from the principles of even-handed justice, as not to allow due weight and liberal doubt to the principles which might urge the adverse parties to the course they adopted.

One side all good and the other all bad, is a picture one half white and the other half black:

no middle tints, no shades, no variety of colouring. What sort of a picture would that be? Notwithstanding this egregious fault, however, the *Life of Thelwall* is well deserving of careful attention in these days. To see what was desired, to remember what has since been done, to look forward to what is still asked or denied, affords matter for very grave consideration. The features of the age and country are much changed in less than half a century; and wisdom may well be employed in gathering wisdom from the contrast, how we stood, and how we stand, as a nation: how we were, how we are, and how we are like to be, as a people. Towards these deliberations, Thelwall's pages furnish many important hints; and though we deem the importance of the individual to be much over-rated, and most of the transactions recorded to be utterly strained into a consistency with the views of faction, still there are useful lessons for all parties, to be acquired by a candid examination of the men and events during a trying and perilous era, even as they are here set before us. In this mode,

"Thelwall, and ye that lecture as ye go,"

may do better than "praise Lepaux;" and we trust that some of our political contemporaries will educe this wheat of experience from this chaff of biography. For ourselves, we shall merely direct notice to a few things which have occurred to us, as un-political writers, whatever we may be as readers. Thelwall is represented to have sprung from an ancient Saxon family, but his immediate ancestors having fallen into decay (though his father was a respectable silk-mercer), he was reared in humble circumstances. After trying his mother's counter, he was apprenticed to a tailor; and from that, through sundry vicissitudes, took a turn at law. During his tailorship, the following characteristic anecdote is told of him:—

"Young Thelwall had now changed his residence, but not his habits; his pursuits were still the same. Instead of acquiring his trade, he was perpetually devoted to Shakspeare and the poets, the philosophers and the historians; and his opportunities of study having become still more inadequate to his wishes, he even carried a wax taper in his pocket, that he might read as he walked along the streets at night. This last habit, which he retained for many years after, was very near proving fatal to him. His family possessed a freehold cottage, or country house, as it was then considered, in the neighbourhood of Walcot Place, Lambeth, which was saved from the wreck of their affairs; to this house they retired during their difficulties, and Thelwall was in the habit of returning home at all hours of the night. At that time the cottage was situated entirely in the country, surrounded by fields. Now, indeed, we look in vain for the footpath which ran between two hedges separating the fields which led to Thelwall's little dwelling. It was here that he was walking one night, between the hours of eleven and twelve, with his lighted taper in his hand, his mind deeply engaged with a book he was perusing, when a man started up out of a ditch by the side of the path, and struck him a blow which felled him to the earth; the fellow then robbed him by the light of his own taper. It seems, however, that the robber was not quite destitute of every humane quality, for he remained with Thelwall till he saw him sufficiently recovered from the stunning effects of the blow to be enabled to walk; and, wiping from his face the blood which flowed from the wound, he assisted him to the gate of his garden, where he left him, and then

made his escape. To this circumstance was owing the small white lock a little above his forehead, so distinct from his naturally black hair, which seemed to defy the snows of age. In his latter years, this contrast became very remarkable."

Another anecdote of his lawyership will pair with the foregoing. His master's name was Impey, and

"The only fault which Impey had, was swearing, which seemed habitual in his kindest as well as his angry moods; and not being so unfashionable a practice at that time, as it fortunately is at the present, it was scarcely looked upon as a moral failing. A client calling upon him one day, after the usual salutations, proceeded thus: 'Mr. Impey, I want you immediately to issue a writ against —, who owes me 40*l*. He called upon me about an hour since, and told me, that as he was going out of town to-morrow, or the next day, he could only now pay me 20*l*. of his debt: I want you, therefore, to arrest him at once for the other 20*l*.' Impey's countenance began to work, but repressing his indignation, he quietly asked if the man was poor? 'Poor! oh, to be sure, I would not arrest him if he were not.' Impey, who was a humane man, could no longer control his anger at the heartless injustice of his client; but working himself up with a string of epithets, ran on thus: 'You rascal! why, what do you take me for? You scoundrel! What! arrest a poor man the very day he has paid you 20*l*. and that half of his debt? Out of my house, sirrah! and never let me see that d—d face again; out! I say.' At the same time, the vehemence with which he jumped upon his legs, overthrew one of the office-stools, and the apparent rage he was in; the clatter of the furniture, and the haste with which Impey attempted to replace it, so frightened the unhappy client, that, snatching up his hat, he made but one step to the door, and was out of sight in an instant."

We should guess that Impey has had few successors, if, indeed, the race be not quite extinct.

Thelwall published two volumes of poems in 1787; and being an orator at the famous debating shop, Coachmakers' Hall, when the French revolution broke out, he, as did many imaginative and worthy persons, left his earlier conservative principles to be an ardent apostle for liberty, equality, reform, the perfectability of governments and men, pure reason, and other difficulties. He, accordingly, leagued with the Friends of the People, the Corresponding Society, and the other principal associations for attaining the ends they proclaimed to be necessary for the regeneration of the country. "If it be (says the editor) a matter of surprise in the present day, how the mass of the people could be led into such acts of riot and confusion, it must be remembered that the lower orders were then exceedingly uneducated, and were, consequently, easily blinded, and led by those who would take the trouble to cajole them, or give them the means of gratifying their brutish appetites." This is spoken of the Westminster election in 1794. Truly, we are much improved since then!! We would bet a shilling the writer is a Westminster elector, or canvasser, at least. (See page 75 for further proof.)

The Scotch trials for high treason, and the English which ensued, when ministers, having a dislike to the assembling of a convention in London, put forth their strength against the leading promoters of that design, brings Thelwall more prominently on the canvass, and the

state trials are described as might be expected from the editor.

"These persecutions were a fatal blow to a young man called upon, as Thelwall was, to support his family by the exertions of his literary talents; and, up to the time of his drawing upon himself the venom of the ministerial press, he had not only increased in literary reputation, but had been enabled to establish himself and his family in a situation far above the common comforts of life. Suddenly, however, within the last four or five months, such was the dread of the relentless persecution, with which every one suspected of having friendly connexions with the marked character of the day was assailed, that Thelwall began to find himself neglected, and his prospects overclouded. 'The productions of my pen,' said he, 'breathing, from the irresistible impulse of zeal and principle, the predominant sentiment of my heart, were rejected by a publication which had hitherto inserted them with avidity; subscriptions for a miscellaneous work, then publishing, were withdrawn with insult, and other literary engagements were broken, without redress. Still, however, I persevered; and though, for a considerable time, not actually a member of any society, I attended almost all the meetings, took my public share in them, and neglected no opportunity of promoting the cause of justice and human happiness.' Notwithstanding all the evils which Thelwall found beginning to fall heavily on his head, he did not suffer his mind to shrink. He knew that to gain a grand national point there must be some personal sacrifice, and he was willing to become the victim. He could still, like others, by retiring from the lists, have retrieved his fallen fortunes, and recovered the literary reputation he was losing so fast; but then he must have consented to resign the hope of urging on, by uniting with other patriots, that parliamentary reform which every one now believed to be within reach. He found that he must be one thing or another—he must be either a patriot or a man of letters; for it is an extraordinary fact, that the world will not appreciate a man for more than one quality at a time. He was not long in choosing the line which the dictates of his heart pointed out, and he became a marked politician: this being the case, none other than political writings would the world receive from his pen."

It is too bad; but when men forsake their own affairs for their country's, it too often happens that their country does not reward them as they and their friends think it ought. If they succeed, and there is a scramble, it may be somewhat better for them, at any rate for a season; but if they fail, why, they seldom reap any other recompense than the glory of being victims and martyrs.

After the trials and acquittal of the prisoners, there is a good deal about Horne Tooke and his alienation from Thelwall, and also about Gerald, Hardy, &c., with which we shall not meddle. A passage or two may exhibit the better parts of the narrative.

"Horne Tooke may be said to have been one of the violent spirits of the age. He did not actually sanction the proceedings which had lately taken place in France, but his principles led him to excuse them; and he was certainly one of those who rejoiced in the death of the king and queen of that country, on the score of expediency. Thelwall, in a note written at the bottom of one of the pages of 'Major Cartwright's Life and Correspondence,' wherein this subject is mentioned, describes him in the following words: 'Horne Tooke, on the con-

trary, was always a strenuous advocate for the decapitation party. Pending the trial of the king, he would exultingly maintain the certainty of his doom, and as exultingly exclaim, 'that if the Convention did not take Louis's head, the populace of Paris would take theirs!' He was for preserving institutions and gibbeting the offending functionaries. He was for having kings, but for cutting off the head of one of them every fifty or one hundred years. These sentiments I have heard from him repeatedly: and I was informed by one of a party at his table (when I happened not to be there), that on one occasion, when he had been running on at this rate, greatly to the annoyance of Tom Paine, who, whatever may have been his failings in other respects, was a man of humanity, the latter, after a long suspense of sullen forbearance, broke silence with the indignant exclamation, 'Ah, Tooke! you are a true royalist! you love blood!' I think it was Frost who told me the anecdote. On another occasion, 'Citizen,' said Horne Tooke to Thelwall, 'I am too old to rebel—I am too gouty to rebel: but if the people choose to rebel, I will sit in my easy chair and pray for their success.'"

Speaking of rioters, &c. we are told,—

"Though it was these unfortunate beings who, on every occasion, had made any disturbance, it cannot be denied that there was then, as there is now, and ever must be, wherever congregated man has passions and opinions to control, a body of persons among the more enlightened classes of society, though happily that but a small one, who maintained the doctrine, that turbulence and commotion, not wisdom and deliberation, are the engines to be employed by intellectual beings for the attainment of their rights and the security of human happiness."

This seems but an early version of "Agitate, agitate, agitate;" but we are told who the agitators were.

"These sanguinary persons, at the period of which we are now writing, were principally of the following description: the spies and informers, and the tools of a tyrannical faction; infatuated enthusiasts, crying for liberty without understanding its principles, who were ready to break every sacred bond of peace and public happiness, to glut their malicious appetite for vengeance, or to satiate their own envy, rapacity, and ambition. And there was, also, another class of persons, consisting of men, who, with the best hearts, the most generous enthusiasm, and the most zealous love of liberty, yet suffered themselves to be deluded by their own feelings and the artifices of others, to become the tools of that corruption they wished to overthrow; and, by their imprudent impetuosity, promoted the views of those who, but for their weakness, must have ultimately shrunk before the light of human reason."

And here we finish; again repeating, and we hope without having been betrayed into party politics, that there are useful lessons to be learned from this volume.

*Earl Harold: a Tragedy, in Five Acts.* 8vo. pp. 108. London, 1837. Fraser.

SUPPOSE a man, who had never seen the Latin rudiments, were to attempt a work after the manner of "Cicero's Orations;" or one who had never heard or read a syllable of German, were to try his hand on a Germanic "Faust;" it is rather likely that there would be a bungle in the job. But it must be confessed, that we are not aware of any instance of folly so absurd, and that we have not heard any gentleman at

large assert that he was writing or conversing in a tongue utterly unintelligible to him. The Dictionary of the Unknown Tongue, when it is published, will be the first example within our knowledge!

But *Earl Harold* is not the first by many specimens that have been before us, of persons attempting to perpetrate poetry and the drama, without possessing a single idea on, or requisite for, the office. Born idiots often seem to fancy that they are born poets—*poeta nascitur*—and the stupidest of created beings, that dramatic composition is as easy as lying. Without imputing either the insane root or the morphine of stolidity to the present author, we must truly say, that, much trash and nonsense as it has been our misfortune to look at in the tragic line, we never did, and hope we never shall, be doomed to peruse greater trash and nonsense than he has been permitted to publish. Were it not that he has concealed his name, and abstained from giving his portrait as a frontispiece, we should at once recommend retirement for a few months to one of those houses in the suburbs, which government commissioners are said, or paid, to look after. *Verbum*—we cannot add "*Sap.*"—as a contraction.

It is not easy to convey any notion of this "Tragedy," which our only surprise is to see neatly printed, on good paper, and with a reputable publisher's name. It is such arrant rubbish. *Harold* (a bastard, but possessed of sovereign powers of life and death), instigated by a gipsy, murders his brother, his brother's wife, his own wife, involving his only child, and poisons and be-devils every body about him; conquers his accuser in trial by battle; and incontinently confesses his crimes, dies penitent, and is much applauded by the king, the court, and the gentleman whom he has overthrown. Such is the general outline; but the details,—the details are beautiful exceedingly! When the constable tells him he has "comprehended" the gipsy, the heroic earl exclaims,

"Arrested him! I told you once before  
Never to bother me with such complaints."

He, however, orders the said gipsy to be hanged; but pardons him on his instigating him to assassinate his brother aforesaid, the Duke of Albany. The gipsy alleges,

"No crime have I committed!"

but the angry earl replies,

"By God, I'll not stand this! Am I a fool,  
That ye do answer thus?"

and, in the end,

"Now, mark me well, for what I say is true;  
I shall confine you straightway hence to prison,  
To be, to rest in mine own sovereign power.  
My brother shall be murdered! And if your words  
Shall turn out one small particle but false,  
I'll tear thine hair but singly from thine head;  
Root out thy cursed sign; cut out thy tongue  
(The framer and designer of these lies);  
Tear all thy fingers joint away from joint;  
And rack thy body till thy bones are broke;  
And search the cruellest of man's inventions  
For thousand tortures, till thy death is come;  
Then burn thy body ere the soul is fled,  
And fling thy cursed dust away from earth!"

The gipsy is in a most infernal quandary.

A scene of gipsies, very like the witches in "*Macbeth*," prepares us for the calamity; and the Duke of Albany, riding across the country alone, telling his duchess and child to follow as soon as convenient, is slain. But we must give a touch of their domestic colloquy before he sets out.

"Duke. Away, my love, away! he wants to sleep.

Duchess. Baby, adieu! sweet sleep!

Duke. My love, what shall we call it?

Duch. Nay, 'tis a son, so call it as you please.

Duke. I'll call it Richard, after my half brother.

Duch. Then, do so; I like the name full well.

Duke. How much surpris'd he'll be, when he sees it.

Duch. Does he not know it's born?  
Duke. I don't think so; for, in my last letter,  
I made no mention of it.

Duch. Well, then, my love, adieu,  
As I have many things yet to arrange.  
Duke. And so have I."

While Albany is being stuck on the heath,  
his affectionate brother sagaciously soliloquises.

"If it was prophesied thus—it so must be;  
Or else it needs be false:"

which seems to be a bad plagiarism from the  
worthy old epigram,

"If woman will, she will, you may depend on't;  
And if she won't, she won't, and there's an end on't"

But, be that as it may, he becomes considerably uneasy in the company of his own wife,  
and urges her, in heroic strains of blank verse,  
to go about her business. Thus, the lady says,

"Why walk up and down, as if your soul  
Suffered some pain of which you would be rid?  
Har. I'd rather you would go."

She remonstrates, but he only persists,

"Go, go away: I wish you would be gone.  
You're only in my way; I don't want you:  
I wish that you would go."

And when she does go, he gets into a tearing  
soliloquy, worse, one would think, than the  
presence of half-a-dozen of wives, *ex. gr.*

"Fame will arise like thunder in the heavens,  
And bloody horror, like the sulphury smoon,  
Will stalk unto the clouds, make dark the sun,  
And make the stars withdraw for very shame,  
Piercing their very vitals with its breath."

The tender lady returns, however, and dutifully  
and lovingly inquires into the health of  
her murdering lord.

"Lady Harold. How fare ye now?  
Harold. But weak—but very weak!"

As small beer or water-gruel, and, in sooth,  
he does not seem quite *compos*; for he desires  
his wife to go and inform the duchess (who has  
arrived first, though she set off last, and her  
husband having only *forwarded* his ghost) that  
she is a widow, urging, as a reason, that she  
may sleep the sounder.

"Harold. I think you'd better go unto his wife,  
And break the news as gently as you can:  
A night of rest may smooth the tide of grief,  
And make the sad to-morrow seem less long.  
Lady Harold. It is an awful duty I must do;  
The sooner now the better!"

But, when she goes, she finds her dear sister-in-law  
most unlawfully done to death, by  
smotheration à *Othello*, and the following  
pathetic scene ensues:—

"Enter Lady Harold.

Lady Har. Oh, mercy! Murder! murder! murder!  
She lays dead in her bed! (moment.)

Maid. Oh, God forgive us! (Exeunt, and enter in a  
Lady Har. Cold! cold! cold! Stone cold! stone cold!

Maid. Murder! murder! murder!  
Lady Har. This to have happened here! Alas! alas!  
Death! death! Cold! cold! cold! cold!

Maid. Oh, heavy time! Murder! murder!  
Enter Earl Harold.

Lady Har. Oh, husband! husband! Murdered in her  
bed!

Har. Who? who? (Immediately.)  
Lady Har. Go in and see. (Exit Harold, and enter  
Har. Cursed be this time in all the year!

Cursed be the far revolving days!  
May the brilliant sun withhold its daily heats,  
And lunar orb dissolve itself in mists!

Maid. Murder! murder!  
Lady Har. Oh! she is as cold as is the common stone,  
And silent as the stillness of the heavens;

Her beauty's faded, like the fallen rose;  
Her soul is fled, as is its sweet perfume.  
Oh, woful time! oh, heavy, heavy day!

She has been dead some time.  
Murdered! murdered!

Maid. Murdered! murdered!  
Har. And wherefore cry you murder? She has died  
Of grief while in the night.

Lady Har. Then grief has murdered her; so I will cry,  
And wake the house with cries of loud murder.

Har. Cease, cease; she died of grief.  
Enter Servants.

All. What's the matter? oh, these doleful sounds!  
Maid. Murder! murder! murder!

All. Who? who? (enter again.)  
Maid. Go in, go in and see. (Exeunt all, and

All. Oh, heavy hour! oh, lamentable time!  
It ought to turn quite dark with heavy news.  
Others. Alack! alack! the dead can never wake!"

Maid. The gardener says he saw a ghost this morn.  
Har. He lies most foully.

Maid. He said, it went across the fields hard by,  
Shaking its head, and raising woful sound;  
And ever and anon it would turn back,  
And look upon the house, and melt in tears.

Har. I say he lies.

Maid. Mayhap it murdered her."

With this we ought to conclude, but really,  
in so fine a composition, we cannot see a blot  
without calling the author's attention to it.  
We are of opinion that the following is rather  
coarse, and would humbly advise so elegant a  
writer to avoid, in future editions and future  
tragedies, being nervous at the expense of po-  
liteness.

"Har. What did I say?  
Lady Har. You said, There's blood!  
Har. They told me so; I knew it would be so!  
They told me so; I dreamed—I know it now!  
False! false! false! damnably false!  
Treacherous, revengeful, and deceitful whore!"

This is not pretty. Poor thing, she pacifi-  
cally and tenderly retorts,

"My lord, I have done nothing;"  
but there is no living with him, so she is driven  
out, and perishes with her child. The bit about  
this is most original.

"Har. I'll kiss thee ere thou go; there, get thee gone.  
Lady Har. Shall I take the babe?  
Har. The bastard babe; ay, take it quick from hence.  
God curse thee, and it too!  
Lady Har. You have cursed me; yet I'll bless thee the  
more. (Exit Lady Harold.)"

Upon which our hero spouts a good page, end-  
ing in a style worthy of the best of the rest.

"And I am left in everlasting pain,  
Bereft of hope, to comfort or condole,  
Or bear me in what I must go through;  
But I must ever, ever, ever bear  
An endless time, to everlasting date!"

Mean time, the lady's expulsion is touching.

"Scene III.—Room in Harold's House.  
Lady Harold, Nurse, and Child.  
Lady Har. Is the baby ready?  
Nurse. Nearly, madam.  
Lady Har. Ah! wrap it up warmly, the days are cold.  
Nurse. Is your ladyship going far?  
Lady Har. I know not where I go; but it is cold!  
Nurse. Doth your ladyship go alone?  
Lady Har. Alone! alone! alas, I have no friend!

Nurse. Lady, the babe is ready.  
Lady Har. So am I."

We shall not detain the curious reader  
longer, though there is much more of equal  
beauty and rarity to admire. Thus, when  
Gloster is going to do the wager of battle with  
Harold, he asks his page

"Gloster. Is mine armour ready?  
Page. Quite, my lord.  
Gloster. The sword well bright, and scabbard free from  
rust,  
Helmet and shield all burnished with gold?  
Page. It is, my lord."

The anxiety of the principal to have the *scab-  
bard* free from rust, and the grammar of the  
Page (there was no Sunday schools, no societies  
for the diffusion of knowledge then), are of a  
piece. We cannot tell which is brightest.  
Well, Harold does the *Othello* trick at last, and  
"they (i. e. King, Gloster, &c. &c.) all embrace"  
and forgive him, and the tragedy thus con-  
cludes. Harold poniarding himself—

"King. Stay! I hold his arm!  
Gloster. Stay!—stop!—stop him! (Harold dies.)  
King. Too late, too late it is! Oh, ending sad!  
Would we had stopped his arm! but let us pray  
That all his sins light on his body lay!  
Gloster. Let him be buried as he last did wish;  
Too true a prophecy of so dire a deed.  
I never heard or saw a sight so full of woe:  
He died as he had lived, in manner bold.  
This tale shall never die, but it shall go  
From son to son, each wond'ring as 'tis told!"

(Exeunt omnes.)  
Nobody, we can truly affirm, can have ful-  
filled the prophecy more than we have done;

for our wonder at this tale, as it is told, exceedeth credibility; and, in so far as we are implicated, it "shall never die!"

*Don Quixote de la Mancha.* By Charles Jarvis, Esq. Part II. London, 1837. Dubochet and Co.

WE have already noticed this beautiful edition of *Don Quixote*, in terms of high panegyric. The engravings, though worked in with the type, are, through care and skill, as clear and distinct as plates intended for separate publication.

The memoir of Cervantes is here continued. The present portion of it, though it has not all the strong interest of the former, has that which the lovers of literature may prize still more, in the copious description which it embraces of the every day life of Cervantes, after the more adventurous part of his career had closed, and the view it gives of his private circumstances. The English reader, for instance, may feel his curiosity not a little moved at learning that Cervantes was engaged as a commissioner in 1583, under Antonio De Guevara, to victual ships, at the time when the latter was employed in completing the equipment of the Invincible Armada. The consequences of his connexion with public affairs were not very favourable to the fortunes of our author. We read,—

"Cervantes, who, in many respects, resembled Camoens, experienced the worst misfortune which embittered the life of that great man, when he was accused of malversations in his office of commissioner of the victualling department at Macao, thrown into prison, and brought before the tribunal of accounts. Like the poet of the *Lusiad*, Cervantes remained poor, and clearly proved his innocence. Towards the close of 1594, when engaged at Seville in settling the accounts of his commissariat, and when he was recovering with difficulty some arrears, Cervantes transmitted, repeatedly, sums of money to the treasurer at Madrid, in bills of exchange drawn from Seville. One remittance arising from the taxation of the district of Velez-Malaga, and amounting to 7400 reals, was sent by him in specie to a merchant at Seville, named Simon Freire de Lima, who undertook to convey it to the treasury in Madrid. It was then that Cervantes made a journey to the capital, and not finding there the cash which he had transmitted, he reclaimed from the merchant the sum which he had confided to him, but, in the mean time, Freire had failed, and fled from Spain. Cervantes returned immediately to Seville, where he found that all the goods of his debtor had been seized by other creditors. He, upon this, addressed a petition to the king, and a decree of the 7th August, 1596, ordered Doctor Bernardo de Olmedilla, judge of *los grados* at Seville, to take by privilege from the assets of Freire, the sum which had been remitted by Cervantes. That judge effectually enforced the claim, and forwarded the amount to the Treasurer-General, Don Pedro Mesia De Tobar, by a bill of exchange drawn November 22, 1596. The tribunal of the Treasury exerted the greatest severity in adjusting the accounts of all connected with the Exchequer, which had been completely drained by the conquests of Portugal and Terceira, by the campaigns in Flanders, the destruction of the Invincible Armada, and the ruinous experiments made by certain charlatans in finance, who were called at that time *arbitristas*. The inspector-general to whom Cervantes had been but the agent, was conducted to Madrid, to make up his accounts. He represented, that all the docu-

ments necessary as vouchers, were at Seville in the hands of Cervantes. A royal order, dated Sept. 6, 1597, directed, in a summary way, the judge Gaspar De Vallejo to arrest and to send Cervantes, under a proper escort, to the prison of the capital, there to be dealt with by the tribunal of accounts. He was, in consequence, forthwith committed to prison, but, having offered security for the payment of 2641 reals, to which the alleged deficiency was reduced, he was released under a second order dated December 1st, of the same year, on condition that he presented himself before the court, within thirty days, to pay the balance. It is not exactly known how this first proceeding against Cervantes terminated; but, some years afterwards, he was again disturbed on account of this paltry claim for 2641 reals. The inspector of Baza, Gaspar Osorio De Tejada, presented in his accounts, at the end of 1602, an acknowledgment from Cervantes, proving, that that sum had been received by him in 1594, when he was commissioned to recover arrears of claims on that city and district. Having consulted on this point, the judges of the court of the Treasury made a report, dated Valladolid, Jan. 24th, 1603, in which they gave an account of the arrest of Cervantes, in 1597, for this same sum, and of his conditional enlargement, adding, that since he had not appeared before them. It was on this occasion that Cervantes went with all his family to Valladolid, where, for two years, Philip III. had held his court. Proof has been obtained, that, on the 8th February, 1603, his sister, Donna Andrea, was engaged in superintending the household and wardrobe of a certain Don Pedro de Toledo Osorio, Marquis de Villafranca, who had returned from the expedition to Algiers. Among the papers found, there are housekeeping accounts, which prove the distress of Cervantes and of his family, and many notes and bills in his handwriting. He settled his affairs with the tribunal of accounts, either by proving an anterior payment, or by satisfying the claim at this period, for the suit commenced against him ceased, and he passed the rest of his life peaceably in the vicinity of that tribunal by which he had been so sharply treated. The honour of Cervantes requires that these minute details should thus be stated; but if it were necessary to prove by other evidence that his probity stood above all suspicion, it would suffice to recall the fact, that he himself mentions, in a spirit of gaiety, his numerous imprisonments. It would have been too much for effrontery itself to do this, if he had been subjected to them by any disgraceful action; and his enemies, those who envied his talents, and detracted from his merit in every possible way, and reproached him even with his crippled hand, would not have failed to wound, in the most vulnerable part, the self-love of the gifted writer."

The following passages will be read with avidity, from their connexion with general literature, as well as for the exact information they give as to the situation and even the abode of Cervantes.

"The period of the publication of *Don Quixote*, is that of the birth of Philip IV., which took place at Valladolid, April 8, 1605. In the preceding year, Don Juan Fernandez de Velasco, constable of Castile, had been sent to England, to negotiate a peace. James I., in return for this high compliment, despatched Admiral Lord Howard to present the treaty of peace to the king of Spain, and to congratulate him on the birth of his son. Lord Howard landed at Corunna with six hundred English,

and entered Valladolid, May 26th, 1605. He was received with all the magnificence that the court of Spain could display. Among the religious ceremonies, the bull-fights, the masked-balls, the reviews, and the games or tournaments, where the king himself ran at the ring, and all the fêtes, which were lavished on the admiral, mention is made of a dinner given to his lordship by the constable of Castile, where twelve hundred dishes were served of meat and fish, without mentioning the dessert, and a superabundance of other delicacies. The Duke of Lerma had an account of these ceremonies written, which was printed at Valladolid in the same year. Cervantes is believed to be the author; at least an epigrammatic sonnet of Gongora, who was an eye witness, seems to give proof of it. It was in the train of these rejoicings, that an unhappy event occurred to distress the family of Cervantes, and conduct him, for the third time, to prison. A knight of St. James's, named Don Gaspar de Ezpeleta, wishing to pass, on the night of the 27th of June, 1605, over the wooden bridge of the Esqueva, was prevented by a stranger; a quarrel ensued, and the two combatants drawing their swords, Don Gaspar was pierced with several wounds. Crying for help, he took refuge, covered with blood, in one of the neighbouring houses: one of the two apartments on the first floor of this house was occupied by Donna Luisa de Montoya, widow of the historian Estefan de Garilay, with her two sons, and the other by Cervantes and his family. At the cries of the wounded man, Cervantes hastened to him, with one of the sons of his neighbour; they found Don Gaspar lying under the portico, his sword in one hand, and his shield in the other, and they took him in to widow Garilay's, where he expired on the following day. An inquest was immediately held by the *alcalde de casa y corte*, Cristobal de Villaroel; they took the depositions of Cervantes, of his wife, Donna Catalina de Palacios Salazar, of his natural daughter, Donna Isabel de Saavedra, then twenty years of age, of his sister, Donna Andrea de Cervantes, a widow, having a daughter twenty-eight years of age, called Donna Constanza de Ovando, of a nun, Donna Magdalena de Sotomayor, who was also said to be the sister of Cervantes, of his servant, Maria de Cevallos, and, lastly, of two friends, who happened to be in the house, Senor de Cigales, and a Portuguese named Simon Mendez. Supposing, whether right or wrong, that Don Gaspar had been killed in a love affair with the daughter or the niece of Cervantes, the judge had those ladies arrested, as well as Cervantes himself, and his sister, the widow Ovando. It was not till the end of eight or ten days, after examinations and hearing witnesses, and even giving bail, that the four prisoners were released. The depositions to which this disagreeable incident gave rise, prove that, at this time, to sustain the burden of four women, of whom he was the only support, Cervantes still occupied himself with agencies, and mixed with the cultivation of literature the dull, but less barren, pursuits of business. It may be presumed that Cervantes followed the court to Madrid in 1606, and that he fixed his residence, from that time forward, in that capital, where he was near to his relations at Alcalá, to those of his wife at Esquivias, and well placed at the same time for his literary engagements and his business agencies. It has been lately established, that in June 1609, he lived in the street De la Magdalena, and shortly afterwards behind the College of Notre-Dame-de-Lorette; in June

1616, in the street Del Leon, No. 9; in 1614, in the street Las Huertas; afterwards in the street Duc d'Alba, at the corner of that of San Isidoro; thence he is traced to the spot, whence he took his final departure in 1616, in the street Del Leon, No. 20, at the corner of that of Francos, where he died."

The following remarks, with which we conclude, not only apply to the follies and literature of the age, but to the caprices and literature of all time.

"How can we be astonished at the passion evinced for books of chivalry, in a country where the examples set forth in them had been actually reduced to practice? Don Quixote was not the first madman of his kind, and the fictitious hero of *La Mancha* had had living precursors, models of flesh and blood. If we open the 'Illustrious Men of Castile,' by Hernando del Pulgar, we shall there see the well-known extravagance of Don S  ro de Quinon  s, son of the chief magistrate of the Asturias, spoken of with praise; who, having agreed to break three hundred lances, in order to ransom himself from the chains cast around him by his lady, defended during thirty days the pass of Orbigo, as did Rodomont the bridge of Montpellier. The same chronicler, without departing from the reign of John II. (from 1407 to 1454), mentions a crowd of warriors personally known to him, such as Gonzalo de Guzman, Juan de Merlo, Gutierrez Qujesada, Juan de Polanco, Pero Vazquez de Sayavedra, Diego Varela, who not only visited their neighbours, the Moors of Grenada, but traversed foreign countries, like true knights-errant, France, Germany, and Italy, offering to break a lance, in honour of their ladies, with any who would accept of their challenge. This immoderate taste for romance of chivalry soon bore its fruits. Young persons estranged from the study of history, which did not offer sufficient matter for their ill-regulated curiosity, took the books of their choice, offering as models both in language and manners. Obedience to the caprice of women, adulterous amours, false points of honour, sanguinary vengeance for the most trivial injuries, unbridled luxury, contempt for social order, all these were brought into practice, and books of chivalry thus became not less fatal to good manners, than to good taste. These fatal consequences excited at first the zeal of the moralists. Lois Viv  s, Alexo Venegas, Diego Gracian, Melchor Cano, Fray Luis de Granada, Malou de Ch  ide, Arias-Montano, and other sensible and pious writers, expressed aloud their indignation at the evil effects produced by such reading. The laws afterwards came to their aid. A decree of Charles V., issued in 1543, ordered the viceroys and courts of the New World not to suffer, by either Spaniard or Indian, any romance of chivalry to be printed, sold, or read. In 1555, the Cortes of Valladolid claimed, in a very energetic petition, the same prohibition for the Peninsula, and still more, demanded that all the books of that description then in existence, should be collected and burnt. Queen Jane promised a law on this subject, which, however, never appeared.\* But neither the de-

clamations of rhetoricians or moralists, nor the anathemas of legislators, could put a stop to the contagion. All these remedies were impotent, opposed to the prevailing taste for the marvellous—a taste over which reason, philosophy, and science, cannot gain a perfect triumph. Romances of chivalry were still written and read. Princes, lords, and prelates, accepted the dedications of them; and Saint Theresa, very much attached in her youth to this kind of literature, invented a chivalrous romance, before writing 'The Interior of the Ch  teau' and her other mysterious works. Charles V. devoured in secret the 'Don Belianis of Greece,' one of the most monstrous productions of this literature run mad, even while he was issuing against it decrees of proscription; and when his sister, the Queen of Hungary, wished to give a grand entertainment on her return to Germany, she could find nothing better to offer in the celebrated *f  tes* of Bins, 1549, than the realisation of the adventures of a book of chivalry, in which all the lords of the court, and the austere Philip II. himself, took a part. This taste had even penetrated the cloisters; they read there, and even wrote, romances. A Franciscan monk, who was called Fray Gabriel de Mata, caused to be printed, not in the thirteenth century, but in the year 1589, a chivalric poem, of which the hero was Saint Francis, the patron of his order, and the poem was entitled 'El Caballero Asisio,' the Knight of the Asizes. For a frontispiece it had a portrait of the saint on horseback and armed at all points, after the manner of those figures which decorate the *Amadis* de Gaul and the *Eplandian*. His horse was gaily caparisoned and adorned with magnificent plumes. He wore in the head-piece of his casque a cross, with nails and a crown of thorns. On his shield, the representation of the five wounds appeared, and on the standard of his lance, one of Faith holding the cross and the chalice, with this legend, 'In this there can be no failure.' This singular book was dedicated to the constable of Castile. Such was the state of things, when Cervantes, shut up in his little village of *La Mancha*, conceived the idea of overthrowing, from top to bottom, the whole fabric of chivalric literature. It was then in the zenith of its popularity, of its success, of its triumph, when he resolved, poor, humble, unknown, without a protector, having no power at his command but his wit and his pen, to attack the hydra which had set common sense and law at defiance. But he opposed to it arms much more efficacious in the cause of reason, than arguments, sermons, and legislative prohibitions,—ridicule. His success was complete."

a loose run to extravagance, much more than but for such reading they would ever have done. Very often it will happen that the mother will leave her daughter shut up in the house, believing that she may leave her with safety in such a retreat, when the latter will so well employ her time in these studies, that the mother may find it would have been much wiser to have taken her child out with her. Not only does this lead to the prejudice and disengagement of individuals, but to the great detriment of conscience; for the more the parties become attached to such folly, the more will they become indifferent to the holy, true, and Christian doctrine. To remedy the above-mentioned evil, we supplicate your majesty to order, under severe penalties, that no books of this description, or approaching to it, shall be read or printed; and further, that those which have already been published may be collected and burnt. Doing this, your majesty will render a great service to God, in taking from young persons the reading of books of vanity, and in compelling them to read religious works, which will edify their souls and reform their lives; and your majesty will further confer on these kingdoms a great benefit and favour."

*The Spirit of the Woods, and The Moral of Flowers.* Third Edition. By the same Author. 8vo. Each illustrated by coloured Engravings. London. Longman and Co.

WHAT sweet remembrances the titles of these works have brought before the "mind's eye." Woods and flowers, and a long train of dreamy thoughts, ere yet they had shap'd themselves, or arranged those rude forms before the resplendent mirror of poetry. What visions have they conjured up of nymph and faun, and dryad, and buck-kneed satyr, wantoning through the green glades, peeping through the branchy thickets, or gliding, with half-averted heads, down those long wild solitudes, only traversed by the skulking fox, or light-footed fallow-deer.

We have not yet read a page of these volumes, and still there are beautiful spirits of the wood flowering around us, with eyes as fair "as star-beams among twilight trees." Often, alas! have we brooded over the title of a work until we have been borne to solitary spots, skirting "the shores of old romance;" but when we have come to peruse the work itself, the fancied charm has fled, even as those enchanted castles of yore vanished before the startling blast of the thrice-sounded horn, blown by some stalwart knight. Was not "the down-glancing Calypso" a fair spirit of the woods when she haunted the lovely island of Ogygia, and, surrounded by her attendant nymphs, listened with aching heart to the echoing strokes of Ulysses' axe, as he felled the tall trees which were to form the bark that bore him from her for ever? And Diana, stealing down, as brightly and noiselessly as a star-beam, to where Endymion slept, and pressing his lips with a sound no louder than that made by the silvery-footed blossoms, when they fly, wind-borne, over a thousand other flowers? Or Eve, stepping over the purple pathways of Eden, beneath a roof of fretted boughs, which had waved greenly from the dawning of creation? Shall we name that lovely spirit Rosalind, that tripped like a hind through the shadowy forest of Arden? or make us wings, and go flying and fancy-borne to that dreamy island where Prospero heard the sweet Miranda, in a jasmine-trellised cave, surrounded with woods, whence Ferdinand bore the logs "that would weep for having wearied him."

Oh! where is that wood-spirit, the fair Ophelia, and the old willow that "grew askant the brook," and the echoes of these old tunes which she chaunted when dying? What green tree-sheltered Una, as she sat beside her milk-white lamb in the savage forest, like a lonely star in a gloomy sky, and "made sunshine in a shady place." Where hides now the fair form that moves, moon-like, over the pages of *Comus*, chequering or dazling our eyes alternately with her presence, or murmuring music that would "create a soul under the ribs of death," and "smooth the raven down of darkness till it smiled?" Shall we visit that ancient wood near Athens, where sweet Hermia and Helena, with their lovers, were wont to lie "upon faint primrose-beds," or speed to that bank

"Whereon the wild thyme blows,  
Where cowslips and the nodding violet grows;  
Quite over-canopied with bush woodbine,  
With sweet musk-roses, and with eglantine."

and on which star-crowned Titania did sit and stroke the hairy cheeks, and press the long ears of her provender-munching lover?

Those were delightful creations of the old immortals, that peopled the trees with forms of beauty, and braided the waving tresses of the dryads among the rustling foliage of the forest.

\* "The following are some of the passages contained in this curious petition:—'We further say that the mischief is most notorious which has been done, and is now doing, to the youth of both sexes, by the reading of books of lies and vanities, such as 'Amadis,' and all the books of like character, published since that period. For as young men and young women, from idleness, principally occupy themselves with these, they imbibe a taste for those reveries and adventures of which they read, as well in love as in war, and at the same time fall into other follies; and for these having once conceived a passion, when favourable opportunities occur, they give

Others there were, too, who made fragrant cities of the flowers, and lulled their tiny inhabitants asleep in the bending bells, to the sound of drowsy music, swung on the wings of the humming-bee. But where are we wandering? Assuredly we quaffed but a moderate draught at Castalia; but the fount of the Muses is much above proof, and sends it ringing through our ears. Ah, how different to the modern potations which we are compelled to swallow! But to come to our task. These works not only contain some beautiful original poetry, but are also studded with appropriate extracts from all imaginable kinds of sources, both of ancient and modern poetry. They have no pretension to any thing botanical, since, whatever remarks are given under that head, are copied from the best authorities: not that they are the less valuable on this account, for, amid the multiplicity of works of research, and matters of fact, we can well afford to make room for a volume or two that treat only of the poetical and beautiful. Their principal feature is, however, the coloured illustrations; and some of these are worthy of the highest praise, while others are executed in a very inferior manner, and, like the painter's sign of the fox, might, were it not for the name, be readily mistaken for any other object than the one they profess to represent. Some of the illustrations are, however, gems in their way. The hazel, for instance, with its cluster of brown nuts, remind us of a similar bunch which we gathered years ago, with feelings such as can never be ours again. And the hawthorn, with its red berries and silvery blossoms, seem such as we bore home in armsful, when boys, and filled the house with reviving fragrance. Some of the buds we could almost swear we have seen before; nay, know the old rural stile which they overhung, a few yards from where the blackbird was wont to build.

We have one objection to the elm — not to the illustration, but the matter appended to it. After reading such passages as

“the female ivy so  
Enrings the barked fingers of the elm,”

and “they led the vine to wed her elm,” we are then carried away by an extract to brood over the flames and agonies of the martyred Hooper, who was chained to the stake, and burnt near an elm. By some minds, such associations as these may be preferred; but, in our opinion, they are not in keeping with the character of the work. It is trusting too much to the kind feelings of the reader, when an author dashes him at once, and without warning, from the green quietness of his thoughts, and the spirit-like tranquillity of his old “ancestral trees,” to the very heart of a rude rabble, and within sight of — But we will get rid of these unpleasant reflections; and yet they have reminded us of what befel ourselves the other day. We tell the anecdote for its resemblance and associations.

We were rambling in the early morning among those few green spots that are yet to be found around the metropolis, though at a far distance from the city, when we reached Cold Harbour Lane. Across a small field we observed, towering above some rugged hawthorns, wild aloes, brambles, and willows, with a goodly mixture of shaggy underwood, a fine bush covered with half-blown dog-roses. We had seldom met with wild roses of so deep a tint, and as we have hundreds of times hazarded our bodies into spots guarded by that modern dragon “Trespass,” we ventured forthwith and culled a fair handful of the tempting flowers.

A man stood awaiting our return at the gap: for the hedge was broken down, and the field was trodden on one side into a complete foot-path. “Wild spot, that, sir,” said he, eyeing us suspiciously; “Very,” was our answer, wishing him at Jericho for breaking in upon our musings: for it really was a wild nook, and had carried us half through a new sonnet, which the fellow’s intrusion had driven from our brain for ever. “That Greenacre must have been here very often to have found it out,” added he, with the utmost composure. In short, reader, we had gathered those roses, unknowingly, in the very osier-belt where Greenacre had hidden a portion of the body of his murdered victim. Faugh! we threw them away instantly; the thoughts they called up were horrible. Some might argue, that it was a folly to throw away the flowers because they had been gathered on a spot that was associated with a crime. But we could not avoid it, their crimson tints seemed dyed in blood; we would as soon have hung a portrait of the murderer in our parlour, as have placed the flowers on our table. We threw them away, and rid ourselves of the remembrance of the spot when we reached home, by reading a few pages of Shakespeare.

We should not have taken the trouble to have written out this anecdote, had it not borne upon the point which we advanced respecting the associations of ideas. Byron has somewhere said, that “a star, a flower, a tone of music, a summer eve,” may strike the electric chain of our thoughts, and send the blood gushing back to the heart. How much better is it, then, to awaken those ideas (if we can) which give pleasure, than to arouse those which bring only pain; even as we avoid uttering words that might increase the sorrows of those who have already “too much to bear.” In conclusion, we must add, that these volumes contain several beautifully written poems. Some of them, we doubt not, will find their way into the periodicals, and speak their own praise. Meantime, we make the following extract, which will give our readers some notion of the literary portion of the work. To judge of the beauty of the illustrations, they must purchase the books.

“The Hawthorn, or May. *Cratogeomys Orycantha.*”

‘Amongst the many buds proclaiming May,  
Decking the fields in holiday’s array  
(Striving who shall surpass in braverie),  
Mark the false blooming of the hawthorne tree;  
Who, finely clothed in a robe of white,  
Feeds full the wanton eye with May’s delight.’

Soon as ‘the hawthorn whitens,’ we know that spring is in its zenith, and looking around we realise the vivid picture of the poet,—

‘And see the country far diffused around,  
One boundless bluish, one white empurpled shower  
Of mingled blossoms, where the raptured eye  
Hurries from joy to joy; and, hid beneath  
The fair profusion, yellow Autumn spies.’

Various species of hawthorn are common in different lands; but our own may surely vie with any in beauty and fragrance. It is amongst the early leafing trees, and none put forth a sunnier, richer tint: and then its blossoms—they are every thing one would wish; their perfume and appearance are alike exquisite, and fully entitle it to the post of honour assigned to it by the poet, of being ‘the virgin flag of Spring.’ It has also another charm: concealed in its flowery recesses, the little birds ‘warble their native woodnotes wild,’ and seem as if they would repay it for their winter’s sustenance by the sweetness and variety of their strains. Burns, the poet of nature, makes frequent allusion to this cir-

cumstance: thus, in ‘the Petition of Bruar Water:’—

‘And for the little songster’s nest,  
The close embowering thorn.’

In another poem he again introduces it:—

‘Within yon milk-white hawthorn bush,  
Among her nestlings sits the thrush;  
Her faithful mate will share her toil,  
Or wi his song her cares beguile.’

Yet one more quotation on the same subject, and from the same pen:—

‘The scented birch and hawthorn white  
Across the pool their arms unite,  
Alike to screen the birdie’s nest.’

Gilpin always speaks disparagingly of this tree, which, in a lover of the picturesque, is matter of wonder; for the sight of it in full bloom always suggests pastoral or rural images. It may be that the poet, who first imbibed and then strengthen any association or fancy peculiar to their nation, have generally invested it with this character. Thus, Milton says,—

‘And every shepherd tells his tale  
Under the hawthorn in the dale.’

And Shakespeare, in ‘Henry the Sixth:’—

‘Gives not a hawthorn bush a sweeter shade  
To shepherds looking on their silly sheep,  
Than doth a rich embroider’d canopy  
To kings that fear their subjects’ treachery?  
Oh! yes, it doth; a thousand fold it doth.’

In ‘the Deserted Village,’ Goldsmith rather varies the picture, and shews us—

‘The hawthorn bush, with seats beneath the shade,  
For talking love and whispering lovers made.’

The hawthorn is the usual accompaniment of that characteristic feature of English rural scenery, the village green. With what truth and beauty has the poet, just quoted, described the merry gambols of which this tree is, we were going to say, the almost sympathising witness, so well does its cheerful, rustic aspect, suit the scene:—

‘How often have I bless’d the coming day,  
When toil remitting lent its turn to play,  
And all the village train, from labour free,  
Led up their sports beneath the spreading tree!  
While many a pastime circled in the shade,  
The young contending as the old survey’d;  
And many a gambol frolic’d o’er the ground,  
And sleights of art, and feats of strength went round.’

Formerly, on May-day and at Whitsuntide, as well as at Christmas, houses, and even churches, were profusely decorated with flowers or evergreens peculiar to the season. This custom is still preserved at Christmas, when almost every temple and every window boasts its sprig of holly: and in some places May-day is thus appropriately ushered in, the hawthorn blossom, when the season is a forward one, being substituted for the evergreen! These practices, however,—to the joy of some, and to the grief of others,—are now certainly on the decline; but we are assured by the greatest poet of the day, that the feeling which suggested them is still alive. In his beautiful address to May, he says,—

‘And if, on this thy natal morn,  
The pole, from which thy name  
Hath not departed, stands forlorn  
Of song, and dance, and game;  
Still from the village green a vow  
Aspires to thee address,  
Wherever peace is on the brow,  
Or love within the breast.’

May we be allowed another quotation from the same author, addressed to the same auspicious season; it will serve, perhaps, as a useful hint to those who complain that May is not the beautiful month it used to be:—

‘Season of fancy and of hope,  
Permit not for one hour  
A blossom from thy crown to drop,  
Nor add to it a flower!  
Keep lovely May as if by touch  
Of self-restraining art,  
This modest charm of not too much,  
Part seen, imagined part.’

But to return to the hawthorn. By the ancients it was considered the emblem of hope; and on that account the Troglodytæ, an Ethiopian tribe, strewed branches of hawthorn over their dead; while, for the same reason, the Athenians illuminated the altar of Hymen with torches made of its wood: and, in their wedding processions, the young girls carried boughs of it in their hands. Also, in the days of chivalry, if a lady favoured the suit of her lover, she wore hawthorn leaves, tied with carnation riband, which signified 'hope in love.' 'To us it promises a beautiful spring; to the Greeks it symbolised auspicious marriages; to the Troglodytæ, immortal life.'

'They tell me storms o'er life do lower,  
They tell me man to grief is born;  
But I have ranged through mead and bower,  
Still asking, as I cul'd the flower,  
Where lurks the thorn?

Avowal sweet of youth's blithe day!  
Made only ere the heart is torn;  
Ah! who in after years can say,  
With smile incredulously gay,  
Where lurks the thorn?

How true a type this hawthorn bough  
Of youthful dreams in life's first morn;  
So thick the fragrant blossoms grow,  
What curious eye detects below  
The frequent thorn?

But wait a few brief days, and soon  
That bough, of all its glory shorn,  
Its fragrance spent, its blossoms gone,  
Will to thine eye shew one by one  
Each pointed thorn.

Thus, crown'd with light and link'd with flowers,  
Seems life, in youth's enchanting morn;  
But soon, how soon, the tempest lowers,  
And, stripping Fancy's fairy bowers,  
Lays bare the thorn!"

We have selected this extract, not as being the best part of the work, but that it may be seen how much talent can do for a subject that is common and hacknied. Who that has lived in the country can forget the "sweet-smelling May," so interwoven with May games, and the fast decaying poetry of all that made rural life lovely?

*Lane's Modern Egypt.*  
[Third Notice.]

CONTINUING our review of this delightful work, our next quotation is one of a very characteristic description:

"With the exception of those of the wealthier classes, the children in Egypt, though objects of so much solicitude, are generally very dirty, and shabbily clad. The stranger here is disgusted by the sight of them, and at once condemns the modern Egyptians as a very filthy people, without requiring any other reason for forming such an opinion of them; but it is often the case, that those children who are most petted and beloved are the dirtiest and worst clad. It is not uncommon to see, in the city in which I am writing, a lady shuffling along in her ample to' and hhab'arah of new, and rich, and glistening silks, and one who scents the whole street with the odour of musk or civet as she passes along, with all that appears of her person scrupulously clean and delicate, her eyes neatly bordered with kohhl applied in the most careful manner, and the tip of a finger or two shewing the fresh dye of the hhen'na, and by her side a little boy or girl, her own child, with a face besmeared with dirt, and with clothes appearing as though they had been worn for months without being washed. Few things surprised me so much as sights of this kind on my first arrival in this country. I naturally inquired the cause of what struck me as so strange and inconsistent; and was informed, that the affectionate mothers thus neglected the appearance of their children, and purposely left them unwashed, and clothed

them so shabbily, particularly when they had to take them out in public, from fear of the evil eye, which is excessively dreaded, and especially in the case of children, since they are generally esteemed the greatest of blessings, and, therefore, most likely to be coveted. The children of the poor have a yet more neglected appearance: besides being very scantily clad, or quite naked, they are, in general, excessively dirty; their eyes are frequently extremely filthy; it is common to see half-a-dozen or more flies in each eye unheeded and unmolested. The parents consider it extremely injurious to wash, or even touch, the eyes, when they discharge that acrid humour which attracts the flies: they even affirm that the loss of sight would result from frequently touching or washing them when thus affected; though washing is really one of the best means of alleviating the complaint."

Some folks tell us that the Mahomedan religion is declining; but it cannot be for want of inducement to remain true in the faith.

"It is said that the souls of martyrs reside, until the judgment, in the crops of green birds, which eat of the fruits of Paradise. Women are not to be excluded from Paradise, according to the Mohammodan faith; though it has been asserted, by many Christians, that the Moos'lims believe women to have no souls. In several places in the Ckoor-a'n, Paradise is promised to all true believers, whether males or females. It is the doctrine of the Ckoor-a'n, that no person will be admitted into Paradise by his own merits; but that admission will be granted to the believers merely by the mercy of God; yet that the felicity of each person will be proportioned to his merits. The very meaneast in Paradise is promised 'eighty thousand servants' (beautiful youths, called welee'ds, or wilda'n), 'seventy-two wives of the girls of Paradise' (hhoo'ree'yehs, or hhoo'r el-oyoo'n), 'besides the wives he had in this world,' if he desire to have the latter (and the good will doubtless desire the good), 'and a tent erected for him of pearls, jacinths, and emeralds, of a very large extent;' and will be waited on by three hundred attendants while he eats, and served in dishes of gold, whereof three hundred shall be set before him at once, each containing a different kind of food, the last morsel of which will be as grateful as the first: wine also, 'though forbidden in this life, will yet be freely allowed to be drunk in the next, and without danger, since the wine of Paradise will not inebriate.' We are further told, that all superfluities from the bodies of the inhabitants of Paradise will be carried off by perspiration, which will diffuse an odour like that of musk; and that they will be clothed in the richest silks, chiefly of green. They are also promised perpetual youth, and children as many as they may desire. These pleasures, together with the songs of the angel Isra'feel, and many other gratifications of the senses, will charm even the meaneast inhabitant of Paradise. But all these enjoyments will be lightly esteemed by those more blessed persons who are to be admitted to the highest of all honours—that spiritual pleasure of beholding, morning and evening, the face of God. The Moos'lim must also believe in the examination of the dead in the sepulchre, by two angels, called Moon'kir and Nekeer, of terrible aspect, who will cause the body (to which the soul shall, for the time, be re-united) to sit upright in the grave,\* and will question the deceased respecting his faith. The wicked

they will severely torture; but the good they will not hurt. Lastly, he should believe in God's absolute decree of every event, both good and evil. This doctrine has given rise to as much controversy among the Moos'lims as among Christians; but the former, generally, believe in predestination as, in some respects, conditional."

Of their humanity, we hear, "An animal that is killed for the food of man must be slaughtered in a particular manner: the person who is about to perform the operation must say, 'In the name of God! God is most great!' and then cut its throat, taking care to divide the windpipe, gullet, and carotid arteries. It is forbidden to employ, in this case, the phrase which is so often made use of on other occasions, 'In the name of God, the Compassionate, the Merciful!' because the mention of the most benevolent epithets of the Deity on such an occasion would seem like a mockery of the sufferings which the animal is about to endure. Some persons in Egypt, but mostly women, when about to kill an animal for food, say, 'In the name of God! God is most great! God give thee patience to endure the affliction which he hath allotted thee!' If the sentiment which first dictated this prayer were always felt, it would present a beautiful trait in the character of the people who use it. In cases of necessity, when in danger of starving, the Moos'lim is allowed to eat any food which is prohibited under other circumstances. The mode of slaughter above described is, of course, only required to be practised in the cases of domestic animals. Most kinds of fish are lawful food; so also are many birds, the tame kinds of which must be killed in the same manner as cattle; but the wild may be shot. The hare, rabbit, gazelle, &c. are lawful, and may either be shot or killed by a dog, provided the name of God was uttered at the time of slipping the dog, and he have not eaten any part of the prey. This animal, however, is considered very unclean: the Sha'fe'es hold themselves to be polluted by the touch of its nose if it be wet, and if any part of their clothes be so touched, they must wash that part with seven waters, and once with clean earth: some others are only careful not to let the animal lick, or defile in a worse manner, their persons or their dress, &c. Gambling and usury are also prohibited, and all games of chance; and likewise the making of images or pictures of any thing that has life.\* The prophet declared that every representation of this kind would be placed before its author on the day of judgment, and that he would be commanded to put life into it; which not being able to do, he would be cast, for a time, into Hell."

Hereabouts we are told that "Boo'zeh, which is an intoxicating liquor made with barley-bread, crumbled, mixed with water, strained, and left to ferment, is commonly drunk by the boatmen of the Nile, and by other persons of the lower orders. \* \* \* A similar beverage, thus prepared from barley, was used by the ancient Egyptians. (Herodotus, lib. ii. cap. 77.) The modern inhabitants of Egypt also prepare boo'zeh from wheat and from millet in the same manner, but less commonly."

Is it from this boo'zeh that we have our English phrase boozy for drunken?

The next are also strangely characteristic.

"The markets of Cairo, and the weights and measures, are under the inspection of an

\* "The corpse is always deposited in a vault, and not placed in a coffin, but merely wrapped in winding-sheets or clothes."

\* "Many of the Moos'lims hold that only sculptures which cast a shadow, representing living creatures, are unlawful; but the prophet certainly condemned pictures also."

officer called the *Mohh'tes'ib*. He occasionally rides about the town, preceded by an officer who carries a large pair of scales, and followed by the executioners, and numerous other servants. Passing by shops, or through the markets, he orders each shopkeeper, one after another, or sometimes only one here and there, to produce his scales, weights, and measures, and tries whether they be correct. He also inquires the prices of provisions at the shops where such articles are sold. Often, too, he stops a servant, or other passenger, in the street, whom he may chance to meet carrying any article of food that he has just bought, and asks him for what sum, or at what weight, he purchased it. When he finds that a shopkeeper has incorrect scales, weights, or measures, or that he has sold a thing deficient in weight, or above the regular market-price, he punishes him on the spot. The general punishment is beating or flogging. Once I saw a man tormented in a different way, for selling bread deficient in weight. A hole was bored through his nose, and a cake of bread, about a span wide, and a finger's breadth in thickness, was suspended to it by a piece of string. He was stripped naked, with the exception of having a piece of linen about his loins, and tied, with his arms bound behind him, to the bars of a window of a mosque, called the *Ashrafeyeh*, in the principal street of the metropolis, his feet resting upon the sill. He remained thus about three hours, exposed to the gaze of the multitude which thronged the street, and to the scorching rays of the sun. A person who was appointed *Mohh'tes'ib*, shortly after my former visit to this country, (*Moos'tuf'a Ka'shif*, a Koord) exercised his power in a most brutal manner, clipping men's ears (that is, cutting off the lobe, or ear-lap), not only for the most trifling transgression, but often for no offence whatever. He once met an old man driving along several asses laden with water-melons, and, pointing to one of the largest of these fruits, asked its price. The old man put his finger and thumb to his ear-lap, and said, 'Cut it, sir.' He was asked again and again, and gave the same answer. The *Mohh'tes'ib*, angry, but unable to refrain from laughing, said, 'Fellow, are you mad, or deaf?' 'No,' replied the old man, 'I am neither mad nor deaf; but I know, that, if I were to say the price of the melon is ten *fud'dahs*, you would say, 'Clip his ear'; and if I said five *fud'dahs*, or one *fud'dah*, you would say, 'Clip his ear'; therefore clip it at once, and let me pass on. His humour saved him. Clipping ears was the usual punishment inflicted by this *Mohh'tes'ib*; but sometimes he tortured in a different manner. A butcher, who had sold some meat wanting two ounces of its due weight, he punished by cutting off two ounces of flesh from his back. A seller of *koona'feh* (a kind of paste resembling vermicelli) having made his customers pay a trifle more than was just, he caused him to be stripped, and seated upon the round copper tray on which the *koons'feh* was baked, and kept so until he was dreadfully burned. He generally punished dishonest butchers by putting a hook through their nose, and hanging a piece of meat to it. Meeting, one day, a man carrying a large crate full of earthen water-bottles from *Semennood'a*, which he offered for sale as made at *Kin'i's*, he caused his attendants to break each bottle, separately, against the vender's head. *Moos'tuf'a Ka'shif* also exercised his tyranny in other cases than those which properly fell under his jurisdiction. He once took a fancy to send one of his horses to bath, and desired the keeper of a bath in

his neighbourhood to prepare for receiving it, and to wash it well, and make its coat very smooth. The bath-keeper, annoyed at so extraordinary a command, ventured to suggest, that, as the pavements of the bath were of marble, the horse might slip, and fall; and also, that it might take cold on going out; and that it would, therefore, be better for him to convey to the stable the contents of the cistern of the bath in buckets, and there to perform the operation. *Moos'tuf'a Ka'shif* said, 'I see how it is; you do not like that my horse should go into your bath.' He desired some of his servants to throw him down, and beat him with staves, until he should tell them to stop. They did so, and beat the poor man till he died. A few years ago, there used to be carried before the *Mohh'tes'ib*, when going his rounds to examine the weights and measures, &c., a pair of scales larger than that used at present. Its beam, it is said, was a hollow tube, containing some quicksilver; by means of which, the bearer, knowing those persons who had bribed his master, and those who had not, easily made either scale preponderate. As the *Mohh'tes'ib* is the overseer of the public markets, so there are officers who have a similar charge in superintending each branch of the *Ba'sha's* trade and manufactures; and some of these persons have been allowed to perpetrate most abominable acts of tyranny and cruelty. One of this class, who was named 'Al'ee Bey, *Na'zir el-Khoosma'ah* (or, overseer of the linen), when he found a person in possession of a private loom, or selling the produce of such a loom, generally bound him up in a piece of his linen, soaked in oil and tar; then suspended him, thus enveloped, to a branch of a tree, and set light to the wrapper. After having destroyed a number of men in this horrible manner, he was himself, among many others, burned to death, by the explosion of a powder-magazine, on the northern slope of the Citadel of Cairo, in 1824, the year before my first arrival in Egypt."

The following is a singular remark:—

"The Egyptian females arrive at puberty much earlier than the natives of colder climates. Many marry at the age of twelve, or thirteen years; and some remarkably precocious girls are married at the age of ten; but such occurrences are not common. Few remain unmarried after sixteen years of age. An Egyptian girl, at the age of thirteen, or even earlier, may be a mother. The women of Egypt are generally very prolific, but females of other countries, residing here, are often childless; and the children of foreigners, born in Egypt, seldom live to a mature age, even when the mother is a native. It was on this account that the emancipated *Memo'eks* (or military slaves) usually adopted *Memo'eks*.

Several of the marriage ceremonies are very extraordinary.

"Sometimes, before bridal processions, two swordsmen, clad in nothing but their drawers, engage each other in a neck combat; or two *fella'h'ees* cudgel each other with *nebboo's* or long staves. In the procession of a bride of a wealthy family, any person who has the art of performing some extraordinary feat to amuse the spectators is almost sure of being a welcome assistant, and of receiving a handsome present. When the *seyd 'Om'ar*, the *Nackee'el-Ashraf* (or chief of the descendants of the Prophet), who was the main instrument of advancing *Mohham'mad 'Al'ee* to the dignity of *Ba'sha* of Egypt, married a daughter about twenty-seven years since, there walked before the procession a young man who had made an incision in his

abdomen, and drawn out a large portion of his intestines, which he carried before him on a silver tray. After the procession he restored them to their proper place, and remained in bed many days before he recovered from the effects of this foolish and disgusting act. Another man, on the same occasion, ran a sword through his arm before the crowding spectators, and then bound over the wound, without withdrawing the sword, several handkerchiefs, which were soaked with the blood. These facts were described to me by an eye-witness. A spectacle of a more singular and more disgusting nature used to be not uncommon on similar occasions, but is now very seldom witnessed."

The facilities for divorce are strikingly enumerated; but we can only refer to these curious customs and practice. It appears that matrimonial and other female affairs are all carried on by female brokers, called *Dello'ahs*; quære, the *Delilah* who betrayed Samson?

"The women of Egypt have the character of being the most licentious in their feelings of all females who lay any claim to be considered as members of a civilised nation; and this character is freely bestowed upon them by their countrymen, even in conversation with foreigners. What liberty they have, many of them, it is said, abuse; and most of them are not considered safe unless under lock and key, to which restraint few are subjected. It is believed that they possess a degree of cunning in the management of their intrigues that the most prudent and careful husband cannot guard against; and, consequently, that their plots are seldom frustrated, however great may be the apparent risk of the undertakings in which they engage."

A singular story is related in proof of this: refer to page 360.

The food of the lower orders is miserable. It chiefly consists of bread (made of millet or of maize), milk, new cheese, eggs, small salted fish, cucumbers and melons, and gourds of a great variety of kinds, onions and leeks, beans, chick-peas, lupins, the fruit of the black egg-plant, lentils, &c., dates (both fresh and dried), and pickles. Most of the vegetables they eat in a crude state. When the maize (or Indian corn) is nearly ripe, many ears of it are plucked, and toasted or baked, and eaten thus by the peasants. Rice is too dear to be an article of common food for the *fella'h'ees*, and flesh-meat they very seldom taste. There is one luxury, however, which most of them enjoy: and that is smoking the cheap tobacco of their country, merely dried and broken up. It is of a pale greenish colour when dried, and of a mild flavour.

"A young family is sometimes an insupportable burden to poor parents. Hence, it is not a very rare occurrence in Egypt for children to be publicly carried about for sale by their mothers, or by women employed by the fathers: but this very seldom happens, except in cases of great distress. When a mother dies, leaving one or more children unweaned, and the father and other surviving relations are so poor as not to be able to procure a nurse, this singular mode of disposing of the child or children is often resorted to: or sometimes an infant is laid at the door of a mosque, generally when the congregation is assembled to perform the noon-prayers of Friday; and in this case it usually happens that some member of the congregation, on coming out of the mosque and seeing the poor foundling, is moved with pity and takes it home to rear in his family, not as a slave, but as an adopted child; or, if not, it is taken under the care of some person until an

adoptive father or mother be found for it. A short time ago a woman offered for sale, to the mistress of a family with whom a friend of mine is acquainted in this city, a child a few days old, which she professed to have found at the door of a mosque. The lady said that she would take the child, to rear it for the sake of God, and in the hope that her own child, an only one, might be spared to her as a reward for her charity; and handed to the woman who brought the infant ten piasters (then equivalent to a little more than two shillings), but the offered remuneration was rejected. This shews that infants are sometimes made mere objects of traffic; and some persons who purchase them may make them their slaves and sell them again. I have been informed by a slave-dealer (and his assertion has been confirmed to me by other persons), that young Egyptian girls are sometimes sold as slaves from other countries, either by a parent or by some other relation. The slave-dealer here alluded to said that several such girls had been committed to him for sale, and by their own consent: they were taught to expect rich dresses and great luxuries; and were instructed to say, that they had been brought from their own country when only three or four years of age, and that they consequently were ignorant of their native language, and could speak only Arabic. It often happens, too, that a fellow in a great state of poverty is induced, by the offer of a sum of money, to place his son in a situation far worse than that of ordinary slavery. When a certain number of recruits are required from a village, the sheykh of the village often adopts the plan that gives him the least trouble to obtain them, which is to take the sons of those persons who are possessed of most property. Under such circumstances, a father, rather than part with his son, generally offers to one of his poorer fellow-villagers a sum equivalent to one or two pounds sterling, to procure a son of the latter as a substitute for his own, and usually succeeds: though the love of offspring prevails among the Egyptians as much as filial piety; and most parents have a great horror of parting with their children, particularly if taken for recruits, as is proved by the means to which they have recourse for the prevention of such an occurrence. There is now (in 1854) seldom to be found, in any of the villages, an able-bodied youth or young man who has not had one or more of his teeth broken out (that he may not be able to bite a cartidge), or a finger cut off, or an eye pulled out or blinded, to prevent his being taken for a recruit. Old women and others make a regular trade of going about from village to village to perform these operations upon the boys; and the parents themselves are sometimes the operators. But, from what has been said before, it appears that it is not always affection alone that prompts the parents to have recourse to such expedients to prevent their being deprived of their children."

"The Fella'hese'n of Egypt resemble the Bed'awees in other respects. When a Fella'hah is found to have been unfaithful to her husband, in general, he, or her brother, throws her into the Nile, with a stone tied to her neck; or cuts her in pieces, and throws her remains into the river. In most instances, also, a father or brother punishes in the same manner an unmarried daughter or sister who has been guilty of incontinence. These relations are considered as more disgraced than the husband by the crime of the woman, and are often despised if they do not thus punish her."

With regard to literature we are told:—

"The literature of the Arabs is very comprehensive; but the number of their books is more remarkable than the variety. The relative number of the books which treat of religion and jurisprudence may be stated to be about one-fourth: next in number, are works on grammar, rhetoric, and various branches of philology: the third in the scale of proportion, are those on history (chiefly that of the Arab nation), and on geography: the fourth, poetical compositions. Works on medicine, chemistry, the mathematics, algebra, and various other sciences, &c., are comparatively very few. There are, in Cairo, many large libraries; most of which are attached to mosques, and consist, for the greater part, of works on theology and jurisprudence, and philology. Several rich merchants, and others, have also good libraries. The booksellers of Cairo are, I am informed, only eight in number; and their shops are but ill-stocked. Whenever a valuable book comes into the possession of one of these persons, he goes round with it to his regular customers, and is almost sure of finding a purchaser. The leaves of the books are seldom sewed together; but they are usually enclosed in a cover bound with leather; and mostly have, also, an outer case (called *zurf*) of pasteboard and leather. Five sheets, or double leaves, are commonly placed together, one within another; composing what is called a *karra's*. The leaves are thus arranged, in small parcels, without being sewed, in order that one book may be of use to a number of persons at the same time; each taking a *karra's*. The books are laid flat, one upon another; and the name is written upon the front of the outer case, or upon the edge of the leaves. The paper is thick and glazed: it is mostly imported from Venice, and glazed in Egypt."

"I once, admiring some very pretty pipe-bowls, asked the maker why he did not stamp them with his name? He answered, 'God forbid! My name is Ahh'mad' (one of the names of the prophet): 'would you have me put it in the fire?' I have heard adduced as one of the subjects of complaint against the present *Ba'sha*, his causing the camels and horses of the government to be branded with his names of 'Mohamm'mad 'Al'ee.' 'In the first place,' said a friend of mine, who mentioned this fact to me, 'the iron upon which are engraved these names, names which ought to be so much venerated, the names of the prophet (God favour and preserve him!) and his nephew (may God be well pleased with him!), is put into the fire, which is shocking: then it is applied to the neck of a camel, and causes blood, which is impure, to flow, and to pollute the sacred names both upon the iron and upon the animal's skin; and when the wound is healed, how probable is it, and almost certain and unavoidable, that the camel will, when he lies down, lay his neck upon something unclean.' A similar feeling is the chief reason why the *Moos'lins* object to printing their books. They have scarcely a book (I do not remember to have seen one) that does not contain the name of God: it is a rule among them to commence every book with the words, 'In the name of God, the compassionate, the merciful,' and to begin the preface or introduction by praising God, and blessing the prophet; and they fear some impurity might be contracted by the ink that is applied to the name of the *Deity*, in the process of printing, or by the paper to be impressed with that sacred name, and perhaps with words taken from the *Koor'a'n*: they fear, also, that their books, becoming

very cheap by being printed, would fall into the hands of infidels; and are much shocked at the idea of using a brush composed of hogs' hair (which was at first done here) to apply the ink to the name, and often to the words of God. Hence, books have hitherto been printed in Egypt only by order of the government: but two or three persons have lately applied for, and received, permission to make use of the government-press. I am acquainted with a bookseller here who has long been desirous of printing some books which he feels sure would bring him considerable profit; but cannot overcome his scruples as to the lawfulness of doing so."

*The Seven Ages of England; or, its Advancement in Arts, Literature, and Science, from the Earliest Periods to the Present Time.* By Charles Williams. 18mo. Pp. 608. London, 1836. Westley and Davis.

WE have risen from the perusal of this book with much pleasure and profit; and, though it can hardly be called original, it is an able arrangement of the rise and progress of the literature, arts, and sciences of our country, from the earliest period to the present time, and does great credit to the reading and research of Mr. Williams. It is, as its title implies, divided into seven ages, namely, "the escape from barbarism; of civilisation; of discovery; of learning; of science; of invention; and of progress:" in each of which there is something that will well repay the general reader. We shall make a few extracts to shew the style, and then leave the book to the favour it well deserves.

Passing over the first, we proceed to the age of civilisation, between 1066 to 1420. One of the great steps in this era, was the invention of chimneys, for, as our author says,—"One only was allowed in a religious house, one in a manor-house, and one in the great hall of a castle, or a lord's house; but in other houses, they had only the *rere d'asse*, a sort of raised hearth, where the inmates dressed their food and dined, and from which the smoke found its way out as it best could. The origin of chimneys has, indeed, been referred to the Venetians and the middle of the fourteenth century; but they are certainly of greater antiquity in England."

He then proceeds to the introduction of coal, and gives some amusing extracts from various sources, whence it appears, that "Henry III. granted a charter to the townsmen of Newcastle-upon-Tyne, for liberty to dig coals in the vicinity of that place."

By our author's account, there appears to have been little luxury about this period; but he seems to forget the comparative value of money and goods, when ale was at 1<sup>d</sup>. the gallon, and field-labourers were hired at 1<sup>d</sup>. the day; but let us hear himself:—

"We have reached in this age so high a pitch of luxury, that we can hardly believe or comprehend the frugality of ancient times; and have, in general, formed mistaken notions as to the habits of expenditure which then prevailed. Accustomed to judge of feudal and chivalrous ages by works of fiction, or by historians who embellish their writings with accounts of occasional festivals and tournaments, and sometimes inattentive enough to transfer the manners of the seventeenth to the fourteenth century, we are not at all aware of the usual simplicity with which the gentry lived under Edward I., or even Henry VI. They drank little wine; they had no foreign luxuries; they rarely or never kept male servants,

except for husbandry; their horses, as we may guess by the price, were indifferent; they seldom travelled beyond their county; and even their hospitality must have been greatly limited, if the value of manors were really no greater than we find it in many surveys. Twenty-four seems a sufficient multiple when we would raise a sum mentioned by a writer under Edward I. to the same real value expressed in our present money: but an income of 10*l.* or 20*l.* was reckoned a competent estate for a gentleman; at least, the lord of a single manor would seldom have enjoyed more. A knight who possessed 150*l.* per annum passed for extremely rich. A gentleman's house, with three or four beds, at that time, was extraordinarily well provided; few, probably, had more than two. The walls were commonly bare, without wainscot or even plaster; except that some great houses were furnished with hangings, and that, perhaps, hardly so soon as the reign of Edward IV. Of course, neither libraries of books nor pictures could have found a place among furniture. Silver plate was very rare, and hardly used for the table. A few inventories of furniture extant exhibit a miserable deficiency. And this was incomparably greater in private gentlemen's houses than among citizens, and especially foreign merchants. In an inventory of the goods belonging to Contarini, a rich Venetian trader, at his house in St. Botolph's Lane, there appears to have been not less than ten beds, in 1481, and glass windows are specially noticed as movable furniture. No mention, however, is made of chairs or looking-glasses."

We now proceed to the age of invention, between 1730 and 1800; among the most interesting of the subjects of which, was the discovery of the Leyden phial. Mr. Williams gives some pleasant notices of electricity and galvanism, from which we extract the following, with which we shall conclude, again recommending this book to our readers:—

"No single philosophical discovery ever excited so much popular and scientific attention as that of the Leyden phial. In the same year in which it was discovered, a number of itinerant experimenters procured a livelihood in different parts of Europe, by travelling from place to place, and shewing its operation. About the middle of the last century, an immense number of facts had been ascertained, which were constantly accumulating, and some principles had been developed; but a general theory for connecting the insulated observations, and giving them the form of a body of science, was still wanting. The foundations for this theory were laid by the ingenuity and industry of our countryman, Dr. Watson; the construction of it is owing to the sagacity of Dr. Franklin. He proved that the conductor in contact with the rubber of the electrical machine, had an opposite electricity from that of the great conductor; that the outside and inside of the Leyden phial were likewise in opposite states; and that an equilibrium was made by their mutual agency; and he referred all the phenomena to the redundancy or deficiency of a single fluid. The experiments adduced by Dr. Franklin in support of his hypothesis were most ingeniously contrived, and happily executed. A singular felicity of induction guided all his researches, and by small means he established very grand truths. He endeavoured, too, to remove all mystery and obscurity from his subject; he wrote equally for the philosopher and the uninitiated; and he rendered his details amusing as well as conspicuous, elegant as well as simple. The

theory of negative and positive electricity was soon made, by M. *Épinus*, of the Academy of Petersburg, the subject of mathematical illustration. A more popular, and not less refined view of the same doctrine, was shortly after furnished by Mr. Cavendish, who combined delicacy of physical experiment with elucidations derived from the higher branches of mathematical science, and whose researches in electricity have the same exalted character as in the other departments of natural philosophy. The magnificent effects produced from the accumulation of electricity by large machines and jars, soon led philosophers to reason, from artificial, concerning natural processes. Such an influence it was impossible to consider passive in the external world, and the most striking analogies soon led to the discovery of its most obvious operations. Dr. Stukely and the Abbé Nollet, had observed the similarity between the electrical spark and lightning and the report of thunder; but Dr. Franklin was the first philosopher who conceived the bold idea of bringing lightning from the clouds—who first imagined that by pointed conductors, charged electrical clouds might be made harmless, and the matter of the thunderbolt quietly conveyed from the atmosphere to the earth. The simple apparatus of a school-boy's kite, held by means of a silk handkerchief attached to a hempen string, with a key for a conductor, enabled him, in June 1752, to verify this grand idea. The practical application soon followed, and, what rarely happens, the same philosopher had the glory of discovering a noble principle in nature, and of making it of public utility."

*Summer Visits to Cottages in a Country Village; with Observations on the Morals and Habits of the Inhabitants, and particularly Exemplifying the Pernicious Effects of Beer-Houses.* By Mrs. Bowles, of Bremhill, Author of "Village Characters," &c. Pp. 54. London, 1837. Rivingtons.

THE sterling, practical, and active piety and benevolence of the wife of the excellent incumbent of Bremhill, as reflected in these pages, which, indeed, only illustrate her own life of daily well-doing, are eminently becoming in the consort of one so highly esteemed in the literary and Christian world. We wish that every peasant and mechanic in the empire could read what she has written. The examples of the baneful effects produced by beer-houses, and by less pernicious habits, which, nevertheless, tend to much unhappiness in the country, are so simple and so evidently drawn from facts, that they must produce a very beneficial effect on the morals of every member of the industrious orders, not absolutely sunk in depravity, and lost alike to reflection, and the sense of human and religious duties. The contrasts between the well and the ill-regulated individuals who have come under Mrs. Bowles' observation, are full of affecting incidents: from her pen, the short and simple annals of the poor are gifted with a power to touch the heart, and reclaim the wandering.

#### MISCELLANEOUS.

*The Book of Sports, Athletic Exercises, and Amusements,* by W. Martin, Author of the "Parlour Book." Pp. 238. (London, Darton and Clark).—A nice boy's book, in which the playing of juvenile games is well described, from marbles to cricket, and from hunt the slipper to chess; swimming, angling, and a few chemical and philosophical amusements, are also treated of, in a manner adapted to youthful capacities; and the whole, embellished with so-so prints of the principal sports.

*Dr. Ewan's Greek Copy-Book.* (London, Longman and Co.).—*Littera scripta manet* is said in Latin; and we do not know that the more ancient Greeks had a saying to the same purpose: if we did we would quote it. As it

is, we think the student of the beautiful language of Greece will feel much obliged to Dr. Ewan for this copy-book. A free translation of the adage might run, "Written letters remain fixed on the memory;" and thus, there can be no better way of impressing the pot-hooks and hangers of the Greek upon us than by copying them, in a fair and firm hand, as here instructed.

#### ARTS AND SCIENCES.

##### THE EUPHRATES, &c. INTERCOURSE WITH INDIA.

COLONEL CHESNEY,\* in a letter promulgated at Bombay, thus speaks of the late expedition, &c. respecting the intercourse with India by steam. "As far as the Euphrates is concerned, if my observations have not failed me, it will prove to be an easier river to ascend than the Rhine, the Danube, or even the Nile. I presume that the main object desired by every friend of India, is a regular communication for the mails, at all events, and for passengers also, if it can be managed without a heavy loss; but the fear of the latter seems to have deterred private speculation in England, unless 65,000*l.* a year is first promised by government; and the discordant proceedings at the different presidencies of India have not been altogether calculated to obtain so large a bonus in these times, especially, as I presume that 12 voyages a year might be made to and from Suez, at a loss of about 40,000*l.*; or a similar number along the Euphrates, by sinking 8 or 10,000*l.* annually. Without joining in the reproaches which are the consequences of those unhappy discussions, and which have prevented any thing like real efforts, it cannot be denied, that if the Indian public were to step forward with 50 or 100,000*l.* as the foundation of a company to open the Red Sea, the remainder would be readily subscribed in England, so as to put that route into speedy and full operation: but as such a project has not all the fascinations of a bank, it is to be feared that our hopes rest on government alone; and if I am not greatly mistaken, they will not be disappointed. With reference to public feeling and convenience, it is to be hoped that something more satisfactory will be attempted when the new steamers reach India. Three steamers, with the assistance of a sailing vessel occasionally, and having two small steamers on the Euphrates, at the annual cost of 25,000*l.* each, would, considering the shorter voyage to Mohammerah, enable the government to open the Red Sea as well, by alternate monthly voyages during the next 18, or such other times as might be sufficient to demonstrate to the world all the advantages and disadvantages of each, before we establish one of them permanently, or both at different seasons, should this be more suitable. It appears to me that there are several good reasons for opening both routes at the same time. 1st. The three steamers could not keep up a monthly communication to Suez; but by going the shorter voyage alternately to the Gulf, they might keep up the twelve voyages for a time, say nine voyages in each direction. 2d. We are not quite sure that either of the routes would be practicable at all seasons, and a continued experiment can alone decide this point, and at the same time the relative speed, expense, &c. 3d. Plague is said to exist in Egypt and Syria almost always at different times, therefore, the one might be opened whilst the other is shut,

\* The colonel, and several of his companions, who have escaped with life from this difficult enterprise, are now, we observe, in London; to receive, we trust, from the government of the country, those rewards and distinctions to which their gallantry and perseverance, under so many privations and perils, so pre-eminently recommend them. In them the love of science, and the brave contempt of danger and death, so inherent in the English character, are equally the objects of regard and admiration.—*Ed. L.G.*

either from this cause, or war disturbances, &c. 4th. The commercial and piratical relations of the Persian Gulf, and our interests in Persia itself, require, at least, occasional and regular communications, which would be secured by the double line of the Red Sea and Euphrates; and if neither of them should fully answer our expectations, there will be the resource of experimenting on two others; the one being along the river Tigris to Trebezonde, and from thence by sea to Constantinople, Malta, and England; whilst the other would be through Persia to Trebezonde, and thence, by the Danube and the Rhine, to England, which may be said to be almost open already. The grand object is to have some regular communication or other; but in the present progressive state of steam, we ought to begin with the shortest and cheapest lines possible, looking forward to more daring attempts some ten or twenty years hence, when the monsoons may not only be overcome, but *paying* voyages made from Madras and Calcutta to Suez, as well as round the Cape. These objects cannot, however, be obtained until vessels are constructed to carry fuel at a cheaper rate, and for double the time that has been accomplished as yet; consequently, we ought to be content, for the present, with what may be actually practicable from Bombay, either to Suez or the Persian Gulf, as experience may decide for or against the latter. I shall merely add, that if the Euphrates were only to contribute its mite to the good cause, by being used at such times as the Red Sea may not be available from any cause whatever, it would still deserve some dispassionate consideration, as a mere auxiliary; especially great moral and commercial benefits may be the consequence of renewing our former intercourse through Arabia."

## FINE ARTS.

## NEW PUBLICATIONS.

*Interior of St. George's Chapel, Windsor, with the Funeral Ceremony of his late Majesty, William the Fourth.* From a Drawing made on the Spot, by Harry Willson, Esq. Welsh and Gwynne.

A GOOD general view of this melancholy ceremonial, although in effect somewhat too light for so sombre an occasion.

*His Grace the Duke of Wellington.* Painted by J. Simpson; engraved by G. H. Phillips. Hodgson and Graves.

A FINE mezzotinto whole length; tranquil and dignified, although on the battle-field; and, in every respect, highly creditable, both to the painter and to the engraver. We wonder how many portraits of our great warrior have been painted and published. Numerous as they are, however, they are still not so numerous as the splendid achievements for which his country and the world are so deeply indebted to him.

*The Village Church.* Painted by Mrs. Seyffarth; engraved by J. Egan. Ackermann and Co.

PERHAPS there is no more pleasing spectacle in this country than the Sabbath gathering of a rural population to perform their duties to their Almighty Maker.\* Mrs. Seyffarth has represented the scene with her usual abilities and taste. The widow and the orphan, buoyant youth and decrepid age, make up the mingled group. An interesting little episode of jea-

lousy shews that, even on so sacred an occasion, human passions cannot be wholly suppressed.

*The Hot Breakfast.* Painted by C. Hancock; engraved by J. Porter. Hodgson and Graves. THE evils of a hot supper have frequently been insisted on by medical advisers: those of a hot breakfast are here very humorously represented. A party of curs, in their eagerness to taste its contents, have contrived to upset a pot of boiling porridge; and several of them, unable to escape, are suffering all the torments of scalding, while others are anxiously waiting the cooling of the savoury mess. The various feelings of the canine conspirators are admirably depicted.

## SKETCHES.

## ONEIRODYNIA.

"Behold, this dreamer cometh."

ONE night, when I was younger than I am by a few years, ere the crow's foot, with light but indelible touch, had marked my countenance—bodily pain, more than time, however, aids Madame Corbeau; for, like Sisyphus and his wearisome stone, I endure the daily toil of suffering—never ending, still beginning—but, aroint thee! It was on a summer's night, in the spring-tide of my life, that I dreamed a dream—let not my readers turn away with a yawn—I am not, with the garrulity of a grand-sire, going to afflict them with the drowsy narrative of a baseless vision. At the period to which I allude, my dreams, as painters say, had a breadth and depth in their masses; their composition was complete, and their colouring, as in the present, was often exquisitely beautiful. Of late years, a habit of cigar smoking (resorted to as a sedative), for an hour or so at night, I imagine, has given a frivolous and shallow character to my dreams; they are now disjointed, incongruous in their parts, and utterly absurd. To return: I had a near and dear relative—a man in whom there was no guile—eminently pious; for obvious reasons he must not here be distinguished by other than an assumed name, Felix Goodman. He was rather unwell. Methought, on the night in question, I was musing on Mount Lebanon—not the mount of modern times, with its half dozen cedars, but, as in the days of the sacred historians, when its trees were numerous, and full of sap. A few days before, I had been turning over a volume of Piranesi, and my mind was filled with wonder by the contemplation of the stupendous, yet elegant character of his architectural designs—as gigantic in conception as any thing, even from our own inimitable Martin. I am altogether unable to explain the philosophy of dreaming; nothing quite satisfactory on the subject has ever been written—most probably, never will be. From my notes of a paper on sleep, by Dr. Wilson Phillip, I find the doctor states, that those portions of the brain associated with mind are not, in "ordinary sleep," so exhausted as not to be disturbed by the internal processes going on at the time in the system. He thus accounts for dreaming, and adds, that the mind, in sleep, "is deprived of the control it exercises, during its waking hours, over the train of its thoughts;" hence, then, doubtless, the incongruities of dreams. So it was, in some degree, with me; I was on the top of the sacred mount: the gloom of the vista was indescribably great. It was dark night; not a star twinkled. It was the blackness of funeral darkness, "without form, and void." As I gazed, in painful uncertainty, something like defined notions of substance entered my mind, and the sensation

was most refreshing. I had looked upon vacuity—not the "palpable obscure" of the poet: that had been satisfactory, compared with the non-existence before me—gradually, however, and, apparently, at incalculable distance from me, I distinctly saw the dark space making way, as it were, for the appearance of some huge stranger. With amazing rapidity it reared its two heads of bronze. Coetaneously with this, daylight began to appear in one particular spot—the Goshen of the scene. The light increased, evidently confining itself to one part of the heavens; for I could now see that it was above me. Midway the scene had assumed a glorious appearance—a city of palaces and of towers (this was Piranesi); that part of the sky which was light, not to speak profanely, had become a perfect Elysium. On a scroll-work of clouds, such as Corbould, in miniature, sometimes draws, I saw written, in beautiful characters, and in compartments, these words:—"And all the days that Adam lived were nine hundred and thirty years: and he died." "And all the days of Seth were nine hundred and twelve years: and he died." "And all the days of Cainan were nine hundred and five years: and he died." "And all the days of Mahalaleel were nine hundred and ten years: and he died." And so on in the same way with Jared, and Methuselah, and Lamech. It is worthy of remark, that Enoch did not appear in the list: it will be remembered that Enoch did not die, "for God took him." This, therefore, was quite congruous, setting aside, to a considerable extent, the assertion of Dr. Philip, just quoted, that the mind, in such situations, is deprived of that control which it exercises in its waking moments. But then Enos, too, was absent, though we are told that "Enos lived nine hundred and five years: and he died." This, too, I consider as a slumbering effort of mind. Awake, I knew that Enoch had not died: asleep, however, incongruity stepped in, and mind tried to right itself. The similarity of *Enoch* and *Enos* acting on the sensorium, caused them both to be excluded, on the principle of making "assurance doubly sure." On the last compartment of the scroll, and following Lamech, there was written—"And all the days of Felix Goodman were sixty and eight years: and he died." I was contemplating the sublime picture with profound delight, when a loud knocking at the street-door awoke me; it was the servant of my friend announcing his death, which took place about ten minutes before.

## DRAMA.

*English Opera.*—On Monday was produced a musical entertainment, in two acts, called the *Little Laundress*, which, we are afraid, is rather too washy an affair to last long. Like the soap bubble, it is too thin for continuance, and, though equally transparent, we cannot say that we had much pleasure in sitting to see through it. The *Little Laundress's* tub will not do for the whale; yet Miss Rainforth, in *Madelon*, the heroine, sang sweetly and acted well; Miss P. Horton did all that could be done for a very poor part; Mr. Compton, the favoured lover, was more dry than his washer-woman flame might be supposed to be wet; and Mr. M'An out-caricatured the caricature of an opera dancer. There was some drollery in this last, however; in Mr. Compton's *Tranquille* there was none: and we could not but wonder what so clever a wench as *Madelon* could see in the stupid lout to induce her to abstain from kicking him down stairs.

\* We hope many of our readers may remember, in Dr. Croly's "Paris in 1815," the touching and exquisitely poetical description of the rural church in England, and its Sabbath worship.—*Ed. L. G.*

**The Colosseum.**—The evening amusements here continue to be one of the pleasantest and most entertaining lounges of the season, and to attract nearly all the fashion that remains in town. Braham occasionally sings; and his favourite songs are sure to attract a crowd. There is also a kind of grotesque ballet, one of the most laughable things that can be seen. Any agreeable party will enjoy the whole much; and it must be a very disagreeable one, indeed, that will not be "pretty considerably" diverted.

### VARIETIES.

**Weather-Wisdom.**—The heavy rains of the past week were fairly foretold; and, in justice to the thunder storms of the last six weeks, we must notice that, if they have not visited London, they have been severely felt in other quarters. Lieutenant Morrison, for the ensuing days, predicts, "The 26th and 27th colder. Many changes. The aspects of the 30th denote rough weather; violent thunder, or very cold. Of Sept. dry and windy weather at the beginning, and rather warmer."

**Franco-English.**—A curious specimen of this occurred the other day. A French gentleman, rescued from a ducking in the Thames, and taken to an adjacent tavern, was advised to drink a tumbler of very hot brandy and water, and thus addressed the waiter, who was mixing it:—"Sir, I shall thank you not to make it a fortnight." "A fortnight," replied Joe, "hadn't you better take it directly?" "Oh, yes," said Monsieur, "directly to be sure, but not a fortnight—not two week."

**Homoeopathy.**—About forty homoeopathic doctors have had a meeting at Frankfort, to discuss their new system and doctrines. Some of these came from Russia.

**Remarkable Caverns, Geology, &c. in Brazil.**—Dr. Lund, the Danish traveller, now in Brazil, has discovered, in the mountain chains between the Rio Francisco and the Rio das Velhas, a great number of caverns; among which, Sappa nova de Maquiné, in the Sierra de Maquiné, is one of the most remarkable. The mountain consists of clay slate, flinty slate, and limestone of the transition period, in which last is the cavern described; the total length of which, from north to south, is 1440 feet, the height being from 30 to 40 feet, and the breadth from 60 to 60. It is separated by masses of stalactite into twelve divisions, of which only three were known before Dr. Lund explored them. The others, especially the innermost, were of such extraordinary beauty, that his attendants fell on their knees, and expressed the greatest astonishment. On the river Velhas, the banks of which the traveller afterwards traversed, the vegetation assumes a peculiar character. The inhabitants call the forests *catingas* (white forests). They form a thicket of thorny trees and bushes, interwoven with parasitical plants of the same nature. The leaves fall in August, and, from the beginning of September till the rainy season, the *catingas* are as bare as European forests in winter. On this excursion Dr. Lund had an opportunity of examining nineteen caverns, all of which confirmed his opinions of their geological formation. He has collected many remarkable particulars respecting the circumstances which must have taken place in a great inundation, as well as respecting its effects, and convinced himself, by several indications, that its course in South America was from north to south. In three of the nineteen caverns which he explored, he found petrifications of quadrupeds, which he had not dis-

covered in the Maquiné cavern, viz. *Cerurus rufus*, *Caelogenys*, *Paca*, *Cavia aperia*, six species of bats, four species of *Mus lepus brasiliensis*, and *Strix peolata*. In the first-mentioned cavern he found two species of ruminating animals, far larger than those now living in Brazil, and a megatherium, of the size of an elephant.

**Munich, May 10.**—We have received from Dr. Ernest Förster, in Padua, further particulars relative to the remarkable paintings of the fourteenth century, which he has discovered there, of which an account was published some time ago. This notice has already attracted numerous strangers, and contributed to make this valuable treasure generally known. Dr. Förster is, therefore, the more desirous to inform the public, through the same channel, of the warm and active interest which, immediately after the first notice, was manifested by the imperial Austrian government. "I wish," he writes, "that every body engaged in a laudable undertaking might meet, not only in foreign countries, but in his own, with such kind support, such attention, and such confidence, as I have enjoyed from the authorities here. Without this aid, it would not have been possible to prosecute the discovery. Above all, I must mention Count Sacco, who ordered that I should be supplied with every thing necessary. He also offered to fulfil the wish expressed in my preceding letter, to have an assistant. The magistrates have expressed their gratitude to me in a very obliging letter; and, at the same time, did me the honour to confide to me the care of restoring a large fresco painting, by Titian, which is justly considered here as a great treasure, and which was damaged last year by being struck with lightning, and was entirely covered with mould. I have already executed this commission. The *Kunstblatt* will publish letters, giving a circumstantial description of the paintings in the Chapel of St. George."

**Antique Casts.**—The Dutch government has directed casts to be taken of the great onyx and cameos, &c. in the royal collection, which casts are to be sold at fixed prices. There are some very fine and rare specimens in this cabinet, which will thus become more familiar to untravelled cognoscenti and the public in general.

**The Thames Tunnel,** we regret to hear, has been filled with water from an opening above. This is an unlucky design: fortunately, there is no loss of life on this occasion, but we fear, that though, as a foreign writer observed, the English have got tired of fine bridges, we shall not be gratified with their substitute under the water.

### The Desirable Bargain.

Blest life-preserver! many years at sea,  
Through storms and tempests I've been saved by thee;  
Yet, now for sale, dirt cheap: child's caul! rare thing!  
And without sorrow,  
For to-morrow,  
I am condemned to swing.—*Truths.*  
*Condemned Cell, Newgate, April 1.*

### LITERARY NOVELTIES.

Miss Agnes Strickland announces a work extremely appropriate to the present period, and with equal fitness placed under the patronage of the queen. It is entitled "Historical Memoirs of the Queens of England," and promises to contain much of their domestic as well as public history, diligently drawn from the most authentic sources.

### LIST OF NEW BOOKS.

A Manual of Veterinary Pharmacy, by W. J. T. Morton, 12mo. 6s.—Lays for All Hearts, by W. H. Pridaux, 12mo. 3s.—Personal Narrative of Events by Sea and Land, from 1800 to 1815, 12mo. 3s. 6d.—Homoeopathy; a

Thesis, 8vo. 2s. 6d.—Charlie Seymour: a Sunday Story, by Miss C. Sinclair, 12mo. hf. bd. 2s.—Bible Lives, from the New Testament, by B. H. Draper, 9 vols. 38mo. 3s. 6d. hf. bd.—Heaven Unveiled, by J. Freeman, 9d edition, 2s. 6d.—E. Saunders on the Care of the Teeth, 12th edition, 3s. 6d.—Memoir of the Rev. W. Newman, D.D. by George Pritchard, 8vo. 9s.—Dr. D. C. Macreight's Manual of British Botany, 12mo. 7s. 6d.—Voyages up the Mediterranean and in the Indian Seas, by J. A. Heraud, post 8vo. 10s. 6d.—Wild's Lincoln Cathedral, 3d edition, by J. Britton, 4to. 25s.; imp. 4to. 17. 11s. 6d.—Drury's Exotic Entomology, new edition, by Westwood, 3 vols. 4to. 6s. 6d.—The Sick Man's Embody, by J. Fawcett, D.D. 12mo. 2s. 6d.—The Christian Reader, selected and arranged by J. Slater, 12mo. 5s.—Martin's Colonial Library, Vol. VIII.: East Indies, Vol. I. 8cp. 6s.—Uncle Horace; a Novel, 3 vols. post 8vo. by Mrs. S. C. Hall, 17. 11s. 6d.—Kindness in Women; Tales, by T. H. Bayly, 3 vols. post 8vo. 17. 11s. 6d.

Prevailing wind, S.W.

Except the 18th, and two following days; generally cloudy, with frequent rain: thunder at times during the afternoon of the 17th.

Rain fallen, .25 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

Latitude... 51° 37' 38" N.

Longitude... 3 51, W. of Greenwich.

### TO CORRESPONDENTS.

We have received the following letter from Mr. Parsey: To the Editor of the Literary Gazette.

Sir,—As your notice of my lectures delivered on the 7th and 14th instant, at the Marylebone Literary and Scientific Institution, signifies that I spoke objectionably of science and scientific men, &c. I trust you will give publicity to the following remarks in your next paper:—So far from speaking disrespectfully, I stated that, in making any remarks on science, they would be expressed with a "hearty desire to benefit, rather than to underrate the importance of mathematics." That the tone I assume being that to which I am not at all entitled, is a singular personality, consonant with the treatment I have met with from incompetent judges, but quite distinct from that of qualified scholars, whose testimonials of my merit are before the public. I challenge any scientific man to refute the original doctrines of Perspective of which I am the author. Your correspondent admits a convergence in the reality; and although art and science have never defined the laws, it is evident, perpendicular parallel surfaces converge in the eye as well as parallel horizontals, when the angles of vision command that effect. "I forget," it is said, "that a picture runs itself into perspective;" let me remark, if the length, breadth, and depth of a solid form, could be delineated on paper or canvas, of their geometrical dimensions, by parallel lines, then, by peculiar position of the picture, it might run itself into true perspective; but as the facial surfaces only can be drawn geometrically, and the receding surfaces are obliged to be drawn in perspective, no position of the picture can run the former into perspective, without running the rest into false delineation, so that a pure optical outline on the picture can only be pronounced scientifically true. I am, &c. ARTHUR PARSEY.

No. 23 Piccadilly, 21st Aug. 1837.

All personality we disclaim. We never even saw Mr. Parsey until the evening of the 7th instant; and the remarks which we made in our last Number were dictated solely by a sense of our public duty. The precise words used by Mr. Parsey, in his lectures, we are unable to quote; but, unquestionably, the substance of them was, that, not in perspective alone, but in the mathematical sciences generally, there were many important errors, obstinately persevered in, which he hoped he should, at some future period, be able to rectify. Mr. Parsey also spoke of the reluctance and hostility with which suggestions of improvement were received; and instanced a case—that of the National School of Design—in which he had been unable to succeed in procuring the adoption of his peculiar views of perspective. Now we have the pleasure of knowing a great many of the scientific men of this country, and we have always observed, that, so far from entertaining ungenerous or illiberal feelings on such subjects, they welcome, with cordiality, any alleged discovery which seems to them calculated really to advance the cause of science.

The latter part of Mr. Parsey's letter is so obscurely and inaccurately expressed, as to be nearly, if not altogether, unintelligible. It certainly contains nothing, in the slightest degree, applicable to the objection to one of Mr. Parsey's "new principles," which we stated last week.

Carmen Amoris declined, with thanks.

**ERRATA.**—In last week's Gazette, page 529, col. 1, line 16 from bottom, for Pehlun, read Pehlvi; and in the same col. line 4 from bottom, for Mosc and Fern, read Masc. and Fern.

## ADVERTISEMENT,

Connected with Literature and the Arts.

**NOW OPEN.—DIORAMA, REGENT'S PARK.**—New Exhibitions, representing the Interior of the Basilica of St. Paul, near Rome, before and after its Destruction by Fire; and the Village of Alagna, in Piedmont, destroyed by an Avalanche. Both Pictures are painted by Le Chevalier Bouton.

Open daily, from Ten till Five.

**KING'S COLLEGE, London.—SENIOR**

**DEPARTMENT.**—The Classes in Theology, the Classics, Mathematics, English Literature, and History, under the Superintendence of the Principal and Professors, the Rev. T. G. Hall, R. W. Browne, and T. Dale, will be re-opened on Tuesday, the 30th October.

The Classes for Private Instruction in Hebrew, the Oriental, and other Foreign Languages, will recommence on the same day. Junior Department.—The Classes in the School were re-opened on Tuesday, the 15th instant.

August 16.

H. J. ROSE, B.D. Principal.

**TO ARTISTS, TOURISTS, AND ADMIRERS OF THE FINE ARTS.****PARLOUR'S PORTABLE SKETCHING-CASE, or DELINEATOR, is confidently recommended to the notice of all persons attached to the Science of Drawing, as being infinitely superior to the Camera Lucida, and all other instruments hitherto invented, for the purpose of Sketching.**

The Sketching-Cases may be held in the hand, and a correct Drawing made of any object or landscape; or it may be attached to a table, in the same manner as the Camera Lucida. It is simple in its management, and does not exceed, in size, the common Sketching-Book. Manufactured for the Patentee, by Reeves and Sons, 150, Fleet Street; may be had also, of Smith and Warner, Marylebone Street, Piccadilly; Jones and Son, Opticians, Charing Cross; and at all other Opticians and Artists' Repositaries. Ladies and Gentlemen who have the Camera Lucida may have the Delineator affixed to their own stem.

Now ready, a Whole-length Portrait of

**HIS GRACE THE DUKE OF WEL-**

LINGTON, K.G. &c. &c. &c.

Engraved by E. H. Phillips, from the original Picture, just painted by John Simpson, for the Junior United Service Club.

Price, Paints, 17. 11s. 6d.; Proofs, 31. 3s. 6d. Proofs before Letters, 5s. 6d.

London: Hodgson and Groves, Printers to the Queen, 6 Pall Mall.

**SALES BY AUCTION.****SOUTHGATE'S ROOMS.**

**Books, Coins, Antiquities, &c.**

By MESSRS. SOUTHGATE and SON,

AT THEIR WEEKLY SALE-ROOMS,

32 FLEET STREET,

ON THURSDAY, AUGUST 31, AND TWO FOLLOWING DAYS,

Being the remaining Portions of the Collections of Thomas Fisher, Esq. F.R.A. and John Kemp, Esq. F.R.A.

Among which are, Hunter's History of Doncaster, 3 vols.; Polwhele's Devonshire; Dugdale's St. Paul's, by Ellis; Hasted's Kent, Vols. II. III. and IV.; Bigland's Gloucester and Genealogical Collections; Luther's German Bible, in antique binding; Encyclopædia Britannica, 9 vols.; Bibliotheca Gloucesteriana; Yates's St. Edmund's Bury; Fossbrooke's Manichæism; Gloucester; Encyclopædia and Foreign Topography; Lodge's Portraits, 12 vols.; Nicholls's Illustrations of his Anecdotes, 6 vols.; Nicolai's Testamenta Vetera, 2 vols.; Gent's Ripon; Large Paper Copies of Animals; several Portfolios of Topographical Prints, arranged in Colours; also of Portraits, to illustrate various Historical Works; Drawings, Oil Paintings, Gilt Frames, &c.; a Cabinet of Coins and Medals, consisting of Greek, Roman, Early English, Indian, and other Foreign Coins; a Collection of Roman Remains, Curiousities, Casts from the Antique, Bronzes, &c.

May be viewed, and Catalogues, price 1s. had at the Rooms. Money Advanced upon Duplicate Portions of Booksellers' Stock, upon Libraries, and on Literary Property in General.

**MUSIC.**

Dedicated, by special permission, to his Grace the Lord Archbishop of Canterbury.

**PSALMS and HYMNS for the SERVICE**

of the CHURCH.

The Words selected by the Rev. H. H. MILMAN, M.A. The Music, including Chants for the Services, and Responses to the Commandments, with the Words at length, and a concise System of Chanting, selected, composed, and arranged (for four voices, but applicable also to two or one).

By J. B. SALLÉ, Musical Instructor to her Most Gracious Majesty Queen Victoria, &c.

4to. neat in Morocco cloth, price 2s. To be had of Mr. J. B. Sale, 35 Holwell Street, Millbank, Westminster; and, by order, of the principal Booksellers and Music Warehouses.

"A great advance on the works we have hitherto had connected with our church and cathedral service."—*Times*.

"One of the best collections of tunes which we have yet seen."

"An exquisite specimen of musical typography."—*Well* merits the distinguished patronage under which it appears."—*Musical World*.

"A collection of psalm tunes certainly unequalled in this country."—*Literary Gazette*.

In 18mo. neat in cloth, 1s.; extra gilt edges, 3s. 6d.

**A Selection of Psalms and Hymns.** By the Rev. H. H. MILMAN, M.A.; with Mr. Sale's Concise System of Chanting.

London: Nichols and Co. 25 Pall Mall Street.

**BOOKS IN THE PRESS.**

On the 1st of September was published, **THE PICTORIAL HISTORY of ENGLAND**, Part VII. price 2s. The Work is also published in Weekly Numbers, price 6d. each. The First Five Parts form a Half-Volume, and are issued, sewed and lettered, price 10s.

**The Pictorial Bible, Part XIX.** price 2s. The Work is also published in Weekly Numbers, price 6d. each. Two Volumes are now completed. The First Volume, including to the End of Ruth, containing 286 Woodcuts, handsomely bound in cloth, price 17s. 6d. The Second Volume extends from Samuel to the End of Isaiah, and contains 540 pages of Letter-press, with 281 Woodcuts, price One Pound. The Third Volume will complete the Work.

London: Charles Knight and Co. 22 Ludgate Street.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

On the 1st of September will be published,

**THE PENNY MAGAZINE, Part LXV.**

Price 6d.

**The Penny Cyclopædia, Part LVI.** Price 1s. 6d.

The Eighth Volume has been recently completed, price 7s. 6d. bound in cloth, uniformly with the preceding Volumes, which may be obtained through every Bookseller.

London: Charles Knight and Co. 22 Ludgate Street.

**NOTICE.****PORTRAIT of the QUEEN.**

Colburn's New Monthly Magazine and Humorist, for September, price 3s. 6d.

Edited by THEODORE HOOK, Esq.

Will be embellished with a finely engraved Likeness of Her Majesty, from a Drawing by Miss Costello.

Those who desire to secure the early impressions, are requested to give their orders immediately to their respective Booksellers.

The following Portraits have appeared in the New Monthly during the present Year:—Lady Charlotte Bury—The Rev. G. R. Gleig—Mrs. Gore—B. D'Israeli, Esq.—Miss Landon—James Smith, Esq. and His late Majesty.

Henry Colburn, Publisher, 15 Great Marlborough Street.

On Monday, August 28, will be published, in square 18mo. price 7s. bound and lettered,

**THE YOUNG SCHOLAR'S LATIN.**

ENGLISH DICTIONARY.

By the Rev. J. E. RIDDLE, M.A.

Translator and Editor of Mohler's Latin Lexicon for the Oxford University Press.

Being an Abridgement of Mr. Riddle's Complete Latin-English Dictionary, compiled from the best Sources, chiefly German, and adapted to the Use of Colleges and Schools. 8vo. price 21s. cloth boards.

In these Dictionaries special attention has been paid to Etymology, including the Greek Derivatives; also to the number and order of Meanings, construction of Words, and Quantities.

In the smaller work, all Words of low style, or such as are otherwise useless to Beginners, have been omitted.

London: Longman and Co.; and J. Murray, Albemarle Street.

**VOLUME XV. TO COMPLETE SOUTHEY'S COWPER'S WORKS.**

On the 31st instant will be published, superbly illustrated with a Frontispiece, engraved by Goodyear, a Vignette View of Lady Austen's Residence at Clifton, and a Foreword of Mrs. Bodham (Administratrix to the Will of the Poet), Volume Fifteen of

**THE ENTIRE WORKS OF COWPER,**

with a Life of the Poet, by the Editor.

ROBERT SOUTHEY, Esq. LL.D. Poet-Laureate.

\* \* \* The Fifteenth Volume completes this genuine and richly illustrated edition of Cowper. Many of the Letters have never before been in print, and the entire Volume is extremely interesting.

The following are the Contents:—

**The Life of Cowper, by Dr. Southey.** Vols. I. II. III.

**The Correspondence, including numerous Letters not before printed.** Vols. IV. V. VI. VII.

**The Poems, with many Originals.** Vols. VIII. IX. X.

**The Translation of the Iliad of Homer.** Vols. XI. XII.

**Translation of Homer's Odyssey.** Vols. XIII. XIV.

\* \* \* The Translation adopted by the Editor is the First edition, printed only in 4to. for the Subscribers, and now extremely scarce. The *Quarterly Review*, April 1837, notices the choice thus:—

"Well and wisely has Mr. Southey resolved on including, in his edition of Cowper, the version of Homer which that poet executed 'in the happiest period of his whole life'; and discarding the perplexed and enfeebled one over which he wearied his fingers in the hopeless gloom of his later years."

The remaining Correspondence, Contributions to the Connoisseur, Commentary on Milton's Paradise Lost, &c. Vol. XV.

London: Baldwin and Cradock, Paternoster Row.

**SPLENDIDLY ILLUSTRATED EDITION.**

On the 1st of September will be published, price 2s. 6d. Part III. of

**DON QUIXOTE de la MANCHA.**

Translated from the Spanish of Miguel Cervantes de Saavedra,

By CHARLES JARVIS.

Revised, and corrected, and beautifully illustrated after Original Designs, by Tony Johannot.

To be completed in 18 Monthly Parts.

London: J. J. Dubochet and Co. 75 Old Broad Street.

Of whom may be had, also (just completed),

**The Illustrated Edition of Gil Blas.**

3 vols. price 11. 12s. in cloth.

On the 1st September will be published, in fcap 8vo. price 6s. the second Volume of

**DOMESTIC ECONOMY: on the Qualities and Preparation, the Uses and Abuses, of Human Food.**

By MICHAEL DONOVAN, Late Professor of Chemistry, Materia Medica, and Pharmacy, to the Apothecary's Company in Ireland. Forming Vol. 34 of Dr. Lardner's "Cabinet Cyclopædia." London: Longman and Co.; and John Taylor.

### REVIEW OF NEW BOOKS.

*The Tribute; a Collection of Miscellaneous Unpublished Poems.* By Various Authors. Edited by Lord Northampton. 8vo. pp. 422. London, 1837. Murray; Lindsell.

"I set no cypress on thy last abode,  
Friend of my earliest, best, and happiest days!  
But rather would I plant the solemn sod  
With emblems bright of thankfulness and praise;  
Violet and rose, whose fragrant bloom decays  
In grateful incense to their author God,  
And trustful hope again their heads to raise  
From root ensepulchred in earthy clod.  
Thus didst thou fall, in richest flower and pride  
Of genius and of years; the fragrance pure  
Of learning and example scattering wide;  
Best sacrifice to Him who gave! 'In sure  
And certain hope' to rise beatified  
In the spring morn that ever shall endure.

Happy in life and death, lov'd friend, farewell!  
Happy in life! since life's severest woes  
At Love's transforming smile in joy repose,  
While health is sickness where he deigns not dwell!  
Happy in death! for with the invisible,  
With whom was here thy converse, God, and those  
Who share his vision's bliss, thou dost unclothe  
The unbodied sense to words ineffable!  
Farewell a little space! Taught here how brief,  
How insignificant the woes of time,  
From earth I hope not nor regret relief;  
But, rising to thy hopes and aims sublime,  
I'll trust to meet thee far o'er care and grief  
In Love's own native and immortal clime."

Such are the tributes paid by the Rev. H. Thompson, of Wrington Rectory, to the memory of his friend, the late Rev. Edward Smedley, M.A. of Cambridge; for whose living benefit this volume was originally undertaken by the accomplished and excellent nobleman, whose name appears on its title-page. Its object, in the spring of only last year, we are told in a brief preface, "was to spare him the necessity for those arduous literary labours which at that time threatened his sight or his life. His hearing he had already lost, and a disorder in his eyes was, to all appearance, sapping a sense still more precious. Before many weeks had elapsed, these anticipations proved too well founded, and death relieved him from his sufferings, and deprived his family of an affectionate husband and father." It has been continued to the end for the sake of those he has left; and will, it is hoped, in conjunction with a forthcoming volume of Mr. Smedley's posthumous poems, contribute, in some measure, to assuage their sorrows and improve their circumstances. The editor offers a very unnecessary apology for his own share in this benevolent design: nothing becomes a coronet more than feelings of humanity and the love of literature; and when the noble marquess has superadded to these the evidences which the volume contains of fine taste and high talent, he may rest assured that another, and a universal *Tribute*, will also be willingly paid to his philanthropy and endowments.

Nor can we withhold our approbation from the distinguished and gifted coadjutors who have joined his lordship in this kind work; a work, the spirit and character of which reflects lustre even upon such names as Wordsworth, Southey, Moore, Joanna Baillie, Bowles, Milman, Montgomery, and Sotheby; not to dwell on those of the noble editor himself, the late Lady Northampton, Lord John Russell, Lady Dacre, Sir E. Cust, Mr. Spring Rice, B. Barton, G. P. R. James, Chauncey Hare Townshend

(how long since we have seen aught of his graceful muse!) Gally Knight, Horace Smith, Landor, Tennyson, Darley, and, besides others, the fair maiden contributors, Costello, D. M. Clephane, A. Bradstreet, M. Popple, Randall, Agnes Strickland, and Mary L. Boyle.

We have of late, in consequence of the number of poetical publications of various merit, many of them adorning our literature, though not sufficiently exalted to require distinct critical review, been led to notice them in batches of ten at a time: thus paying proper respect to the deserving, and allying over the failures without severity. In the present instance, the phalanx of contributors offers us a batch of more than twice ten, and compels us to selection rather than general specification: and we begin with some pretty lines to a favourite bird of ours, by W. Empson, Esq.

"Bravo, cuckoo, call again!  
Loud and louder still!  
From the hedge-partridge's plain  
And the wood-top's hill.  
With thine un mistaken shout  
Make the valley ring!  
All the world is looking out,  
But in vain, for spring.  
I have search'd in every place,  
Garden, grove, and green;  
Of her footstep not a trace  
Is there to be seen.  
Yet her servants without fail  
Have observed their day,  
Swallow, bat, and nightingale;  
And herself away!  
Shout again! she knows thy call,  
'Tis her muster-drum:  
An she be on earth at all  
She will hear and come."

From the noble editor's pieces we make choice of one sweet sonnet to "Memory."

"Oh, Memory! thou ever restless power,  
Recalling all that's vanish'd from our sight,  
Thy pencil dip'd now in the rainbow's light,  
Now in the gloomy tints of midnight's hour.  
From youth's gay garden, manhood's blighted bower,  
Culling thy varied chaplet, dark and bright—  
The rose, the rue, the baleful asclepias;  
Alternating the cypress and the flower!  
Casting with lightning speed thy wizard glance  
Through the long retrospect of by-gone years,  
Whence, at thine heet, in dim array advance,  
Shadows of idle hopes and idle fears:  
Half cheerful is thy saddest countenance,  
Thy sweetest smile, alas, is moist with tears!"

It is pleasing to turn from the right hon. the chancellor of the exchequer's electioneering and political visits to Cambridge, with which all the newspapers have rung, and look upon him in a finer and happier mood—the following is his offering:—

"On Revisiting Trinity College, Cambridge, after Twenty Years' Absence. By the Right Hon. T. Spring Rice.  
Years have rolled on since first I passed these gates,  
Yet each succeeding year I love thee more—  
When I revisit thee, within my heart  
Thoughts, images, emotions, crowd. The past  
Awakens from its tomb, and present light  
Blends with the future's dim uncertainty.  
All that is best in life I here have known,  
Love, Friendship, and Ambition, heavenly Hope  
Lifting her seraph-eye to brighter worlds:  
And now the gushing founts of tenderness  
Which spring perennial in a parent's heart.

Thy walls to me are vocal. Many a sound  
Of solemn warning and of stern reproof,  
Echoes beneath those arches. Time misused,  
And opportunity for ever lost;  
Powers misapplied!—these thoughts of deep remorse,  
All, all around me rise, like angry shades  
Which haunt the midnight of some murderer.  
Oh! had such thoughts flow'd earlier o'er my mind  
I should not now lament its barrenness.  
Had they but roused me to some strenuous deeds,

In more enduring love for human kind,  
Purging my soul from sloth and selfishness—  
Had those, whose bright examples might have taught  
To scorn the earth, and humbly strive for heaven—  
Had these but shed due influence, noble acts  
Had sprung from noble thoughts—duty and joy,  
Like two fair sisters with their arms entwined  
And glances love returning, had led on,  
Through deeds of manly usefulness below,  
To the inheritance of brighter crowns.

But though the sun his mid-day height has passed,  
Light yet remaineth while 'tis given to work:  
Then let me not, a vile and idle thing,  
Pass in a world of dreams my life away;  
Or bubble-like float down the stream of life;  
Or like an autumn leaf, circling aloft,  
Whirl in a useless orbit—  
The drowsy joys of indolent repose,  
Or the unmeaning laugh of rapid mirth,  
Accomplish not man's destiny. 'Tis his  
To will—to do—to suffer—days of toil,  
And nights of watching; and to cast his lot,  
To live for others—or to live in vain.

Before the Spirit to Bethesda's pool  
Gave healing power, the waters first were moved;—  
Could but such influence reach a worm like me,  
And rouse from torpor, life new life would gain,  
And, like the eagle springing towards the sun,  
The soul, on angel-pinions borne, would seek  
Eternal beauty, undecaying truth,  
Wisdom heaven-taught, and virtue strong in faith."

As party incites their critics, we often see, with regret, the literary productions of eminent men, ministers or statesmen, treated or rather maltreated by those of the opposite faction, as if they were offences against society. Ridicule, abuse, contempt, are poured out upon the criminal's head, and he is made to appear, if not the wickedest, the weakest of mankind. Not so our course. It always rejoices us to see such individuals enter into the lists of authorship. Even were their efforts feeble, the attempt and not the deed would entitle them to praise. The love of letters is a sure test that the interests of literary men will not be neglected; and a cabinet, without a due feeling of the lustre and importance of the press, would indeed be one for England to deplore. We hail it as a good omen, without distinction of Whig, Conservative, or Radical, when we see men eminently before the public, and occupied with the severer cares of life, employ their brief periods of relaxation and delight in wooing the muse, or cultivating any branch of refining literature.\* Surely, the pursuit will not only attune the mind to the better sympathies of nature, and abate the asperities of the stern politician, but will teach the value of those who exercise qualities, without which history becomes a blank, and the actions of men equivalent to the brutes that live and perish during the same epoch of barren years.

It is with pleasure, after these few general remarks, that we extract a portion of a specimen of Homer's *Odyssey*, the opening of the fifth book, as translated by Lord John Russell. It is the message from Jove, by Mercury, to Calypso, and rendered with much beauty and spirit.

"The golden sandals on his feet he tied,  
Wing'd and immortal, by whose aid he darts  
Swift as the gale, o'er lands and oceans wide:  
Then grasped the wand, whose magic power imparts

\* It may be received as a sample of our sagacity and prescience, that the "Times" of yesterday (long after this notice was in type) has torn to pieces the very lines we have quoted from the pen of the chancellor of the exchequer. We think they are very honourable to his heart. Our contemporary has, with much talent, given a political cast to the poem, and mashed its author to the utmost of its powers of ridicule.—*Ed. L. G.*

Sleep to the eyes of men ; or, if applied  
 With other aims, the weary mortal starts  
 From deepest slumber ; bearing in his hand  
 This rod, he lighted on Plerian land.  
 Thence from the mountain's top, with one light fling,  
 He touched the sea ; and as upon the wave  
 The sea-gull hovers, dipping her white wing  
 From time to time, so too did Mercury lave  
 His brilliant plunions, till with easy spring  
 He reach'd the distant isle, where, in a cave,  
 Calypso dwelt ; then, rising from the brine,  
 He sought the mansion of the nymph divine.  
 A fire of cedar, blent with frankincense,  
 Round the green isle its pleasant odour spread ;  
 The nymph's sweet song beguiled another sense ;  
 And as she sung, she wove the golden thread.  
 Above the illumined cave a forest dense,  
 Of cypress, ash, and poplar, reared its head ;  
 Where hawks and herons arched the boughs bulld high  
 Their rocking nests, and sea-mews circling fly.  
 Round the cave's mouth broad vines entwining throw  
 Their tendrils, rich with many a clustering grape ;  
 Four fountains here with crystal waters flow,  
 Together rise, but different ways escape.  
 There, in green meadows, scented violets grow,  
 While flowers and herbs, of every hue and shape,  
 Flourish unchecked ; a God approaching near,  
 Might well admire, nor deem Elysium dear.  
 Charm'd with the savage beauty of the place,  
 One moment Hermes paused ; within the cave  
 The next he stood ; Calypso knew the face  
 Of him she met ; such sense immortals have,  
 Though far and long removed by time and space,—  
 But undiscover'd was the chieftain brave :  
 He, sitting on the shore, in melting woe,  
 Gazed on the barren sea, and let his tears fall flow.  
 The fair-haired nymph, when she had plac'd the god  
 Upon her throne of ivory, thus address'd :  
 ' Say, now, mild bearer of the golden rod,  
 What happy errand gives me such a guest ?  
 For none, till now, have more unfrequented trod  
 My cave ; be frank, and tell me thy behest.  
 Whatever it be, thy pleasure be the lord  
 Of all my pow'rs ; but first partake my board.'  
 Then on a table spreading the repast,  
 Ambrosia, and red nectar, Hermes took  
 Reflection suited to his length of fast ;  
 Then spoke—"

Our next quotation can hardly be of greater diversity than this

" *Mute Courtship, from the Persian.*  
 By Thomas Moore, Esq.  
 Love hath a language of his own,—  
 A voice that goes  
 From heart to heart,—whose mystic tone  
 Love only knows.  
 The lotus-flower, whose leaves I now  
 Kiss silently  
 Far more than words will tell thee how  
 I worship thee.  
 The mirror, which to thee I hold,—  
 Which, when I kneep  
 With thy bright looks, I turn and fold  
 To this fond breast,—  
 Doth it not speak, beyond all spells,  
 Of poet's art,  
 How deep thy hidden image dwells  
 In this hush'd heart ?"

We conclude with one of the maiden offerings to which we referred in our introduction.

" *Woman.* By Miss M. Popple.  
 Ask ye what woman was form'd to be ?  
 Oh, woman was form'd to be fair and vain ;  
 To sport awhile on the summer sea,  
 But to shrink from the winter-blast of pain.  
 To smile on man in his hour of joy,  
 To weave for his brow the festal wreath—  
 But to flee from the storms which his peace destroy,  
 And to quail at the withering glance of Death.  
 No—woman was form'd for a loftier sphere,  
 Nor pleasure to court, nor pity to claim,  
 But to rival man in his wide career,  
 And to mount with him to the heights of fame.  
 To laugh at the spectre of Fear, and dare  
 To gaze unmoved on the sanguine field ;  
 Man's valour, and pride, and ambition, to share,  
 Nor in aught, save the strength of her arm, to yield.  
 Oh, false is the notion that either extreme  
 Is the path which woman was born to tread !  
 Her course is that of the bounteous stream,  
 As it calmly glides o'er its sparkling bed.  
 Though it want the strength of the ocean wave,  
 Nor whirlpool nor hurricane trouble its breast,  
 And it still flows on through the darksome cave,  
 As it flow'd through the sunniest vale of rest.  
 Yes—to woman was given the twofold power,  
 To glid with her smile the green vistas of life,  
 And when its horizon with tempests shall lour,  
 With that smile to dispel the dark omens of strife.  
 And, though by her nature defenceless and weak,  
 She may ask the support of a manlier breast,  
 'Tis such as the tender vine may seek  
 From the stem by her faithful arms caress'd.

Then deem not that woman was form'd to be  
 The toy of a moment, capricious and vain ;  
 For bright as an angel of mercy may she  
 Be found by the wearisome couch of pain.  
 And though with a feminine softness she shrink  
 From the toils which in this world man's spirit may dare ;  
 Yet steadfast as him may she stand on the brink  
 Of that which alike they hereafter must share."

Many of the other contributions are sweet, fanciful, and poetical ; but we trust we have done enough (independently of the forcible appeal which the volume makes to the moral sense of the public) to induce many hundred readers to adorn their shelves with this interesting collection.

*Uncle Horace ; a Novel.* By the Author of "Sketches of Irish Character," "The Buccaneer," &c. 3 vols. 12mo. London, 1837. Colburn.

Mrs. HALL has, in the present performance, taken completely new ground ; and, instead of animated pictures of cavaliers and roundheads, or the exquisite pieces of rural life contained in her Irish sketches, the work now before us is an animated panorama of to-day, with all its meannesses and vanities, detected with feminine shrewdness, yet redeemed by touches of that good feeling, without which this would be a harsh and bad world indeed. Her own sex ought to be obliged to Mrs. S. C. Hall, for nothing can be more true, more beautiful, or more encouraging, than her estimate of woman. But we will let the volumes speak for themselves, giving the sentiment and character, without trenching upon the narrative. The beginning of an artist's career is thus painted.

" 'In one of those lone, cold, shivering houses,' continued Mortimer, 'which stretch out into what once was a meadow, but, having been half built upon, looks gloomy, and drear, and grassless, even now ; spotted with a half-naked child, or a few dirty, starved geese, mocking rusticity, and claiming alliance with the soil and misery of London paupers ;—in one, or rather at the back of one of these cottages, we found the sculptor. The mistress of the place, astonished at our appearance, directed us, with much civility, across a filthy yard, at the bottom of which appeared what I suppose was intended originally for a carpenter's shed. There was a long, low, narrow window, close to the door, and, before Lady Ellen knocked for entrance, she paused to observe the artist through its dim panes. As he stood with his back to us, it was impossible not to observe the ease and grace of his willowy figure. A tunic of grey cloth was girded round his waist by a black leather belt ; and a small cap, of the same material, sat lightly upon long and clustering curls.' 'I hope,' said Uncle Horace, 'he is not a puppy.' 'Before him, on an elevated table,' continued Mortimer, 'was a figure evidently intended as a companion to the one Lady Ellen had purchased—a brigand, leaning back, and looking upward, waving his hand in the air. It was partially covered with wet linen ; but the attitude of the head, notwithstanding the smallness of the figure, was magnificent. At one side of this rude table stood an easel, around which were different portions of sculpture ; and he had managed, with a couple of sticks, to form a sort of reading-desk, to support some books. Apparently, the youth had been fatigued by exertion, and was seeking relaxation in change of employment, for he was reading, though a modelling tool remained in his hand. The clay floor of the shed was heaped with the strange mis-shapen creations of a wild, but fertile and powerful imagination—a skeleton, with extended arms, supported a shroud-like drapery, in one corner ; and in the

other a straw pallet was but partially concealed by a tattered curtain.' Mary sighed. 'Go on,' said Uncle Horace. 'There was a poverty in the aspect of the sculptor's dwelling that was painful to look upon ; but it was the poverty of circumstances, not the poverty of genius.' 'Right,' interrupted Uncle Horace, 'they are, indeed, distinct.' 'It is hardly fair,' whispered Ellen to me, 'to pry into such a scene.' She tapped at the door, however, and, before he opened it, he threw a ragged cloth over a delft plate, upon which rested a half-eaten crust of bread and a broken vessel of water. He started when he opened the door, but Lady Ellen endeavoured to remove his embarrassment by saying how much she admired the brigand's wife—how much she desired a companion for it. I wish, dear Sir, you had witnessed the flush of an ambition, perhaps gratified for the first time, suffuse itself over the youth's features. I never saw a man with so pale a cheek, so white a brow ; if it had not been for the bright and earnest look of his eagle eye, you might have imagined him a corpse. There was a loftiness in his address, tempered by modesty, which fascinated us both. And he shewed Lady Ellen some models, that would do no disgrace to the glorious sculptors of Italy and Greece. If he lives, he will be a great man ; but —' 'Curse your 'buts ;' really, Harry, you provoke me sometimes !' exclaimed Uncle Horace. 'What is to prevent the young man's living ? what is to prevent his being a great man ? Is not his merit discovered ; and when once a man's talent is known and appreciated in England, he must succeed !—By heavens, he shall succeed !' 'He looks so very worn :—his parents are both dead. The woman of the house said she believed he had no relation in the world ; and yet, poor fellow ! he is so energetic, so full of fire. It is quite beautiful to hear him talk of his art ; you would imagine he had the power of an emperor, and could call persons and actions into existence for its glory.' 'You have seen him again, then ?' 'Oh yes ! to-day : and Lady Norley is to have her bust done ; and Mary should have seen how delicately her friend, Lady Ellen, managed to bestow upon him a purse. The net-work, she said, as a *souvenir* from herself, the gold to purchase the marble, that was to be a present from her to her mother, which his skill would prevail on her to accept.' 'God bless her !' said Uncle Horace."

*A Woman's Generosity* will also afford us a characteristic specimen. We must premise that Lady Ellen Revis, though slightly deformed, is beautiful in face, rich, and highly gifted ; but has just discovered that her cousin is attached to another.

"Many and bitter tears she had given to the wreck of the fairy palace which her heart and imagination had erected and peopled ; but having waived over it, in the solitude of silence of her own heart, her succeeding feeling was how to confer benefits on the living. She recalled every word, look, and action Harry Mortimer had addressed to her since the commencement of their acquaintance ; and in no one instance could she blame his conduct. Nay, she recalled his very looks, and with something very like self-reproach for having been so 'lightly won,' she pronounced him blameless. Nothing tests nobility of soul so strongly as forwarding a rival's claims to the affection of a beloved object. Ellen Revis was not only noble, but proud ; and her pride was tried almost beyond its strength by the desire she felt to appear careless of Harry's affections. Yet, mingled as it was with true woman's

generosity, it enabled her to address her cousin as he entered the library, though she was glad that it was the gentle light of evening, not the glaring sun of morning, that was streaming through the windows, and that the chair in which she sat was sufficiently high-backed to screen her face from observation. 'Oh, cousin, is it you!' she exclaimed; at the same time pressing her clasped hands on her heart to still its beatings. 'Nay, do not attempt to run away, I have been sitting here for hours, reading—I suppose—and waiting your arrival.' Harry stammered out something about being sorry she had waited; and also, that had he known she had been there, he would have come into the library 'long ago.' 'Harry Mortimer,' said Ellen, 'I pray you do not indulge in a habit of story-telling. If you had known I was here, you would have gone to any other portion of the dwelling rather than meet me to-day, nor do I wonder at it. However, come and sit down; no, not there, opposite to me, but here, on my right hand—that will do. You need not draw back—good, my cousin—I am neither going to make love to you, nor offer'—(and here she drew herself up, and, but that she was so completely shaded from the light, Mortimer must have observed the pride that flashed from her eyes)—'nor offer myself as your bride. But I am going to scold you, Harry Mortimer. What have you seen in Ellen Revis to prevent your considering her your friend? Was I not worthy to be trusted with your secret? Was not my sisterly regard for you, my friendship for Mary Lorton, a sufficient guarantee for my good offices?' 'Mary Lorton—secret,' murmured Harry, as she paused. 'Ay, my brother-cousin!' continued the lady, 'I have discovered your secret—your—why should I hesitate about the word,' she added; endeavouring with all a woman's tact to cover the pain, which pronouncing the mystic name gave her—by skillfully turning the subject of her hesitation; 'the word is simple, though you feel it deeply: I have discovered your love for Mary Lorton.' 'My love for Mary Lorton!' he repeated; 'I am sure no word, no act of mine —' 'The very thing I complain of,' she interrupted; 'I know you never treated me as a friend.' 'Upon my sacred honour, Ellen, a coolness has existed between Mary and me for months. The fact was, she became jealous, silly girl, of your letters and the drawings!—and the letters, though I confessed they came from a lady, I could not in honour shew her, containing as they did family affairs, and facts relating solely to my cousins and uncle.' 'And it was ill-judgment not to shew them. Do you not know that those who truly love, though they may have two hearts, can have but one soul! The mystery, my good cousin, to her, was ill-judged!' 'But how, Lady Ellen, how came you to discover this?' Lady Ellen Revis paused; and then she told the truth. It is a question with me whether those who tell the truth from impulse, or those who tell the truth from reason, deserve the most credit. Impulse is nature—reason! dare I call it art? Lady Ellen was not artful, and yet she reasoned. 'It is awkward,' she said, 'and yet why I know not, for we are cousins—brother and sister rather—near akin in blood—and in all truth and friendship. My father told me how highly you complimented me this morning, by thinking me too good to bestow upon a man who had no heart to give for mine. Now, do not apologise; you rejected cousin Ellen, and must positively present her with a wreath of silver willow! But, notwithstanding your

desire to see me mated with a man of heart, and notwithstanding this ugly lump upon my shoulder, I knew human nature too well to suppose you would refuse to swallow the gilded pill, if your heart had not been occupied by something better than heartless speculation!' 'Believe me, Ellen, there is no woman upon earth —' 'You love so well as me, *except!*—No woman on earth you esteem so highly, *except!*—No woman you would so desire to marry, *except!*—I know it all, cousin.' 'Lord Norley has been abrupt. I would not wound —' 'Harry!' said Lady Ellen, assuming, for the first, and indeed it was the last time in her life, a proud tone to her cousin; you cannot suppose from my past conduct that you were ever more to me than a dear relative; consequently, my father was not too abrupt. And there can be no danger of my feelings being wounded!' 'Indeed, Ellen, I meant not that,' replied Harry, without noticing her manner. 'If Mary, on my arrival in London, had manifested the least remains of an affection which grew with my growth; but the vanities, the glare, the lovers she has had, the extreme volatility and ambition of her mother, the heavy toiling after distinction of her father, the —' 'You do Mary injustice!' interrupted Lady Ellen, firmly. 'And as I have been the innocent instrument of setting you all wrong, I will be the direct means of bringing you all right again. You shall see what talents I possess for winding off, and winding on, and winding up. I should have been, putting all things else out of the question, a most ill-assorted wife for you; if you get into Parliament (which, asking your pardon, is a task fools find easy now-a-days), the extent of your service to the state will be to make a maiden speech—a speech upon the currency question, one upon the poor laws, ditto on the duty on malt; a few cautious observations on tithes, write occasional letters to the newspapers, and then accept the Chiltern Hundreds! For me, my regret is, that Talleyrand is too old to marry, and that Metternich has, I believe, a wife: they would have suited me exactly; but as to the other members of the diplomatic corps, I, Ellen Revis, hold them in sovereign contempt. No; you and Mary will cultivate roses and children, and Uncle Horace and I will be godmamma and godpapa. Have you any idea what Brown Lorton's property really is?' 'I know what it really was; but living as they have been living lately, I really can form no idea.' 'Well,' continued Lady Ellen, 'I must find that out, because papa must be managed. And — However, the dressing hour is come. God bless you, Harry; I will set my wits to work for the happiness of you and Mary, and you will both bless Ellen Revis when she is in her grave: there, one kiss upon my hand will do!—it must not be more, or I will tell Mary!' She flew out of the room. 'She is an admirable creature!' exclaimed Harry; 'and what excellent spirits she has—I never saw her in such spirits—delighted at making others happy—what charming spirits!' How little do we know of each other in this masquerading world! Before Harry Mortimer had finished his encomium upon his cousin's 'charming spirits,' Lady Ellen had thrown herself upon her bed in an agony of irrepressible anguish: the part she had been playing had overpowered her strength, and so torturing were her feelings, that she would have welcomed death during that and many succeeding hours. Still nothing disturbed her resolution to promote the happiness of her cousin. Men sacrifice others; women, themselves! "

There are some sweet snatches of verse scattered through these volumes; which, whether for talent, feeling, or principle, do Mrs. Hall the highest credit. We congratulate our readers on having to make *Uncle Horace's* acquaintance.

#### IMPRISONMENT FOR DEBT.

*The Prison-House Unmasked: in a Letter to her Most Gracious Majesty, shewing that Arrest and Imprisonment for Debt are Violations of Magna Charta, and therefore Illegal; and also the Cruelty and Inutility of the present System.* By Runnymede Secundus. Second Edition. 8vo. pp. 36. London, 1837. Hatchard and Son.

THE cruel uncertainty which has now for several years prevailed, touching the question of imprisonment for debt, seems to have stirred up a new and able advocate in opposition to that practice, from whom we have received the striking pamphlet before us. The prominent argument in this production is, that imprisonment for debt is illegal, being contrary to Magna Charta; and the whole process a fiction invented to defeat the dicta of laws and judges. But, were it otherwise—did Magna Charta ordain incarceration for debt, and every ancient act of parliament, and every great judge who had sat upon the bench for five hundred years, concur in sanctioning it,—still, on the far superior grounds of humanity, morality, and religion, not to mention expediency, utility, and right, we would say that the most illustrious commencement of the reign of a young queen would be to repeal and rescind every authority which could cause such distress and misery to thousands of her people.

Custom has brazed the country to this pernicious and barbarous system, or it would not be endured for a moment. See how quickly the better national feelings are awakened to any individual instance or story of suffering, and how promptly relief is afforded; but the accumulated horrors and iniquities of the gaol seem to excite no other sympathy than if they did not exist. We pity the very criminal condemned to expiate his offence by punishment; but we have no compassion for the unfortunate whose only guilt is the sin of poverty.

If we look around at similar circumstances, we must be amazed at this strange and unnatural apathy. When Africa held a few hundred captives, all Christendom rang with the injury; and crusades were undertaken to rescue them, and avenge the insulted world on their oppressors. Were these oppressors more heartless, more relentless, than the man who consigns a helpless fellow-creature to Horsemonger Lane,\* the Marshalsea, the Fleet, or other prison, there to waste his life in wretchedness, because he owes five pounds, or fifty, which he is unable to pay, after his small substance has been stripped from him by the extortions of low legal proceedings and the torture of low legal minions?

The New Poor Law has created a loud outcry throughout the country against the cruelty of shutting paupers up in Unions, separating men from their wives, and parents from their families; but these are comparatively humane establishments, for they at least feed and clothe the sufferers, whereas imprisonment for debt not only severs all these natural ties, but

\* In this, and perhaps in other gaols, it is stated, that the regulations as to air, exercise, the visits of friends, &c. are the same as those applied to the most atrocious felons.

starves or leaves to perish the husband or the father that has fallen into its merciless fangs. Raiment, or food, or covering, or warmth, or cherishing of any kind are denied to him; he is an outcast from society, the Pariah of free and generous Britain. And what has he done to merit this affliction? he has contracted a debt which losses, or disappointments, or, if you will, imprudence or extravagance, put it out of his power immediately to discharge!

The Bastile in Paris, with its lettres de cachet, provoked the indignation of civilised Europe; why, the Bastile was a playhouse, and the extent of the wrongs it perpetrated a jest, when compared with one year of the agonies inflicted, and the guilt induced, by the debtors' prisons in the metropolis of England.

And by whom are these evils wrought? Are they infamous scoundrels, devoid of sense, shunned and hated? No, they are professed Christians; professors of a faith of which mercy and forgiveness of injury are the essence; offerers up of that sublimely simple prayer which implores of a Heavenly Father to pardon them as they pardon others. And yet these men can, without remorse or an uneasy reflection, proceed to a filthy office, and take an oath which is to deprive their brother of his liberty, tear him from his family, ruin his credit, and make all his future days grief and bitterness. The process is handed to a brutal and ruthless ruffian to execute; and the worthy Christian who has committed this act retires to enjoy the communion of his children, an evening meal of plenty and comfort, and lay his head upon a soft pillow with the conjugal partner of his happier hours—to rise, perhaps, on the morrow, refreshed, and go to his church or meeting-house to worship his Creator, and pray for the forgiveness of his trespasses. Yet "Amen" does not stick in his throat! Is it not monstrous that such things are? nor

"Overcome us like a summer cloud  
Without our special wonder."

It may frequently be observed, that some slight change of circumstance may arouse feelings which habit has rendered dormant; and it is, perhaps, owing to something of this sort that the use of the name of our young and innocent queen, in the phraseology of those proceedings which doom her subjects to the loss of their freedom, has rendered them more odious and disgusting, than when the name of an astute and world-accustomed king was employed. There is a contradiction particularly unnatural in the grating conjunction. To illustrate this we have requested, from a respectable solicitor, a copy of the form in which the name and title of One, who should only be associated with agreeable and affectionate ideas, is thus abused:—"Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith. To the Sheriff of \_\_\_\_\_, greeting. *We* (our dear and loved young queen!) *command you*, and that you omit not, but *enter and take C. D. and him safely keep*, &c. until the said C. D. shall by lawful means be discharged from your custody," &c.: and our informant writes us,—"This is a copy of a writ of *Capias*, upon which the sheriff grants his warrant; and when defendant is arrested, he is taken by the officer to the county gaol. If defendant wishes to be removed to the Queen's Bench Prison, he causes an *Habeas Corpus* to be issued, directed to the sheriff, who makes a return, containing an extract of the writ: the defendant is then taken before a judge, who signs his name to the commitment, viz.:—

"The within-named C. D. is committed to the custody of the marshal, &c. for want of bail, within the causes hereunto annexed, there to remain until, &c.

Signature, \_\_\_\_\_,  
Date, \_\_\_\_\_."

And so any honest, meritorious, and unoffending citizen of this land of boasted freedom, may, under the authority of its youthful female sovereign, whose heart would bleed at the sight or thought of a single soul in distress, be torn from all the dearest ties on earth, and doomed to want, solitude, and despair. That, too, as this pamphlet shews, contrary to the great fundamental and unalterable principle of the constitution, without trial, and at the mere will (seldom, indeed, of good and right-minded creditors, but) of hardened and vindictive oppressors; perhaps of false swearers; of cheats who thus try to enforce exorbitant charges by the moral torture it is in their option to inflict; of misguided individuals who, in moments of anger and resentment, get into the trammels of rascal-practitioners (the disgrace of a liberal profession), and are obliged to go on, as they drive them and their victims alike to perdition: for the pursuers in turn become the hunted, and few escape from the ruin that too surely follows the "due administration of the laws!"

But we must now go to our author, who says in opening, "Your majesty has ascended the throne at a period of life when the feelings are most alive to the sufferings of others; and when the intellect, unclouded by the Jesuitism of expediency, sees, with almost instinctive quickness, those results which are the deductions of truth and justice—at all times, and under all circumstances, the highest policy. With the sincerest and deepest sentiments of loyalty, respect, and devotion, I shall attempt to call into action those feelings which are the ornament of woman; and, when manifested in a queen, become a beacon light to the chivalry of a kingdom,—that invincible safeguard of royalty. To attempt to make feeling, unsupported by reason, experience, and fact, the guide in a matter of policy, would be disrespectful and unwise; and, from all your subjects have seen and heard, though so young, useless."

"If, most gracious Sovereign, it is shewn that your crown has been put into danger by the violation of the Great Charter, and that through that violation, fifteen thousand of your subjects are kept in prisons, without having been brought before a tribunal of their country, without being convicted of crime, without which no punishment can be awarded: that by far the greater number are in poverty and destitution, being unable to 'cultivate the ground, or maintain their families,' which the humane enactments of Magna Charta justly declare necessary, and, therefore, that no man should be imprisoned for debt,—which, unless fraudulent, is no crime,—your majesty will see and feel the necessity of commanding your ministers to take immediate steps to restore the Great Charter to its purity, and remove the tyranny and unlawful oppression from fifteen thousand of your people. Magna Charta is the foundation of the constitution and the liberties of England. In the twenty-ninth article of it, are these memorable words: 'No freeman shall be taken (i. e. arrested), imprisoned, or otherwise injured, unless by the legal judgment of his peers, and the law of the land.' Sir Edward Coke, commenting on those words, remarks, 'the king, by Magna Charta, is debarred from imprisoning his debtor. The power reserved to the crown was, by the common law, allowed to the subject. The Great

Charter shall be taken as common law, and all statutes made against it are void.'"

Other legal enactments, in the same spirit, are quoted, and the narrative proceeds:—

"The 19th of Henry VII. gave no countenance to any violation of the Great Charter. The fallacious ingenuity of lawyers by (impudent absurdity!) a fiction converted a civil question of account into a criminal act, and seized the person on fictitious grounds. The treacherous cunning of lawyers, or the ignorance of a government, cannot be permitted to abrogate the charter of our freedom, though carried in those troublesome times to unwarrantable excess. The incontrovertible law of Magna Charta was always declared to be inviolable. Lord Chancellor Bacon gave it as his decided opinion, 'that no person could be arrested for debt according to the constitution.' As if to complete the chain of authorities who upheld the true interpretation of the Great Charter, Lord Chief Justice Holt, (*vide Rep. in 'Banco Regine' 242*), in the reign of Queen Anne, delivered the decision of the twelve judges on this important point, and so sacred did they hold Magna Charta, that they acquitted a man who had killed a constable's assistant in an affray caused by arrest for debt, on the sole ground that arrest and imprisonment for debt were illegal. And Lord Eldon has eloquently declared—mark the word he uses—'Arrest for debt is a *permission* to commit acts of greater oppression and inhumanity than are to be met with in slavery itself—a permission to tear a father from his weeping children, the husband from the distressed wife, and to hurry him to a dungeon to linger out a life of pain and misery!'"

These are high and important authorities; but as we have said, were they all for, instead of being against, the system of domestic slavery, at the caprice or evil passion of any person, we should still hold that system to be incompatible with policy, justice, morality, humanity, and Christianity. The Inquisition, in its worst age and most rampant cruelty, was not more inconsistent with the rights of man, and the golden rule of doing unto others as we would have others do unto us.

"A brief description (says the writer) of the method by which this violation of Magna Charta is put into practice is so curious, that a few lines may be given to it. In this free country, any man, whether a creditor or a villain, has only to walk to an office in the Temple, and there make an affidavit that an individual is indebted to him any sum (above 20*l.*); having made that affidavit before a 'commissioner for taking affidavits,' a slip of parchment is given to him, which he takes to the sheriff, or to his under sheriff's office, who gives him a warrant, directed to two or more of his men, whom he designates his officers; and upon that unsupported affidavit, according to Lord Eldon, 'a father is torn from his weeping children, the husband from the distressed wife, and hurried to a dungeon to linger out a life of pain and misery.' To be placed where he cannot work, and then to be told, 'Here you shall remain, until you find a ransom or your grave!' It is scarcely credible, but it is true. The wonder is, that it has been borne so long, and that the prisons have not been destroyed. It is clear that submission to what has the semblance of law, but which is in defiance of the great constitutional rights of the people, has induced so many hundreds of thousands to submit to imprisonment without crime, to insult, degradation, and ruin."

The writer then states many cases of such

wretchedness, that, were they related of savages in the interior of Africa, would not be believed.\* Dying men and women, absolutely murdered by being dragged from their deathbeds to expire within a few hours in prison; and that in defiance of medical protests against the act. There is no scene to be conceived in tragedy which can rival these realities in wo and suffering. But they extend beyond the circle of tragic fiction. It is not the individual alone who is condemned to misery; a contagion is propagated throughout society. His immediate relatives come first into contact with the blasting influence, and from them it spreads far and wide. Not in the interior of the prison walls—though, if report speak true, crimes of the deepest dye are generated there†—but all around, is more or less infected with the leprosy; and it may be asserted that every connexion outside the walls is tainted from the poison within.

Among the cases, we find the following curious mention made of Bellingham, the assassin of Mr. Perceval:—

“The true exciting cause of Mr. Perceval’s assassination arose from the attempt to use the power of arrest for debt. Bellingham was perhaps insane, and very troublesome at the Treasury. It was ascertained that he was in debt; applications were made to his creditors to arrest him. So extraordinary a request from the Treasury induced a creditor to communicate the circumstance to Bellingham, who saw that, if the request should be complied with, he would be the inmate of a prison for life. In his excited state, he slew the man whom he supposed to have meditated his perpetual imprisonment. Those letters and documents are still in existence. These examples will be sufficient to shew the dangerous character of its application; and the mind will easily perceive how so dreadful an instrument, even in cases where debts are due, may be made the means of revenge, of interest, of ruin; while it panders to the cupidity of the worst grade of common law practitioners, sheriffs’ officers, and others of the same degraded stamp. In some few instances, an unwilling debtor, who is able to pay, may, by such process, be enforced. Not two in one hundred would become the inmates of a prison, if able to liquidate the demand.”

We presume the writer would hardly have made this statement respecting Bellingham, unless assured of the fact; but to us, we must confess, it seems questionable. We had some cognisance of that catastrophe, and Bellingham’s papers, taken from his person, were long time in our custody, and we observed no trace of such circumstances. On the contrary, Bellingham was equally prepared to murder Lord L. Gower (our late ambassador at Petersburg), had he encountered him instead of the unfortunate gentleman whom he deprived of life. But we must copy some further remarks from our author, who says,

“Ask those men whose lives have been passed in executing the law, in guarding the prisoner, or in the character of agents, or as the employés of the prisoner. They are the best practical judges: they will inform you that imprisonment for debt, in ninety-five cases out of one hundred, is productive of loss to the

creditor and the debtor; and that the only gainers are the attorneys, and their coadjutors and companions, the sheriffs’ officers and their men. Would nearly twenty thousand human beings remain for debt in the prisons of your majesty’s dominions, if they could pay the demands on them? A common law attorney, an usurer, a sheriff’s officer, might have the effrontery to answer, yes; but the common sense of the civilised nations of Europe, who have abolished the law, and every honourable and reflecting man in England, will reply in the negative. Let it be admitted that many are incarcerated for debts to which they are justly liable, arising from ignorance, imprudence, neglect, a want of strict economy, from being sanguine of success, and all the other weaknesses of human nature; yet, is the clergyman placed within four spiked walls better able, in such a situation, to liquidate his debts? Is the shopkeeper enabled, in such a situation, to conduct his business? Is the broken-down officer in a condition to add to his slender pittance? Can the medical practitioner perform his duties, and earn the means of paying? Can the mechanic, who has, perhaps, hereafter to receive his country’s thanks, carry on his work in a prison, and thus pay his creditors? Can the workman follow his trade, and relieve himself of the burden probably brought on by sickness, or some of the ills of humanity? None of these can. The widow cannot—a life of imprisonment, we have seen, without a fault, cannot exact it. Can the blind, in a state of destitution, benefit the creditor? If any one thinks that possible, let them walk to the Queen’s Bench, and see there a broken-down gentleman, of great acquirements and unimpeachable character, stone blind, in rags and destitution, living chiefly on the charity of his brother-prisoners, with a wife and (eight) children in one small room!\* On his return he will, perhaps, not have the hardihood to maintain its utility. The class of men above mentioned constitute, by far, the greater number of those who fill our prisons; with a considerable proportion of poets, authors, mathematicians, and men of science, who are the instructors, the amusers, and the pioneers of civilised society. Their minds are too harassed by the infliction on them to earn their daily bread—(we know that Bunyan and others have composed their immortal works in prisons, but those were extraordinary men). The gamblers, spendthrifts, and profligates, constitute only a small proportion; and, from all that is known, are not much improved by this method of annoying them.”

In this view we have, after all, only a glance at the positive evils of the system: who could estimate its far more extensive negative injuries? How much has it prevented such men, as are here described, from accomplishing of great and good, as well as of common objects? How often, on the very eve of fruition of long-planned and sedulously laboured designs, have the law myrmidons interfered, and crushed the works and all their hopes. In one day the individual would have been happy; that day is denied him, and he lifts his eyes, an outcast from his kind, to gaze upon the dismal vacancy of a dungeon, or the more loathsome presence of some degraded companionship.

The author treats of the Insolvent Court, and other matters connected with his subject. The unproductive bastard compassion, and often severe sentences, of that court, are exhibited in strong light; and the attorney-

general’s bill (the shuttlecock of several sessions of parliament) is condemned, inasmuch as “It is a creditor’s bill, and not a debtor and creditor’s; that the power over the property is far too absolute; the time allowed to the debtor from and between the stages of the process is too short; that the executive part is placed in the hands of sheriffs’ officers, and other grasping and inferior men, which is certain to lead to even more plunder and oppression than the present system. The bill shews astuteness, but is not practical, and is contrary to the genius of the people. That bill has been drawn as if there were no persons in the kingdom but wholesale and retail dealers. In case of bankruptcy, or temporary suspension of payment, or the non-payment of a judgment-debt for three weeks, the power given savours too much of despotism; and, moreover, the executive part is placed in the hands of a desperate and reckless class of extortioners, the sheriffs’ officers, under the secret collateral direction of those pests of England, the low common-law attorneys. Under the present practice of the law, it may be said that the English are as much dictated to and law-ridden as our Catholic forefathers were priest-ridden, even at greater loss of property and independence. Sir John Campbell’s bill will add inquisitorial power to that extraordinary influence now possessed by the legal profession, and which, with a slow and silent Jesuit-step, gradually winds an inextricable coil around the victim, until he finds that to struggle is only to have the cords more tightly drawn, and he yields at last to smooth dictation and unceasing robbery. In that profession there are many excellent and noble-minded men; but, let it be remarked, they never do any common-law business. All the expenses incident on the writs issued in Middlesex only are not less than 500,000*l.* per annum: a frightful sum, unlawfully extorted to pander to the worst vices of a dangerous and reckless class. Upwards of thirty-two thousand writs are issued per annum in Middlesex, the expenses on which, taking one with another, will not amount to less than 200,000*l.* a-year, to be divided among the low-class attorneys and sheriffs’ officers: a sum sufficient to produce the mass of corruption, extortion, brutality, and ruin, which is known to be the consequence. There can be no doubt that the creditor should be protected from loss, and that the wealthy debtor in particular should be made to liquidate his debts, and that the power over him should be of so positive a nature as to restrain his extravagance, and virtually compel him so to regulate his expenditure that it does not exceed his means; but that power should be so devised as to prevent avarice, resentment, and the cupidity of those who execute the law, from inflicting unnecessary injury, or, by undue inquisitorial power, trenching on the rights of a free-born man. To bring in a bill for the ‘Abolition of Imprisonment for Debt,’ when no law exists which can enforce it, unless Magna Charta be trampled under foot, appears to be an absurdity that has no parallel in history! But if Sir John Campbell’s act should become a law, as its operative part would lead to the seizure of much property, the sacrifice of it, and virtual plunder, would ensue, if the sale be left to the sheriff or his officers: the only power vested in them should be the seizure. The removal and sale should be by an order from a board of men, not lawyers, of known respectability; and the sale should be public, by any accredited auctioneer selected by the debtor: otherwise the sacrifice of it will injure the debtor, while it does not benefit the

\* These savages, indeed, are more rational in their punishment of debtors; for they either condemn them to work out their debts by servitude, or the creditors are allowed to pay themselves by selling them for slaves. One can see some sense and justice, though severe, in this; but none in simply destroying every useful energy and productive power of a debtor by incarcerating him.

† We have heard statements too atrocious even for allusion.

\* “The afflicted man is allowed a few shillings a-week by a man interested in his life being preserved.”

creditor, but enriches that band of depredators who are the salesmen—too often, the purchasers—of the property of the unfortunate.”

With this we conclude; and if, by any observations of ours, we have succeeded in obtaining public attention more fixedly to this able pamphlet, and producing a feeling on behalf of those whose forlorn cause it advocates, we shall be happy in thinking that our labour has been devoted to the best interests of our country and of human nature.

#### NATURAL HISTORY.

1. *A History of British Birds*. By W. Yarrell, F.L.S. Secretary to the Zoological Society. Part I. 8vo. pp. 48. London, 1837. Van Voorst.
2. *A History of British Quadrupeds*. By T. Bell, F.R.S. &c. Parts IX., X., and XI. Idem.
3. *The Naturalist*. Edited by Neville Wood, Esq. Vol. II. Nos. VII., VIII., and IX. London, Groombridge; Edinburgh, Whyte and Co.; Birmingham, Barlow; Doncaster, Stafford; Paris, Galignani; Brussels, Haumann and Co.; New York, Jackson.

THE ever agreeable studies of natural history are so consonant to the feelings of all mankind, that the majority love them all; and each particular branch possesses votaries with the warmest affections. The mineral, the vegetable, and the animal world, present endless subjects for inquiry and investigation. Their own natures and qualities deeply interest the mind, and their analogies teach us to extend our remarks to more home and higher objects, which affect the condition of humanity itself, in its widest as well as most intimate relations. Thus the curious and the useful are blended, and the minute leads to the great and comprehensive. The connexion of the scale is as a ladder which ascends from earth to heaven. Creation, change, destruction, reproduction, beauty, contrivance, adaptation, force, and other wonders, are laid open to view; and, in the insect of an hour, the mysteries of the physical world are unfolded to the careful observer. Whence they come and whither they go, as in man himself, remains the secret known only to Omniscience; but there is amply enough to gratify finite longings after knowledge; and the tree, instead of being forbidden, courts the taste of every living soul to its countless varieties and salutary nourishment.

And England is fortunate at this time in the authors who distinguish themselves in pursuits and publications belonging to this class of literature. No month passes in which it is not our grateful duty to notice productions in it of great scientific value and great artistical merit. Among the foremost contributors, the name of Mr. Yarrell must stand prominent; and it is with no small degree of satisfaction that we have taken up his Part I. of a new work, *A History of British Birds*. Had we not been able to judge from his previous performances,\* this single commencing specimen would have taught us what to anticipate from him on so generally interesting a subject. But the pattern is so truly excellent, that we have only to hope there will be no falling off: improvement we hardly think possible. The Part begins with the Raptorial, and the first bird is the Egyptian vulture, which is settled as a British bird, from one having been shot in Somersetshire. In the course of his description, Mr. Yarrell informs us that “It will be one of the objects of this history to trace our British birds throughout all the various countries in which they are

\* See *Literary Gazette*, for notices of his “History of British Fishes,” &c. &c.

found, and thus to shew, as far as has been yet observed, the extent of the range of each species.” It is unnecessary for us to point out the popular attractions that must attach to this portion of the plan. Such a view is much wanted. The golden and white-tailed eagles, the osprey, gyrfalcon, peregrine, hobby, red-footed falcon, and merlin, are the other raptorial birds figured and described; and nothing can exceed the spirit and nature of the illustrations. The birds are living in wood, and you might fancy you could pluck a feather from the cut.

No. II. of *Mr. Yarrell's Birds*, issued since the above was written, continues the work in the same admirable style. The kestrel, goshawk, sparrow-hawk, kite, swallow-tailed kite, the common, rough-legged, and honey buzzards, and the marsh and hen harriers (*Falconidae*), are figured and described. From the text we select a few miscellaneous passages.

*Of the Kestrel*.—“Mice, as before stated, certainly form the principal part of the food of this species; and it appears to obtain them by dropping suddenly upon them, and thus taking them by surprise. Montagu says that he never found any feathers in the stomach of the kestrel; but it is certain that it does occasionally kill and devour small birds. The remains of coleopterous insects, their larvæ, and earth-worms, have been found in their stomachs; and Mr. Selby, on the authority of an eye-witness, has recorded the following fact: ‘I had the pleasure this summer of seeing the kestrel engaged in an occupation entirely new to me,—hawking after cockchafer late in the evening. I watched him with a glass, and saw him dart through a swarm of the insects, seize one in each claw, and eat them while flying. He returned to the charge again and again. I ascertained it beyond a doubt, as I afterwards shot him.’ In spring the kestrel frequently takes possession of the nest of a crow or a magpie, in which to deposit its eggs. Sometimes these birds build in high rocks, or on old towers, and among the ruins of buildings, laying four, and occasionally five eggs, about one inch seven lines long, by one inch three lines across, mottled all over with dark reddish brown, and sometimes with blotches of reddish brown upon a pale reddish white ground. The fifth egg has been known to weigh several grains less than either of those previously deposited, and it has also less colouring matter spread over the shell than the others; both effects probably occasioned by the temporary constitutional exhaustion the bird has sustained in her previous efforts.”

*Of the Goshawk*.—“The goshawk was formerly in esteem among falconers, and was flown at hares, rabbits, pheasants, grouse, and partridges. It flies fast for a short distance, may be used in an enclosed country, and will even dash through woods after its prey; but if it does not catch the object, it soon gives up the pursuit, and, perching on a bough, waits till some new game presents itself. This habit of taking to a branch of a tree and waiting, is particularly alluded to by Colonel Thornton, formerly of Thornville Royal, who was devoted to hawking, and who, in reference to the goshawk, says, ‘If its game take refuge, there it waits patiently on a tree, or a stone, until the game, pressed by hunger, is induced to move; and as the hawk is capable of greater abstinence, it generally succeeds in taking it. I flew a goshawk,’ says the colonel, ‘at a pheasant; but it got into cover, and we lost the hawk: at ten o’clock next morning the falconer found her, and just as he had lifted her, the pheasant ran and rose.’”

*Of the Sparrow-hawk*.—“In reference to the capabilities of this species for hawking, Sir John Sebright says, that he ‘once took a partridge with a sparrow-hawk of his own breaking, ten days after he had been taken wild from a wood. These hawks must be kept in high condition, and cannot fly when there is the least wind: they are upon the whole more difficult to manage than stronger birds. The flight of the sparrow-hawk is rapid for a short distance: he will take partridges at the beginning of the season, and is the best of all the hawks for landrails.’ Mr. Selby says, in rearing the young of this species, care should be taken to separate them very early; otherwise, the female birds, being superior in size and stronger, are sure to destroy and devour the males, as he has repeatedly found, if they are kept caged together. The sparrow-hawk generally takes possession of some old or deserted nest in a tree, most frequently that of the crow, in which the female deposits four or five eggs, each about one inch seven lines long, by one inch four lines broad, of a pale bluish white, blotched and spotted with dark red brown. The young are covered with a delicate and pure white down, and are abundantly supplied with food. Mr. Selby mentions having found a nest of five young sparrow-hawks, which contained besides, a lapwing, two blackbirds, one thrush, and two green linnetts, recently killed, and partly divested of their feathers.”

*Of the Common Buzzard*.—“A few years back, a female buzzard, kept in the garden of the Chequers Inn, at Uxbridge, shewed an inclination to sit, by collecting and bending all the loose sticks she could obtain possession of. Her owner, noticing her actions, supplied her with materials; she completed her nest, and sat on two hen’s eggs, which she hatched, and afterwards reared the young. Since then, she has hatched and brought up a brood of chickens every year. She indicates her desire to sit by scratching holes in the ground, and breaking and tearing every thing within her reach. One summer, in order to save her the fatigue of sitting, some young chickens, just hatched, were put down to her; but she destroyed the whole. Her family, in June 1831, consisted of nine; the original number were ten, but one had been lost. When flesh was given to her, she was very assiduous in tearing and offering it as food to her nurslings, and appeared uneasy if, after taking small portions from her, they turned away to pick up grain. Several other similar instances are recorded.”

The tail-piece of the chapter, representing this hen-like action, is extremely pretty; as, indeed, all these embellishments are.

Of Mr. Bell’s *History of British Quadrupeds*, we have spoken as former Parts appeared; and of IX., X., and XI. now before us, have truly to state, that they fully maintain the high character of the work, which is completed by the last Number. In the former, opening with p. 385, we find ourselves engaged with “The Ass;” and we have really forgotten whether or not, in our last review, we left off with that too little admired and respected animal; so we must begin in the middle, as if the donkey were an oration or an epic poem—[droll enough! one has just set up a bray at this moment under our windows! We cannot translate his meaning, and must, therefore, revert to Mr. Bell, who says]—“It appears that as the domestic ass advances northward, it becomes deteriorated. In the genial warmth of its native climate, it is a far superior animal to that

which we are accustomed to see in this country. In various parts of Asia and Africa, and in the South of Europe, it still exhibits this superiority; and in Spain particularly, the male asses, which are bred and selected for the purpose of producing mules, are really beautiful animals. Its progress northward has not been rapid: its introduction into this country, however, took place early; for it is mentioned in the reign of Ethelred, when its price was as high as twelve shillings, and again in the time of Henry the Third. Notwithstanding this, it appears to have subsequently become extinct here; for Holingshead distinctly states, that in the time of Elizabeth 'our launde did yeelde no asses.' "

Oh, glorious period! this Elizabethan age! There were no asses in the Queendom then. How numerous now, under our gracious Victoria! The restoration, we mean of the ass, to England, "is attributed by Pennant, with much probability, to our intercourse with Spain during the reign of Mary. It would appear by the testimony of Linnaeus, that it was rare in Sweden in his time, as he says, in the 'Fauna Suecica,' 1746, 'Habitat in magnatum prædiis rarius;' and in the last edition it is altogether omitted."

The following remarks on the general subject, are extremely judicious and curious:—
